The sanitary inspectors for the past year, Messrs J. H. Echlin and T. Dillon, have effected a marked improvement in the sanitary conditions of the factories. They went out from the Department clothed with authority to insist upon improvements which were necessary and which had, in many cases, been recommended by the instructors, but which had not been made. Many expressions of appreciation of the work accomplished by these inspectors have been received from all sections and the better class of Dairy-men throughout the Province are strongly of opinion that work of this nature should be followed still more closely during the coming season.

The representatives of the dairy associations and the chief instructors as well as the regular staff of instructors are of one opinion as to the advisability of clothing the instructors with the power of sanitary inspectors and so arranging the districts that every factory and creamery will be subject to regular and systematic sanitary inspection and may have the benefit of instruction as well. In order that the opinions above expressed might be put into tangible form to be placed before the Minister of Agriculture, the Director of Dairy Instruction called a meeting of the chief instructors, sanitary inspectors, and representatives of the two dairy associations to meet in Toronto on the 8th inst. Those present were Chief Instructors, G. H. Barr and G. G. Pubby. Sanitary Inspectors, T. Dillon and J. H. Echlin. Representatives of Eastern Dairyman's Association, R. G. Murphy, J. R. Dargavel, M. P. and J. H. Singletary, Western Association, Thos. Ballantyne, Jno. McIrvin and J. N. Paget. After discussing the subjects before them at great length they unanimously decided upon the following system.

(1) That the whole Province be divided into such sub-divisions as would give each inspector from 35 to 36 factories or creameries. This will require a staff of 38 instructor-inspectors, and it is considered by those who have had the work in charge that the men appointed to the work would be able to render more effective service than in past years. Many of the better factories are really not in need of regular instruction and in majority of cases a call of an hour or two from the instructor will be just as effective as to spend a whole day with the maker in manufacturing a lot of cheese. This will give the instructor-inspectors an opportunity to visit many of the farms and to advise with the producers as to

## NASAL CATARRH AFFECTS HEARING.

MR. R. J. ARLESS.

### FINDS RELIEF IN PE-RU-NA.

Mr. R. J. Arless, 401 City Hall Ave., Montreal, Quebec, is an old gentleman of wide acquaintance, having served thirty-eight years in the General Post-office of Montreal, a record which speaks for itself. Concerning his use of Peruna, Mr. Arless says:

"I have been afflicted with nasal catarrh to such a degree that it affected my hearing.

"This was contracted some twenty years ago by being exposed to draughts and sudden changes of temperature.

"I have been under the treatment of specialists and have used many drugs recommended as specifics for catarrh in the head and throat—all to no purpose.

"About three years ago I was induced by a confrere in office to try Peruna.

"After some hesitation, as I had doubts as to results after so many failures, I gave Peruna a trial, and am happy to state that after using eight or ten bottles of Peruna I am much improved in hearing, and in breathing through the nostrils."

The Department is desirous of doing only that which shall be in the best interests of the cheese and butter industry of the Province and wishes to adopt such measures as are necessary to secure the same, but at the same time, wishes to avoid doing an injustice to any person or persons. It must not be inferred that instruction is to be abandoned and an army of men sent out merely to give orders to the men who own the factories and herds of the country. It is the desire to so arrange the work of instruction and sanitary inspection that it can be done most effectively at a reasonable cost and in the best interests of the owner of the factories, the producers of milk and the makers.

The Director of Dairy Instruction Mr. G. A. Putman, would be glad to receive suggestions of recommendations from dairymen regarding the proposed regulations.

A meeting regarding the above will be held at Enterprise on Dec. 6th.

## RICHMOND MINUTES

Selby, Nov. 5th 1906

The council met at Selby. The members present were Messrs. Z. A. Grooms, Fred Sexsmith, Chas. Anderson, E. R. Sills and Alf McCutcheon.

The Reeve presiding. The minutes of the last meeting were read and confirmed.

Moved by Chas. Anderson and seconded by Fred Sexsmith, that the By-Law to ratify the sales and contracts of completing the Otter Creek Drainage works be now read the first time. Carried.

Moved and seconded that the By-law to ratify the sales and contracts of completing the Otter Creek Drainage works be now read the second time. Carried.

A petition was presented and read, praying that the sale of spirituous and fermented liquors be prohibited in the Township of Richmond. Laid on the table.

Moved by Chas. Anderson and seconded by E. R. Sills, that whereas a petition having been presented by a large number of ratepayers of the Township asking that a by-law be submitted to the Electors of the Township of Richmond, that the Township of Richmond be now read the first time. Carried.

Moved and seconded, that the collector be granted a voucher for \$33.29 taxes uncollectable for 1906. Carried.

The By-law, re, Local Option, prohibiting the sale of spirituous or fermented liquors in the Township of Richmond was read the first time.

Moved by Chas. Anderson, seconded by Fred Sexsmith, that Luther Clark be paid \$6.00 commutation Statute Labor, by order of the Pathmaster, Wm. Peany, also \$1.26 for 18 loads of gravel furnished road section No. 15. Carried.

Moved by Fred Sexsmith, seconded by Chas. Anderson that the following accounts be paid: Ford Russell, \$7.14, for 102 loads of gravel for road section No. 19 by order of the Pathmaster; J. R. A. Lochead, \$11.57 for 161 loads of gravel for road section No. 12; Geo. Arnold 75c for repairing culvert in 9th Concession; E. P. Smith for building 3 culverts in the 2nd Concession and furnishing stringers for same \$7; Elias Thompson, \$4.50 for building culvert in 8th Concession and furnishing stringers for same; W. R. Chamberlain, \$1.25 for stringers and spikes for culverts in road section No. 12; Municipal World for supplies \$1.68; Mrs. Sedore, \$1.00 support of David Sedore; A. Wood, \$9.65 support of

Moved by Chas. Anderson and seconded by E. R. Sills, that whereas a petition having been presented by a large number of ratepayers of the Township asking that a by-law be submitted to the Electors of the Township at the next Municipal Election for the prohibiting of the sale of spirituous, fermented or other manufactured liquors. Be it resolved that the clerk be authorized to prepare the By-law and take such other steps as may be necessary to have the By-law properly submitted to the Electors of the Township. Carried.

Moved by Chas. Anderson, seconded by E. R. Sills, that the amounts placed on the Collector's Rolls of 1904 and 1905, charged against the Otter Creek Drainage Works, be remitted and that the Collectors of those years be granted vouchers for the same. Carried.

A notice was received and read from E. U. Brown, re the cleaning out of the Hemp Fly Drain. Fined.

Thomas Thompson, \$3.00 for building culvert in 8th Concession and furnishing stringers for same; W. R. Chamberlain, \$1.25 for stringers and spikes for culverts in road section No. 12; Municipal World for supplies \$1.68; Mrs. Sedore, \$1.00 support of David Sedore; A. Wood, \$9.05 support of Thos. Sovereign; Arthur McKnight, for 20 loads gravel \$1.40. Carried.

The By-Law ratifying the sales and contract of completing the Otter Creek Drainage Works, was read the third and last time and finally passed.

Moved and seconded that the council adjourn to meet on the 15th day of December at the hour of 10 o'clock a. m. Carried.

ABRAM WINTERS,  
Tp. Clerk.

An attempt was made Sunday to destroy St. Peter's Cathedral at Rome by means of a bomb.

Horse Blankets, a complete line of first-class blankets at right prices.

MADOLE & WILSON

## FROM GIRLHOOD TO WOMANHOOD

Mothers Should Watch the Development of Their Daughters—  
Interesting Experiences of Misses Borman and Mills.

Every mother possesses information which is of vital interest to her young daughter.

Too often this is never imparted or is withheld until serious harm has resulted to the growing girl through her ignorance of nature's mysterious and wonderful laws and penalties.

Girls' over-sensitiveness and modesty often puzzle their mothers and baffles physicians, as they so often withhold their confidence from their mothers and conceal the symptoms which ought to be told to their physician at this critical period.

When a girl's thoughts become sluggish, with headache, dizziness or a disposition to sleep, pains in the back or lower limbs, eyes dim, desire for solitude when she is a mystery to herself and friends, her mother should come to her aid, and remember that Lydia E. Pinkham's Vegetable Compound will at this time prepare the system for the coming change, and start this trying period in a young girl's life without pain or irregularities.

Hundreds of letters from young girls and from mothers, expressing their gratitude for what Lydia E. Pinkham's Vegetable Compound has accomplished for them, have been received by the Lydia E. Pinkham Medicine Co., at Lynn, Mass.

Miss Mills has written the two following letters to Mrs. Pinkham, which will be read with interest:

Dear Mrs. Pinkham:— (First letter.)  
"I am but fifteen years of age, am depressed, have dizzy spells, chills, headache and backache, and as I have heard that you can give helpful advice in my condition, I

Lydia E. Pinkham's Vegetable Compound Makes Sick Women Well.

am writing you."—Myrtle Mills, Oquawka, Ill.

Dear Mrs. Pinkham:— (Second letter.)

"It is with the feeling of utmost gratitude that I write to you to tell you what your valuable medicine has done for me. When I wrote you in regard to my condition I had consulted several doctors, but they failed to understand my case and I did not receive any benefit from their treatment. I followed your advice and took Lydia E. Pinkham's Vegetable Compound and am now healthy and well, and all the distressing symptoms which I had at that time have disappeared."—Myrtle Mills, Oquawka, Ill.

Miss Matilda Borman writes Mrs. Pinkham as follows:

Dear Mrs. Pinkham:—  
"Before taking Lydia E. Pinkham's Vegetable Compound my periods were irregular and painful, and I always had such dreadful headaches.

"But since taking the Compound my headaches have entirely left me, my periods are regular and I am getting strong and well. I am telling all my girl friends what Lydia E. Pinkham's Vegetable Compound has done for me."—Matilda Borman, Farmington, Iowa.

If you know of any young girl who is sick and needs motherly advice, ask her to address Mrs. Pinkham at Lynn, Mass., and tell her every detail of her symptoms, and to keep nothing back. She will receive advice absolutely free, from a source that has no rival in the experience of woman's ills, and it will, if followed, put her on the right road to a strong, healthy and happy womanhood.

Lydia E. Pinkham's Vegetable Compound holds the record for the greatest number of cures of female ills of any medicine that the world has ever known. Why don't you try it?

regular instruction and in majority of cases a call of an hour or two from the instructor will be just as effective as to spend a whole day with the maker in manufacturing a lot of cheese. This will give the instructor-inspectors an opportunity to visit many of the farms and to advise with the producers as to the best method of producing the desired quality of milk. In the opinion of the chief instructors the chief essential in producing a first-class article is that the raw material receive proper attention by the producer and milk hauler. Chief Instructors Bar and Publow stated that 90 per cent of the rejections can be traced to inferior raw material."

(2) That every factory and creamery in the Province be charged a uniform fee of \$12.00 to help defray the expense to the Department of furnishing instructor-inspectors. The total appropriation necessary for the work suggested by the joint committee is \$42,700 and upon the basis of the \$12 tax above mentioned, the factories and creameries will contribute \$16,000 towards this expenditure. It was at first thought that a sliding scale would be more equitable but after discussing the question from all sides it was decided to recommend a uniform fee, chiefly for the reason that the smaller factories and creameries are usually in need of a greater amount of instruction than the larger factories and really demand as much or more time than the larger concerns.

(3) That the instructor-inspectors be required to test milk and cream for adulteration or tampering but only in these cases in which application is made and the maker or some other responsible person furnishes the Department or one of the Chief Instructors with evidence that adulteration or tampering has been practised. In some sections the time of the instructor has been almost entirely taken up with the work of testing and it is considered by the representative of the Associations and the Department that the persons identified with the factory should be qualified to make preliminary tests and investigations sufficient to furnish evidence that tempering or adulteration has taken place, before the services of the inspector be asked for.

(4) It is also recommended that any owner or manager of, or assistant in a cheese or butter manufactory who shall knowingly receive or make into cheese or butter any milk or cream that is tainted, grassy, over-ripe, or delivered in rusty or unclean cans or utensils, or in which a preservative of any description has been used, or which has been drawn from cows suffering from lamp-jaw or other infectious disease, shall be liable to a fine. We now have a provision under which the producer can be prosecuted, provided he sell or supply to a cheese or butter manufactory any milk that is tainted or badly soured, and it is thought to be distinctly in the interests of the industry to have a provision by which a maker or proprietor can be dealt with provided he accepts any such milk to be manufactured into a food product for general use. This will have the effect of practically prohibiting a maker from accepting milk of inferior quality which has been refused at a neighboring factory.

It must be remembered that the above are recommendations made by the joint committee to the Department, and the same are being published at this time in order that the comments of the dairymen generally may be secured before definite action is taken.

Wind Spasms and Sick Headache.

BILEANS A CERTAIN CURE

It is not the food you swallow which does you good. It is the food you digest. When the digestive apparatus deranged, only part of your food is digested, the rest simply decomposes. This causes gas which inflates the stomach, causing belching, pain and sometimes (by pressing upon the heart) palpitation. The foul gas so generated taints the blood with poisons and is carried to the brain. Headache, nausea, dizziness, and sometimes blurred vision result.

Now Bileans correct all these evils. They stimulate the gastric flow, and the stomach is thus enabled to digest all the food taken. They gently open the bowels, so that accumulated impurities are expelled. They purify the blood, clearing it of poisons, etc.

Mr. H. S. Sharkey, Petrolia, (Ont.), says:—I suffered severely from sick headache and dizziness, and had a constant mist before my eyes. A friend advised me to try Bileans, and a short course made me feel like a new being. I shall always keep Bileans handy, for they are a splendid household medicine."

Mr. B. Haines, of Shortreed, B. C., says:—Bileans cured my wife of sick headache when other remedies had failed." Bileans are purely vegetable, and entirely superior to other medicines containing mercury, bismuth and mineral poisons. They also cure liver and kidney troubles, constipation, piles, anaemia, debility, rheumatism, female ailments and irregularities, blood impurities. They tone up the system and enable it to throw off chills, etc. All druggists sell at 50c a box, or post paid from Bilean Co. Toronto, for price. 6 boxes for \$2.50.

Vapo-Cresolene

Established 1879

Whooping Cough, Croup, Bronchitis  
Cough, Grip, Asthma, Diphtheria

Cresolene is a boon to Asthmatics

Does it not seem more effective to breathe in a remedy to cure disease of the breathing organs than to take the remedy into the stomach?

It cures, because the air rendered strongly antiseptic is carried over the diseased surface with every breath, giving prolonged and constant treatment. It is invaluable to mothers with small children.

Those of a consumptive tendency find immediate relief from a cough or influenza condition of the throat.

# DARE HE?

## OR, A SAD LIFE STORY

### CHAPTER VI.—(Continued).

"But it would not be fair; it would be asking you to give up too much."

The meek abnegation of her rather worn voice brings his remorse uppermost again on the revolving wheel of his feelings.

"Is not it my turn to give up something?" he asks, tenderly; "and, besides, it is time for me to settle! I am—I am tired of wandering!"

As this atrocious lie passes his lips, he catches his breath. Tired of the Sierras! Tired of the bivouacs among the dazzling snow! Tired of the august silence of the everlasting hills! Heaven forgive him for saying so! Perhaps there is no great air of veracity in his assertion, for she looks at him distrustfully; so distrustfully that he reshapes his phrase. "At least if I am not I ought to be!"

But still she gazes at him with a wistful and doubting intendment.

"If I could only believe that that was true!"

"It is true," replies he, evading her look; "at least true enough for all working purposes; we all know that life is a series of compromises, a balancing of gain and loss. I shall lose something, I do not deny that, but I gain more, I gain you!"

"That is such a mighty gain, is not it?" she says with a melancholy smile, as that intuition of the truth which sometimes comes to unloved or tepidly loved women flashes upon her.

"A matter of taste—a mere matter of taste!" rejoins he, hurriedly; aware of the unreal ring in his own words, and trying, with all his might, to feel as well as speak light-heartedly.

She shakes her head in a way which tells him how poorly he has succeeded. In a desperate, if not very well-judged, attempt to convince her of his sincerity, his next speech is uttered.

"Why should not we be married at once? to-morrow? the day after to-morrow? at the Consulate—of course there is a Consulate—or the English Church, I suppose there are half-a-dozen English churches. Why not? We have nothing to wait for, and we are both of age!"

He has had no unkindly intention in the last words, but the moment that these are out of his mouth, a glance at Amelia's unblooming face and unyouthful figure tell him that they were not happily chosen. At the first instant that the suggestion of an immediate marriage reaches the hearer's brain, it sends a dart of joy over her features. To be married at once! To put an end forever to the interminable waiting, to enter at last—at last upon the possession of the so-long deferred Canaan. But in a second that first bright flash is chased away and gives place to a look of almost humiliation.

"You must be making fun of me, to suggest such a thing!" she says in a wounded voice; "you know how wildly impossible it would be that I should leave them all—my father, Sybilla, without any preparation."

"Without any preparation!" replies Jim, raising his eyebrows. "Have not you been preparing them for the last eight years?"

He feels a vague unjust irritation with her for opposing his proposition, though deep down in his heart he knows that he would have felt a much greater annoyance had she eagerly closed with it,

and heavier sigh) "you have been more pleasantly employed."

"Amelia did hint at some disaster," replies Jim, struggling to conceal the rather grim smile which is curving his mouth, a feat the more difficult since he has no moustache to aid him; "but I have been waiting to hear all the details from yourself."

"I know that you are apt to think I fancy things," says Cecilia, sitting down on a third hard chair, "but here could be no fancy in this case; I am sure I was as much engaged as any girl ever was. I had chosen the drawing-room paper and bought the dining-room grate!"

"That is further than we ever got, is not it, Amelia?" says Jim, breaking, at the relation of this prosaic fact, into the laugh he has been with difficulty swallowing; "but, Cis, if I were you, I should keep the grate; one does not know how soon its services may be required again!"

"It is all very well for you to joke," returns Cecilia, with an offended air; "it may be play to you, but it is—"

"Not death, not quite death to you!" interrupts Burgoyne, glancing with an expressive smile at her buxom outline. "I think you will live to fight another day, will not you? But I really am extremely sorry; tell me all about it."

"He was perfectly right when we left England," says Cecilia, mollified at once, and apparently relieved by the invitation to unbosom herself of her woes; "nobody could have been more so; he came to see us off at Folkestone, and the tears were in his eyes; they were really, it was not my imagination, was it, Amelia? And at first he wrote all right, and said all the usual things; but then his letters gradually grew fewer and fewer, and after I had written and telegraphed a great many times, I do not know how many times I did telegraph to ask whether he was ill, and you know how expensive foreign telegrams are, he sent me a few lines, oh, such cruel lines, were not they, Amelia? to say, that on reflection, he feared that the feeling he had for me was not such as to justify his entering on so sacred an engagement as marriage with me; but he ought to have thought of that before, ought not he?"

"Undoubtedly!"

"I will never engage myself to a clergyman again," says Cecilia, pensively.

Burgoyne's thoughts have strayed at the mention of the cloth of his sister-in-law elect's truant admirer, to that member of the same profession who has lately robbed him of his heritage, and he replies with a good deal of feeling:

"They do play one dirty turn now and then, do not they? Yes, Cis, stick to laymen for the future!"

Cecilia receives this counsel with a melancholy sigh, fixing her large eyes on the carpet, but presently resumes the conversation in a livelier key.

"Let us talk about something pleasanter," she says. "Had you a good journey? Do you like your travelling companion? Why did not you bring him with you? Is he nice?"

"At all events, he is not a clergyman," replies Jim, with a rather malicious smile; "but, no, my dear, do not let your thoughts turn in that direction! You must look at him as poor women look at diamonds!"

not repeat the statement of this fact too often to himself and others.

"And I think it would be only civil," continues Cecilia, persistently, "in fact, I do not see how you can avoid it, if you invited your friend to join us."

But Jim escapes without having committed himself to this promise, and wanders about the town in the lovely, lowering light; finds himself on the Lung Arno, strolling along with the leisurely loiterers, among whom, for every two soft Tuscan voices, there is a loud metallic Anglo-Saxon one. He watches the carriages rolling back from their drive on the Cascine; the river falling over the weir; the river yellow as Tiber yesterday, and to-day shot with blue and green and silver, as it tumbles with a pleasant noise. The houses on either side of the Arno, the domes and roofs are all clothed in a strange serenity of yellow light; a golden air so transparent and fine and crystal clear; so free from the soft blur of mist—lovely, too—through which we see objects in our wet green home, that Jim feels as if he could stretch out his hand and touch the hill that backs gold towers and bridges, and see whether it really is made out of one whole amethyst, as it looks. The beauty of the world has always been very much to Burgoyne, though hitherto it has been chiefly in the austerity of her high and desert places that he has bowed the knee before the Universal Mother. This little gold evening city, sunset clad in the colors of the New Jerusalem, lifting her heavenly campanile to as heavenly a sky, is to him a new and wonderful thing. Her loveliness sinks into his soul, and with it a companion sadness as deep. From henceforth the sight of earth's fair shows will be, for the most part, forbidden him. He has always loved to look and adore in silence and alone; henceforth he will never have the right to be alone; henceforth he will never have the right to go anywhere without his wife. Strange and terrible word to which he tries in vain to accustom his mental ears; and, thanks to the narrowness of their means, neither of them will be able to stir from the strait precincts of their pinched home.

He comes back to his hotel, through the piazza of the Duomo. All the infinite richness of cupola and arch, high up, are still wrapped in the fiery rose cloak of sunset, while below the body of the great church with all its marbles and traceries, and carved wonders, is clad in the sobriety of twilight. On reaching the Minerva, he finds that Byng has not yet returned, or rather that he has been in and gone out again. He waits dinner half-an-hour for him, and then dines without him; dines in solitude, since it is not till his cup of coffee is before him, and his cigarette between his lips, that his young friend appears. It is evidently no unpleasant errand that has detained him, for he arrives beaming, and too excited even to perceive the menu which a waiter offers him.

"They have arrived!" he cries. Oddly enough it never occurs to Burgoyne to inquire who "they" may be; it seems as much a matter-of-course to him as to the handsome pink and white boy before him, that the pronoun must relate to Elizabeth le Marchant and her mother.

His only answer, however, is an "Oh!" whose tone is rather more eagerly interested than he could have wished.

"I thought that they could not stay more than another day in Genoa," continues Byng, at length becoming aware of the menu at his elbow; but only to wave it impatiently away. So I thought I would just run down to the station to meet the evening train, the one we came by last night; however, it must have been more punctual than yesterday, for, before I reached the station, I met them; I mean they passed me in a flacre. I only caught a glimpse of her face, but I saw her hand; it was lying on the carriage-door like a snow-flake."

"Like my grandmother!" cries Burgoyne in a rage, for which he cannot quite account to himself, at this ingenious and novel simile.

Byng laughs; the laugh of a thoroughly sweet-natured person, who, in addition

with them—make their house a second home, in fact.

And meanwhile Jim is keenly, and for some reason sorely, conscious of the fact that, during the hours in which he is stooping his weary head over catalogues of fenders and fireirons, carving knives and fish slices, blankets and ticking, Byng is searching Florence through her length and breadth for their two countrywomen. It is not indeed necessary to credit his friend with any special quest to account for his wanderings through the "adorable little city," as Henry James most truly calls it, since he is a young man of a wide and alert curiosity, with a large appetite for pleasure both intellectual and the reverse. Jim, whose acquaintance with him has chiefly been with his rowdy undergraduate side, bear-fighting, and proctor-defying, is astonished at his almost tremulous appreciation of the Ghirlandajos, the Lorenzo di Credis, the Giotto's, that, in a hundred chapels, from a hundred walls, shine down in their mixed glory of naive piety and blinding color upon him.

One day the elder man is sifting in his bedroom with a despatch-box and a sheet of paper before him. He is embarked upon a weary calculation as to what his guns will fetch. He has made up his mind to sell them. Of what further use can they be to him? He will not be allowed to shoot at the Bayswater omnibuses, which will be the only game henceforth within his reach. While he is thus employed upon an occupation akin to, and about as cheerful as that of Rawdon Crawley before Waterloo, Byng enters.

(To be continued).

### EACH MEAL AN AGONY.

Dr. Williams' Pink Pills Cure Obstinate Indigestion After Other Medicines Fail.

"When I was first troubled with indigestion I did not bother with it; I thought it would pass away naturally. But instead of doing so it developed into a painful chronic affection, which in spite of all I did grew worse and worse until I had abandoned all hopes of ever getting relief." These words of Mrs. Chas. McKay, of Norwood, N. S., should serve as a warning to all who suffer distress after meals, with palpitation, drowsiness and loss of appetite—early warning of a more serious trouble to follow.

"I used to rise in the morning," said Mrs. McKay, "feeling no better for a night's rest. I rapidly lost flesh and after even the most frugal meal I always suffered severe pains in my stomach. I cut my meals down to a few mouthfuls, but even then every morsel of food caused agony, my digestion was so weak. Some days I could scarcely drag myself about the house, and I was never free from sharp

you been preparing them for the last eight years?"

He feels a vague unjust irritation with her for opposing his proposition, though deep down in his heart he knows that he would have felt a much greater annoyance had she eagerly closed with it. As she does not answer a question, which the moment that it is uttered he feels to have been rather brutal, he goes on, against his will, in the same sarcastic key.

"I am afraid that you will have to leave them all some day; I am afraid that our Bayswater mansion—by-the-by, I am sure it will, not be a mansion, for I am sure it will not have a back-door—will not be likely to contain all. Your father, Sybilla—Sybilla and her physic bottles take up a good deal of room, do they not?"

It is for Amelie for Amelie that she is too preoccupied by the thought of her own next speech to take in the full acerbity of the last remark.

"If you would consent to wait till we get home—father does not mean to stay in Italy beyond the end of next month—we might be married in June, that" (with a pink flush of happiness) "would not be so long to wait."

In a second a sum of the simplest description executes itself in Burgoyne's head. It is now the second week of April; they are to be married in June, he has then eight weeks left. It shocks himself to find that this is the way in which he puts it. All the over action that he permits himself, however, is to say with a shrug—

"As you will, then, as you will," adding, since he feels that there is something discourteous even to unchivalry in so bald an acquiescence in his prospect of bliss: "Of course, dear, the sooner I get you the better for me!"

No lover could have been overheard giving utterance to a more proper or suitable sentiment; so that it is lucky that this is just the moment that Cecilia chooses for entering.

"Do not be afraid," she says, with a laugh. "I will not stay a minute, but I just wanted to say 'How do you do? How well you are looking! and how young!' with an involuntary glance of comparison from him to her sister; a glance, of which they are both rather painfully conscious. "Ah!" (sighing) "with all your Rocky Mountain experiences, it is evident that you have been having an easier time than we have!"

"Are you alluding to Sybilla?" asks Jim, gravely. "I have no doubt, from what I know of her powers in that line, that she has been extremely trying."

"Yes, partly," replies the girl, doubtfully; "but I have had troubles of my own, too. I suppose that Amelie has told you, or probably" with a second

with you? she is miser!"

"At all events, he is not a clergyman," replies Jim, with a rather malicious smile; "but, no, my dear, do not let your thoughts turn in that direction! You must look at him as poor women look at diamonds!"

"I am sure I do not know what you mean!" replies Cecilia, reddening. "I have not the slightest wish to look at him! I am not in spirits to 'look,' as you call it, at any one!"

A moment later, she adds, with a suspicion of malice in her tone:

"We are certainly an unlucky family in our loves! I heartlessly thrown over, and Amelie engaged for eight years!"

Burgoyne smiles. "Amelie is not going to be engaged any longer," he says, putting his arm round his betrothed. "Amelie is going to be married at once!"

#### CHAPTER VII.

It would seem natural that, after so long a separation, Burgoyne should dine and spend the evening with his betrothed; but such is not the case. For this, however, he is not to blame; he is quite prepared to stay with her until she turns him out. Had he not better school himself to domestic habits, since he is so soon to assume them for life? But in consideration for Sybilla he is dismissed undined. It is not that she ever shares the family dinner at their table a part in the same manner, but the thought of their entertaining a guest with a conviviality far greater in her imagination than would be the case in reality, while she herself lies lonely on her couch of suffering, preys upon her spirits so much that her family have to abandon the idea. So, towards sunset, Jim is dismissed. He has no opportunity for any particular endearments to his lady-love, as the whole family are in the room, and it is Cecilia, not Amelie, who volunteers to walk across the hotel courtyard with him, for the advantage of a last word. What the last word is he is not slow to learn.

"You will take us some excursions, will you not?" she says, with a persuasive air, pulling her arm through his. "Father is so unenterprising, we have really seen scarcely anything; but you will take us some excursions now, will you not?"

"Are you sure that your spirits are equal to them?" inquires Jim unkindly.

"I do not know about that. I am sure," replies she, growing pink at his tone; "but one must make an exertion some time, and I think a little distraction would do me good, and so I am sure it would to poor Amelie!"

"Poor Amelie will shortly have the distraction of being married," rejoins the young man, who feels as if he could

lying on the carriage seat and "snow-flake."

"Like my grandmother!" cries Burgoyne in a rage, for which he cannot quite account to himself, at this ingenious and novel simile.

Byng laughs; the laugh of a thoroughly sweet-natured person, who, in addition has some special cause for good-humor.

"I do not know what color your grandmother was; but she must have been very unlike most people if she was like a snow-flake."

Jim's cross mouth unbends into a reluctant smile. It is not the first time that he has discovered how useless, and also impossible it is to be out of humor with Byng.

"I had a good mind to tell my fiancé man to follow them," continued Byng, in an excited voice; "but, in the first place, I did not know how to say it—really, Jim, we must get up a little of the lingo—and, in the second place, I thought it would be rather too much in the private detective line."

"I think it would have been extremely ungentlemanlike!" rejoins Jim, severely.

Byng reddens; but still without losing his temper.

"That is coming it rather strong. Is not it? but, anyhow, I did not do it." And then, by tacit agreement, they both drop the subject.

During the next three or four days it is not named between them, nor, indeed, do they see much of each other. Burgoyne spends the greater part of his days with Amelie. Whatever cause for the accusation he may have given during the previous eight years, nobody can say that he neglects her now. He passes long hours at her side, on the same hard chair that had supported him on their first interview, in the little dismal dining-room; going into calculations of house-rent and taxes; drawing up lists of necessary furniture. He even makes a bid for Cecilia's drawing-room grate; but that young lady whose forecasting mind can look beyond present grief to future sunshine refuses to part with it. The lovers are not always, however, studying Maple's and Oetzmann's lists. Sometimes Jim varies the diversion by taking his future wife to picture galleries and churches, to the Uffizi, the Accademia, San Lorenzo. It is doubtful whether Amelie enjoys these excursions as much as she does the selection of bedsteads and saucepans, her pleasure being in some degree marred by a feverish anxiety to say what she thinks her lover expects of her as they stand before each immortal canvas. In her heart she thinks the great statues in the Medici Chapel frightful, a heresy in which she is kept in countenance by no less a light than George Eliot, who in one of her letters dares to say of them, "they remained to us as affected and exaggerated in the original, as in copies and casts." To Amelie many of the frescoes appear lamentably washed out, nor are her efforts to hide these sentiments attended with any conspicuous success, since nothing is more hopeless than for one utterly destitute of a feeling for works of art to feign it, without having the imposture at once detected.

Burgoyne's mind during these expeditions is a battle-ground for pity and rage; pity at the pathos of his poor love's endeavors; rage at their glaring failure. Cecilia sometimes accompanies the lovers, but his does not make matters much better. Cecilia devotes but a very cursory notice to the pictures; her attention being almost wholly centred on the visitors, and on finding resemblances for them among the inhabitants of her own village at home, for the accuracy of which she appeals at every moment to her sister. Every day she asks Burgoyne to fulfill his promise—a promise which he as punctually assures her that he never made—to introduce his friend to her. He has a strangely strong reluctance to comply with this simple request, which yet, he knows, will have to be complied with some day. When Amelie is his wife, Byng will have to know Cecilia, for she will probably spend a great deal of her time

ways suffered severe pains in my stomach. I cut my meals down to a few mouthfuls, but even then every morsel of food caused agony, my digestion was so weak. Some days I could scarcely drag myself about the house, and I was never free from sharp piercing pains in the back and chest. I grew so bad that I had to limit my diet to milk and soda water, and even this caused severe suffering. In vain I sought relief—all medicines I took seemed useless. But in the darkest hour of my suffering help came. While reading a newspaper I came across a cure that was quite similar to my own case, wrought by the use of Dr. Williams' Pink Pills. I thought if another person had been cured by these pills of such suffering as I was experiencing, surely there was hope for me, and I at once sent to the druggist for a supply of these pills. The first indication that the pills were helping me was the disappearance of the feeling of oppression. Then I began to take solid food with but little feeling of distress. I still continued taking the pills with an improvement every day, until I could digest all kinds of food without the least trouble or distress. I am in splendid health to-day and all the credit is due to Dr. Williams' Pink Pills."

Dr. Williams' Pink Pills go right to the root of indigestion and other troubles by making rich, red blood which tones and strengthens every organ of the body. That is why they cure anaemia, with all the headaches and backaches and sideaches, rheumatism and neuralgia and the special ailments of growing girls and women of all ages. Sold by all medicine dealers or by mail at 50 cents a box or six boxes for \$2.50 by writing The Dr. Williams' Medicine Co., Brockville, Ont.

Visiting Uncle—"There is no beast that has a roar so terrifying as a lion." Small Niece—"Did you ever hear papa when dinner wasn't ready in time?"

WELCOME AS SUNSHINE after storm is the relief when an obstinate, pitiless cough has been driven away by Allen's Lung Balm. No opium in it. The good effect lasts.

A young stick of bamboo stretching its head above the ground looks much like a stalk of asparagus. In Japan these young shoots are as much sought for food as asparagus is here.

A Small Pill, but Powerful.—They that judge of the powers of a pill by its size, would consider Parlee's Vegetable Pills to be lacking. It is a little wonder among pills. What it lacks in size it makes up in potency. The remedies which it carries are put up in these small doses, because they are so powerful that only small doses are required. The full strength of the extracts is secured in this form and do their work thoroughly.

The most curious thing about the butterfly is the size of the case from which the insect proceeds compared with the size of the insect's body. The case is rarely more than one inch long, and a quarter of an inch in thickness; the butterfly covers a surface of nearly four inches square.

**Rapid changes of temperature are hard on the toughest constitution.**

The conductor passing from the heated inside of a trolley car to the icy temperature of the platform—the canvasser spending an hour or so in a heated building and then walking against a biting wind—know the difficulty of avoiding cold.

**Scott's Emulsion** strengthens the body so that it can better withstand the danger of cold from changes of temperature.

**It will help you to avoid taking cold.**

ALL DRUGGISTS; 50C. AND \$1.00.

Before you get Pen-Angle garments all the shrink is taken out.

Pen-Angle Underwear keeps you comfy as well as warm, because the short fibres that make some underwear itch are taken out of Pen-Angle wool.

In a variety of fabrics, styles and prices, in all sizes for women, men and children, and guaranteed by your own dealer.

**\$5.00 Brooch**

Does it strike you as "almost too good to be true"? It is only one instance of the price-attractiveness of Diamond Hall's stock—backed by its half-century reputation for quality.

This Brooch (Catalogue No. 31683) consists of a 1 3/4 inch crescent of solid 14k. gold, supporting a lily-of-valley spray set with 16 pearls.

It is sent post free in dainty satin lined case.

We send upon request free of charge our large illustrated catalogue.

Toronto, Ont.

#### SAW HER FIRST.

Visitor—"Willie, tell your mamma that I have come to call on her."

Willie—"Mamma's not at home."

Visitor (shocked)—"Why, Willie, I'm sure I saw her looking from the parlor window as I came up the street."

Willie (stoutly)—"No, you didn't, neither. That was Sis peeping through the parlor blinds. Mum saw you coming from upstairs."

#### ENTHUSIASTIC MOTHERS.

When mothers become enthusiastic over a medicine for little ones, it is safe to say that it has high merit. Every mother who has used Baby's Own Tablets speaks strongly in praise of them, and tells every other mother how much good they have done her children. Mrs. Alfred Marcouse, St. Charles, Que., says: "I strongly advise every mother to keep Baby's Own Tablets in the house always. I have used them for teething troubles, colic and other ills of childhood and found them the most satisfactory medicine I ever tried." These Tablets are guaranteed to contain no poisonous opiate and no harmful drug. They are equally good for the new born baby or the well grown child, and are a sure cure for all their ills.

## MANIAC IN CONFESSIONAL

EXCITING SCENE AFTER PENITENT WARNS PRIEST.

Woman Lunatic Brandished a Turkish Dagger in Brompton Oratory.

gaged in confession at the Brompton (England) Oratory has averted a terrible crime in that well-known Catholic church.

The exciting scene here described took place a fortnight ago, but the facts have only just come to light.

While kneeling for the confessional the lady observed a woman standing a few yards away, evidently in a most excited state of mind. She was gesticulating wildly, and pointing in the direction of the priest to whom the lady was confessing. Presently the lunatic—for so she proved to be—produced a yataghan, a deadly Turkish dagger, two feet long, with a razor edge, which she brandished in the air.

#### PRESENCE OF MIND.

Without betraying the slightest sign that this extraordinary action had been observed, and in the same low voice in which she was confessing, the lady warned her confessor of his danger.

The priest leapt to his feet, and the maniac at the same time sprang towards him, waving the weapon wildly.

Pursued by the maniac, the priest ran for the door, by which time the situation had been grasped by all those in the Oratory. Help was immediately forthcoming, and after a sharp struggle the would-be murderess was disarmed and secured. She was handed over to the police; by whom she was taken to the work-house infirmary. She is now confined in the county asylum at Colney Hatch.

#### MUCH-ADMIRED WEAPON.

From enquiries made by the London Daily Mirror it appears that the maniac was a cook in the employ of a well-known lady.

The yataghan, which was of particularly fine workmanship, had been bought at Mrs. Brown-Potter's sale last summer, and until stolen by the cook had lain upon a table in her mistress' drawing-room. The weapon had always been greatly admired, and on several occasions the cook herself had expressed great admiration for it.

One of the resident priests at the Oratory spoke of the incident in a perfectly calm way to the Daily Mirror.

"We often have unpleasant incidents in the church," he said. "I only heard that some poor mad-woman took out a dagger and began flourishing it about in a dangerous way. I have never made further enquiries."

**Faulty Kidneys.**—Have you backache? Do you feel drowsy? Do your limbs feel heavy? Have you frequent headaches? Have you failing vision? Have you dizzy feeling? Are you depressed? Is your skin dry? Have you a tired feeling? Any of these signs prove kidney disease. Experience has proved that South American Kidney Cure never fails.—6

"I used ter think," remarked Meandering Mike, "that I wasn't popular with dumb animals." "Are ye?" inquired Plodding Pete. "Tremendously. I met three dogs to-day, and every one of them thought I was nice enough to eat."

They are Carefully Prepared.—Pills which dissipate themselves in the stomach cannot be expected to have much effect upon the intestines, and to overcome costiveness the medicine administered must influence the action of these canals. Parmelee's Vegetable Pills are so made, under the supervision of experts, that the substance in them intended to operate on the intestines is retarded in action until they pass through the stomach to the intestines.

Little Sister: "Any new studies this term?" Little Brother: "One—elocution." "What's that?" "It's learning how to read a thing so it will sound as if you was at the other end of a drain-pipe."

The efficiency of Bickle's Anti-Consumptive Syrup in curing coughs and colds and arresting inflammation of the lungs, can be established by hundreds of testimonials from all sorts and conditions of men. It is a standard remedy in these ailments and all affections of the throat and lungs. It is highly recommended by medicine vendors, because they know and appreciate its value as a curative. Try it.

#### THEY MEAN IT.

No one should suffer a moment longer with Piles, for Dr. Leonhardt's Hem-Roid will cure any case.

No matter what kind you have, Blind, Bleeding, Internal, External, Itching or Suppurating, Dr. Leonhardt's Hem-Roid will cure you.

This statement is supported by a thousand testimonials from those who have been permanently cured.

If you are not cured you get your money back. \$1.00. All dealers, or The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

"Hair is getting pretty thin, sir." "Think so?" "Yes." "But it was much thinner about thirty years ago." "But you do not look much older than that." "I was thirty yesterday."

A Pleasant Duty.—"When I know anything worthy of recommendation, I consider it my duty to tell it," says Rev. Jas. Murdoch, of Hamburg, Pa. "Dr. Agnew's Catarrhal Powder has cured me of Catarrh of five years standing. It is certainly magical in its effect. The first application benefited me in five minutes." 50 cents.—

"How in the world, Mrs. Wisely, do you manage to have all of your three daughters in so early when they spend the evening out?" "The last one home has to get breakfast next morning."

There are a number of varieties of corns. Holloway's Corn Cure will remove any of them. Call on your druggist and get a bottle at once.

Judge—"And your wife aimed at and struck your head with a cup?" Witness—"Yes, sir." Judge—"Well, all I have to say is that you ought to be very proud of her."

Eat what you like.—Give the digestive organs some work to do. These functions need exercise as much as any part of the human anatomy, but if they're delicate, give them the aid that Dr. Von Stan's Pineapple Tablets afford and you can eat anything that's wholesome and palatable—60 in a box, 35 cents.—8

...ministered must influence the action of these canals. Parmelee's Vegetable Pills are so made, under the supervision of experts, that the substance in them intended to operate on the intestines is retarded in action until they pass through the stomach to the bowels.

The young physician looked pleased and confident. "Well," he began, "I must say that with my first patient I have succeeded remarkably well." "Of what did you relieve him?" his friend asked. "Five dollars," said the younger man.

Itching, Burning, Creeping, Crawling Skin Diseases relieved in a few minutes by Agnew's Ointment. Dr. Agnew's Ointment relieves instantly, and cures Tetters, Salt Rheum, Scald Head, Eczema, Ulcers, Blisters, and all Eruptions of the Skin. It is soothing and quieting and acts like magic in all Baby Humors, Irritation of the Scalp or Rash during teething time. 35 cents a box.—7

"And is this man come unto this court with unblushing footsteps, with the cloak of hypocrisy in his mouth, and to draw fifteen bullocks out of my client's pocket with impunity?" asked a barrister. There was no reply.

AN UGLY FAMILY of skin diseases is the one generally described by the word Eczema. In all its forms it resists ordinary treatment, but is completely cured by Weaver's Cerate used in connection with Weaver's Syrup.

Miss Sharpe—"I've paid this bill once." Baker—"Indeed, ma'am, I'm very sorry that I didn't recollect it." Miss Sharpe—"I dare say that you are sorry that you didn't recollect it, but I'll take care of that."

It Keeps the Muscles Pliant.—Men given to muscular sports and exercises and those who suffer muscular pains from bicycle riding will find Dr. Thomas' Electric Oil something worth trying. As a lubricant it will keep the muscles pliable and free from pains which often follow constant use of them, without softening them or impairing their strength. For bruises, sprains and contusions it is without a peer.

Master—"When was Rome built?" Kid—"In the night, sir." Master—"How do you make that out?" Kid—"Well, everybody says Rome wasn't built in a day."

ITCH, Mange, Prairie Scratches and every form of contagious Itch on human or animals cured in 30 minutes by Wolford's Sanitary Lotion. It never fails.

"I hear your firm discharged you." "Yes; but I wouldn't mind that so much if they hadn't added insult to injury." "How?" "They advertised for a boy to fill my place."

## Your Doctor

Can cure your Cough or Cold, no question about that, but why go to all the trouble and inconvenience of looking him up, and then of having his prescription filled, when you can step into any drug store in Canada and obtain a bottle of SHILOH'S CURE for a quarter.

Why pay two to five dollars when a twenty-five cent bottle of SHILOH will cure you as quickly?

Why not do as hundreds of thousands of Canadians have done for the past thirty-four years: let SHILOH be your doctor whenever a Cough or Cold appears.

SHILOH will cure you, and all druggists back up this statement with a positive guarantee.

The next time you have a Cough or Cold cure it with

## HEART ACTION ON SHIPBOARD.

Surgeons Find That Vibration Bothers Their Diagnoses.

"All hearts sound alike on these modern ships," said the surgeon of a transatlantic liner. "Although the hull of the average modern steamer is bigger and supposedly less subject to the violence of the sea, the machinery to drive the enlarged hulls has been increased in size. With the increase in the size of the engines there has followed greater vibration."

"It is this vibration which makes it impossible for us to read truly the action of the average human heart. I have tried repeatedly by all manner of means to overcome the influence of the vibration on the heart, but I find that by even swinging a patient in a hammock, where the shaking up is not greatly felt, the result of the heart reading is far from satisfactory."

"The first day at sea in the ship on her maiden voyage I had occasion to treat an Englishman who was en route

to Canada on business. I was startled to hear his heart. Yet he had the finest kind of cardiac action, as I ascertained once the ship's machinery stopped. I have since found it to be an invariable rule that the engine's vibration makes it appear as though the heart of the average man was going to stop before I could get the stethoscope away from his breast.

"Vibration does not hurt the heart any. Do not make the mistake of supposing that it does. It just sounds as though the end was positive, and while the patient's heart is beating in regular form the shaking of the ship deceives even the practised ear."

# BOMB IN ST. PETERS, ROME

## Dastardly Attempt to Wreck Great Temple of Catholicism.

A despatch from Rome says: A bomb was exploded in St. Peter's on Sunday. The edifice was crowded, and an indescribable scene of confusion followed. There were no fatalities. As soon as the echoes of the tremendous roar had ceased a canon sought by reassuring words to quiet the people, but in vain. They fled in all directions, and a number of women fainted.

### SCENES OF CONFUSION.

Women and children screamed, and men tried to protect their families in the crush. The church is so large, however, that there was ample room for the crowd to scatter, and no one was injured. No trace of the perpetrator of the deed has been found.

Since Saint Anacletus, who was ordained by Peter himself, erected an oratory in 90 A.D. on the site of the present Basilica to mark the spot where the remains of St. Peter are buried, no such dastardly offence is noted in the annals of the Church.

### MASS JUST CONCLUDED.

Sunday was the anniversary of the dedication of the Basilica to St. Peter, and it was beautifully decorated for the occasion. Holy relics were exposed, and a large number of the faithful attended the services. The last mass had just been concluded when the explosion occurred, and only one canon, who had not quite finished, remained at the altar of St. Petronilla. This altar is at the end of the right aisle, and it was near here that the bomb had been placed. As

the canon turned to bless the communicants there was a tremendous roar, which echoed through lofty arches of the immense dome like a thunder clap. At the same time a dense smoke spread throughout this portion of the Basilica, and a strong odor of gunpowder filled the air. Confusion and panic at once seized the people.

### ONLY THE NOONDAY GUN.

The canon at the altar tried to stem the tide of fear. He shouted out: "Do not be afraid; it is nothing, merely the noonday gun."

His words, however, had little effect; they were refuted by the smoke and the pungent smell of powder, and the people continued their headlong flight. Chairs were overthrown, making the confusion more serious. Men and women fled, stumbling in all directions, screams of children and cries of anguish were heard on all sides, and for a few moments it seemed as if nothing could obviate a grave disaster. The vast size of the church, however, gave room for the crowd to scatter, and at the end of a few moments the people were surging toward the doors, excited and nervous, but orderly.

### NO ONE INJURED.

As soon as the smoke cleared away a hasty examination showed that nobody had been hurt in the crush, and, furthermore, that no one had been wounded by the explosion. Calm was gradually restored, and people returned to view the extent of the damage.

Thou and have been rendered homeless by floods at Seattle.

The American Federation of Labor approves the idea of entering the political arena.

The United States Government has under taken the dissolution of the Standard Oil trust.

Overcome by grief at the sight of the corpse, a brother of Frank F. Quinn, whose body arrived in Jersey City for burial on Wednesday, fell dead as soon as the coffin was opened.

J. G. Holloway, fireman on a Louisville and Nashville freight train, on Tuesday saved a child's life by climbing to the cowcatcher of the engine and lifting the child from the track in front of the rushing train.

## IMMENSE DAMAGE

## The State of Washington Suffered

A despatch from Tacoma, Wash., says: A flood area of 300 miles in Northwestern Washington was the result on Thursday of heavy rains and melting snow, which for 48 hours had rushed from the slopes of the Cascade Mountains, causing nearly all the streams in the north-west to spread over low lands. Seattle and scores of towns have been for 36 hours cut off from outside communication. Bridges have been swept away, railroad tracks washed out, telegraph and telephone wires torn down. As far as can be learned half a dozen lives have been lost.

When darkness fell on Wednesday night watchers from the highlands saw nothing except an expanse of water, with here and there the tops of submerged houses, on some of which water-bound persons could be seen signalling for help. Some attempted rescues were made, but the mad rush of swollen waters, carrying trees, snags, lumber,

### FORTY-TWO PEOPLE DROWNED.

Crowded Passenger Ship Rammed Near Seattle, Washington.

A despatch from Seattle, Wash., says: The steamer Dix, Capt. P. Larmon, bound from Seattle to Port Blakeley, with passengers, sank two miles north of Alki Point, shortly after 7 o'clock on Sunday night, after having collided with the steamship Jeanie, Capt. P. H. Mason, of the Alaska Coast Company. Forty-three passengers and members of the crew of the Dix are missing and 36 were saved. The Dix is a total wreck. The Jeanie was not injured in the least. The master of the Dix was saved. The collision occurred while the Sound was almost as smooth as a mill pond, and after the boats had been steaming within sight of each other for a quarter of an hour.

The Jeanie was backing when she collided with the Dix, and the impact was very slight. The Dix was struck abaft of amidships on the starboard side. She listed heavily to port for a brief period, righted herself, then sank stern first. There was hardly time to launch life rafts or boats before she was almost entirely submerged. Passengers jumped from the decks into the water; women screamed and officers and men called orders that could hardly be heard above the din. The passengers from the Dix who could swim made their way to the sides of the Jeanie and were dragged aboard. The Jeanie was not moved until after all who had reached her had been hauled aboard. Then she cruised about picking up several who managed to stay above water. It was after 10 o'clock before the Jeanie left the scene of the catastrophe and steamed to Virginia Street dock, with her 36 survivors.

### NIAGARA POWER IN TORONTO.

Flashd Over Eighty Miles Between the Two Places.

A despatch from Toronto says: Toronto has at last electric power from Niagara Falls. It was flashed at 5.28 on Monday evening over the wires of the Toronto & Niagara Power Company, and the officers of the company had the satisfaction of witnessing the achievement of their ambition and the spacious transforming station on Davenport road illuminated with the electric current generated by the powerful turbines of the

## THE WORLD'S MARKETS

### REPORTS FROM THE LEADING TRADE CENTRES.

#### Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, Nov. 20. — Flour — Ontario wheat 90 per cent. patents are quoted at \$2.70 in buyers' sacks outside for export. Manitoba first patents, \$3.50; second patents, \$3; and strong bakers', \$3.90, Toronto.

Corn—No. 2 old American yellow nominal at 53½¢, Toronto, and at 54½¢ outside.

Bran—The market is steady at \$16 to \$16.50 in bulk, outside. Shorts are quoted at \$18.50 to \$19 outside.

Wheat—No. 2 white offered at 72¢ outside, and No. 2 red winter at 71½¢ outside, without bids. No. 2 mixed wanted at 70¢ on C.P.R. north without sellers. No. 1 Manitoba hard offered at 81¢ track Point Edward; No. 1 Northern at 79½¢ track, Point Edward, with 79¢ bid, and No. 2 Northern offered at 77¢ track, Point Edward, without bids.

Barley—No. 3 extra offered at 51¢ east, with 49¢ bid.

Peas—No. 2 offered at 84¢ east, with 80¢ bid, and 81¢ was bid either on C.P.R. or G.T.R.

Oats—Five cars of No. 2 white sold at 36¢ on a 6¢ rate to Toronto, and more offered at 26½¢ on a 6¢ rate December delivery, with 36¢ bid; 35½¢ bid for 10 cars outside. No. 2 mixed offered at 35½¢ on a 6¢ rate to Toronto, with 35¢ bid.

Corn—No. 2 American yellow offered at 54¢ Toronto, prompt shipment, and No. 2 Canadian yellow offered at 52¢ track, Toronto, but there were no bids.

Rye—No. 2 offered at 73½¢ east, without bids.

clear bacon, 12½ to 12¾¢; barrels plate beef, \$12 to \$13; half-barrels do, \$6.50 to \$7; barrels heavy mess beef, \$11; half-barrels do, \$6; compound lard, 8 to 9½¢; pure lard, 12½ to 13¢; kettle rendered, 13½ to 14¢; hams, 14 to 15½¢; breakfast bacon, 15 to 16¢; Windsor bacon, 15 to 16½¢; fresh killed abattoir dressed hogs, \$8.50 to \$8.75; alive, \$5.85 to \$6. Eggs—Selects, 24¢; No. 1 canted, 20½ to 21¢. Cheese—Ontario, 12½ to 13¢; Quebec, 12½ to 12¾¢. Butter—Choicest creamery, 24½ to 24¾¢; medium grades, 23½ to 23¾¢.

### UNITED STATES MARKETS.

St. Louis, Nov. 20. — Wheat—Cash, 74½¢; December, 73½¢; May, 77½¢.

Milwaukee, Nov. 20. — Wheat—No. 1 Northern, 78 to 80¢; No. 2 Northern, 75 to 77½¢; May, 79¢ bid. Rye—No. 1, 67½¢. Barley—No. 2, 55½¢; sample, 42 to 50¢. Corn—No. 3 cash, 46½ to 47¢; May, 43½¢ asked.

Duluth, Nov. 20. —Wheat—No. 1 Northern, 79½¢; No. 2 Northern, 78½¢; November, 79½¢; December, 76½¢; May, 79½¢; July, 80½¢.

### CATTLE MARKET.

Toronto, Nov. 20.—Trade at the City Cattle Market this morning was little changed from last week, business in all lines being considered fairly good.

Export Cattle—Choice, \$4.50 to \$4.75; medium, \$4 to \$4.40; cows, \$3.50 to \$4; bulls, firm, at \$3.75 to \$4.

Butcher Cattle—Choice, \$4.25 to \$4.50; medium \$3.75 to \$4; common, \$2.75 to \$3.25; bulls, \$2.75 to \$3.

Steers and Feeders—Choice, \$3.25 to \$3.60; common, \$2.75 to \$3; bulls, \$2 to \$2.25; heavy feeders, \$3.70 to \$3.80; short-keepers, \$3.80 to \$4.

Milch Cows—Choice, \$40 to \$50; common, \$25 to \$35; springers, \$25 to \$40. Calves—Quotations are 3¢ to 6¢ per lb.

Sheep and Lambs—Export ewes, \$4.50 to \$5; backs and culls, \$3 to \$3.50; lambs, \$5 to \$5.90.

Hogs—Choice selects, \$5.65 per cwt. and lights and fats, \$5.40.

bid.  
Corn—No. 2 American yellow offered at 51c Toronto, prompt shipment, and No. 2 Canadian yellow offered at 52c track, Toronto, but there were no bids.  
Rye—No. 2 offered at 73½c east, without bids.

COUNTRY PRODUCE.

Beans—No. 1 Hand-picked are selling at \$1.75 and primes at \$1.60 to \$1.65.  
Honey—Strain'd, quoted at 10 to 12c per lb, and combs at \$2 to \$2.50 per dozen.  
Hops—New, quoted at 18 to 22c.  
Hay—No. 1 timothy scarce, and quoted at \$11 to \$11.25 on truck here; No. 2 quoted at \$8 to \$8.50.  
Straw—\$6 to \$6.50 per ton.  
Potatoes—Ontarios, 55 to 60c per bag on track, and New Brunswick, 65 to 70c per bag.  
Poultry—Turkeys, fresh killed, 13 to 15c; chickens, dressed, 8 to 9c; alive, 6 to 7c per lb. Fowl, alive, 5 to 6c; ducks, dressed, 10c; do, alive, 7 to 8c per lb.

THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 22 to 23c; tubs, 20 to 22c; large rolls, 19 to 20c. Creamery prints sell at 26 to 27c, and solids at 24½ to 25c.  
Eggs—Quotations rule from 22 to 23c per dozen.  
Cheese—Large cheese, 12½ to 14c, and twans, 14½ to 14½c.

HOG PRODUCTS.

Dressed hogs in car lots are unchanged. Bacon, long clear, 11½ to 12c per lb in case lots; mess pork, \$21 to \$21.50; short cut, \$23.  
Hams—Light to medium, 15 to 15½c; do, heavy, 14 to 14½c; rolls, 12c; shoulders, 11 to 11½c; backs, 10½ to 17c; breakfast bacon, 15½ to 16c.  
Lard—Tierces, 12½c; tubs, 12½c; pails, 12½c.

BUSINESS AT MONTREAL.

Montreal, Nov. 20.—Business in Manitoba wheat was dull, cables being out of line. There is no change in local market for oats. Prices are 39 to 39½c for No. 4 in store; 40 to 40½c for No. 3, and 41 to 41½c for No. 2. Buckwheat—56½ to 57c per bushel in store. American corn, No. 2 yellow, 56½ to 57c, and No. 3 mixed, 55½ to 56c in store. Flour—Manitola spring wheat, \$1.60; strong bakers', \$1.10; winter wheat patents, \$4.10 to \$4.25; straight rollers, \$3.75 to \$3.85; do, in bags, \$1.65 to \$1.75; extras, \$1.50 to \$1.60. Feed—Manitoba bran, in bags, \$20; shorts, \$22 per ton; Ontario bran, in bags, \$20 to \$20.50; shorts, \$22.50 to \$23; milled moultrie, \$21 to \$23 per ton, and straight grain, \$28 to \$30. Provisions—Barrels of cut meat, \$22 to \$24; half-barrels, \$11.75 to \$12.50; clear fat backs, \$23.50; long cut heavy mess, \$20.50; half-barrels do, \$10.75; dry salt long

mon, \$20 to \$23; springs, \$20 to \$20. Calves—Quotations are 3c to 6c per lb.  
Sheep and Lambs—Export ewes, \$4.50 to \$5; backs and culls, \$3 to \$3.50; lambs, \$5.5 to \$5.90.  
Hogs—Choice selects, \$5.65 per cwt. and lights and fats, \$5.40.

NEGRO KILLS FIVE MEN.

The Colored Man Was a Dead Shot With Revolver.

A despatch from Asheville, North Carolina, says: Fighting bravely in defence of their lives, Police Captain Page, Patrolman Chas. Blackstock and Wm. Bailey of this city, were shot to death on Tuesday by a negro, who also killed one negro and fatally wounded another. The murderer gave his name as Will Harris of Charlotte, N.C., a desperado for whom a large reward has been standing for some time. Prior to the death of the two officers, a negro restaurant keeper named Ben. Allison, was shot and killed by Harris, without provocation. Another negro named Tom Neil lies mortally wounded, he, too, being shot before the officers took a hand in the melee. Harris, starting out on his tour, fired into two houses. Later he wounded Allison. On Main Street he encountered Tom Neil and fired at him. Police Captain Page and Officers Bailey and Blackstock rushed from police headquarters in pursuit. Captain Page, who met the negro in Main Street received a bullet in the arm. Page called upon Blackstock to fire, but before the officer could do so Blackstock fell dead with a bullet in the chest. Bailey fired twice without hitting and the negro then shot and killed Bailey. The negro escaped.

ANTHRAX IN DURHAM.

Anxiety Among Darlington Farmers Over Outbreak.

A despatch from Bowmanville says: Considerable excitement has been created among farmers of West Darlington, in Durham County, over an outbreak of the deadly disease among cattle known as symptomatic anthrax, or more familiarly known among farmers as blackleg. Two valuable cows belonging to the herd of the Munday Bros., west of this town, have died, and another has suspicious symptoms. Dr. E. H. S. Lowrey, V.S., was called and pronounced the disease anthrax at once. Dr. Robert Young, Dominion Veterinary Inspector, was notified and confirmed Dr. Lowrey's diagnosis and ordered the animals burned to prevent the disease being communicated, and took immediate action to have all the other cattle vaccinated. The disease is new to this locality.

burial on Wednesday, fell dead as soon as the coffin was opened.  
J. G. Holloway, fireman on a Louisville and Nashville freight train, on Tuesday saved a child's life by climbing to the cowcatcher of the engine and lifting the child from the track in front of the rushing train.

The prune growers of California will receive \$2,550,000 more for their crop of 1906 than was obtained by them for the crop of 1905. The total estimated amount due to the prune growers for this year's crop is \$4,050,000, representing 1,000,000 pounds of fruit.

Armed bandits held up the Southern Pacific Overland Limited, westbound, at Carlin, Nevada, on Sunday night, and escaped with the suit cases of passengers and the money sack of Conductor Conn. Railroad men say that the robbers got about \$1,000 in all.

Maggie Malone, eleven years old, was taken to the Girl Industrial School at Delaware, Ohio, yesterday. For months she had been robbing houses and stores, dressed like a boy. She changed clothes after each theft, and so for a time fooled the police.

Because they were first cousins, Miss Mary Kutz, of Drytown, Penn., refused to marry Clarence Ilgenfietz. Tuesday night Ilgenfietz lay in wait for the girl and her grandmother as they were returning home from church. As they passed he shot the girl twice. Ilgenfietz then sent a bullet into his brain.

Soldiers of the Fifth Infantry, colored, recently dismissed by the President as the result of a riotous disturbance, were formally disarmed on Wednesday. Many men, some of them who have been in the service for over twenty years, shed tears when they gave up their guns.

Mrs. Charles Mowry and her three children were burned to death on Wednesday in their home on a farm at Batavia Station, Mich. The husband and father rose early and built two fires in the house. He then went to the barn to do chores, and while there discovered that his house was on fire. He rushed back, but the flames had made such headway that he could not enter the house.

GENERAL.

Count Von Buelow has declared that Germany's policy is to be one of peace. Santos Dumont has prophesied that the aeroplane is to take the place of the bicycle.

Laboratory among the workmen has sealed the fate of Chinese labor in South Africa.

Russia will shortly undertake the development of Siberia.

Terrorists attempted to assassinate General Rheinholt at Moscow because his humanity was winning over the people.

Senator Vidal died at the family residence in Sarnia on Sunday.

Fifteen million dollars are reported to have been offered for the mining rights on the Gillies limit.

It is rumored that President Castro of Venezuela is dead, and that the Government is concealing his decease.

Marie Corelli has warned the British people that the United States have no love for them.

There is a rumor that both the C.P.R. and G.N.W. Telegraph Companies desire to buy the Temiskaming Railway's line.

The steamer Theano was sunk at the entrance to Thunder Bay, and the Winona of Hamilton ran on a shoal at Manitoulin Island and had to be beached.

Hon. Rodolphe Lemieux is credited with the statement in Montreal that the Georgian Bay Ship Canal, from Georgian Bay to Montreal, is a thing of the near future.

ALL THE CONNAUGHTS COMING.

Duke Will be Accompanied by Duchess and Princess Patricia.

A despatch from London says: The Duchess of Connaught and Princess Patricia will accompany the Duke on his visit to Canada. The Duke of Connaught goes as Inspector-General of the forces, and not as a Prince of the blood royal.

Toronto & Niagara Power Company, and the officers of the company had the satisfaction of witnessing the achievement of their ambition and the spacious transforming station on Davenport road illuminated with the electric current generated by the powerful turbines of the Electrical Development Co.'s works at Niagara Falls.

The scene was most impressive, and as the moment for making the test approached the excitement which animated those present was intense. Everything had been put in readiness when word was received over the private telephone wire of the company that all was ready at Niagara Falls. Instantly the switches connecting the station with the Toronto Electric Light system were thrown and the lamps immediately went out.

Mr. Flower, a member of the Toronto & Niagara Power Company's electrical staff, as soon as the Toronto circuit was cut out operated the controlling switches on the Niagara line and permitted the current from the Niagara Falls station to pass into the transformers. After a brief pause the station was illuminated by a brilliant blaze of light, and at 5.28 p.m. the electric power generated by Niagara performed its first service for Toronto.

FATAL HOTEL FIRE.

Three Persons Burned to Death in Windsor Hotel, Regina.

A despatch from Regina says: Fire on Monday gutted the Windsor Hotel, the best known hostelry in this city, causing the death of three persons, and the probable fatal injury of two more, with a loss of \$125,000, and \$37,000 insurance. The dead are: M. Musselet, manager Regina Planing Mills, L. M. Musselet, assistant manager Regina Planing Mills, Robt Johnson, well boxer. The injured are: Donald Walker, day porter, may die. Henry Jones, brother of the second cook, will probably die.

The alarm was rung in just before 5, and the brigade was promptly on the spot and tried their best, but the fire had made too great headway. There were 65 guests in the hotel, and they lost all their belongings, while many escaped in only their nightclothes by the new iron ladders just completed on the south wall. The women help, sleeping in the wing, escaped in their night dresses through a sea of flame.

Italian Freemasons are endeavoring to start an anti-clerical movement.

AIRY NAVIES

The Airship Will in a Few

A despatch from London says: Aerial navigation was the subject of discussion at the Royal Service Institution on Thursday and the consensus of opinion was that airships will play an important part in future wars. Col. J. D. Fullerton, of the Royal Engineers, who lectured on the subject, said: "There is no doubt whatever that aerial ships will play an important part in future wars. It is consequently most desirable that this country should at once take steps to ensure a suitable aerial force being ready when the time for the struggle arrives, and I suggest that a Royal Commission be appointed to report, after careful enquiry, as to whether there is now a reasonable chance of solving the problem of flight."

Sir Hiram Maxim, who opened the discussion, said: "My own experience tells me there cannot be any question of the future of the flying machine. It is coming, whether we like it or not." Major B. F. G. Baden-Powell, who

SAN FRANCISCO'S SCANDAL  
Relief Money Which Never Reached the Committee

A despatch from San Francisco says: A new investigation is progressing in the course of developments in the local graft scandal. It now appears that many sums of money, large and small, sent from different States to San Francisco for the relief of the earthquake and fire sufferers, never reached the relief committee. Some of these amounts, which aggregated a large sum, were mailed to the care of Mayor Schmitz. F. J. Heney, Detective Wm. Burns, and about 100 Government agents have been making investigation. President Roosevelt is the moving spirit behind the enquiry and he declares that no man guilty of diverting the relief funds shall escape justice. The cases come within the jurisdiction of the Fed-

eral authorities because of the interstate character of the postal service, which it is alleged was criminally tampered with.

A considerable sum of money was also sent through the express companies and Wells Fargo, which companies are now investigating the disappearance of \$10,580 sent in one package from the citizens of Searchlight, Nevada, which the relief committee say they never received, and which the company says was delivered to the representatives of the committee to whom it was addressed.

The crime of forgery is said to be included in the offences of the raiders of the relief contributions. It is said that in the aggregate the stealings will amount to a million dollars.

# DAMAGE BY FLOODS

## Washington Is a Severe Sufferer

and even houses, forced the rescuers back.

The Northern Pacific Bridge across Stuck River went out on Wednesday, and soon after came a suspension of railroad traffic between Tacoma and Seattle, the tracks being under water in many places. The Northern Pacific is able to maintain its service to Portland.

Advices received at the office of the Northern Pacific say the water in Green River canon is two feet higher than during the floods of 1903, when the railroad was tied up for two weeks.

What has occurred east of Auburn and west of the slopes of the Cascades can only be conjectured. That great damage has been done to property and live stock is evident, but all wires between Hot Springs and Auburn are down.

Every railroad in the north-west is tied up, and though a few trains are being run, no attempt is made at a schedule. The tracks have been washed away in many places on the different roads.

## ERNEST K. CATE'S SUICIDE.

### A Hamilton Boy Shoots Himself at North Sydney.

A despatch from Halifax, N. S., says: A shocking tragedy occurred in the Avalon Hotel, North Sydney, on Tuesday night about 9 o'clock, when Ernest K. Cate, a native of Hamilton, Ontario, placed the muzzle of a 48-calibre revolver to his forehead and blew his brains out. The unfortunate man came to North Sydney about a month ago, and worked for a short period as chemist at the Nova Scotia steel plant at Sydney Min. s. He held that position for only a few days, quitting work of his own accord. The general opinion is that he left his job in a fit of mental aberration. As evidence of this a letter was found in a pocket of the deceased addressed to Lord Strathcona, in which Cate asserts his inability to attend to official work. Cate left his father but a short time before the dreadful act was committed. They had been playing a game of cribbage at a nearby hotel, when suddenly the boy got up, went about a hundred yards to his own sleeping place, locked himself in his room, stood before the mirror, and fired the fatal shot.

## MORE CRIMES NEAR PITTSBURG.

### Seven Cases of Robbery and Assault Added to List.

A despatch from Pittsburgh, Penn., says: Despite the efforts of city officials and the police department to put an end to the burglaries and hold-ups in this city, and notwithstanding the veritable drag-net that has been thrown out by the public protectors, reports of hold-ups and burglaries continue to reach the public. In the fashionable east end section of the city, where most of the recent crimes have been committed, the house of W. A. Forman, a prominent mechanical engineer, was entered by burglars between midnight and daylight on Wednesday morning. Among the articles taken by the thieves was an automatic revolver recently purchased by Mr. Forman to protect himself against any occasion of this kind.

Despatches to the Associated Press from points in Alleghany County outside of this city, and also towns in neighboring counties recount seven stories of crime and violence.

## DEATH BY ASPHYXIA.

### Deseronto Young Woman Succumbed to Deadly Vapor.

A despatch from Deseronto says: Gas escaping through a sewer pipe during the night was the cause of death by suffocation of the only daughter of Mr. and Mrs. Jack Wright, of this town. The family, consisting of Mr. and Mrs. Wright, two sons, and one daughter, aged about 21, retired as usual on Thursday night, the two sons sleeping in the upper flat. Friday morning they were around the house, but appeared to be dazed through inhaling the gas, and it was 3 o'clock in the afternoon before they recovered sufficiently to realize the condition of the rest of the family. A doctor was immediately summoned, but when he arrived he found the daughter had been dead for some time. The father and mother are now in a very serious condition, with but slight hopes of their recovery. An inquest will be held.

## JAPAN'S NEW BATTLESHIP.

### Exceeds the British Dreadnought in Tonnage.

A despatch from Tokio says: The utmost interest was felt in the launching of the new battleship Satsuma, which took place on Tuesday at Yokosuka in the presence of the Emperor. The keel of the Satsuma was laid on May 15 of last year. She has a length of 482 feet and beam of 83½ feet. Her draught is 27½ feet. Her tonnage, which is 19,200, exceeds that of England's biggest battleship, the Dreadnought, by 1,200 tons. Her horse-power, it is said, will be 18,000. Her speed will be 20½ knots. While this is slower than the Dreadnought, it is expected that the Satsuma's Myabara boilers will give her greater steaming stability. The armament will consist of four 12-inch guns, ten 10-inch and 12 120 MM. guns. The Japanese naval architects have utilized in the construction of the Satsuma the valuable lessons learned in the late war.

## RICH GOLD MINES.

### There Is Great Excitement at Maidstone, Saskatchewan.

A despatch from Maidstone, Sask., says: A man named Joyce, an experienced miner, who has been prospecting between Maidstone and Birling, arrived here on Tuesday and reported having discovered rich placer diggings just east of this town. The samples brought in are similar to that found at Birling, and it is possible the gold will cover a much larger area than was at first reported. Great excitement prevails, and people are rushing here in great numbers, many claims having already been staked, and it is thought that before winter sets in many large companies will be formed to extensively operate their properties. Experienced miners who have already visited the place state that the findings and formation are as rich as those recently discovered in northern Ontario, and will undoubtedly attract a large influx of miners to this district. Maidstone is the most accessible railway point to the diggings.

## BOER RAIDERS REINFORCED.

### Transport Drivers With German Forces Join Them.

A despatch from Berlin says: A telegram, dated Windhoek, German Southwest Africa, Wednesday, says that four Boer transport drivers attached to the German expeditionary force that is operating against the rebellious Hereros, have joined the band Ferreira is leading in Cape Colony. The German frontier stations have been ordered to disarm all armed Boers who may attempt to cross over into British territory. A despatch from Cape Colony reports that twelve Cape Colony farmers have joined the raiders. Three of the followers of Ferreira, the Boer raider,

# MAY INVADE WEST ONTARIO

## Canadian Northern Is Considering the Question

A despatch from Winnipeg says: Rail-roads have been deluged during the month past.

With their new line between Parry Sound and Toronto completed, the Canadian Northern are now ready to consider not only a connection between Parry Sound and Port Arthur, but the tapping of western Ontario. Which of the two projects will receive first attention has not been announced, but the likelihood is that both schemes will be worked simultaneously.

The executive agent, Hugh Sutherland, of the C. N. R., at present in Port Arthur, is considering the early projection of the railway east to meet the line just opened at Parry Sound. When that connection is made the C. N. R. will have a through line from Toronto to Edmonton. Announcement is expected in a few days.

Road construction during the past month has been greater, and more has been accomplished than in any other month for years past. Realizing that winter was at hand, when work would be forcibly suspended, the contractors have rushed their work with all possible speed, the lack of men, however, being a great handicap. At the close of the thrashing season the ranks of the railroad builders were considerably augmented by the engagement of a large number of Eastern harvest hands, the high pay offered being an inducement to them to terminate their stay in the West a month or two later than usual.

A noticeable fact has been the large number of applications and notices of applications for the construction of new roads with which the Provincial Govern-

# HEALTH

## ST. VITUS'S DANCE.

This distressing affection, called in medical terms chorea, is a nervous malady of early life. It is most frequent in children twelve or thirteen years old; before five and after twenty it is rare.

Girls are affected more frequently than boys, nearly in the proportion of three to one.

What the essence of the disease is physicians do not know. Some think it consists in an undue irritability of that portion of the nervous system which has to do with muscular contraction, others that it is due to fatigue or exhaustion of the nerves. The principal symptom of chorea is an involuntary contraction of certain muscles, commonly those of the face, neck and arms, giving rise to irregular movements of the head and arms, coupled with grimaces. In severe cases the muscles of the trunk and the legs are also affected, so that the sufferer is unable to walk, and even rolls and tosses about in the bed.

The constant movements give rise to an intense and painful fatigue. Sometimes the spasmodic twitching of the tongue and the muscles concerned in the

useful, but they must of course be taken only under the physician's supervision. The eyes should always be examined and proper glasses fitted before the child is allowed to return to study after recovery from an attack of chorea.—Youth's Companion.

## HOW TO STAVE OFF NERVOUSNESS.

How shall we manage not to be nervous? By proper living, proper working and playing, eating, drinking, and sleeping; above all, proper thinking and feeling.

Many a hysterical woman would be stable and strong had she consistently striven with singleness of aim for a laudable object.

Besides relaxation we must have diversion. We must play, if our work is to be effective and long sustained and if we are not to be nervous. Ambition is a wonderful force and makes for progress.

Emulation is an excellent stimulus, and industry is better than both, but in excess the combination has worked the ruin of many.

To sum it all up, if you wish never to be nervous, live with reason, have a purpose in life and work for it, play joyously, strive not for the unattainable, be not annoyed by trifles.

## HOW TO LIVE A CENTURY.

Sir James Sawyer, an English phys-

# TRAIN DITCHED AT WOODSTOCK

## The Engine and Pullman Alone Kept the Rails

A despatch from Woodstock says: Grand Trunk express No. 4, Chicago to New York, due in this city at 4.10 a.m., was wrecked early on Friday morning at a point only a few yards east of the interlocker at the crossing on the Beachville-Ingersoll Road. The entire train, with the exception of the engine and one Pullman sleeper, left the track and three of the coaches were ditched, one day coach being thrown on its side. It is almost a miracle that no one was killed and that the list of injured was not greater than six. Those who suffered more or less serious injuries are:—Edward Wilkinson, brakeman, Peter Jorgensen, Menden, Neb., left hand lacerated. Mr. Hick's, Buffalo, three ribs broken. James Smith, Chicago, head and back bruised. Mrs. Smith, Chicago, ankle sprained, hip bruised, and back wrenched. Outside of those seriously hurt a number of the passengers suffered badly bruised limbs and small cuts about the face and hands. The rolling stock was badly damaged.

The cause of the accident cannot be accurately ascertained. The railway-men say that it was due to a breakage in some part of the running gear of one of the baggage coaches. The theory that one of the axles broke is dispelled by the fact that none of the axles are broken. Others think that

against any occasion of this kind. Despatches to the Associated Press from points in Alleghany County outside of this city, and also towns in neighboring counties recount seven stories of crime and violence.

## LARGE IMMIGRATION.

**During the Season 110,000 Strangers Landed at Quebec.**

A despatch from Quebec says: The season of navigation of the St. Lawrence is drawing to a close, and only two more passenger steamers are due this fall, which will close the immigration, according to information derived from the agents here. One hundred and ten thousand immigrants were landed at the port of Quebec this season of navigation, twenty-eight thousand more than last year. The immigration was composed not only of a superior class of new settlers from the British Islands, but of people of fair means. The last two ships brought out quite a number of foreigners, including Norwegians, which is unusual at this season of the year.

## EAT DOGFISH EGGS.

**They are as Good as Hen's Eggs and Taste Very Similar.**

A despatch from London says: Government Analyst Thorpe offers hope to egg-eaters when hen's strike. Reporting to the Fisheries Committee of the Cornwall County Council, he says that the eggs of dogfish when boiled, are very similar to hard-boiled hen's eggs, and that they are wholesome and highly nutritious.

## TEN YEARS FOR FORGERY.

**Montreal Ex-Bookkeeper Receives a Heavy Sentence.**

A despatch from Montreal says: Morris M. Jacobs, formerly bookkeeper to Diamond & Co., wholesale merchants, St. Paul Street, who stole some \$6,000 from the company by means of forged cheques drawn on the Ontario Bank and other banks, was condemned by Judge Piche in the Court of Sessions on Friday to ten years in the penitentiary. There were eight other charges of forgery against Jacobs and one of theft. On the former he was condemned to five years, the terms to be consecutive.

# OF NATIONS

**be a War Vessel  
w Years**

occupied the chair, said in another ten years' time they might have machines flying through the air which would be absolutely under control and of great practical use.

Directly that had been done every Government would obtain them and their navies would then be practically useless as their first line of defence. The dirigible balloon of the future would be a powerful factor in war, for their ships could not fight them with guns of the present day, while the occupants of an airship could drop projectiles on the decks of ships whenever they wished to do so.

Major Baden-Powell concluded:—"This may appear like a dream of the future. It is one that may be realized, and we must prepare against such a contingency by paying so much attention to the subject that we in England will have our airships with which to fight our battles."

referred to the Santa Fe and Ferreira is leading in Cape Colony. The German frontier stations have been ordered to disarm all armed Boers who may attempt to cross over into British territory. A despatch from Cape Colony reports that twelve Cape Colony farmers have joined the raiders. Three of the followers of Ferreira, the Boer raider, have been captured. One of the prisoners is a brother of Ferreira.

## U. S. SOLDIERS FIGHT.

**Artillerymen and Infantrymen Attack One Another with Knives.**

A despatch from Cheyenne, Wyoming, says: A desperate fight occurred on the streets of Cheyenne on Tuesday night when a detachment of artillerymen from Fort Russell attacked a number of infantrymen all on leave. Each side fought desperately with knives. Five men were cut and slashed, one of whom is expected to die. The wounded were taken to the hospital. The cause of the fight is an old feud existing between the two arms of the service.

## RAIDERS CAPTURED.

**Cape Colony Police Gather in Ferreira and His Followers.**

A despatch from Cape Town says: Ferreira, the leader of the Boer raid from German South-west Africa into the northern part of Cape Colony, and all his followers, were captured on Saturday by colonial patrols.

## STARVATION IN RUSSIA.

**Wheat Yields Small—Peasants Sleep to Lessen Hunger.**

A despatch from St. Petersburg says: The crop reports received here from 71 provinces and districts in Russia show the yield of wheat to be 15,059,000,000 pounds, and rye 38,355,000,000 pounds, which is 9,598,000,000 pounds below the average. In several of the interior provinces the peasants have taken to their beds for days at a time, in order to weaken the pangs of hunger, and are mixing their scanty supply of grain with pig-weed to make more filling for bread.

## AS BAD AS RUSIA.

**In Five Years List of Murders in United States Totals 45,000.**

A despatch from Chicago says: Judge Kavanagh in an address on Thursday night before Ignatius College Alumni declared that during the last five years 45,000 persons were murdered in the United States. More persons were murdered last year than died of typhoid fever. This awful total has been due to the way in which the law has been administered. And the law itself is bad and inefficient. It is burdened with restrictions and technicalities, and in almost every case the criminal has nine chances of escaping to one of being found guilty.

## EARTHQUAKE AT JAMAICA.

**Two Severe Shocks, One the Heaviest for Many Years.**

A despatch from Kingston, Jamaica, says: An exceedingly sharp earthquake was felt south and north of this island at 11 o'clock on Tuesday night. It was followed immediately by a second shock which was the heaviest experienced here in many years.

Customer (to printer): "You promised to have my work done yesterday, and you haven't touched it yet." Printer: "My dear sir, we've been so busy in this office that you ought to be thankful that we took the time to make you a promise."

and one Pullman sleeper, left the track and three of the coaches were ditched, one day coach being thrown on its side. It is almost a miracle that no one was killed and that the list of injured was not greater than six. Those who suffered more or less serious injuries are:—Edward Wilkinson, brakeman, back badly injured. Edwin Skinner, La Pierre, Mich., badly cut about the head.

act of swallowing interferes with the taking of food, and the patient suffers from semi-starvation. Sleep is prevented or disturbed, although when sleep does occur the movements usually cease. In the milder forms there may be only slight twitches of the muscles of the face, the patient seeming only to be "making faces" at people.

The disease often, although not always, follows an attack of rheumatism, or it may be occasioned by a fright or some other shock to the nervous system. Eye-strain is believed to be a cause in some cases. It is sometimes imitative in character, being excited by the sight of another child who has St. Vitus's dance, and in this way the disease may spread, as by contagion, through a school. The strain of school life, with long hours of study and insufficient playtime, seems to be an occasional cause, or at least to predispose to an attack.

The treatment of chorea by drugs is unsatisfactory. Some have been extolled as curative, but a further trial has usually shown that the recovery was in large measure due to other things. Much good can be done by absolute rest in bed in a darkened but well-ventilated room, or better yet, in a room with all windows open, or actually in the open air, darkness being secured by a hood drawn over the eyes. Reading and visitors should be prohibited. The food should be nourishing and digestible.

Sedative medicines are undoubtedly

The cause of the accident cannot be accurately ascertained. The railwaymen say that it was due to a breakage in some part of the running gear of one of the baggage coaches. The theory that one of the axles broke is dispelled by the fact that none of the axles are broken. Others think that it was due to the rails spreading, and this is probably the correct theory.

cian, has formulated the following nineteen rules for prolonging life to one hundred years:

1. Eight hours' sleep.
2. Sleep on your right side.
3. Keep your bedroom window open all night.
4. Have a mat to your bedroom floor.
5. Do not have your bedstead against the wall.
6. No cold tub in the morning, but a bath at the temperature of the body.
7. Exercise before breakfast.
8. Eat light meat, and see that it is well cooked.
9. (For adults.) Drink no milk.
10. Eat plenty of fat to feed the cells, which destroy disease germs.
11. Avoid intoxicants, which destroy these cells.
12. Daily exercise in the open air.
13. Allow no pet animals in your living rooms. They are apt to carry about disease germs.
14. Live in the country if you can.
15. Watch the three D's—drinking, water, damp and drains.
16. Have a change of occupation.
17. Take frequent and short holidays.
18. Limit your ambitions; and
19. Keep your temper.

The two new Allan liners will be named the Corsican and Grampian. They will be about 10,000 tons gross, and have 14 to 16-knot speed.

# RUSSIAN PEOPLE CALLOUS

## The Multiplicity of Executions Makes Them Indifferent

### HORRORS OF REPRESSION.

The London Times' correspondent at St. Petersburg cables as follows:—"People here have become quite callous to the horrors of repression, and scarcely any attention is now paid to the daily batch of executions. Professor Kusmin Karavioff expresses deep indignation in The Russ of Wednesday because a woman was executed for complicity in an attempted bomb outrage, although she was about to become a mother.

### RIGHTS FOR HEBREWS.

A despatch from St. Petersburg says: It is authoritatively stated that measures for relieving the Hebrews of many of their disabilities will be published as temporary legislation before the convocation of Parliament, as foreshadowed in M. Stolypin's communication of September 6. The full extent of the reforms is still a matter for discussion by the Cabinet, but they comprise permission for Hebrews to live in the country as well as in the cities within the pale, and the removal of certain restrictions placed on Hebrew merchants and artisans in cities outside the pale. The full settlement of the Hebrew problem is left to Parliament; the Government not being willing to venture deeply into the matter for fear of stirring up a storm of anti-Semitic opposition.

### CONSCRIPTS REFUSED OATH.

A despatch from Moscow says: During the swearing in of conscripts here on Tuesday disorders broke out, over half of them refusing to take the usual

oath of loyalty to the Emperor on account of the phrase pledging them to defend his Majesty against all interior enemies. Troops were summoned, but bloodshed was finally averted.

### DEATH FOR BOMB-THROWING.

A despatch from Odessa says: Five terrorists, including a girl, were tried by court-martial on Wednesday for having thrown a bomb in a cafe and thereby injured two persons. Two of the men and the girl were sentenced to death. The other two men were given seven-year penitentiary.

### CONVICTS ESCAPE.

A despatch from Cronstadt, Russia, says: Twenty-five sailors who were sentenced to hard labor in the mines for life after having been convicted of participation in the August mutiny escaped on Tuesday night while awaiting deportation. They were allowed to visit the baths, under an escort of sixteen soldiers, and overpowered and disarmed the guard, killing one man. The convicts then donned civilian clothes and disappeared. Only one of the fugitives has been recaptured.

### TERRORISTS GET MORE LOOT.

A despatch from Warsaw says: Thirty Terrorists attacked the railway station at Suchednek, on the Vistula Railway, on Thursday, killing a gendarme, overpowering the officers, cut telegraph wires, and destroyed and rifled the safe. They carried off some secret mobilization plans.

## THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

**CHOICE CORN MEAL and BUCK-WHEAT FLOUR** always on hand.

**FEED GRINDING** a specialty, with the best feed mills known to the trade. A full stock of the best **ANTHRACITE COAL**. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,  
16th January, 1906.

BOYLE & SON

Ladies Attention—20 per cent discount Sale.

F. Chinneck will sell for this week Only ending Nov. 30th, his fine Chinas at above prices and some pieces at greater reductions.

An excellent programme is being prepared in connection with the Firemen's Oyster Supper. If it is possible the event this year will eclipse anything ever previously attempted. An elegant feed of oysters, and a two hours delightful programme following is what is being offered.

**FARM FOR SALE**—East half of lot 23. In the 8th concession of the Township of Kingsbury, county of Lennox, one mile east of the brick school house, and one mile west of Thorpe Post Office. The farm contains one hundred acres, 70 acres cultivated, and 30 acres pasture land; is well fenced, has good stone house, good barn and drive house, stable room or silage, head of cattle and six horses. Plenty of pasture and three living wells on the place. Reason for selling—owner has purchased a full farm near Cherry Valley. For full particulars apply to THOS. M. CATON, Thorpe P. O., or on the farm.

### MARYSVILLE

Much sympathy is expressed for Mr. and Mrs. John Toppings, who sustained a severe loss on Friday afternoon, their dwelling being totally destroyed by fire. The fire originated from a defective chimney it is supposed. Very few of the contents were saved, as the house was a frame structure and was soon a wreath of flames. The loss is partly covered by insurance.

W. H. Oliver and his party have returned from the northern country where they spent the last two weeks in quest of game. Each was rewarded by capturing a fine deer.

Miss Theresa McNeill has returned home after a lengthy visit with friends in Toronto.

Frederick Boulton, night operator here for a few weeks was removed last week, much to our regret.

James Darcy and Vernon Oliver spent Saturday in Belleville.

### Something Nice to Break the Fast.

Cracked Wheat, Rolled Wheat, Gold Dust Corn Meal, Farina, Rolled Oats, Graham Flour, Split Peas, Pearl Barley, Buckwheat Flour. All the above are bulk goods and sold by the pound and you will find them to give you much better satisfaction, and go further than the Package goods, as they are all freshly ground and from one of the best mills in the Dominion.

THE COXALL CO.

### WILTON

The funeral of the late Mrs. Samson Dary, Palmero, was held at Harvey Mills, sr., last Friday, Mrs. Mills being a sister of Mrs. Davy. Mrs. Davy died at the home of her daughter, Mrs. Robertson, in London. She was a sister of the late J. Miller. Mr. and Mrs. Davy lived in this neighborhood, at Laspum's for a number of years before their removal to Palermo. Deceased was buried in the cemetery here on Tuesday.

Lloyd Lapum, Watertown, N. Y., with his friend, Eugene Moxley, Kingston, spent a few days visiting old acquaintances here.

A number of people from Wilton attended the annual tea meeting at Violet on Monday night.

Geo. Babcock, Sharpton, has his engine here assisting his brother, Alfred in dressing clover.

The Prescription Druggist.

Red Cross Drug Store,  
Napanee.

**Anniversary**

The annual meeting of Mrs. Symington's Bible class met at her home on Nov. 10th. After greeting and hand shaking all were invited to partake of a bountiful meal, with Mr. Symington at the head of the table. Mr. A. E. Paul was elected Chairman, a position he filled with honor and credit, and in his address spoke of the benefits and Blessings he had received while attending this class. All of the class present were asked to speak on the Studies, which impressed them most in the life of Christ, to which all responded, showing how closely they had followed the lessons under Mrs. Symington's teaching. Mr. Real, Mr. Madole, and Miss Morden, gave short addresses. Mrs. Symington gave a splendid address on thirty years as teacher of this class; what changes had taken place since starting, Ministers, Superintendents, teacher, and the Personnel of her class, many of whom have gone out to fill prominent places in Sabbath School and other religious work. After singing by Mrs. Black and others, Rev. Mr. Real closed with prayer and all went away saying, "What a delightful meeting."

**SUPERIOR VALUE.**

When buying a newspaper the same rule should apply as when buying goods. You want the best for your money—There is one "best" in Canada and it should be in every home. You should have your own local paper without doubt, but you should also have the Family Herald and Weekly Star of Montreal. It can be had at the price of the cheapest—one dollar a year—and is certainly the greatest family and farm paper on the continent. Their premium picture given free to all subscribers, entitled "A Tug of War," is away ahead of the ordinary premium picture, and will adorn any home. The Family Herald is certainly very superior value this season.

**A Practical Gift.**

And one not soon to be forgotten is a pair of Stevens & Co's (American) glasses, properly fitted by the expert optician in charge of the new optical department at The Medical Hall—Fred L. Hooper.

**CASTORIA.**

The Kind You Have Always Bought

Geo. Baucok, snarpton, has his engine here assisting his brother, Alfred in dressing clover.

**FALLING OF THE LEAVES.**

**The Wind In the Autumn Really Has Very Little to Do With It.**

When the storm clouds gather behind the brown autumnal woods and cold winds begin to blow, then the bright leaves come drifting down in fluttering, fast thickening showers until it almost seems as if the wind were the active agent and actually tore the leaves from the trees. This, of course, is not the case. The leaf fall only becomes possible after a long preparation on the part of the tree, which forms a peculiar layer of cells in each leaf stem called the cleavage plate.

This cleavage plate, or separation layer, consists of a section of loosely attached thin walled cells with a few strands of stronger woody fiber in among them, so, in the early autumn, although the leaves appear as firmly attached as ever before, they are really only held on the tree by these few woody strands and the outer brittle skin or epidermis of the stem. Now only a slight shock or wind flurry is sufficient to break the fragile support and bring the leaves in showers to the ground. We may see these woody strands broken through in the leaf scar of the horse chestnut, where they appear as little rounded projections on the broken surface and are often spoken of from their fancied resemblance to the nails of a horseshoe. The hickory and ash among other trees have similar markings on their leaf scars and from the same cause. On the root of the wild sarsaparilla, which projects just above the ground, a like series of little projections will be seen upon the ringlike scar which surrounds the bud where the leaf stalk has just separated.

Often the leaves separate and fall even on the quietest days, for their own weight is sufficient to break the frail support. These hushed and supremely tranquil days we all remember, when our October walks are accompanied by the soft, small sounds of falling leaves, by the rustlings and dry whisperings of their showering multitudes.

**The American Girl.**

The American girl is a most interesting contradiction. She is regarded as the world's greatest representative of feminine freedom, and yet at the root of her character she is the most prudish of girls. She makes the best friend for a man, and yet his worst lover. She cannot deny that she is a flirt, and yet she is at heart hard and selfish. She will do the most unconventional things, and yet in no part of the world is etiquette more insisted on than in American society.—Madame of London.

**A Certain Advantage.**

"A woman can always get the better of a man in an argument," said the visitor.

"Yes," answered Miss Cayenne. "But we should remember that in an argument a woman always has a certain advantage. She is not expected to be a gentleman."

**During the Rush Hour.**

She—Were you ever in a street car accident? He—Yes. The car was completely wrecked, but the passengers were packed so tight that only the outside layers were injured.—Chicago News.

## SLEEP AND NERVE REST.

### A Necessity That Is Overlooked In the Modern Strenuous Life.

In the days when eight hours for sleep were nominally regarded as an hour too long for any self respecting individual the exhausting character of modern life was unknown. There was less wealth and more contentment; less competition and more security; fewer distractions, but more simplicity. Work was easier, slower, and care, anxiety, apprehension—in a word, worry—did not feed, like the worm in the bud, upon the hours exempt from toil. We are remorseless in overtaxing the delicate mechanism of our minds and nerves. The best walker, for instance, does not propose to himself to go regularly sixty miles a day or to subject the same set of muscles in any other form of physical exercise to intense and unremitting labor. But that is what we do with the immediate agent of our minds—the brain machine. We cannot watch its operations. We often assume that its movements are as light and endless as the ripples of the universal air. We know and nevertheless we forget that the brain is a substantial apparatus as liable to depreciation as the fixed plant in a workshop. Now, nothing is more certain than this—that the potential capacity of the human brain has not increased, if at all, in anything like the proportion of the immensely aggravated demand upon it.

The modern man is subject to as much mental and moral wear and tear in a day as his ancestors in no very remote generation experienced in a week. Yet in respect of sleep we have hardly changed traditional habit. We keep later and still later hours. We catch our trains in the morning as usual. There is no doubt whatever that we burn the candle at both ends with unprecedented disregard of the laws of psychological economy, and that the amount of rest we allow for nerve and brain is no longer adequate.—London Telegraph.

### A Fast Train.

On the Riviera line near Ventimiglia, Italy, the train, after ambling gently along, stopped suddenly. An impatient passenger put his head out and asked crustily, "Is this Bordighera?" No answer. "Guard, is this Bordighera?" he shouted again. A voice came from the fore part of the train, "No, monsieur, it is not Bordighera—it is a cow."

## PERSONALS

Mr. and Mrs. Wm. A. Boyce, Newburgh, spent Saturday and Sunday with relatives at Sydenham.

Miss Evelyn Grange, Toronto, is the guest of Miss Beeman, Newburgh.

Mr. Jas. Kenny spent a few days last week in Toronto.

Many other bargains, including ten Parlor Chairs in the best covering, some leather, at greatly reduced prices.

Italy, the train, after ambling gently along, stopped suddenly. An impatient passenger put his head out and asked crustily, "Is this Bordighera?" No answer. "Guard, is this Bordighera?" he shouted again. A voice came from the fore part of the train, "No, monsieur, it is not Bordighera—it is a cow." When the cow had been removed from the line the train ambled on again. Two minutes later it once more came to a dead stop. "Another cow, I suppose?" shouted the testy passenger witheringly. "No, monsieur, it is not," said the guard placidly. "It is the same cow."

#### A Costly Desk.

There is a famous old desk in the British war office in London. It is a desk to which old hands point with emotion. That desk cost the nation \$25,000,000. In it is a pigeonhole with a story. It was into that pigeonhole that the dispatch of King Theodore of Abyssinia was thrust—and forgotten. After we had been to view the document was found in the desk, and we all learned that there ought to have been no war.—London Sketch.

The Stock of the late Robt. Denison is now being sold at a bargain, at the Store.

## UNDERWEAR.

## BUILT UP HER HEALTH

### SPEEDY CURE OF MISS ECCLESON

She is Made Well by Lydia E. Pinkham's Vegetable Compound, and Writes Gratefully to Mrs. Pinkham.

For the wonderful help that she has found Zula Eccleson, 6 Erie St., East, St. Thomas, Ont., believes it her duty to write the following letter for publication, in order that other women afflicted with

the same way may be benefited as she was. She writes:

Dear Mrs. Pinkham:—

"I heartily recommend Lydia E. Pinkham's Vegetable Compound as a tonic and regulator for female troubles. I suffered for four years with displacement and no one but those who have experienced this dreadful agony can form any idea of the physical and mental suffering those endure who are thus affected. Your Vegetable Compound cured me. Within three months I was fully restored to health and strength and now my periods are regular and painless. What a blessing it is to obtain such relief when so many doctors fail to help you. Your medicine is better than any doctor or medicine I ever had."

No other medicine has such a record of cures of female troubles as has Lydia E. Pinkham's Vegetable Compound.

Women who are troubled with painful or irregular periods, backache, bloating (or flatulence), displacement of organs, inflammation or ulceration can be restored to perfect health and strength by taking Lydia E. Pinkham's Vegetable Compound.

Mrs. Pinkham invites all sick women to write her for advice. She has guided thousands to health. Her experience is very great, and she gives the benefit of it to all who stand in need of wise counsel. She is the daughter-in-law of Lydia E. Pinkham and for twenty-five years has been advising sick women free of charge. Address, Lynn, Mass.

### MAGIC AND RELIGION.

**Their Parting Due to the Advance of Civilization.**

In west Africa the belief in a new birth without loss of identity is proved by the fact that when a baby arrives in a family it is shown a selection of small articles belonging to deceased members, and the thing which the child catches hold of identifies him as "Uncle John" or "Cousin Emma," and so forth. So far as this belief prevails it is held by some that garments once worn or other objects which have been in intimate contact with a human being are penetrated by his personality and remain, as it were, united with him for good or ill.

In nearly all stages of civilization now to be found in the world what we call supernatural beings were concerned with the initiation of the magician. The schism between magic and religion was a later development of civilization. When it occurred, as the history of heresy in Europe and the witch trials teach, it was rather magic in its antisocial aspect than in itself, which was reprobated and punished. It is strange in this connection to notice that the magician was only condemned when he departed from established custom and established beliefs which involved a severance from the community and an imputation of antisocial ends. Practices essentially magical might be incorporated in religious rites and exercised for what was believed to be the general good. In such a case they have continued to be exercised with general assent in the highest forms of religion.—London Hospital.

### ODD MARRIAGE CUSTOM.

**Porches as Wedding Certificates on the Island of Jersey.**

Among Jerseymen proper—that is to say, among the descendants of the original inhabitants of the island and not the English or French residents there—a very curious and interesting old marriage custom exists.

Upon the completion of the ceremony and, if in strict accordance with tradition, before the happy couple take up residence in their new abode the stone slab at the top of the porch containing the front door is inscribed with the initials of the bridegroom, those of the bride, the date of the ceremony and two hearts entwined, the latter being an emblem of their intermingled love and the whole forming a most lasting and public certificate of marriage.

Occasionally, however, a little difficulty arises. The bride may meet with an early death, and in the course of time the widower may desire to re-enter the holy state of matrimony. Having fulfilled his desire, it appears rather puzzling to know what to do about the inscription.

In some cases, therefore, the initials and date of the first wedding have been erased and those of the subsequent ceremony substituted, while in others the initials of the second wife and the date have been added below the first, a second pair of entwined hearts being thought unnecessary. The

# SILKS AND DRESS GOODS

you will find upon inspection that this section of our store is stocked with the latest and most up-to-date patterns and colorings procurable, from the best manufacturers and dyers of the old world, namely: Rhodesia, Melrose, Panamas, Prunella, Comlots, and Brocade's, in all the leading styles for street wear, ranging in price from 50c to \$2.50. Bought for spot cash—share in the saving. Evening shades a specialty.

## ALBERT COLLEGE,

Belleville, Ont.

Business School Founded 1877.

Practical and thorough. Five complete courses. Many graduates occupying important places as book-keepers and shorthand reporters.

\$33.75 pays board, room, tuition, electric light, use of gymnasium and baths, all bat books and laundry, etc. for ten weeks, longer period at same rate. Special reduction for students on to two or more entering at same time from the same family or from the same place. A specialist in Book-keeping, who is also an expert penman, and a specialist in shorthand in constant attendance. The teachers in the literary department also assist in the work. The high character of the college is a guarantee of thoroughness.

Catalogue with specimen of penmanship free. Address PRINCIPAL DYER, D. D., Belleville, Ontario.

been erased—and those of the subsequent ceremony substituted, while in others the initials of the second wife and the date have been added below the first, a second pair of intertwined hearts being thought unnecessary. The letters are usually from six to nine inches in height, so that they may be easily read across the road.—London Mail.

### Victims of a False Prophet.

Just before the opening of the Kaffir rebellion in South Africa, about the middle of the last century, the sooth-sayers bade the tribes kill their cattle and destroy their crops of grain. The spirits of their ancestors were to arise and help them to exterminate every white man in the country. The advice was solemnly accepted. When the day of the great uprising arrived many of the rebels were already starving. But there came no ghostly herds of cattle out of the earth, no crops not sown with hands. Grim, terrible famine swept over the land, and in the months which followed, although the authorities did everything in their power to mitigate its horrors, 30,000 victims of a false prophet starved to death.

### Ventilation.

Have we ever stopped to think how our ancestors two or three generations back lived and flourished with little or no ventilation in their sleeping apartments? The night air used to be considered a very dreadful menace to health and a sure inducer of colds. Bedrooms were kept closely shut, and yet our ancestors, many of them, were harder than we and lived to good old ages. Animals burrow in their holes at night, breathing the same air over and over again, while birds and fowls tuck their heads under their wings. Of course ventilation is absolutely necessary for proper comfort, cleanliness and health, but people have lived on little or none of it for hundreds and thousands of years.

### Another Soft Answer.

"I'm glad to say," remarked Mrs. Strongminded in an insinuating tone, "that my husband is not a sporty man." "Oh," replied Mrs. Kaffyppe, looking very sweet and innocent, "I'm surprised to hear you say that. I had always supposed that he must have married you on a bet."

### Buying or Selling?

It is told of the son of a horse dealer, a sharp lad, when once unexpectedly called upon by his father to mount a horse and exhibit its paces, the little fellow whispered the question in order to regulate how he should ride, "Are you buying or selling?"

### Beginning Over.

"Did I hear you say, old chap, that marriage has made a new man of you?"

"That's right."

"Then that wipes out that ten I owe you. Now lend me five, will you?"—Milwaukee Sentinel

J. B. Sanderson took charge of the service here in the schoolhouse, Wednesday evening.

Mrs. C. Lapum and Mrs. C. Joyner attended the ladies' Auxiliary in Wilton.

Mrs. Michael Love has returned from a week's visit with friends in Elginburg.

F. E. Brown has the porch completed on the schoolhouse.

Quite an excitement is created here over the coming election. A new candidate is coming out for reeve, in the person of Col. Clyde, Odessa.

Edward Joyner, accompanied by F. Wallace, Colebrooke, paid a visit on Saturday to Kingston.

Mr. and Mrs. G. C. Davy and Mrs. Husted, Michigan, were guests of Mr. and Mrs. Wilkie Pringle.

John Brown spent Saturday and Sunday with friends in Colebrooke.

Mrs. F. Wallace and daughter, Helen, Colebrooke, spent a few days last week with her mother, Mrs. C. Joyner.

Visitors: Mr. and Mrs. Adkin Snider, Odessa, with Mr. and Mrs. J. E. Boulton; Mr. and Mrs. S. Vandewater, Yarker, with Mrs. R. D. Brown; Walter Bush with Clarence Lapum; James Reid, Elginburg, with Mr. and Mrs. James Huff.

A good offer—The Napanee Express from now until January 1908 for \$1.00. Send your order early.

Coughs, colds, hoarseness, and other throat ailments are quickly relieved by Crescolum tablets, ten cents per box. All druggists.

## BARRET

The stern reaper, death has again visited our vicinity, and called for our midst one much esteemed and loved by all, in the person of Mr. Elias Thompson. Mr. Thompson had apparently been in good health till the week previous to his death. On Saturday he suffered a stroke and lingered until Wednesday when God relieve him by taking him to Himself. Deceased was a consistent member of the Methodist

**OPEN LETTER TO THE EXPRESS.**

DEAR EDITOR,—

A special meeting of the ratepayers of S.S. No. 13, Richmond, was called on November 27th, by the Trustees, to discuss the very drastic amendments to the Public Schools Act, passed by the Ontario Legislature, at its last session, and, if possible, to devise ways and means to lighten the very burdensome taxes as deemed unjustly placed upon rural school supporters.

The meeting was very representative and after lengthy discussions, a resolution was presented requesting the Trustees to close the school for at least three months, beginning the 1st of January, 1907, and that the motion was not made with a view entirely of curtailing expenses, but also that this section put in an emphatic protest to the Minister of Education for the arbitrary and unjust law he has placed upon us. The motion was carried unanimously, and without a dissenting voice, and it is with feelings of deep regret that the Trustees have to advise Miss Dora Casey, our beloved and devoted teacher (who is just closing her eighth year among us) with

Make this store your headquarters, we keep everything a Drug Store should have—Quality the highest and prices right—T. B. Wallace.

arbitrary and unjust law has been placed upon us. The motion was carried unanimously, and without a dissenting voice, and it is with feelings of deep regret that the Trustees have to advise Miss Dora Casey, our beloved and devoted teacher (who is just closing her eighth year among us) with these facts.

Now, Mr. Editor, not wishing to take up too much space, but a few remarks might not be out of place—As to the equipment, I think the Honorable Minister of Education must be a man of great mind to think of so much at once, or else his mind might have been wandering. If there was any more he could possibly have thought of, no doubt he would have added it, and again, just to think, the Honorable Gentleman, sitting in his easy chair in the Parliament Buildings, Toronto, know so much better the requirements of the individual school sections than does the Trustees of the section, men supposed to possess ordinary intelligence at least.—And, still again, the law is for the rich, and against men of ordinary means, as I know of men who have undergone privations of various kinds to educate their children, and now have them ready to finish in our Model School at home, but now they find, under the new law, they are required to send them to some distant City to finish at the Normal, and to do this they will require to lay down from \$200 to \$300, which is beyond their power to do, consequently those bright hopes that once existed have all vanished, and the strenuous exertion and privations that both parent and child have undergone to bring them up this point, now passes into oblivion. "Consistency thou art a Jewel."

And now in conclusion let me ask are we a free people? This is the first step in this fair Province of ours to coercion, and such law should not be allowed to deface the Statutes of Ontario. Else ere long we will awake and ask ourselves, whether we are in the fair Province of Ontario, or in down trodden Russia under the throes of the Czar.—Conn.

ITCH, Mange, Prairie Scratches and every form of contagious Itch on human or animals cured in 30 minutes by Wolford's Sanitary Lotion. It never fails. Sold by F. L. HOOPER.

#### NEWBURGH.

Mr. Stanley Boyce, Colebrooke, and Miss Lena Fields, Gretna, spent Saturday and Sunday the guests of their cousins, Mr. and Mrs. Wm. A. Boyce.

# PARLIAMENT IN SESSION

## Large Gathering Attended the November Opening

A despatch from Ottawa says: The opening of Parliament without the usual adjuncts of winter is somewhat of a novelty. Thursday was almost as balmy as a morning in May. There was the usual crowd in front of the Parliament Buildings. The Governor-General arrived sharp at 3 o'clock, the cavalcade being preceded by a detachment of the Princess Louise Dragon Guards. As soon as his Excellency's carriage drew up under the lower the band of the G.G.F.G. played the National Anthem and the guard of honor presented arms. The scene within the Senate Chamber was as beautiful as of yore. All the seats usually occupied by the Senators, and, in fact, every inch of the floor space of the chamber of the Upper House, was utilized to accommodate the wives and daughters of Senators and members and of prominent personages from all parts of the country. The general galleries were crowded, notwithstanding the fact that the Sergeant-at-Arms had restricted the issue of tickets of admission.

### SPEECH FROM THE THRONE.

After the Commons had been sent for and Speaker Sutherland and the members of the Lower House had taken their places below the bar, his Excellency opened Parliament with the following speech from the throne:

Hon. Gentlemen of the Senate:

Gentlemen of the House of Commons:

In opening the third session of the tenth Parliament of Canada I avail myself of the opportunity to offer you my congratulations on the unparalleled prosperity prevailing in all parts of the Dominion. The harvest has been abundant, and the trade with both British and foreign nations continues to expand in annually increasing volume, with every prospect of continued growth for many years to come.

The number of immigrants seeking homes in Canada continues yearly to increase, and it is very satisfactory to observe that a larger proportion than in any former year has in the past season come from the British Isles.

During the recess following the last session I visited the Western provinces and was much gratified to note the great advance that is being made in the development of the vast resources of those highly-favored sections of the Dominion. I found the people of the West rejoicing in their prosperity and full of hope and confidence in the future growth of its agricultural and industrial wealth.

### ENTITLED TO MORE MEMBERS.

The quinquennial census recently taken in the provinces of Alberta and Saskatchewan shows that those provinces are now entitled to an increase in their representation in the House of Commons. A bill giving effect to that provision will be submitted for your approval. In accordance with the announcement made in a previous session, you will be asked to consider a bill for the revision of the Customs tariff.

The sanction of Parliament will be required to give legal effect to the treaty made with the Empire of Japan. A bill for that purpose will be submitted for your approval.

The products and manufactures of Canada shown at the recent international exhibition held in the City of Milan proved a great attraction, and as a result it is confidently believed our trade with Central and Southern Europe can be materially increased.

The naval authorities having relinquished the use of the dockyard at Halifax, a proposal was made to transfer it to the Government of Canada. This offer has been accepted and the dockyard will now be used by the Department of Marine and Fisheries as a base for its operations in connection with aids to navigation.

Many immigrants having in recent years been induced to come to Canada by false representations made in the United Kingdom, at the request of the Minister of Labor a clause has been added to the Merchants' Shipping Bill now before the Imperial Parliament for the punishment of any persons who may be found guilty of that offence.

### EXPANSION IN REVENUE.

Gentlemen of the House of Commons: The accounts of the past year will be laid before you. I am glad to say that the revenue has shown a large expansion, and has not only provided for ordinary expenditure, but has also to a great extent provided for the outlay on capital account.

The estimates for the coming year will be laid before you at an early date.

Honorable Gentlemen of the Senate:

Gentlemen of the House of Commons:

A united application having been received by my Ministers from the Governments of the several provinces asking for an increase in the provincial subsidies, a conference was recently held, when the reasons for granting additional aid were fully set forth and discussed. Resolutions based on the conclusions reached by my Government will be submitted for your consideration.

Bills will be laid before you amending the Election Acts, the Post-office Act, the Dominion Lands Act, a bill for the more effective supervision and inspection of Canadian canned food products, meats and fish, a bill relating to the sale and manufacture of patent medicines, and also a bill to make better provision for dealing with juvenile delinquents.

It is hoped that the report of the commission appointed to inquire into the working of insurance companies will shortly be completed, when it will be laid upon the table.

The subjects I have mentioned will, I hope, receive your best consideration, and the measures to be submitted for your approval will, I trust, tend to the well-being and good government of our fair Dominion.

## THE WORLD'S MARKETS

### REPORTS FROM THE LEADING TRADE CENTRES.

#### Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Flour—Ontario wheat 90 per cent. patents are quoted at \$2.70 in buyers'

23c. Creamery prints sell at 26 to 27c, and solids at 24½ to 25c.

Eggs—New laid, 28 to 30c per dozen, and cold storage, 23c.

Cheese—Large cheese, 12½ to 14c, and twins at 14½ to 14¾c.

### HOG PRODUCTS.

Dressed hogs in car lots are unchanged. Bacon, long clear, 11½ to 12c per lb in case lots; mess pork, \$21 to \$21.50; short cut, 23c.

Hams—Light to medium, 15 to 15½c; do, heavy, 14 to 14½c; rolls, 12c; should-

Oats—Cash, 36½c; December, 35½c; May, 37½c.

Minneapolis, Nov. 27.—Wheat—Dec., 78½c; May, 80½ to 80¾c; July, 81½ to 81¾c; No. 1 hard, 83½c; No. 1 Northern, 82½c; No. 2 Northern, 80½c; No. 3 Northern, 77 to 78c. Flour—First patents, \$4.30 to \$4.40; second patents, \$4.15 to \$4.25; first clears, \$3.25 to \$3.35; second clears, \$2.40 to \$2.60. Bran—in bulk, \$16 to \$16.25.

### LIVE STOCK MARKET.

Toronto, Nov. 27.—A fairly brisk trade was reported at the Western Market today on moderate deliveries.

An absence of exporters' cattle was recorded on the market today. The range was from \$1.25 to \$4.35 per cwt. for fair to good lots.

Choice butchers', selected, \$4.40 to \$4.65; medium to fair butchers' cattle, \$3.85 to \$4.20; mixed lots, \$2 to \$3.25; cows, \$3.15 to \$3.35; common cows, \$1.50 to \$3 per cwt.

Feeders, 1,050 to 1,150 lbs., \$3.33 to \$3.85; short-keepers, \$3.90 to \$4.10; stockers, good, \$2.50 to \$3.25; stockers, common, \$1.75 to \$2.25 per cwt.

Export ewes were worth \$4.25 to \$4.85; export bucks, \$3 to \$3.50, and lambs, \$3 to \$5.75 per cwt.

Milch cows were in fair demand at \$25 to \$60 each.

Hogs were 10 cents higher. Selects were worth 6, and lights and fats \$5.75 per cwt.

### FIRE VISITS STURGEON FALLS.

#### Entire Business Portion of Town Was in Danger.

A despatch from Sturgeon Falls says: The progressive town of Sturgeon Falls was scourged by fire early on Sunday morning, and the principal business block of the town is now a mass of smouldering ruins. About 3 o'clock in the morning Electrician Win. Young noticed a blaze in the rear of the McArthur Block, on King Street, and at once turned in an alarm. Although the fire department responded quickly the block was in flames and beyond saving when the water was turned on. Neil McArthur, owner of the block, occupied part of the upper portion of the building, and his family were rescued with difficulty in their nightrobes without time to save anything. The attention of the firemen was given to saving the surrounding buildings, and by hard work the Lillie and Parliament Blocks were saved, although damaged considerably by fire and water. The entire business portion of the town was in danger of being wiped out, but fortunately the wind was favorable, and the fire area was confined to the McArthur Block on King Street, and a building on William Street, besides sheds and stables. The fire is supposed to have started in Weighman's Bakery, but the clean sweep made by the flames renders the origin a matter of conjecture only. The loss will reach \$40,000, with insurance of \$13,000.

### RAILWAY TIE CONTRACT.

#### A Big Order for the Provincial Government's Road.

A despatch from Toronto says: The Temiskaming & Northern Ontario Railway Commission has awarded to Mr. John Cahill of Bonfield, near North Bay, the contract, for which tenders were publicly advertised, for 275,000 railway ties. These are to be used in the construction of the branch lines for which the contracts were awarded some time ago and in the completion of the second section of the main line.

The work on the latter portion of the road has been subject to some delays, which could not be avoided so far as the commissioners were concerned. In one instance timbers for trestle work had to be obtained from British Columbia. Of course there is plenty of timber in its natural state in the part of the country through which the road passes, but there are no facilities for preparing it according to the manner necessary for the trestle work mentioned. Quite rec-

## TOSSED BABE

### Nurse Went Ins Child O

A despatch from New York says: Rosa Naegle, a governess and nurse of Berne Switzerland, returning to this city from a visit to her native land, won the hearts of all the women and children in the cabins of the big new Holland-America steamship Nieuw Amsterdam, in on Tuesday from Rotterdam and Boulogne. She embarked at the latter port and straightway walked right into the affections of the youngsters and their mothers.

On the afternoon of the fifth day out from Boulogne, Nov. 15, in mid-ocean, while the liner was plunging through white-crested three-storied seas, the young governess saw on the deck below her a group of children of the second cabin playing ring games.

Presently the governess grabbed up

Wheat—No. 2 white, 71c bid C.P.R. north; No. 2 red winter, 70½c bid, and No. 2 mixed, 70c bid on C.P.R., without offerings. No. 2 goose offered at 68c outside, and No. 1 Northern at 82c, Point Edward, without bids.

Barley—No. 2 wanted at 51c east, and No. 3 extra at 48c, without sellers.

Oats—No. 2 white offered at 36½c outside, and at 36c on a 6c rate to Toronto, with 36c bid; they offered at 36½c on a 6c rate to New York, and at 36½c outside, December shipment, for 25,000 bushels, without bids.

### COUNTRY PRODUCE.

Beans—Hand-picked selling at \$1.60 to \$1.65, and primes at \$1.40 to \$1.65.

Honey—Strained quoted at 10 to 12c per lb, and combs at 82 to \$2.50 per dozen.

Hops—Now quoted at 18 to 22c.

Hay—No. 1 timothy scarce, and quoted at \$11 to \$11.25 on track here, No. 2 quoted at \$8 to \$8.50.

Straw—\$6 to \$6.50 per ton.

Potatoes—Ontarios, 55 to 60c per bag, on track, and New Brunswicks, 65 to 70c per bag.

Poultry—Turkeys, fresh killed, 12 to 15c; chickens, dressed, 8 to 9c; alive, 6 to 7c per lb. Fowl, alive, 4 to 5c; ducks, dressed, 8 to 9c; do, alive, 6 to 7c per lb; geese, 8 to 9c per lb.

### THE DAIRY MARKETS.

Butter—Bound rolls are quoted at 22 to 23c; tubs, 20 to 22c; large rolls, 19 to

## HOG PRODUCTS.

Dressed hogs in car lots are unchanged. Bacon, long clear, 11½ to 12c per lb in case lots; mess pork, \$21 to \$21.50; short cut, 23c.

Hams—Light to medium, 15 to 15½c; do, heavy, 14 to 14½c; rolls, 12c; shoulders, 11 to 11½c; backs, 16½ to 17c; breakfast bacon, 15½ to 16c.

Lard—Tierces, 12½c; tubs, 12½c; pails, 12½c.

### BUSINESS AT MONTREAL.

Montreal, Nov. 27.—Grain—There was some improvement in the demand for Manitoba wheat over the cable to-day. The market for oats was about steady. Prices held at around 40c for No. 4 store, 41c for No. 3, and 42c for No. 2. Flour—Manitoba spring wheat, \$4.60; strong bakers', \$4.10; winter wheat patents, \$4.10 to \$4.25; straight rollers, \$3.75 to \$3.80; do, in bags, \$1.65 to \$1.75; extras, \$1.50 to \$1.60. Feed—A firm feeling prevails in the market for millfeed owing to a continued good demand and small supplies; Manitoba bran, in bags, \$20; shorts, \$22 per ton; Ontario bran in bags, \$20 to \$20.50; shorts, \$22.50 to \$23; milled middling, \$21 to \$25 per ton, and straight grain, \$28 to \$30. Provisions—Barrels short cut, mess, \$22 to \$24; ½-bbls, \$11.75 to \$12.50; clear fat backs, \$23.50; long cut heavy mess, \$20.50; ½-bbls, do, \$10.75; dry salt long clear bacon, 12½ to 12½c; bbls plate beef, \$12 to \$13; ½-bbls do, \$6.50 to \$7; barrels heavy mess beef, \$11; ½-bbls do, \$6; compound lard, 8 to 9½c; pure lard, 12½ to 13c; kettle rendered, 13½ to 14c; hams, 14 to 15½c; breakfast bacon, 15 to 16c; Windsor bacon, 15 to 16½c; fresh killed abattoir dressed hogs, \$8.50 to \$8.75; alive, \$8.25 to \$6.35. Eggs—Selects, 25c; No. 1 candled, 20½ to 21c.

Cheese—Ontario, 12½ to 13c; Quebec, 12½ to 12½c. Butter—Choice creamery, 24½ to 25c; medium grades, 23½ to 24c.

### UNITED STATES MARKETS.

Toledo, Nov. 27.—Wheat—Cash, 76½c; December, 77c; May, 81½c. Corn—Cash, 44c; December, 42½c; May, 44½c.

# STATISTICS OF THE CROPS

## Agricultural Department Announces Extent of Yield

"Only in a few localities was the supply of farm labor equal to the demand," says the November crop report of the Department of Agriculture. It proceeds to say that the exodus to the Northwest has been the cause of this state of affairs. Some correspondents are inclined to believe the English immigrant exodus a laborer, while on the other hand, many aver that there has been a great improvement in the last few years. The general opinion is that wages will remain stationary for a time, as farmers cannot afford to pay more. The attractions of city life are said to have caused a scarcity of domestic help in the rural districts. During the year there was more or less activity in the making of farm improvements in the province. The estimates of the 1906 crops are slightly below the forecast of August. The reports of the various crops include the following:—Fall wheat, 18,841,774 bushels from 787,287 acres, or 23.9 bushels per acre, as compared with 17,333,361 bushels in 1905; Spring wheat, 3,267,000 bushels from 171,745 acres, as against 3,582,627 bushels in 1905; barley, 755,163 acres, yielding 25,253,011 bushels; oats, 2,716,711 acres, yielding 105,563,572 bushels; potatoes, 126,061 acres, yielding 15,029,290 bushels; hay and clover, 3,669,917 acres, yielding 2,139,413 tons. The report also gives the figures for peas, beans, corn and roots of various kinds.

### A SPECIAL ENQUIRY.

is being made by the Department of Ag-

riculture into the condition of the sheep-raising industry. Sheep have been in great demand, and the business is growing in favor. One correspondent speaks of losses by bears, and several complain of sheep-killing by dogs. Live stock generally is in a healthy condition. Horses are commanding more attention from farmers, while cattle are in excellent condition for wintering. Hogs are scarcer than usual. There is a smaller supply of hay than usual and as mill feed is high in price care will have to be exercised to carry stock through until Spring. This Winter, it is said, will afford practical tests of the value of corn silage in the feeding stock. Dairying has been a most profitable branch of agriculture on account of the high prices prevailing for butter and cheese. The honey crop has been a failure although the bees are in good condition. Poultry raising is becoming more popular as a source of revenue for the farmer.

The statistics obtained show 688,117 horses on hand as against 672,781 in 1905; 2,963,018 cattle as against 2,889,593 in the previous year; 1,304,800 sheep as against 1,324,153 in 1905; 1,819,778 swine as against 1,906,160 in 1905; 10,254,834 poultry as compared with 9,738,493 in 1905.

Considerable injury was done to orchards in October by an early snowfall, and in some districts the San Jose Scale and the borer have done damage. Plums were never scarcer, but all other fruits were equal to the demand.

instance timbers for trestle work had to be obtained from British Columbia. Of course there is plenty of timber in its natural state in the part of the country through which the road passes, but there are no facilities for preparing it according to the manner necessary for the trestle work mentioned. Quite recently 200 Italian laborers employed in grading the track struck work as soon as they had obtained the pay due them, walked about twenty miles to get a train and departed for Montreal and New York thence to sail to their native land, where they will spend the winter. It is expected that most of them will be back next spring to resume work. This is not an unusual experience with Italian laborers, but it was not any the more welcome to the T. & N. O. contractors because of that.

### SIXTEEN MEN PERISH.

Loss of the Norwegian Barque Magda in the Lower St. Lawrence.

A despatch from Quebec says: The Government steamer Druid, Captain Koenig, master, arrived in port early on Sunday morning from Red Island, and gives out the fact that the Norwegian barque Magda, with her master, Captain Isankensen, and her entire crew of fourteen men, and pilot, Charles Pelletier, were drowned during the terrible northeast gale and blinding snowstorm that prevailed in the lower St. Lawrence on the 16th instant, and caused the Magda to go on the Red Island reef, and break in two. Captain Koenig is also of the opinion that at least one schooner with all hands on board was lost, and other small craft, judging by the amount of wreckage seen after the storm and the quantity washed ashore. He is also convinced that the Magda crew jumped into the water with life belts around them, but could not live in such a furious sea. This is evidenced by two bodies that were washed ashore, one at St. Fabien and the other near Bic, with life belts on, who were proved to be Norwegians by articles and letters found on their bodies.

### PLAYED WITH MATCHES.

One Montreal Child Dead, Another Fatally Burned.

A despatch from Montreal says: As the result of playing with matches little Louise Philippe Dupuis, two years of age, was burned to death in his home on Friday, and in trying to extinguish the flames his little sister, Maria Annette, was so frightfully burned about the arms and body that no hope for her recovery is entertained. The victims were children of Mr. Phillipe Dupuis, 301 Champlain Street, and were alone in the house when the accident occurred, the mother having gone to the corner grocery for provisions. The father, who is a painter, was at his work. The children were playing in the kitchen and the mother, who only intended to be out a few minutes, turned the key in the door so as to be on the safe side.

### BRITAIN BARS OUT CHINAMEN.

First Attempt Made to Exclude Them Under Aliens Act.

A despatch from London says: The first attempt to exclude Chinese from landing in Great Britain is now occupying the attention of the Immigration Board. Thirty-two Chinamen from Hong Kong, who arrived at Gravesend on Monday, en route to Liverpool, were refused permission to land, the immigration officers basing their refusal on the Chinamen lacking means to support themselves. The case was appealed to the Immigration Board, and, after consideration, decision was postponed, the chairman of the board pointing out that this was the first case under the Aliens Act, passed last year, and was one of great importance.

The Bell Telephone franchise in London expires at the end of this year.

preparing to start their mines early next spring, which will enable them to produce about four hundred tons of pig iron per day.

The Dominion Gas Co. is to put down a test well for gas in the village of Port Dover on the property of J. E. Anderson, and two citizens, Captain J. S. Allan and Dr. Hicks will also sink a well.

Game Warden B. B. Miller reports that as a result of the prohibitory law in the Bruce peninsula during the past two years deer are largely on the increase and next season will find them quite plentiful.

Postmaster-General Lemieux announced at Montreal that the Government intended taking steps at the coming session to protect Canada from the yellow press of the United States, and to give a preference to British periodicals.

The quinquennial census in Manitoba and the new provinces shows that Saskatchewan has made the greatest gain of any in the five years, the increase being 180 per cent., and against 65 per cent. for Alberta and 48 per cent. for Manitoba.

The Mayor of Arnprior is determined that not only must the railways dispense with all unnecessary whistling on trains passing through the limits of the town, but that they must have electric bells installed at the different railway crossings in the centre of the town.

### GREAT BRITAIN.

For the first time Chinese have been forbidden to land in England.

It is stated that Sir Henry Campbell-Bannerman will shortly be made a Peer. It is rumored that Hon. James Bryce

# ISLANDS ADDED

## Captain Bernier Wasting

A despatch from Ottawa says: Advice have been received from Capt. Bernier, in command of the Government steamer Arctic, that he has decided to winter in Albert Harbor, Pond's Inlet, Baffin's Land.

Writing to a friend under date of Sept. 19th, Capt. Bernier says: "We have had great luck since we left the old city, and have to date taken possession of eight islands for the Dominion, and have discovered 65 miles of

## INTO THE SEA

### isane and Threw Overboard

the baby and was pressing it to her bosom as if it were her own child. Then she ran to the ship's rail and laid the little one on it. The mother ran toward Miss Naegle just as the governess, with a laugh heard over half the ship, raised the child high in her arms and tossed it into the tossing seas. Then she turned on the mothers and let out a series of shrieks that sent them and their little ones scampering for protection.

At first it was thought that she intended to make a sea sacrifice of others, as she ran after the children. But before she had gone half across the deck she was seized by officers, who locked her up in a cabin. She had gone stark mad.

The body was not recovered

#### CANOE UPSET, ONE DROWNED.

Son of Clatham Fire Chief Made Death

## YOUNG FOLKS

#### THE SONG SPARROW'S TOILET.

A splash into a silver brook,  
A dainty little dipping;  
A dart into a quiet nook,  
With all his feathers dripping;  
A little shake, a little tweak,  
To stir up every feather;  
A pretty preening with his beak  
To lay them all together;  
A stretch of wing, some fluffy shakes,  
A flash—he's flown away!  
That is how the sparrow makes  
His toilet for the day.

#### HOW LOVE FOUND OUT A WAY.

"Poor, dear little mother! It is hard for thee to lie upon this bed with those aching limbs of thine, so stiff with rheumatism." The mattress is so hard and so full of lumps. If I could but have a new one for thee!"

The invalid mother smiled gratefully up in her daughter's face. Rettchen was her only child, and since her husband's death this girl had been the breadwinner and sole support of the helpless woman.

"Dear child," she said, "a new mattress would cost money, and this is not easy to find. But fret not, my Rettchen; I am used to the old bed, and mind it less than thou thinkest. Bethink thee, dear, there be some poor souls that have no bed at all, and so must needs lie upon the floor. How much better off am I than these!"

Nevertheless Rettchen could not give up the hope of somehow contriving a new soft bed for her mother, and since to buy a wool or horsehair mattress was not to be thought of, she tried to think of something that would answer the purpose without expense. At last a bright thought struck her. "What a donkey I am!" she said to herself, "not to have remembered before that there is a stuffing that should answer quite well, and cost nothing but a little time and trouble."

For, sure enough, down by the river, just a mile or two away, close by the place where she caught the little crayfish in the season, was a marshy spot, which was thickly covered with the sort of wild cotton plant that grows in the North of Europe. In the months of August and September the pods were open, and the snowy tufts were to be seen ready to scatter their minute seeds when the wind should blow them out of their envelope.

"Why should I not make for mother a new bed out of this cotton?" she said to herself; and, forthwith she set about the carrying out of her plan.

Her cousins, Liza and Fritz, brought their boat to her aid, and the three young folks loaded it with cotton, stems and pods. Then Liza and Fritz returned in the boat to their starting point, unloaded their cargo into a shed by Rettchen's home, and rowed back for another load. Rettchen, meanwhile, filling her creel with crayfish and wet moss, and then setting to work to gather as much of the cotton as possible.

For several days the young people made these expeditions, until Rettchen at length felt sure she had enough material for her novel experiment.

She and her cousins first picked out all the cotton fluff, and put it into a coarse canvas bag. This bag, after being closely stitched up, was baked for hours in the great brick oven from which the huge loaves of brown bread had just been taken. This long-continued heat was to kill any insects or germs there might be in the cotton.

After baking, the fluff was carefully looked through, and any pieces of stalk or sheaths of pod were taken out. Rettchen had by her a piece of coarse unbleached calico; she took this for her mother's new mattress, and stitched it strongly all round, save at one end. In at this opening she put the cotton, and after filling the huge bag she sewed up

# RIOTING IN HAMILTON

## Police and Dragoons Had Long Fight With the Mob.

A despatch from Hamilton says: Never in the history of the city were scenes of such wild disorder witnessed as those of Saturday night, when for over three hours the militia and the police charged a mob of about 10,000 people continuously. In the afternoon the infantrymen were stationed about the city at each of the corners where the street railway switches are. They were given strict instructions to allow no person to interfere with the switches. There was no trouble, however, until after night fall. Crowds began to gather then around the City Hall and the other places in the centre of the city, and by 7 o'clock there were many thousands out.

#### READING THE RIOT ACT.

Mayor Biggar and Sheriff Middleton were at the City Hall all afternoon in readiness to read the riot act, but not until 7.10, when the crowd began to show a violent spirit, did they go out on the steps of the City Hall. The Sheriff proceeded to read in a loud voice, with an accompaniment of hooting and jeering by the crowd. Before the act was read the policemen had been drawn up in front of the Sheriff on the road, each man with his baton drawn, and not far away were fifty-five cavalrymen armed with swords and one hundred infantry men armed with rifles on which bayonets were fixed. The militia was under the command of Lieut.-Colonel Denison and Lieut.-Colonel Ogilvie.

#### CHARGING THE CROWD.

Immediately after the act was read the policemen were given orders to charge the crowd. They separated, half going in each direction, and hammered the crowd indiscriminately. The people fled with great haste in every direction open to them. In about two minutes James street was pretty well cleared from King to Cannon. After the police had passed through about one hundred people were lying in the road, where they had been knocked down by blows on the head or forced off their feet by the crowd.

Several went back to the City Hall, which was made a temporary hospital for the remainder of the night, to have

their heads dressed. It was only a short time before the crowd was back again, and from that time on until 10.30 the police and military charged it continuously. The cavalry rode on sidewalks, clearing them, while the infantry and the police made lines across the streets and swept the crowd before them. The people dispersed, going up and down the side streets, leading from and to James street, only to return and begin jeering and hooting again. It was the most persistent mob that could be imagined.

#### BIG FIGHT NEAR WALNUT STREET.

What was perhaps the affray of the evening took place on King street, near the corner of Walnut street, after the crowds had been repeatedly dispersed from the central part of the city. A number gathered there, and placed a couple of barrels of cement or stones and some planks on the track. When the first car came along the motorman tried to rush through, as he realized in stopping he and others in the car were in great danger. The blockade of stones resisted the car, and when the men in it got out to clear it away they were violently assailed, and beat a hasty retreat to the car and threw themselves on the floor. The crowd showered bricks and stones at the car, battering it almost to pieces. Screens and windows were soon broken and many missiles hit those in the car. They lay on the floor for a short time, but were maddened into an attack, and hurled the stones thrown at them back at the crowd, injuring some. Some one telephoned to the centre of the city for the soldiers, and the Royal Canadian Dragoons and the Horse Artillerymen galloped down full speed on the rioters, and they fled in all directions in great haste. The track was cleared, and the wreck of the car proceeded to the east end barn. About all that was left intact were the trucks. Motorman Arthur Bertram was injured in the spine. He was taken to the hospital, where he remained over night. Nearly all the other men in the car were more or less bruised by stones.

About 10 o'clock the cars were called in and after that the crowds went home. The soldiers went in about 11 o'clock.

#### MAXIM GUN SAVED THE CHIEF.

Revolutionists Attempt to Assassinate Police Official.

A despatch from Odessa says: The attempt to murder the chief commissary of the Odessa police on Wednesday was frustrated by the use of a Maxim gun. The aggressive band, said to have been composed of social revolutionists, suffered the death of three, and the wounding of three others. The remainder escaped.

Terrorists seized \$2,000 in the Russian Navigation Company's office on Wednesday, after killing a police official.

Two thousand copies of the peaceful regenerationist party's appeal were seized.

#### FIVE BOYS DROWNED.

Skating Party Went through the Ice at Varines, Quebec.

A despatch from Montreal says: Five boys, scholars at St. Paul's College, Varines, a few miles below Montreal, on the St. Lawrence, were drowned while skating on Friday. There were six in

#### COST HALF A MILLION.

Amount Fernie Strikers and Coal Company are Out.

A despatch from Vancouver, B. C., says: The Fernie strike has cost half a million, and the Crow's Nest Coal Company lost one hundred thousand in profits, and it will cost fifty thousand dollars to place the mines in good condition again, which will take one month. The men lost the strike and three hundred thousand in wages. The Government lost twenty thousand in royalties.

#### SMELTER IN ALGOMA.

Will Handle Ore Which Now is Sent to Illinois.

A despatch from Sault Ste. Marie, Ont., says: A big smelter is to be erected at Dead Lake by the Northern Ontario Consolidated Copper Company, according to an announcement made on Wednesday. It will be the first in Canada, and will handle ore which now goes to Illinois. Work will start at once. Several new mines will ship ore there.

# mail. **CANOE UPSET, ONE DROWNED.** **Son of Chatham Fire Chief Meets Death While Sifting.**

A despatch from Chatham says: Herbert Pritchard, 20 years old, the eldest son of Fire Chief Richard Pritchard, met his death by drowning in the Thames on Monday afternoon at 2.30 o'clock, while out for a sail in a canoe with two companions. Wylie Braddon and George Sommerville. The boys made a tack across to the opposite shore, when a gust of wind upset the canoe. The young men were thrown into the water clear of the canoe, and only a few yards from the shore. Sommerville clung to a pile until he was rescued. Braddon tried to save Pritchard, but the water was too cold, and Pritchard hindered the rescue by clinging to Braddon. Both young men went down several times, and finally Braddon succeeded in freeing himself from the other's grasp, and managed to swim to the shore. Pritchard sank for the last time. The body was recovered in 45 minutes.

# **MAN SWEEPED OVER FALLS.** **Seen Drifting in Boat to Cataract From Canadian Shore.**

A despatch from Niagara Falls, Ont., says: Monday afternoon people along the Canadian shore of the upper river

# **ED TO CANADA** **Has Not Been His Time**

new channel, and named several places and islands which were not named before. We have been as far as Melville Island, and have restored Sir John Franklin's monument and the graves of those we love for the work they did for science.

"We have been looking for whalers, and I am sorry that four of them have been caught in the ice in Melville Bay and will do nothing this Summer. We are wintering here and will continue our work next Spring until the Fall."

saw a boat drift down into the rapids and pass over the Horseshoe Falls, a man was standing up in the craft, waving his arms wildly, and that before the boat reached the Falls he lay prone in the bottom of the boat. Nothing was seen of man or boat after the plunge over the waterfall.

Two rowboats started down the Chippewa River toward the Niagara to attempt to rescue at the mouth of the smaller stream. The rescuers went far beyond what is considered the danger line, but a cross current carried the unfortunate man away from them toward Goat Island. The would-be rescuers were by this time in a perilous position, and it was with great difficulty that they succeeded in reaching shore.

Inquiry along both shores fails to reveal any person missing. The boat was green in color, and may have come from further up stream. It is possible that the occupant was a duck hunter.

# **COMPULSORY FLAG-FLYING.** **The Proposal Voted Down by the House of Lords.**

A despatch from London says: A motion to insert a clause in the education bill making it compulsory to fly the Union Jack on elementary schools was voted down by the Lords without discussion.

unbleached calico; she took this for her mother's new mattress, and stitched it strongly all round, save at one end. In at this opening she put the cotton, and after filling the huge bag she sewed up this end too.

"Why, what is this, my Bettechen?" said the mother, when, after sitting in the armchair to have her bed made, she was helped tenderly back by her daughter, and found her poor crippled limbs resting easily and painlessly upon a soft and yielding mattress. "Whence hast thou this lovely soft bed?"

"Why, mother, God sent it. He made the wild cotton to grow, and he put it into my heart to use it. So I baked and prepared it, and stitched the covering, and put in the stuffing, and lo, this bed, with which my little mother is so much pleased; and yet more—is it not so, mother? with the love which found out the way to give thee comfort?"

# **BRUTAL MURDER IN MONTREAL.** **Body of an Italian Found With Face Badly Gashed.**

A despatch from Montreal says: The city detectives are actively engaged in attempting to clear up the mystery surrounding another tragedy. On Sunday three boys found the body of an Italian lying face downwards in a pool of water a short distance from the coal towers at Windmill Point, a section of the harbor west of McGill Street, which is part land and part water.

The man had evidently been murdered after a desperate struggle. The face and head bore wounds inflicted with a knife or other sharp instrument, and the skull had been crushed in by a heavy blow with a stone. A blood-stained stone of heavy proportions was lying on top of the man when the police found him, while about the body were found several smaller stones, each with a bloody clot of hair. The face of the deceased was covered with a piece of rough brown duck, similar to that used in overalls, and the police have drawn the conclusion that the man had been struck down elsewhere and carried to this spot, so that if any spark of life had been left in the body it would be extinguished by the water. A piece of an iron bat was also found near the body, but there was no evidence upon it to indicate that it had been used as a weapon.

The body was on Monday identified as that of Antonio Sartoria, an Italian workman. No arrests have yet been made.

# **SELLING THEIR DAUGHTERS.** **Russian Peasants Reduced to Terrible Straits by Famine.**

A despatch from St. Petersburg says: Reports from the famine districts of Russia show that the distress is steadily growing acute. The peasantry in the Government of Kazan have been driven to desperation, and are selling their daughters into slavery to the Mohammedans of the Caucasus. A form of typhus fever, known as "hunger typhus," resulting from starvation, has become epidemic in Kazan.

# **NEARLY DROWNED IN LIQUOR.** **Workmen Caught in Bursting of Distillery Tank.**

A despatch from Glasgow, Scotland, says: A tank in a distillery here, containing about 70,000 gallons of spirits, gave way on Wednesday and a dozen workmen narrowly escaped being drowned in the liquid. They were caught in the hood and dashed against a wall, which, fortunately for them, gave way, thus allowing the liquid to reach the street. Here several horses were caught in the rush and carried off their feet. Eleven of the workmen were slightly injured.

The fever isolation hospital at Hamilton will cost \$75,000.

A despatch from Montreal says: Five boys, scholars at St. Paul's College, Varines, a few miles below Montreal, on the St. Lawrence, were drowned while skating on Friday. There were six in the party, and only one of them escaped from going through the thin ice. The names of the drowned boys are:—Edward Matepart, aged nine; his brother Paul, aged six; Deudonne Decelles, aged eleven; Camille Racicot, aged fourteen, and Raoul Marchand, aged ten. Alderice Prevost gave the alarm, but only the dead bodies were recovered.

# **SENTENCE OF DEATH.** **Italian at Port Arthur Wept When It Was Passed.**

A despatch from Port Arthur, Ont., says: Mike Rivino will pay the extreme penalty for killing Samuela Franchella. Friday morning sentence of death was passed upon the Italian. He will be hanged on Jan. 18. There was nothing to indicate from the attitude of the prisoner that he expected so severe a sentence. When he understood the terrible meaning of the sentence he burst into tears and continued crying until he was led back to his cell.

# **SAY THEY POCKETED FARES.** **Government Immigration Agents Have Been Laid Off.**

A despatch from Ottawa says: Half a dozen Government immigration agents who were employed to travel with immigrants to the west have been laid off on account of the charge that they have been collecting from the Government Pullman fares which they did not pay to the railway company. An investigation is in progress, and if the charge is proven the offenders will be required to make restitution.

# **STEAM BARGE FOUNDERED** **Six Sailors Met Death In Wreck Off Toronto**

A despatch from Toronto says: During the terrific gale which raged over Lake Ontario on Thursday morning, the steam barge Resolute, belonging to Haney and Miller, contractors, went to pieces just outside the Western Gap and six lives out of the crew of twelve were lost in one of the lifeboats, which capsized in the heavy seas as it was leaving the wreck. A second lifeboat, in command of Capt. John Fahey, reached the land in safety after an hour's hard battle against the waves. Capt. John Sullivan, who stuck to the vessel until she broke up, was washed ashore through the gap, clinging for life to the top of the wrecked vessel's cabin. Thomas Topping, the second engineer, one of those capsized from the first lifeboat, clung to the cabin-top with Capt. Sullivan until he lost his hold and sank from exhaustion. The schooner P. B. Locke, which was in tow of the Resolute, withstood the force of the storm, and lies anchored a short distance from the spot where one mast and the top of a wheel-house mark all that is left of the wreck. The Locke's crew was taken off by a surf boat towed out by the tug Maggie Mitchell and in command of Capt. Ward. The crew of the schooner St. Louis, which had also sought shelter from the storm near the gap, was also taken off by the surf boat.

**THE DEAD.**

John Harrison, chief engineer, Deseronto; Thomas Topping, second engineer, Deseronto; David White, deck hand, Prescott; Harry Gregory, fireman, Bath,

ing to an announcement made on Wednesday. It will be the first in Canada, and will handle ore which now goes to Illinois. Work will start at once. Several new mines will ship ore there.

# **WHY PEDLAR HANGED HIMSELF.** **Afraid of Being Run Over by an Automobile While Tramping.**

A despatch from London says: Overwhelming dread of being run down and killed by an automobile while tramping along country roads impelled a traveling peddler to hang himself on a tree at Buckland, Surrey, on Wednesday, to prevent such a catastrophe.

# **WHEN YOUR FACE IS A DOT.** Here are a few facts which will help you to judge distances: At 30 yards, assuming that your sight is of the average strength, the white of a man's eye is plainly seen, and the eyes themselves up to 80 yards. At 100 yards all parts of the body are seen distinctly, slight movements are perceptible, and the details of the dress can be distinguished. At 200 yards the outlines of the face are confused and rows of buttons look like stripes. At 400 yards the face is a mere dot, but all movements of the legs and arms are still distinct. At 600 yards details can no longer be distinguished. At 800 yards the men in a crowd cannot be counted, nor their individual movements distinguished. At 1,000 yards a line of soldiers resembles a broad belt. At 1,200 yards cavalry can be distinguished from infantry, and at 2,000 yards a mounted man usually appears a mere speck.

Buffalo citizens are petitioning to have further supplies of Canadian power excluded.

England; John Barnes, fireman, Port Colborne; Nels Nfelson, Sweden.

**THE SAVED.**

Capt John Sullivan, 575 Euclid Avenue, city; Captain John Fahey, St. Catharines; Andrew Hicks, wheelsman, Milford; Michael Haney, mate, Buffalo; Edward McBeth, deck hand, Toronto; Mrs. Lizzie Callaghan, cook, St. Catharines.

**BIG STEAMER ASHORE.**

A despatch from Detroit says: Eighteen known drowned, and possibly a dozen others, is the record on Thursday of the worst storm that has swept the lakes in many years. The barge Athens sank in Lake Erie, and Capt. Munkle, of Milwaukee, and his crew of six men are lost.

Off the new breakwater, at the entrance of Holland Harbor, four men were swept into the lake and drowned. The gale created much havoc in the Detroit River, and reports from all over the lakes show that the storm left a wake of wreck, disabled, and drownings, and has done much damage to shore property.

The steel steamer Chauncey Hurlburt, bound for Buffalo, was blown out of its course on Lake Erie on Thursday night by the terrific gale, and is aground off Leamington. The Anchor Line steamer Cenemagh, up-bound, with a valuable cargo of package freight, also is ashore on Point Pelee, in Lake Erie, pounding hard, and filled with water. The crew of 20 men was rescued.

# LONG DISTANCE PIPING

## ENGINEERING FEATS PLANNED FOR WESTERN AUSTRALIA.

Gold Mining Region of Coolgardie Supplied With Water at a Cost of \$14,000,000.

It is expected that the next few years will witness the development of the most remarkable system of water carrying in western Australia that has ever been seen. The plan is to repeat, again and again, the successful engineering work that is now supplying the great gold mining region of Coolgardie, far out in the desert of the interior, with plenty of water brought from the coast mountains, 325 miles away.

This western Australian desert contains perhaps the largest waterless regions in the world. When David W. Carnegie made his second journey across it, several years ago, he travelled 800 miles without finding anything that suggested a permanent source of water.

For many days he saw nothing but prickly spinifex covering the sand ridges, which were forty to fifty feet in height and extended east and west parallel with one another. He wrote that he crossed more than eighty of these sand ridges in eight hours travel.

But under these repellant sands lie the great gold resources of western Australia that are now supplying more of the metal every year than all the rest of the commonwealth. When the rush of miners to this great thirst region began, the eager search and the frantic strife for water was

### SOMETIMES TRAGICAL.

The Government sought for underground sources of supply, but most of this water was found to be so impregnated with salts that it was unfit for use. Engineers finally devised a plan of water delivery from the western coast mountains, about twenty miles to the south of Perth, which involved the largest pumping scheme that has yet been carried into operation in any part of the world.

The works were completed only two years ago and they are attracting all the more attention because the population that is paying \$14,000,000 for them is still quite small.

The amount of rainfall in the basin of the Helena River, which flows through the Canning Hills south of Perth, is about 30 inches a year. It was found that by impounding this river a supply of 5,000,000 gallons a day would be available for transportation into the interior.

The problem was to transport this water a distance of 350 miles, for it was proposed to extend the aqueduct to the Kalgoorlie diggings, east of Coolgardie, and this has been done. Mundaring, the place where the Helena River was dammed, is only about 300 feet above the sea, but the surface of the desert to which the water was to be carried is about

1,650 FEET ABOVE SEA LEVEL,

and had to be lifted during the process about 1,300 feet.

The water which collects back of the dam in the Helena River forms a fine lake seven miles in length. The big delivery pipe that carries the water is not buried in the soil, but lies on the surface or in open trenches, for there is no danger of freezing.

There are eight pumping stations, a little more than forty miles apart, and the water is kept moving up the long, but very gentle, incline. It finally reaches a reservoir many miles west of Coolgardie, and from this point gravitation takes it to the 45,000 inhabitants of the Coolgardie mining camps and to the Kalgoorlie region beyond.

This water is sold out there in the desert at a comparatively small price considering that interest must be paid

# OUT-OF-WORK MONARCHS

## UNEASY LIE THESE HEADS WHICH WEAR NO CROWNS.

Don Carlos de Bourbon Can Claim the Thrones of Spain and France.

Even to-day there are thousands of people in Spain who refuse to regard Alfonso XIII., the husband of Princess Ena, as their rightful ruler. In their opinion Don Carlos de Bourbon, Duke of Madrid, should reign over them as King Charles VII. of Spain. Indeed, this head of the kingly house of Bourbon is an uncrowned monarch in the fullest sense of the word, for, taking up arms in 1872, he did actually reign over the greater part of northern Spain for nearly four years, being acclaimed by nobility and peasantry alike as their lawful sovereign. Yet you will search historical tables in vain for any mention of King Charles VII., and also for the names of his predecessors in the Carlist claim, "Kings" Charles V. and Charles VI., for these also were uncrowned monarchs. The long struggle of the Carlists to win the throne they regard as theirs dates back to 1813, and their claim is based on the contention that Ferdinand VII. acted illegally in appointing his daughter Isabella his successor, for under the Salic law no woman was empowered to reign. But to-day, at the age of fifty-eight, tired of a life of political

### PLOT AND COUNTERPLOT.

It is suspected that Don Carlos is content with the quiet repose of the Palazzo Loredan at Venice, and that he is willing at any time to waive his claims in favor of his son, Don Jaime de Bourbon, the future leader of the Carlist faction.

Oddly enough, Don Carlos, as the undisputed head of the Bourbon family, could also present the strongest possible claim to the throne of France. But he has never desired a duel pretendership, and although often urged by French Royalists to place himself at their head, he has invariably declined to do so. In the case of France, however, there is no lack of pretenders, the most popular of the mall being Prince Victor Napoleon, the present head of the Bonapartes.

The Portuguese crown, again, is claimed by Dom Miguel de Braganza, who, although he has many supporters, stands but a scant chance of unseating the present ruler, King Charles. And there are many "other men who want thrones," and at least one woman—namely, the Princess Paleologae, who is considered entitled by descent to rule at Constantinople in the place of

### THE SULTAN, ABDUL HAMID.

A fact which should bring cheer to all uncrowned monarchs is that one of their number has recently succeeded in his claim. Peter Karageorgevitch, so long pretender to the crown of Serbia, has waded to his heart's desire through the blood of the murdered Alexander Obrenovitch. But his is a kingship of constant dread. The murderers of his predecessor surround his person, probably quite as willing—should it be worth their while—to intrigue against the present occupant of the throne.

There are even a few—a very few—people in Great Britain who hold that King Edward himself has no strict right to the position he so nobly fills. They acclaim the Princess Ludwig of Bavaria—born Mary of Modena—as the true ruler of Great Britain and Ireland, because, forsooth, she can claim descent from Charles I.'s daughter, Henrietta Stuart, while King Edward can only claim to be descended from the same monarch's sister! But all this was settled by Act of Parliament long years ago, and no musty old question of pedigree can ever disturb our loyal adherence to the first of kings and gentlemen,

# YUKON IN THE SIXTIES

## VISITED THE INDIANS IN THE FROZEN NORTH.

Archdeacon McDonald Spent the Best Years of His Life Within the Arctic Circle.

One of the makers of history in North-Western Canada is now spending the evening of his days in Winnipeg, venerated by those who know him and his life's history. His active years were chiefly spent near and within the Arctic Circle, the Yukon, the Klondike, and other districts whose names gold has since made familiar to the world, which were traversed by him in the long ago.

He was ordained deacon in December, 1852, and priest in 1858. He was first stationed as Church missionary Society missionary at Islington, Winnipeg River. In 1862 he was selected to establish a mission at Fort Aux Liards, Mackenzie River District, but he proceeded instead to Fort Yukon. In 1871 he removed to Porcupine River, and in the next year to Peel River, where he labored until 1904.

Proceeding in 1862 from what was then called the Red River Settlement to Fort Yukon, Archdeacon McDonald labored there

### AMONG THE INDIANS.

who were composed of numerous tribes, and who annually assembled in the summer at that port for the purpose of fur-trading with the Hudson's Bay Company. During his stay there of eight years, the Indians in the surrounding country were visited, both in winter and in summer.

Thousands of miles were traversed annually, either in canoe or boat in summer, and on snowshoes in winter. In 1865 scarlet fever spread among the Indians, and many of them were carried off by the disease. At first only infants were baptized, but after four years the adults gave such evidences of their belief in and of their acceptance of the truths of the Gospel that it was considered advisable to examine them when they assembled at the fort for purposes of trade. Having found that they had an intelligent understanding of what they had been taught, the archdeacon administered baptism to them, not only at Fort Yukon, but along the line of travel from that fort to the fort of the H. B. C. on Bell River, a tributary of the Porcupine, and the Indians across the mountains at Peel River, when it was found that the number of baptized men, women and children amounted to about 700.

From Fort Yukon tribes of Indians were visited about 450 miles down the Yukon at the confluence of the Tanana, where gold was afterwards found. This river is not as large as the Yukon. It takes its name, as the word implies, from

### THE GLACIER MOUNTAINS.

At first the natives held themselves aloof from the missionaries, but after three or four visits all gave in their adhesion; over one hundred of them received baptism and the following year about three hundred more. These tribes had to be addressed through an interpreter, one of themselves, who could speak the language of the Tukudh, the people among whom the missionary resided.

During these 42 years of residence in the frozen north, Archdeacon McDonald was accustomed to visit the different tribes of Indians on the Upper Yukon and below the confluence of the Porcupine River with the Yukon, all the way to the entrance of the Yukon into the Pacific, and as far as Norton Sound, where there was a depot of the Russian Fur Company, which passed in 1867 into the hands of the United States of America through purchase.

# MARIE LLOYD'S WEDDING

## AMID SCENES OF MERRIMENT AND HILARITY.

Screaming Gags and Dances at Marriage of English Music Hall Idol.

One of the most amazing marriages of modern times took place at Hampstead (London, England) registry office recently, when Miss Marie Lloyd and Mr. Alec Hurley, the two well-known music hall artists, were married amid scenes of merriment and hilarity which have possibly never been equalled.

The ceremony was performed by Superintendent Registrar Herbert Bridger, and the side-play of the contracting parties and the humorous "patter" and antics of the best man and the sallies of the bride and bridegroom's friends kept the hundred odd guests convulsed with laughter from beginning to end of the ceremony.

### COUPLE ARRIVE.

The marriage was fixed for half-past three, but long before that time a crowd of many hundreds assembled outside the town hall on Haverstock Hill, and the bride and bridegroom, who rode from the bride's residence in King Henry's road, on two motor cars, had to literally fight their way up the steps into the building.

The bride was attired in a costume of oyster-white-faced cloth, with a little ermine coat, toque and muff, which, with a diamond necklace and earrings that she wore, were the gifts of the coster comedian. The bridegroom wore a heavily braided morning coat and vest, with striped trousers and patent leather boots.

Mr. Sam Poluski acted as best man, and Mr. Tom McNaughton performed the unusual office of "geni of the ring."

The couple met with a very cordial reception from their friends who had gathered in the town hall, and the fun commenced when the bride and bridegroom, having taken their seats in front of the registrars' table, the best man proceeded with mock solemnity to mop the perspiration from the bridegroom's face with a large white handkerchief, at the same time entreating him to "keep cool." Mr. McNaughton also added to the gaiety of the proceedings by reverently dusting Mr. Hurley's boots with a gorgeous red and blue bandana.

Other guests kept the fun going with "patter" and witty sallies, whilst the registrar completed the filling in of the registrar, and a dozen camera men, by whom that official was literally surrounded, snap-shot almost every movement of the bride and bridegroom.

### BEST MAN'S WAR DANCE.

Some sort of order having been at last obtained, the registrar intimated that he was ready to proceed with the ceremony.

The best man and Mr. McNaughton promptly executed a sort of war dance, and the best man having passed his hands hypnotic fashion in front of the couple, the registrar proceeded to recite the marriage lines, which were repeated with much gusto by the bride and bridegroom.

After a vigorous search through all his pockets Mr. Sam Poluski discovered the ring on his finger, and the room simply echoed with laughter when he handed it to Mr. McNaughton and cheerfully remarked:

"Now, Geni of the Ring, pass it round."

The ring was duly handed round, and eventually reached the bridegroom, who slipped it on the finger of the bride.

Almost at the same moment Mr. Sam Poluski gagged—

"Gemini Talk about a soap trust, why it's all sunlight here!"

### HALL OF KISSES.

claim takes it to the 45,000 inhabitants of the Coolgardie mining camps and to the Kalgoorlie region beyond.

This water is sold out there in the desert at a comparatively small price considering that interest must be paid on the money borrowed to develop the works. It sells for about 75 cents a thousand gallons, and it supplies not only those distant mining camps, but also some twenty of thirty settlements on the way to them and small pipes carry water to stockmen or villages miles away from the main line.

Up to this time the consumers have been able to obtain all the water desired of the very best quality and at all times of the year. Stockmen along the route who had supplied their animals from scanty wells that might run dry at any time have lost this fear, for the pipe line is an unfailing source of

**GOOD FRESH WATER AT ALL TIMES.**

There has been no interruption of the flow on account of accident to the pumps, because extra pumps are installed at every station for use in case of need.

It is to give the widest possible application to this great idea whose practicability has been so thoroughly demonstrated that the people of western Australia are now turning their attention. The rivers do not come from far in the interior, for the rainfall is too small for to have much surface flow.

But nearer the coast the precipitation is quite large, and engineers are now working on plans for saving of this water that can be collected and sent in through pipes far into the interior, not only to supply mines, but also to give life to many thousands of acres of farm and grazing lands, so that the agricultural and grazing industries may be far more widely extended over the country than was formerly thought possible.

## GETTING EVEN WITH LAWYERS.

**Where the Overshrewd Have Fallen Into Traps of Their Own Making.**

Overshrewd lawyers often furnish their adversaries with weapons. "Did you see this tree that has been mentioned by the roadside?" an advocate inquired.

"Yes, sir, I saw it very plainly." "It was conspicuous, then?" The witness seemed puzzled by the new word. He repeated his former assertion.

"What's the difference," sneered the lawyer, "between plain and conspicuous?"

But he was hoist with his own petard. The witness innocently answered: "I can see you plainly, sir, among the other lawyers, though you are not a bit conspicuous."

In another witness a blow directed against the character of a witness forcibly recoiled.

"You were in the company of these people?" he was asked.

"Of two friends, sir."

"Friends; two thieves, I suppose you mean."

"That may be true," was the dry retort; "they are both lawyers."

The blow that destroys the effect of an adverse examination is occasionally more the result of accident than of conscious effort. In a trial not long ago a very simple witness was in the box, and after going through his ordeal was ready to retire. One question remained.

"Now, Mr. —, has not an attempt been made to induce you to tell the Court a different story?"

"A different story to what I have told, sir."

"Yes. Is it not so?"

"Yes, sir."

"Upon your oath, I demand to know who the persons are who have attempted this?"

"Well, sir, you've tried as hard as any of 'em," was the unexpected answer.

It ended the examination.

claim to be descended from the same monarch's sister! But all this was settled by Act of Parliament long years ago, and no musty old question of pedigree can ever disturb our loyal adherence to the first of kings and gentlemen,

## EDWARD REX ET IMPERATOR.

One of the newest pretenders to a throne is Shemais Abrahim, a refined man of twenty-eight years, whose claim to the throne of Poland was recently given prominence in England by the report of his arrest in Swindon. The charge against him was "obtaining 35s. from the Rev. B. C. Thelwall, of Burghage, Wilts."

It was alleged that he claimed to be the Prince of Conde, and that his father was heir to the Polish crown. He appeared to be a reasonable, well-educated and gentlemanly fellow, but even if he were descended from a family who once reigned in Poland—as was quite possible—he could scarcely make good any claim to the throne, for the simple reason that the monarchy of Poland was not hereditary, but electoral.

## BERLIN HAS A NEW SWINDLE.

**Hardup Man With Bargain Watch, Easy Market Woman and Fake Sleuth.**

Berlin, Germany, has developed a new variation of the confidence game. The victim who has brought it to light is Frau Elizabeth Andres, who keeps a stand in the Central Market on the Alexanderplatz. The police are wondering how many others have been victimized.

Frau Andres was sitting at her stand one evening about 6.30 o'clock waiting for customers when a shabbily dressed man went up to her and poured a hard luck story into her ears. At the conclusion he produced a near gold watch and semi-tearfully declared that his necessities obliged him to sell it for any old price. He begged Frau Andres to take it for 20 marks (about \$5), assuring her that it had cost him 100 marks and was still just as good.

The shrewd market woman scented a bargain but she drove a hard one. She finally became the owner of the watch for 16 marks (\$4) and spent the next hour admiring her purchase and patting herself on the back.

She had a rude awakening when a solemn man stalked up to her and exhibiting a metal badge announced that he was a Detective Muller of the police force and accused her of buying a stolen watch. The thief, he said, had been arrested and had confessed turning it over to her.

The woman was terrified. She shook with terror as if she had a chill and of course never thought of question or resistance when the detective laid an embargo on the watch and informed her that she was under arrest as a receiver of stolen goods.

While the woman closed her stand and prepared to go with him the detective strolled toward the entrance of the market. When she was ready he beckoned to her to follow—they do these things differently in Germany—and started toward the nearest police office.

The prisoner kept him in sight for a little way, but he vanished in crossing the Alexanderplatz. Having no suspicion of the genuineness of her arrest, however, she kept right on to the Police Prefecture.

Nobody seemed to know anything about her there. She was referred to the Commissary in charge and he speedily divined that she had been swindled. The police are still looking for the bunco men—which has a familiar sound.

## A LITERAL TRANSLATION.

Mrs. Modus—Well, George, you promised me a new bonnet.

George—? Promised you a new bonnet? Great Scott! When?

Mrs. Modus—Before you married me you swore that never should disgrace rest upon my head through you, and what do you call this shabby thing but a disgrace?

Pacific, and as far as Norton Sound, where there was a depot of the Russian Fur Company, which passed in 1867 into the hands of the United States of America through purchase.

## HONORED BY THE KING.

**The Albert Medal for Gallantry Conferred on Mr. Leslie Urquhart.**

Mr. Leslie Urquhart (his Majesty's Vice-Consul at Baku) had the honor of being received by King Edward at Buckingham Palace recently, when his Majesty conferred upon him the Albert medal for gallantry, which is thus described in the Court Circular:

"During the disturbances at Baku, in September, 1905, four Englishmen were surrounded by insurgents at Zabral, the headquarters in Balachani of the Baku Russian Company, and were in imminent danger of losing their lives. The four Englishmen had already been isolated for some time when news of their perilous position reached the British Embassy at St. Petersburg, and Mr. Urquhart, accompanied by two Cossacks and several Tartars from the village of Mushlagge, started to relieve the beleaguered men.

"The district was full of armed Tartars, and in such a state of unrest that when Mr. Urquhart started upon his expedition it was not expected by the remainder of the British colony in Baku that he would live to return.

"On the night of his departure Mr. Urquhart proceeded to a farm which he possessed in the neighborhood, where he hoped to be able to get help from his own farm hands, who were Tartars, and also to collect supplies; but notwithstanding that the party was stopped and fired on from time to time the supplies were collected, and a start was made early the next morning for Balachani.

"Mr. Urquhart's courageous and spontaneous action was rewarded with success. He got through and found the four Englishmen in a dreadful condition, especially on account of water, and after feeding them he persuaded them to go with him in carts which he had brought, with as many Armenians as they could take with them. Immediately afterwards the whole of the buildings were carried by storm, and everyone found therein put to death.

## PRETENDER'S SHAM COURT.

**Duc d'Orleans in Royalist's Chateau Addressed as "Your Majesty."**

The entente cordiale which has already resulted in the interchange of all kinds of official visits between the English and French authorities, has now advanced another step. This fall it is the fashion for French and English people of position to exchange visits to their country houses.

The aristocratic Frenchwoman's idea of the English country house has yet to be recorded, but the British peeress who has just returned from a round of visits in France has been so delighted that she has told all her friends to "go and do likewise." Among the houses she visited was the chateau of the Duc de Luynes, where, unknown to the majority of English people and many Frenchmen, a regular little court is kept up when the Duc d'Orleans, the "rightful King of France," stays at the house.

The Duke is always addressed as "Your Majesty," and he is given a retinue of gentlemen in waiting. At the chateau is a wonderfully interesting visitors' book full of historical names. To enter one's name in this book is recognized as a sacred privilege. The volume was buried in the grounds during the French revolution.

English visitors to French country houses are much impressed by the fact that house parties seldom exceed fifteen in number, and at the big places each guest has a complete suite of rooms like a flat. This is a great contrast to the overcrowding and discomfort often found in large English country house parties.

slipped it on the finger of the bride.

Almost at the same moment Mr. Sam Poluski gagged—

"Gemini! Talk about a soap trust, why it's all sunlight here!"

## HALL OF KISSES.

Before the guests had recovered from their convulsions the bride and bridegroom were cordially kissing each other, a signal for general and promiscuous kissing. Both the best man and the "Geni of the Ring" kissed the bride, and then the fun grew fast and furious as these two comedians fell on each other's neck and affectionately kissed each other. Every body seemed to want to kiss the bride, who seemed in no way perturbed at these affectionate outbursts, and it is doubtful if any registrar has ever witnessed such an amusing scene as did Mr. Registrar Bridger.

The kissing over, the bride and bridegroom proceeded to sign the registrar, and the camera flenda again got to work, Mrs. Hurley obliging with a pose in the act of signing.

Mr. Sam Poluski, Miss Alice Lloyd, and Mr. John Wood, father of the bride, having signed the registrar as witnesses, the two "knockabouts" obliged with more cheerful sallies, and then, with Marie Lloyd on his arm, Mr. Alec Hurley proceeded to "face the music" of the crowd outside.

## TRIUMPHANT DEPARTURE.

The couple were plentifully besprinkled with confetti, but, with the two knockabouts saluting pantomime style, backwards down the stairs in front of them, eventually reached their motor, and received a tremendous reception from the crowd outside, which now numbered a good thousand.

Followed by a string of motor hansom, Mr. and Mrs. Alec Hurley motored to a West End hotel, where a reception was held, all the leading lights of the music hall profession being present. Amusing speeches were made by Mr. Arthur Roberts, Mr. Malcolm Scott and others, and later in the day the newly-married couple left for Brighton.

## SENTENCE SERMONS.

Anarchy is the ghost of liberty. Innocence seldom needs argument. Fruit for eternity needs the frosts of time.

A strong breath reveals a weak backbone.

It's hard to succeed if you have no setbacks.

It is easy to mistake a resolution for a reform.

Secrets behind the hand often are but slabs in the back.

No man ever found his father by shutting out his fellows.

The sharp dealing that hurts is that which cuts into the soul.

Good wishes often grow up before they come home again.

The sermon is sure to be empty of blessing when the head is full of business.

The recording angel isn't wasting any ink over the good you intend to do.

People who are short on sense are apt to think themselves long on science.

You are not likely to do much in this world until you learn to do without much.

The effect of true consecration always is to cut cleaner the lines of square dealing.

Popular appreciation of your work will not be created by the depreciation of that of others.

The man who steadily tries to scatter happiness need not worry about his stores of holiness.

Keep the wolf of worry from your door and you will not need to fear many other wild beasts.

It is not the upward gaze of ambition that makes men dizzy; it is the looking down on those who cannot climb.

It always is the man who looks as though his religion disagreed with him who insists on others taking his dose.

Some people sit up nights wondering whether the Lord knows enough to tell their pearls from other people's pumpkins.

## SOME MODERN HOLD-UPS

### MAN WAVING AN UMBRELLA STOPPED AN EXPRESS TRAIN.

### How Farmers, Cats, Dogs and Butterflies Have Stopped Railway Traffic.

The driver of a Scotch express noticed a man standing waving an umbrella in an excited manner, the express then being a few miles from Peterborough, England, says Pearson's Weekly. Steam was shut off, the brakes applied, and the train was brought to a standstill. The individual with the umbrella then coolly informed the guard that he wished to board the train. For reasons of his own he had alighted from the King's Cross train at Peterborough, and had proceeded on his journey on foot. After walking a couple of miles he tired of his task, so he stopped the express in order that he might have a lift up. He got one.

A more determined affair was one which took place in Kansas during the recent remarkable wheat yield. As the farmers at Burlingham found that it was not possible to obtain men willing to work as reapers, they lit upon the bold expedient of "holding up" a train carrying two hundred reapers bound further west. A party of farmers, armed to the very teeth with shot-guns, revolvers, and what not, brought the train to a halt. They forced the men out of the car, and marched them off into the fields.

### THE MEN WERE WELL PAID;

but this was small satisfaction for the farmers from whom the two hundred reapers were commandeered.

A train on the South-Eastern Railway, while on its journey from Tunbridge Wells to Hastings, was brought to a sudden standstill owing to a very slight cause. A couple of bonny fox-terrier puppies were the cause of the stoppage of the great train. The engine-driver noticed the poor little animals fast asleep on the line. His humanity did him credit, for, sooner than run over the helpless couple, he stopped his train, and picked up the puppies.

A dog was responsible for holding up one hundred yards of electric tramcars in London. The dog was only a little one, but he caused a commotion out of all proportion to his size. He crept under one of the huge cars when it stopped in the Brixton Road. The driver hesitated to start, and tram after tram joined the waiting cars. Then quite an amusing scene was witnessed. Drivers, conductors, inspectors, passengers and pedestrians all joined in the endeavor to dislodge the barking terrier. Despite all entreaties and cajolery, whether of voice or of walking-stick, the dog remained under the car. It was remarkably agile and stupid. So, for a quarter of an hour, matters progressed, until an eight-foot pole was obtained.

### A VIGOROUS PROD IN THE RIBS

caused the terrier to emerge suddenly, amidst wild cheers from the crowd, and the tramcars moved off.

A cat very successfully "held-up" several trains on the Lockport Electric Railway, although the result could scarcely be deemed satisfactory from its point of view. It climbed the trolley-pole of a standing motor, and attempted to walk along the overhead feed-wire. Owing to its tail coming into contact with the wire conducting the return current, the cat disorganized the whole railway system for several hours. It was a big yellow tom-cat before its tail completed the circuit; afterwards it was a cinder. The inquiring Thomas was electrocuted instantaneously, as it received a full charge of 24,000 volts. The flash was seen for miles, and not only was the traffic on the railway stopped, but a large number of neighboring factory plants were deprived of their power and light for some hours.

## RICHEST OF ALL WOMEN

### ACCOUNT OF SAINT MELANIA THE YOUNGER.

### Her Annual Income Was One Hundred and Twenty Thousand Pounds Weight of Gold.

Cardinal Rampolla, Secretary of State to Pope Leo XIII., discovered among the manuscripts of the Escorial when he was Papal Nuncio at Madrid, a biography of Saint Melania the Younger, which he has lately translated, edited and had printed at the Vatican press. What follows is an abridgment of his narrative.

The author of this biography was named Geronitius. From A. D. 405 until 439 he was in the service of and daily association with Melania, and after her death he succeeded her as the head of a monastery which she founded. An eyewitness, he tells who Melania was, the amount of her fortune and what she did with it.

Melania and her husband were both Christians and wished to follow literally the Saviour's precept: "Go and sell all that thou hast and give to the poor and thou shalt have treasure in heaven." They therefore resolved to devote their immense possessions to the cause of Christ.

History records that during the fourth and the beginning of the fifth century after Christ certain patrician Roman families amassed enormous wealth. Melania's fortune surpassed all others and consisted of a villa on the Collian at Rome which enclosed porticoed courts, a circus, a hippodrome and

### IMMENSE GARDENS.

Its buildings were decorated with paintings, mosaics, statues, sculpture and precious marbles, cared for and served by gardeners, butchers, bakers, cooks, waiting women, valets and all the host of necessary slaves.

A rural domain at the fifth milestone on the Appian way three miles in circumference—its ruins have yielded many marbles to the Vatican museum.

An estate on the northern coast of Sicily titled by eight thousand slaves. Estates in Africa, Numidia, Mauritania, in Britain, in Spain and in Gaul with enough slaves to cultivate them.

Her yearly revenues, it is estimated, amounted to scores of millions of dollars. They may well have exceeded the civil list of any emperor or potentate who ever lived, and were probably greater than any other woman ever possessed. It is not known what use Melania made of her wealth before she decided to rid herself of it; her biographer begins his story only when she had so resolved.

Melania found it very difficult to follow the command of her Master; public opinion, custom and above all the law of the Empire forbade. The Roman law then prohibited, except under certain restrictions, the alienation of real estate. Then, when this husband and wife decided to obey Christ's command they were minors and they could not sell their real estate without a decree, ratified by the Roman Senate.

At the instigation of a brother-in-law the slaves of the property on the Via Appia rose in insurrection, insisting that they preferred slavery with its sure maintenance to freedom with an uncertain future, and they were only pacified when made over to the brother-in-law with a gratuity of

### THREE GOLD PENNIES APIECE.

How hard it was to become poor! An imperial edict alone could overcome the opposition of relatives, of the law and of the Senate. This Melania secured through the favor of Serena, who was a niece of the Emperor Theodosius and his adopted daughter; the wife of Stilicho and the mother-in-law of Honorius, the son and successor of Theodosius.

## BRAVE CANADIAN NURSES

### SPLENDID WORK IN A FRENCH RAILWAY DISASTER.

### Their Knowledge Helped to Save the Lives of a Number of the Wounded.

The railway disaster on October 14 last near Paris, France, by which ten people were killed and more than a score very seriously injured has an interesting side for Canadians because of the splendid work of three nurses, all natives of Ontario—namely, Miss Frances Monroe, formerly of Toronto; Miss Laura E. Coleman, from near Kingston, and Miss Elizabeth Hogie, from near St. Catharines. These nurses, who each finished their hospital training at Boston, Mass., were on their way for a short holiday through picturesque and historic Touraine, when their train, which was to run into a siding to allow an express to pass, was struck by the flyer for Paris going at the rate of fifty miles an hour. Four cars were smashed, the nurses were severely shaken, and Miss Coleman struck in the cheek with a flying splinter. The cries of the sufferers reached the nurses' ears, and even before their train had stopped they were out of the car and at work.

The nurses, who had fortunately brought their emergency cases with them, had no doctor to assist them for almost half an hour, but Miss Coleman, who speaks French, sent one porter for she knew was carried by all French trains. Others were despatched for doctors, and others again for rugs and blankets, whilst the train hands brought cushions as fast as they were able to get the dead and wounded out of the cars.

The three brave Canadian nurses worked unceasingly from 5 p.m. till almost midnight before the last sufferer was on the train for Paris, and then they returned with the train to look after the worst cases on the way to the capital. In the meantime the news of the heroic work of the nurses had spread in the city, and when they emerged from the station they were given a great ovation, but they quickly got carriages and drove away, not even giving their names to the doctors or the railway officials, and had it not been for the fact that a doctor from Boston, Mass., saw and recognized them they would have remained unknown yet even by name or nationality. At their request, however, the doctor did not say who they were until they had left Paris a second time on their holiday tour.

Miss Coleman, who was for a time lady superintendent of the Faulkner Hospital, Mass., and Miss Monroe both graduated from the Boston General Hospital, and Miss Hogie from the Massachusetts General Hospital. Miss Coleman has a sister, who is lady superintendent of the House of the Good Samaritan, and Miss Hogie has a sister matron of the Somerville City Hospital, both of Massachusetts.

The Boston papers have been full of accounts of the heroic bravery of

### "THREE AMERICAN" NURSES.

but a peculiar omission in the biography of these three brave women which the papers publish is that no mention is made of their place of birth. All the articles in the Boston papers convey the impression that the three ladies were natives of Boston or of some other part of the United States. Without doubt their training in the Boston hospitals was of the very best, but the training and nurture of their Canadian homes fitted them for every emergency, and enabled them, even in a strange land, and among strange people to become "ministering angels" to the sufferers.

The French Government failing to obtain the names of the three ladies, has

## ARISTOCRATIC FAILURES

### SPRIGS OF NOBILITY WHO HAVE COME DOWN IN THE WORLD.

### Their Strange Adventures in South Africa, Australia and Canada.

If you wish to know what becomes of many of the younger sons of our noble houses you should go to the Colonies, said the friend of a writer in London Tit-Bits, who has spent half a lifetime in "globe-trotting." There you will run across them in scores in the most unexpected places, and doing work which they would rather starve than touch in England. There is scarcely a British colony in which you will not meet these aristocratic derelicts who have, been turned—or, rather, in most cases have turned themselves—adrift to make a living as best they can.

In Johannesburg alone, when I was there a few years ago, just before the war, I was told that there were at least sixty of these sprigs of nobility, some of them men with titles, filling all kinds of humble roles, from barman to groom and from loafer to lifterman. Among the men working in one livery-stable on the Rand were two young fellows who bore two of the proudest names in the peerage.

One of these had held a commission in a crack regiment, and had been one of the most fashionable and popular men in London society.

### HE HAD A MANIA FOR GAMBLING,

however, got heavily into debt, and, as his father refused him any further assistance, disappeared one day and turned up in South Africa, where after a close brush with starvation he was glad to get employment as a groom—about the only kind of work for which he had any qualification. This man is the son of an earl and is closely related to many of our great noble families; while his comrade, who is brother of a well-known baron whose purse is as short as his lineage is long, had no resource but to emigrate after failing to qualify for the Army. There are many men of noble birth, too, who are working at the gold-mines, including the brother-in-law of one of our dukes, who, when I was on the Rand, was acting as foreman of a gang of Kaffirs.

In different parts of America there are literally hundreds of these aristocratic failures, living in log-huts in the backwoods of Canada, acting as cowboys in the States, as clerks and porters in New York and Chicago, and so on. Two of them whose acquaintance I made had enlisted as privates in the American Army and fought through the war with Spain. One of them was the son of a Scottish earl, a handsome, clever man, who might have done something good at home if it had not been for his love of

### ROAMING AND ADVENTURE.

The other, who is the younger brother and heir presumptive of an Irish peer, had been an officer in our Army and had distinguished himself in the Boer War. But he was extravagant far beyond his means, and after his family grew weary of extricating him from debt he had to resign his commission. After a spell of acting with various touring companies, he crossed the Atlantic and was glad to drift into the army as a private.

But it is to Australia that the aristocratic ne'er-do-well mostly gravitates, and as a rule he is a most undesirable immigrant, who quickly degenerates into a drunkard, gambler, and loafer, if nothing worse. Not long ago the magistrates of a small town in South Australia had before them, within a few days, three counts, a Russian prince, the son of an ex-British Cabinet Minister, and three cadets of English noble families—all charged with drunkenness and disorderly conduct.

instantaneously, as it received a full charge of 24,000 volts. The flash was seen for miles, and not only was the traffic on the railway stopped, but a large number of neighboring factory plants were deprived of their power and light for some hours.

Stranger still, a train on the Central Argentine Railway was stopped by white butterflies some little time ago. This sounds extremely curious, but

#### IT IS PERFECTLY TRUE.

Myriads of the insects occupied miles of the track. It was their crunched bodies that brought the engine to a standstill.

A very remarkable sight was witnessed by passengers in one of the down trains of the Uganda Railway. While the train was proceeding from Lake Victoria to Mombasa, it ran into a perfect bank of locusts, which continued with more or less density for a distance of nearly forty miles. In some places the insects were between four and five inches deep. Very soon the engine stuck fast, owing to the greasy state of the rails, thus bringing the train to a standstill. For a couple of hours a breakdown gang had to be employed in shovelling the locusts from the metals, which were then covered with sand, before the train could resume its journey.

#### GREAT SUN DIAL OF INDIA.

##### Shadows Fall Upon Marble Arches Built in Seventeenth Century.

The largest sun dial in the world is at Delhi, in India. Dr. Reim of the Royal Astronomical Institute in Berlin, Germany, has recently completed the difficult task of making a model of this gigantic piece of work. About 1650—the exact date is not known—Jai Sing II., influenced probably by the Jesuits, erected at Delhi, Benares and other places observatories, the ruins of which still exist. The natives know little or nothing of the meaning of these ruins and reports of English travellers of the eighteenth century give the only definite information which we possess as to the form and use of the mural instruments.

The peculiarity of this work, giving it a unique position among the astronomical monuments of the world, says the *Deutsche Urmacher Zeitung*, is that wall and instrument are one. It is one of the oldest which have been preserved (the oldest in Europe being the Leyden Observatory, built in 1632), and here were determined the obliquity of the ecliptic, the length and breadth, declination and position of the equinoctial lines.

A narrow flight of stone steps like a ladder parallel with the axis of the earth leads straight upward. Its supporting walls are smooth marble and the shadow falls upon great marble arches, built out at the right and left, and marks the time when the sun is shining to minutes. Galleries and steps allow access from all sides.

The platform of the building were once used, probably, for smaller portable instruments, which have fallen to pieces. Before the year 1800 Englishmen found the building used for horse stalls. This equatorial gnomon is about 58 feet high, the length of the oblique edges is 116 feet and the radius of the circle about 19 feet. Near it stand the ruins of an obliquely inclined astronomical construction whose purpose is unknown.

The observations seem to have been longer continued at Benares, the residence of the great Moguls. At least Dr. Riem was able, guided by information from English sources of the eighteenth century, to reconstruct some small instruments which were still known at that time in Benares.

But the saying "ex oriente lux," applied to the science of astronomy, seems to have no great significance here, for in spite of the construction of this observatory, no accurate results were obtained.

There is no place like home—according to the glowing description given by the man who wants to sell his.

opposition of relatives, of the law and of the Senate. This Melania secured through the favor of Serena, who was a niece of the Emperor Theodosius and his adopted daughter; the wife of Stilicho and the mother-in-law of Honorius, the son and successor of Theodosius. For many years Stilicho and Serena had been the actual rulers of the western half of the Roman Empire.

Public rumor, which had been busy with Melania's future, blaming or praising as prejudice or religious bias swayed, had aroused the Queen's curiosity and its object had been several times bidden to the imperial palace, commands which had invariably been disobeyed. In the spring of A. D. 404 the disobedient one remembered that the imperial power could unmake as well as make laws and could smooth her difficult road to poverty.

Accompanied by her husband, several Bishops and Gerontius, who chronicles the event, she went to the Palestine. Her train included slaves bearing many and costly presents, the customary offerings to the powerful and their court. Closely veiled and wearing a dress of very cheap material, the suppliant said to those who remonstrated with her:

"I shall not uncover the head which I have covered for Christ's sake; I shall not change the garment which I have put on for my Saviour's glory."

Her humility had its immediate reward, for Serena herself came forward to meet and greet her, seated her at her side

#### ON THE GOLDEN THRONE,

and calling her court around her, said: "Behold this woman, who could be surrounded by all that wealth could buy, yet for Christ's sake renounces all the vanities of this world."

Serena herself declined the gifts offered to her, and forbade any of her courtiers or servants to accept any. At her request the Emperor at once gave orders to the rulers of his provinces to sell Melania's estates and remit the proceeds to her.

"We were all stupefied with amazement," comments Gerontius.

Melania and her husband left Rome before Alaric captured it and went to their Sicilian estate. The troubles of the times delayed the sale of their possessions for years. As fast as they could they spent their wealth in building and endowing churches, monasteries, nunneries, hospitals, and endowing and adorning their altars with vessels of gold and of silver.

They relieved the necessities of thousands of the poor and needy, sending vessels and messengers with money and necessities for them and to the hermits and monks of Egypt, Jerusalem and Antioch. After twenty-seven years of continuous effort they had at last reduced their once colossal fortune to the remnant of a small estate in Spain. They then went to Jerusalem, where they ended their days and were buried in a monastic retreat which they had built and endowed.

Gerontius never could give the number of slaves that Melania at one time owned, but stated that in two years eight thousand were liberated. He states that her annual income was one hundred and twenty thousand pounds weight of gold, and, taking the purchasing power of specie in the sixth century A. D., fully equal, it is estimated, to \$175,000,000 to-day.

#### TOO WARM.

With pale face she waited the verdict.

"And you told father your love for me was burning love," she hastened to ask.

"I did," sighed the young man, who was perspiring from running.

"And that my heart was on fire?"

"Yes."

"And what did he say?"

"Why he blazed away for fifteen minutes and if there had been any more combustions around there they would have had to call the fire engines."

Canadian homes fitted them for every emergency, and enabled them, even in a strange land, and among strange people to become "ministering angels" to the sufferers.

The French Government failing to obtain the names of the three ladies, has through its Ambassador at Washington asked that the thanks of the French people be conveyed to the three nurses from Boston, whose quick and invaluable services not only relieved sufferers, but were the means of saving the lives of a number of the more seriously injured, who but for the prompt aid of the nurses would have succumbed to their injuries.

#### AS TO DREAMS.

##### Mr. Billtops on the Fancies Cherished by Both Men and Women.

"We all dream dreams," said Mr. Billtops, "and I suppose if we could look into our neighbor's heart, be that neighbor man or woman, we might find there cherished aspirations and fancies fantastically at variance with the said neighbor's conventional demeanor and orderly life."

"A man I know, energetic, capable, effective, successful and in all his life nictably systematic, tells me that if he could do as he would like to do he would be a tramp. No less a person than Mrs. Billtops, paragon of domesticity and devotion confides to me that she always wanted to be an actress. Let us be grateful that actually she chose to play her charming part on the Billtop household stage."

"But we all dream dreams, and though we may never realize them, yet we cherish them through life, and—so for the great majority of us—they do us no harm. True, some of us waste time in dreaming, and some of us fairly run away in pursuit of dreams, searching for the pot of gold at the foot of the rainbow, but most of us work and dream, and our dreams do no harm."

"We admire the heroes of history and we love the heroes of romance, for we would like to be like them, and fondly we fancy we might be placed in like circumstances. The gentle girl dreams of a splendid lover, the strong man dreams of the achievement of his ambition."

"We dream of fine houses and carriages and jewels, or it may be that the dreams of many of us—but these as soaring in their way, perhaps, as loftier dreams of others—carry us only into the clouds of comfort. Or, dissatisfied with our lot or calling in life, we dream of a day when it will be happier."

"But all these are only the familiar dreams—the dreams commonly indulged. We have many strange dreams, and these may be harbored by the seemingly most prosaic, as well as those most impressionable. If we could look into the heart of our neighbor, man or woman, we might be amused or amazed."

"Necessity is our greatest blessing, it keeps us at work and it is in work in accomplishing things that man finds his only real enjoyment. And for the rest of us work keeps us busy; it gives us little time for dreams, and these may then be a solace to us and they may stimulate us to greater endeavor, but necessity keeps our feet on the earth, and so by labor we are saved."

"But we all dream dreams."

#### "OF TWO EVILS."

Miss Young—And you're going to marry old Bouncer. I warn you that he'll lead a double life.

Miss Older—Well, if I don't marry him I'll have to lead a single one, and that's worse."

#### PLATED.

During the Boer War an Irish peasant, who was posted with a musket on duty, and had wandered a little out of his position, was accosted by an officer with: "What are you here for?"

"Faith, your honor," said Pat, with his accustomed good humor, "they tell me I am here for a century."

illustrates of a small town in South Australia had before them, within a few days, three counts, a Russian prince, the son of an ex-British Cabinet Minister, and three cadets of English noble families—all charged with drunkenness and disorderly conduct.

In Melbourne I had pointed out to me a cab-driver who in England was known as Lord —, the younger son of a well-known marquess, and the conductor of a tram-car who, as the son of an Irish baron, was entitled to call himself "Honorable."

#### WILL DISCOUNT DREADNOUGHT.

##### Guns Weighing 85 Tons Likely to be Installed in New Battleships.

Though many of the recent measures of the British Admiralty are open to the sharpest criticism, and have been not unjustly criticized, there is one department, that concerned with the designing of warships, where the present Admiralty is far in advance of all foreign naval administrations, and of past Admiralties in Great Britain. The brilliant success of the Dreadnought is still fresh in the minds of all; the great armored cruisers of the Invincible type represent in their class what the Dreadnought represents in the class of battleship; but there are indications that the naval authorities have in view yet larger and more powerful battleships than even the Dreadnought, armed with guns which will throw hers in the shade.

These new ships are not the vessels to be begun in the present financial year, but the battleships of the 1907-8 programme, which are not, unhappily, to be laid down until March or April, 1908. In them there is some reason to believe that the 12-in. gun will be finally abandoned and replaced by a new and far more powerful weapon.

It is impossible by way of reply to the new German ships to put more 12-in. guns into a battleship. The Dreadnought's battery represents the utmost number of guns that can be used in action with real advantage. The conditions necessitate the introduction of a new type of monster gun.

The pattern selected is believed to be a 13½-in. gun forty-five calibres long. That is to say, the gun will be forty-five times 13½-in. in length, or roughly 602 feet long. Its weight will be about eighty-five or eighty-six tons. A gun of the same calibre, but of old design, and much feebler power, is carried to-day in the Royal Sovereign class. The old gun has a 1,250-lb. shell, which is 400-lb. heavier than the projectiles fired by the Dreadnought's weapons. The penetration through wrought iron at the muzzle is 51-in. in the case of the Dreadnought's guns. It should be 62-in. or 63-in. at the very least in the case of the new weapons.

Probably the new British battleships will have eight big guns so mounted that all can fire on either broadside and six ahead or astern.

#### INDEMNITY DEFERRED.

A strange case of indemnity deferred for nearly a century has just come to light in Austria. The story has its beginning in the Greek War of Independence, during which, in 1818, an Austrian subject named Florio and his ship were seized by the Turks as a contraband runner. After languishing in Ottoman jails for several years Florio was released, but no compensation was offered, and in 1851 he died without redress, but without ceasing to demand it. His son, an Austrian naval officer, kept the case equally before his Government, and he, too, recently died, a pensioned rear-admiral, without achieving success, which, however, has now come to his widow and family, \$200,000 having been paid by the Porte.

There are forests of leafless trees in some parts of Australia.

The wise girl selects for a husband a man whose mother did not know how to cook.

# Weak Lungs Bronchitis

For over sixty years doctors have endorsed Ayer's Cherry Pectoral for coughs, colds, weak lungs, bronchitis, consumption. You can trust a medicine the best doctors approve. Then trust this the next time you have a hard cough.

### LETTER FROM THE MINISTER OF EDUCATION re TEACHERS' SALARIES.

Toronto, Nov. 23rd, 1906

Dear Sir—The attention of the Education Department has been called to an advertisement in one of your local papers as follows:—

"TEACHER WANTED—for S. S. No. 13, North Fredericksburgh, must state salary and experience as we do not intend to comply with the new regulations.

A. B. SCHRYVER, A. SCRIMSHAW, W. E. CUMMINGS, Secty. Treas."

The only authority of a municipal council to raise money for teachers' salaries is contained in Section 39 sub-sections (2), (3) chap. 53, 6 Edward VII and it must be raised as prescribed therein.

I suggest that you intimate the above facts to the Board of Trustees concerned, with the intimation that for any expenditure incurred, not within the provisions of the Act, each trustee is personally liable.

Under Sub-section (6) of the same section referred to above it is further provided that:—

"The Public School Inspector shall have power to, and shall, suspend the certificate of any teacher in a rural school who agrees to accept a salary of less amount than is provided for, or who by rebate deduction, donation or other subterfuge accepts a less amount in settlement of his or her claim for salary. The inspector shall forthwith report such suspension to the Minister of Education, and the suspension shall be continued or dealt with as the Minister deems expedient.

In case the full amount of the salary provided for herein shall not be paid to any teacher by the trustees of a rural school, or if by rebate deduction, donation or

### They Stand Alone.

Standing out in bold relief, all alone, and as a conspicuous example of open, frank and honest dealing with the sick and afflicted, are Dr. Pierce's Favorite Prescription for weak, over-worked, debilitated, nervous, "run-down," prostrated women, and Dr. Pierce's Golden Medical Discovery, the famous remedy for weak stomach, indigestion, or dyspepsia, torpid liver, or biliousness, all catarrhal affections whether of the stomach, bowels, kidneys, bladder, nasal passages, throat, bronchia, or other mucous passages, also as an effective remedy for all diseases arising from thin, watery or impure blood, as scrofulous and skin affections.

Each bottle of the above medicines bears upon its wrapper a badge of honesty in the full list of ingredients composing it—printed in plain English. This frank and open publicity places these medicines in a class all by themselves, and is the best guaranty of their merits. They cannot be classed as patent or secret medicines for they are neither—being of known composition.

Dr. Pierce feels that he can afford to take the afflicted into his full confidence and lay all the ingredients of his medicines freely before them because these ingredients are such as are endorsed and most strongly praised by scores of the most eminent medical writers as cures for the diseases for which these medicines are recommended. Therefore, the afflicted do not have to rely alone upon Dr. Pierce's recommendation as to the curative value of his medicines for certain easily recognized diseases.

A glance at the printed formula on each bottle will show that no alcohol and no harmful or habit-forming drugs enter into Dr. Pierce's medicines, they being wholly compounded of glyceric extracts of the roots of native, American forest plants. These are best and safest for the cure of most lingering, chronic diseases. Dr. R. V. Pierce can be consulted FREE, by addressing him at Buffalo, N. Y., and all communications are regarded as sacredly confidential.

Copyright, 1906, by P. C. Eastment

"Did you ever? That bonnet was old fashioned when Noah went into the ark," Miss Althea Evans said, nodding toward the new girl in the choir.

Isabella Strange, her chum and rival in Eastwood society, giggled and answered loud enough for the new girl to hear: "You are shockingly ignorant, Leathy. Don't you know there are people who take pride in their antiques?"

Involuntarily, it seemed, the new girl put her hand up to the plume which drooped to touch masses of bright waving hair. The plume was not dragged; nothing, indeed, about the hat showed a touch of wear. But it was at least three seasons behind the style, also very becoming to the wearer. She was slim and tall, with sherry wine eyes and a creamy, rose tinted complexion. In the lips the roses burned to clear scarlet, and there was an adorable dimple lurking at one side. Dark brows, delicately arched, gave an accent to the face, an accent repeated by the gold lights of the abundant brown hair. Thus nature explained the situation. A girl who looked that way could afford

A Yorkshireman in Canada writes home that Canadians universally eat with knives. How beastly vulgar to be sure!

**Madeo Review.**

Ontario stands at the head of all the provinces this year, with a total production of over one hundred million bushels of grain, the heaviest crop in the history of the province.

**Toronto Globe.**

Riotous outbreaks like that at Hamilton have invariably followed the operation of street railways by private corporations. Fortunately there is a remedy, and the public are growing more and more inclined to apply it.

**Guelph Herald.**

Will that Ottawa editor who struck a silver mine in Cobalt please send in his resignation? The traditions of the profession must be maintained.

**Listowel Banner.**

Farmers to-day have more leisure to keep posted on public questions, and take a much keener interest in tariff matters than in years gone by. The west is rapidly filling up with farmers who object to paying higher prices for their goods for the benefit of manufacturers, and it will not be long before these men will have a preponderating voice in Canadian politics. The signs of the times certainly do not point towards increased protection in Canada.

"A man on a limited income," remarks a correspondent of the Fourth Estate, "simply cannot afford to overlook advertisements." It is to this fact as much as anything else that the certainty of success attending advertising appeal is due. Ninety-nine out of every hundred newspaper readers are on "limited" incomes. They are obliged to study the markets before they invest in either the necessities or the luxuries of life. The newspaper is their guide. Because it is indispensable to them in planning their purchase it is indispensable to merchants in disposing of their wares. And incidentally it is worthy of note that even those whose incomes are unlimited guard against imposition by consulting the advertising columns of the newspapers before they buy.

In case the full amount of the salary provided for herein shall not be paid to any teacher by the trustees of a rural school, or if by rebate, deduction, donation or other subterfuge, any such teacher accepts a less amount in settlement of his or her salary the difference between the said full amount provided for herein and the less sum so paid or accepted as aforesaid, shall be deducted by the township treasurer, on the order of the Public School inspector, from the amount payable by the township council to the said trustees under sub-section 2 or 3 (as the case may be) of this section and by said treasurer divided equally amongst the other school sections of the township.

In view of the circumstances, I suggest also that you give this communication such publicity as you may deem advisable in the interests of Education.

Your Obedient Servant,  
Sgd. R. A. PYNE,  
Minister of Education.

F. BURROWS, Esq.  
School Inspector  
L. Knox and Addington,  
Napane, Ont.

**Three Years.**

"How long," asked the judge of a vagrant negro, "have you been without any means of support?"  
"Since my wife died in 1903, sub," responded the darky respectfully.

The Median tyrants never devised a greater punishment than envy. — Juvenal.

**No Regrets.**

"Hello, old man. Haven't seen anything of you since you got married. How goes it?"  
"Thanks, fairly well. But marriage is a costly job! If you only knew what the dressmakers charge!"  
"So I suppose you regret it?"  
"Oh, no. I married a dressmaker."

Our sale of Stoves, Ranges and Furnaces exceeds anything in the history of this store, which speaks volumes for the quality of the goods in this line which we are offering, each and every one is guaranteed to you.  
MADOLE & WILSON

These are the best and safest for the cure of most lingering, chronic diseases. Dr. R. V. Pierce can be consulted FREE, by addressing him at Buffalo, N. Y., and all communications are regarded as sacredly confidential.  
It is as easy to be well as ill—and much more comfortable. Constipation is the cause of many forms of illness. Dr. Pierce's Pleasant Pellets cure constipation. They are tiny, sugar-coated granules. One little "Pellet" is a gentle laxative, two a mild cathartic. All dealers in medicines sell them.

**Sir Richard Burton's Translation of the Tales.**

"The Arabian Nights" was first introduced to Europe by a Frenchman named Galland, and the first English versions were simply translations of his. Then a Dr. Scott gave a very superior edition, "occasionally corrected from the Arabic." In 1839, however, appeared an English translation entirely from the Arabic, with copious notes and illustrations. It was Edward William Lane's, a gentleman whose long residence in Egypt had fully qualified him for his work. This translation may be said to have held the field until the appearance of one by Sir Richard Burton. Sir Richard was a daring and successful traveler, who had a remarkable facility in acquiring eastern languages. He performed a pilgrimage to Mecca disguised as a pilgrim, a feat as difficult as it was daring. In 1872 he was appointed to the post of British consul at Trieste. Here he applied his knowledge of Arabic to making a faithful translation of "The Arabian Nights Entertainments," supplementing his work with copious notes and terminal essays which have been called a mine of curious and diverting information. Its publication caused a great sensation. Details were freely given that had previously been suppressed. But the accuracy of the translation as a whole was candidly acknowledged, and Burton may be credited with having made into the English language the finest translation of these wonderful Arabian tales.—London Answers.

**Saved by a Cipher.**

The story is told of how a neatly constructed cipher saved Sir John Trevelyan's life. This cavalier was taken prisoner and locked up in Colchester castle to await his execution. On the second day of his confinement the jailer brought him a letter, which, as far as the warden of the castle could discover, was merely a note of condolence from a friend. But the letter had been concocted on a cipher to which Sir John had a clew. Every third letter after a punctuation mark of any kind was to tell. What he made out was this: "Panel at east end of chapel slides." On the following evening the prisoner begged permission to pass a quiet hour in prayer in the chapel. The request was granted, and before the hour had passed the panel had done its work and the bird had flown.

**A Bird Performer.**

Canaries and other tame birds are sometimes taught to perform tricks, but it always has been regarded almost an impossibility to train a wild bird. Andrew Hume, the famous Scotch bird lover, trained one of the wildest of Scotch birds to perform all sorts of remarkable tricks—to jump and keep time with the skipping rope, to perform on the slack and tight rope, climb an upright rope, stand on top of a running carriage, draw cards out of a box, mount a ladder and ring a bell, go round a wheeling stair step by step and fly to its owner's head when called upon.

unaccountably arched, gave an accent to the face, an accent repeated by the gold lights of the abundant brown hair. Thus nature explained the situation. A girl who looked that way could afford to be old fashioned, and two other girls, enormously stylish, but with no looks to boast, could not help but be ill-natured.

Benson, the choir leader, a thin man, perpetually scowling, but wholly through near sight, wheeled stiffly upon Althea and said: "The solo? Have you practiced it as you promised? Let's try it first thing."

Althea turned her back to him. "Pig! Does he think I mean to waste my singing?" she whispered loudly to Isabella. Over her shoulder she added languidly: "Mr. Benson, I'll sing my solo Sunday after next. Some—some friends of mine," significant emphasis on the friends, "are coming specially to hear me. Until then you must make out with—the rest."

"As you will, Miss Evans," Benson said, a flush creeping up to his sallow cheek. "But you promised. I—depended on the promise. And it is much to me that the music shall be even."

"I dare say, but I shan't sing except when I feel like it," Althea said, with a touch of insolence.

Her father was head of the vestry, and she thought she knew Benson dared not resent anything she might do.

It took her breath to have him say firmly: "In that case you are quite useless. Music, a great gift, a great blessing, does not come without work. If you will not work unsparingly you will hinder rather than help. You should work—for your own sake. You have voice, oh, yes, but it needs hearting in. Unless you grow to love the work you will never get the heart. Your singing will be—what you say—dumb!—like a street piano that one may play with a crank."

"Really, this—is this beyond endurance," Althea begun.

Isabella laughed low and unpleasantly and put her hand over Althea's lips. Then she called to the choir master, who had moved a little way off: "Why don't you try Miss Archer?" nodding toward the new girl. "I'm sure she looks musical—she may be an artist."

Miss Archer smiled daintily, saying: "Oh, thank you. I should like to sing. I love it and have been silent ever since I came—the walls are so thin at Mrs. Wray's, and I should so hate to disturb any one."

"You! What will you care for?" Benson asked, seating himself at the small organ. The girl bent her head softly, saying: "Something old and simple. Something my mother sang, please. Say 'Rock of Ages' or 'Coronation.'"

"I'm going. I hate all that old rubbish," Althea said, marching toward the door.

Isabella followed her, but paused, her hand on the knob, to say with a giggle, as though speaking to some one still in the room: "You'd better put up a sign outside, 'Antiques to Be Seen and Heard Here!'" Then she ran down the steps laughing loudly, and as she overtook Althea caught her arm, shook her gayly and said: "I think we have settled Miss Archer. If she has any sense at all she won't come again—after this."

Whether or no Miss Archer had sense she certainly had a voice. She also—and this was the crown of poor Benson's joy—knew mighty well how to use it. She was withal modest and biddable, giving herself no airs whatever, albeit two Sundays of her solos had sufficed to crowd the church. She kept much to herself and, although frank and friendly enough, put by social opportunities as they came.

Mrs. Judge Gray called the very first Sunday afternoon, a thing she had never been known to do before. She asked Miss Archer to tea; also to dinner next week. But Miss Archer shook her head. She was in Eastwood for rest and must not let herself be beguiled. Besides, she had a charming room, and the woods roundabout were so enchanting she hated to stay out of them. She was very grateful, but Mrs. Gray must excuse her.

It was the same with all the rest. Young or old found her, if they found her at all, the soul of graciousness, but elusive. She rode out every morning and drove every afternoon, always alone except for a staid liveried groom. The one thing vulnerable about her was her clothes. Exquisite in choice make, fit and material, they were all so very far from being in fashion. There fore they bred theories. Nobody really knew more of Miss Archer than that she had come to the Wray house with unimpeachable credentials from two of last season's star boarders. So there was some excuse for the romances woven about her. The favorite one was that she had been either suddenly bereft of fortune or that she had inherited a wardrobe and thriftily chose to wear it out unchanged. The fine fit made rather against that, so much so that the bereft heiress notion was most generally accepted. But Miss Archer could certainly not have lost all her money. She was liberal to a fault in her expenditures and reckless in the matter of tips to her caddies—indeed, to small boys generally, whether or no they had rendered her a service.

Althea's special friends were delayed; therefore she in turn delayed her return to the choir. She had no doubt whatever that Benson would take her, notwithstanding she admitted that she and Isabella had been foolish. "But how could we dream things would turn out so?" Althea asked of Isabella, who in turn queried:

"Of course he can't," Althea said, almost tearfully, "because the thanks are mostly for Cousin Rob, and everybody knows he won't care for anything except to hear me sing."

Cousin Rob was, understand, a lieutenant in the navy, for whose escape from typhoon and other perils Eastwood felt called upon to give especial thanks. There were other Eastwood men, but they had not been mentioned in dispatches for cool and reckless bravery. Moreover, they had not been promoted. So, although they were included in the roster, it was well understood that Lieutenant Robert Starling was the beginning and the end of things.

Althea thrilled to think of herself singing to him, with the multitude hanging breathlessly upon her voice, there in the church, all bedight with flags and oaken boughs. Flowers were held out of place for these hearts of oak. She knew she should do her best. She must, with such inspiration.

So it was a thunderbolt to have Benson say grimly:

"Miss Evans, there is no place for you, I am sorry to say. Besides, Miss Archer sings, oh, much, much better! Her notes are gold, where yours are scarcely silver. Tommy Bell has the only voice hers does not make thin and tin-panny. He shall sing with her in the special opening anthem. I have myself arranged it. You might be in a chorus later on, but you do not know enough. You would try to drown the rest with your big notes. There is the difference. Put Miss Archer in chorus, and she would sing exactly in key."

"You are an old bear!" said Althea and ran home to tell her mother.

Before it came to telling her plan was all upset, and by no less a person than Miss Archer, who came swiftly to her and said a lot, but not in many words. The result was when the service of thanks came on there were several surprises, but, if truth must be told, some severe disappointments, for Althea sang the solo and in the anthem, and Miss Archer was no more than a chorister. She subdued her voice admirably and kept in the background as much as she might, yet her name ran all about from lip to lip, so it was not perhaps through occult divination that Lieutenant Robert Starling waited outside the choir loft stair, with at least fifty of his enthusiastic townsmen hanging behind, to see the reason of his loitering.

Verily, they had their reward, for the lieutenant caught both Miss Archer's hands and wrung them as though he would never let go. He spoke to her familiarly, almost entreatingly, and went away with her without a by your leave. When they were safe in the Wray House he said, masterfully, "Elinor, darling, tell me what is behind this masquerade?"

"Oh, nothing much," Miss Elinor Archer Wesley, actress and gentleman, said, with a little laugh. "I wanted to rest, and people wouldn't let me alone, so I determined to play Princess Charming again for just myself. All the costumes were perfectly fresh and perfectly beautiful if the public didn't like them nor me in them, so I've had the play—the play that failed five years ago—on again all summer. You can't think how interesting it's been, and it has helped me—oh, such a lot! Without it I never could have seen just what your people were."

"As if that mattered, as if anything mattered, except that we love each other," Lieutenant Starling said. "You do love me, Nora, darling?"

"I ought not to. It will break the town's heart to have you marry me," Elinor responded. "But I'm mightily afraid that I do."

### TRAINING DOG POLICE.

Breaking In of the Seine Patrol One of the Sights of Paris.

The training of the young Newfoundlanders that are periodically added to the staff is one of the sights of Paris. It takes place in the headquarters of the agents plongeurs, a small building on the quayside not far from the Cathedral of Notre Dame. Dogs and men enter into the exercise with zest, and there is usually a crowd of onlookers. Only dummy figures are used, but the "rescue" is nevertheless a very realistic affair. The big dogs know perfectly well what the exercise means, and they wait with comic enthusiasm until the dummy is thrown into the water and an agent plongeur rushes out on hearing the splash and the outcry of spectators. While the men are busy with lines and life buoys the dog plunges into the water, swims to the dummy, watches with rare intelligence for an opportunity to get an advantageous hold, and then it either swims ashore or waits for its master, who brings to the rescue long poles, cork belts and the like. The more experienced dogs, however, will easily

effect a rescue from first to last without human assistance, and it is an inspiring sight to watch them looking for a foothold on the slippery sides of the river bank and pulling the heavy dummy into a place of safety.

It takes about four months to train the dogs efficiently. They are also charged with the protection of the masters when attacked by the desperate ruffians who sleep under the arches of the bridge in summer. Thus in Paris the police dogs are a prove success.—Century.

### LOOK ASKANCE

How could we dream things would turn out so?" Althea asked of Isabella, who in turn queried:

"Who would have thought Benson could do without you? And does he think he can keep on doing without you when they have the service of thanks?"

## Cause and Cure of Piles

### WHY BILEANS ARE SO SUCCESSFUL

Why is it that Bileans are so effective in the cure of piles? Because they don't waste time on symptoms, but get back to the real cause! Nature has provided that the liver shall secrete a substance which, operating on the intestines, shall prevent the congestion which causes piles. Bileans do not merely soothe the congested veins. They act on the liver cells, enable them to start their work and then the agony of piles disappears as does a river flood when the ice jam is removed.

Mr. Thos. Plunkett, of 472 Manning Ave., Toronto says:—"For three or four years I suffered from constipation and piles. I also had severe headaches. All sorts of remedies were recommended to me but I tried them in vain. Bileans were very different. However, from first trying them I found benefit, and now if anybody wishes to know anything about Bileans I will be glad to tell them how superior they are."

Why superior? Because most remedies merely get at the external symptoms. Bileans go back to the cause. Same reasoning applies to their certain cure of all liver ailments, indigestion, headache, constipation, female ailments, anaemia, debility, etc. Druggists and stores sell at 5c a box, or from the Bilean Co., Toronto, upon receipt of price. 6 boxes for \$2.50.

### The Dawn of Conscience.

The development of conscience has been interestingly traced in the career of a deaf mute who for many years was quite uneducated. He thought in pictures and had mental words for only the fewest things. He had no sense of right and wrong. Being often hungry, he stole food—that is to say, he found and took it, not then knowing that it was an offense to do so. Small sums of money he made his own in the same way, and again he saw no wrong. But one day he took from a butcher's counter a piece of money which turned out to be gold. He went into a shop to buy sweets with it, but when he realized the value of the coin he snatched it up and ran away. He was horrified, not at the theft, but the extent of it. In the end he buried the piece and from that time stole no more. The shock had quickened conscience into life, and he needed little "converting" when kindly instructors at last took him in hand.—St. James' Gazette.

### A GREAT BEER HOUSE.

#### Munich Owns the Oldest and Largest Saloon in the World.

The Hofbrauhaus of Munich is perhaps the oldest and largest saloon in the world, owned by the king of Bavaria and patronized by an average of 12,000 customers a day. On holidays the number often runs up to 15,000 and 16,000. Nothing to drink is sold but beer, brewed at the royal brewery, which was started by King Ludwig the Severe in 1255. The present Hofbrauhaus was built in 1644, and the beer was brewed on the spot until 1878, when the brewery was moved into the country to less expensive quarters.

There are seats for 1,500 customers, plain wooden benches without backs beside plain wooden tables without covers. In the garden or court are 100 empty beer barrels set on end, which are used for tables. The steins, which are very heavy and hold a quart of beer, are piled up in stacks before the bar on the floor in the morning, where they remain until they are used.

When a customer wants beer he picks out a stein, takes it to one of the basins of running water which line the walls and washes it himself. Then he carries it to the counter and hands it over to the bartender, who fills it with beer from the barrel. The price is 6 cents a stein, and the profits support the hospitals of the city, although the king could claim them if he desired to do so, as the brewery and the Hofbrauhaus belong to him by inheritance.

### A Surfeit of Oratory.

One of the mistaken theories is that a "public speaker" is necessary to the success of any public affair. This theory had its rise at a time when oratory was a fad. Orators were cultivated, and they were supposed to take human passions in their hands and toy with them. In this practical age public speakers are a bore, and nobody cares anything about them. People gather to be entertained and not lectured. But, this theory having been established that a "public speaker" is important to a picnic, an orator is hauled out and set loose on a few old gentlemen with canes and a few mothers who must occupy the benches in taking care of the children.

### THE FORGOTTEN DEAD.

#### There Are Few English Tombstones Over Two Centuries Old.

Some years ago there was a correspondence in the papers, the main argument being that there were very few tombstones in the open—that is, outside of a church—which could show a record of over 200 years. Doubtless there are many tombstones of a far greater age, but most of these are now undecipherable from the perishing material used or have sunk deep into the earth, in which case there can be small doubt as to the inscriptions having been obliterated.

The oldest record I have come across was at Godshill churchyard, near Ventnor, where the visitor can see legibly inscribed, "Annie Garde, 1592," but probably some of your readers may know of tombstones bearing an earlier date. The most surprising number of old tombstones clustered together are possibly those grouped at Bonchurch, Isle of Wight, these ranging from 1616 to 1702. In all there are seven, having these dates: 1616, 1619, 1620, 1627, 1646, 1687, 1702.

So far—that is, during a three years' search—I have found tombstones of the seventeenth century at Godshill, Bonchurch, Brading and St. Lawrence (Ventnor), in the Isle of Wight; at Wateringbury, in Kent, where there are several in excellent order; at Tonbridge, Bristol, Ipswich, Harwich, Southwell, Colwyn Bay (old parish churchyard).

and at Millbrook, near Southampton.

I might note that in all I have so far found only thirty-five tombstones over 200 years of age.—London Standard.

#### Pat as a Lion.

"No," said the lion tamer to Patsy Flannigan; "you can't have a job to look after the animals, but our pet lion died last week, and we've kept the skin, so I'll give you £2 a week to dress up as a lion," says London Tit-Bits.

"Two pounds!" echoed Flannigan. "Good gracious, is there so much gold in the world? Right, sorr."

So Patsy dressed up as the lion and laid down in the cage. The menagerie doors were opened, and the performance commenced. "Ladies and gentlemen," said the keeper, "to show the wonderful docility of these animals, we will now place the lion in the cage with the tiger."

"Man, are ye mad?" said Patsy. "Think of me wife and children!"

"Get in," said the keeper, "or I'll run this pitchfork through you."

Patsy thought he might as well die one way as another, so he crawled into the tiger's cage, and when he saw the animal's big, ferocious eyes fixed on him he uttered a doleful wail and commenced to pray in Irish. The tiger walked over to him. "What's the matter wid' ye?" said he. "Shure, man, ye needn't be afraid. Oi'm Irish meself!"

## The Rejuvenation of Chilton Forester

By Constance D'Arcy Maclay

Copyright, 1906, by E. C. Parcells

Olivia Forester descended from her auto and looked about her helplessly. As far as she could see the road stretched away dusty and desolate. It was the haying season. Farmers were busy with their crops and passersby were few. Olivia's car stood half in and half out of the wayside ditch, and it was beyond her power to move it. There was nothing to be done but wait. If deliverance in any guise approached she could readily signal it, for she stood on the crest of a hill.

Below her the countryside lay like a green map. The clear air mocked distance and brought things wonderfully near—the cluster of houses that formed Oakdale village, beyond these the gray gables of her own home and still farther away the shining roof of Willoughby manor.

It was at the latter that she looked with the most interest, for the Forester-Willoughby feud, beginning about a land line, had continued for two generations. The elder Willoughby had died, but Broughton Willoughby had returned from college and the manor was reopened.

The villagers, who took a lively interest in the two families, declared him to be a fine, sensible young man, nor was Olivia a whit less popular. People liked to wait for her smile and nod as she galloped past. Recently her motor had taken the place of her horse, a course of which her father heartily disapproved, for he hated modern innovations.

His role of hostile neighbor was only one of many idiosyncrasies. Trains filled him with a horror unspeakable. It was his boast that he had never ridden in a sleeper. He loathed the bustle of a city life and clung tenaciously to his New England homestead, whose accessibility rendered it doubly dear to him. Olivia often teased him by saying she was sure he would like to keep her at home beside a spinning wheel.

"Anything," he cried, "would be better than what you have chosen! With such a hideous, snorting thing as that how can you expect to come to anything but grief? And, though Murray, the groom, is an excellent—what do you call it?—chauffeur, you insist in going about the country alone. You are a modern, Olivia, and I wash my hands of you!"

Yet now, as Olivia was experiencing her first breakdown, she recalled her father's words with a twinge of apprehension, and it was a relief to hear another machine approaching, a relief which turned to consternation when she saw its occupant. Young Willoughby coolly ignored the embarrassment of the situation.

"I beg your pardon," he said pleasantly, "but can I be of some assistance?"

"Thank you," answered Olivia confusedly. "It won't move either way, and I can't find out what's the matter with it." Nor could Willoughby when, after twenty minutes' work, he managed to get it from the ditch.

"There doesn't seem to be any help in sight," he observed cheerfully after looking up and down the road. "Will you let me take your motor in tow?"

Olivia hesitated. But what had a family feud to do with a breakdown? "It may well be so good," she murmured.

## Boils and Pimples

Red Rash, Eczema, in fact any skin disease, disfigures the complexion because the bowels are constipated—or because the kidneys do not rid the system of waste—or because the skin itself is unhealthy.

Ointments, salves and soaps are useless. Because the trouble is with the blood.

Owing to defective action of bowels, kidneys or skin, the blood becomes laden with impurities. It is these impurities—deposited by the blood—that make boils, pimples, and painful, disfiguring skin diseases. It is because the trouble is with the bowels, kidneys or skin, that FRUIT-A-TIVES cure these diseases.

## Fruit-a-tives

OR "FRUIT LIVER TABLETS"

act directly on the eliminating organs—correct their irregularities—strengthen them—and thus clear the skin and make the complexion clear and soft.

If you have any skin trouble—or any fault with constipation, liver trouble, biliousness, headaches, indigestion, rheumatism—cure yourself with Fruit-a-tives. They are made of fruit juices and tonics—and never fail to cure.

50c. a box or 6 boxes for \$2.50. Sent on receipt of price if your druggist does not handle them.

at my machine. Perhaps by this time its changed its mind. "There, you see?" and his car began putting with an alacrity which might have awakened Olivia's suspicions, but she had no chance to analyze her emotions.

"It's a good thing my machine is covered," he went on, "for we are going to have a bit of a storm." He snatched up his dust colored coat and held it out for her. "I'm sorry it's so cumbersome," he said, smiling, "though at least it's a protection."

Olivia was lost in the folds of it, and the wind whipped her veil out banner-like and she stepped into Willoughby's car. The storm had broken on them, and the rain drove blindingly in their faces. Trees, fields and road seemed blotted out. The rain was still coming down in torrents as the two machines spurted up the gravel driveway under the Foresters' porte cochere, and Willoughby opened the door for Olivia as if it was an everyday occurrence, though none of his family had set foot within the Forester grounds in a lifetime.

Olivia, disheveled and breathless, stood dripping in the hall, while her father in a passion of resentment listened to the story of her afternoon's adventure. And in the house across the way young Willoughby mused with an unlighted pipe between his lips. "What would she have thought," he murmured, "if she had known that the breakdown of my bully old motor was nothing but a ruse from start to finish? But all's fair in love and motoring."

But the barriers of the feud were down, and between Olivia and Willoughby, the old animosity, deepened into

in sight," he observed cheerfully after looking up and down the road. "Will you let me take your motor in tow?" Olivia hesitated. But what had a family feud to do with a breakdown? "If you will be so good," she murmured, and, gathering her dress about her, she stepped into her own car.

She leaned back with a sign of relief. At least she would not have to talk to him. Then the absurdity of the affair struck her. She realized how she would look whirling through the village streets as if taken captive by Willoughby. Instantly her pride was up in arms. At the edge of the village she called to him, and he slowed down immediately.

"I think," said Olivia, "I would rather you left me here. I'm sure some farmer's team will be passing and take me the rest of the way, and I am grateful to you for the assistance you have given me."

"It was the greatest pleasure," said Willoughby and, raising his cap, was gone.

But Olivia was sure that the farmer's team which came to her aid a few moments afterward was of his sending, and, though she told herself it was the uneventfulness of her life that made the afternoon's occurrence seem of so much importance, yet she took pleasure in mentally recalling each incident. Indeed, so much did Willoughby occupy her thoughts that she was scarcely surprised when a few days later, scudding home against a wind that presaged a storm, a turn in the road brought Willoughby into view. He was on his knees in the middle of the road, apparently investigating his gasoline tank.

"The sparkler doesn't connect," he said in answer to her question and quickly accepted her offer of assistance. They started homeward in complete reversal of the parts they had played before. Now it was Olivia's motor that went gallantly ahead, while Willoughby and his car trailed in the rear. They were still some twenty miles from Oakdale, the wind was steadily rising, and a few great drops of rain began to fall.

"Now," thought Olivia as they sped forward, "I have canceled the debt. We are square. There need be no further."

## CURED HIS WIFE of LA GRIPPE

Quebec Man tells how the Great Consumptive Preventative was an all-round Benefit

"My wife took La Grippe when she was in Ottawa," says R. N. D'aoe of Northfield Farm, Que., in an interview. "She got a bottle of Psychine and after using it for a few days she was quite well. I took a cold and am using it and am getting all right. I think Psychine is one of the best tonics on the market to-day."

There you have the whole matter in a nutshell. La Grippe and colds are among the forerunners of consumption.

This man had one, his wife had the other. Psychine not only cured both but it built them up so that their bodies are strong enough to resist disease. All seeds of consumption are killed by

of my bully old motor was nothing but a ruse from start to finish? But all's fair in love and motoring."

But the barriers of the feud were down, and between Olivia and Willoughby acquaintance deepened into intimacy. They took long rides through the country, the two machines whirling along side by side. "I've never had a chauffeur," said Olivia on one of these occasions.

"But you should," Willoughby whimsically protested. "I know of some one who's longing for the place."

"Why, what?" began Olivia and then stopped. The look in Willoughby's eyes was not one of banter.

"I'm not worthy of it," he went on, "but still I dare to ask. And if you'll say 'yes' I'll do my best to steer straight and well and guard you to the end of the journey. Will you trust me, Olivia?"

"Always," she answered, and from the autumn slope of the hill down which they rode it seemed as if the whole world lay golden before them.

But their dream was destined to end with startling abruptness when Willoughby wrote to her father, for it gave the old gentleman a grim satisfaction to refuse all terms of conciliation. He cherished the feud because it belonged to the old order of things, and for him custom was not easily uprooted. To Olivia's many entreaties he made the same obdurate answers. But there was in her a spark of the same unquenchable fire that burned in him, and his determination fanned its embers to a blaze as she went quietly on with her preparations—preparations of which no one knew save Willoughby and Mr. MacWurter, the village justice, who had known Olivia since childhood.

"This is romantically old fashioned enough to suit even your father," declared Willoughby as they sped through the moonlit night on their way to the 8:15 train.

Olivia's answer was a clutch on his arm. "Listen!" she cried. "We're being followed! It's father—in my machine—with Murray, the groom."

Willoughby's chauffeur put on full speed, and the waiting MacWurter was caught up with cyclonic rapidity. The car was still plunging forward at a terrific rate as he jolted out the words of the hurried ceremony. It was a race for love, and the auto won—barely won; they had not reached the village station before the other machine came alongside.

For the first time in many years old Chilton Forester had been completely taken out of himself. The long stretch of road, white in the moonlight, the crisp air of night rushing past him, had filled him with a tremendous exhilaration. He half forgot the lovers in the keenness of this new sensation. His blood felt like wine in his veins. The ivory tint of his face had taken on a glow. His eyes sparkled. To Olivia's startled gaze he looked strangely young. Of the torrent of denunciation that the runaway pair had expected there was none.

"You young fools," said Chilton Forester.

## How's This.

We offer One Hundred Dollars Reward for any case of Catarrh that cannot be cured by Hall's Catarrh Cure.

F. J. CHENEY & CO, Toledo, O.

### POULTY HOUSES

The poultry houses I have seen on many of the farms in Ontario are mostly of two kinds—those that are small, poorly lighted, and seldom cleaned; and those that are well built, well lighted, and frequently kept moderately clean. The last mentioned houses are not much more satisfactory than the first.

The essential points in a poultry house are light, dryness and good ventilation. The houses that have been built warm and tight, with the idea of keeping the water from freezing have the objection, that in nearly all cases the ceilings and walls coat with frost during very cold weather. When the weather moderates the frost melts and you have a very damp house. The house smells of chickens, or in other words, is poorly ventilated, and in many instances the chickens are unhealthy. Sometimes they lay well during winter, but the eggs are very poor for hatching purposes.

For a number of years we have been trying to find some way to overcome these difficulties. The best means of ventilating a house, that I know of, is by using cloth screens, and to keep a house perfectly dry I have found nothing better than a straw loft. The ceiling is covered with straw, the straw being placed on boards or rails which are some 6 or 8" apart. The straw should be about one foot or more in depth. The straw which is exposed to the air of the pen, absorbs the majority of the moisture in keeping houses perfectly dry by using straw lofts. Where we have not used these lofts, even where there was ample ventilation, there has been some little difficulty with frosted walls and ceilings.

The use of the curtain front is coming more into favor. Under ordinary circumstances a house needs to be of the front of glass in order to have the pen well lighted. There should be about as much more of the front of the cotton. The cotton may be put on frames which can be closed or opened according to weather conditions. On nice bright days the cotton is either rolled up, or if the curtain is put on frames, it can be hung up. This makes the pen very nice, bright and airy. On nearly all days the cotton screens should be opened for a short time. On days which are very windy and dull, it is advisable to only open one screen. If more than one is opened there is apt to be many draughts throughout the pen. As far as we can tell, cotton will keep out almost as much cold as ordinary glass frame or sash. At least, in the houses where we have a similar house with all glass front and no cotton. It must be borne in mind, however, that in these houses of ours where the tests are made, the windows are not fitted extreme tight.

Where floors are made of cement, boards, or ground; at least four or six inches of fresh earth should be put on each year. Care should be taken to keep the floors well cleaned, otherwise the ground becomes tainted and the common epidemic among fowls, more prevalent. The ground outside the house should be ploughed or spaded once or twice a year. The land too needs cropping and where this is impossible the next best thing is to supply lime and work the same into the soil.

All poultry houses should be white-washed and disinfected at least once a year. The present time is undesirable for whitewashing, as it is apt to leave the house entirely too damp for the coming season. It would be better done in the spring or summer.

# THE OLDEST MAN IN AMERICA

## Escaped the Terrors of Many Winters By Using Pe-ru-na.

*"I Attribute my  
Extreme Old  
Age to the Use  
of Pe-ru-na."*

**Mr. Isaac Brock, 117 Years Old Last Birthday.**

ISAAC BROCK, a citizen of McLennan county, Texas, has lived for 117 years. For many years he resided at Bosque Falls, eighteen miles west of Waco, but now lives with his son-in-law at Valley Mills, Texas.

Some time ago, by request, Uncle Isaac came to Waco and sat for his picture, holding in his hand a stick cut from the grave of General Andrew Jackson. Mr. Brock is a dignified old gentleman, showing few signs of decrepitude. His family Bible is still preserved, and it shows that the date of his birth was written 117 years ago.

Born before the United States were formed.  
Saw 22 Presidents elected.  
Pe-ru-na has protected him from all sudden changes.  
Veteran of four wars.  
Shod a horse when 99 years old.  
Always conquered the grip with Pe-ru-na.  
Witness in a land suit at the age of 110 years.  
Believes Pe-ru-na the greatest remedy of the age for catarrhal troubles.

IN speaking of his good health and extreme old age, Mr. Brock says: "After a man has lived in the world as long as I have, he ought to have found out a great many things by experience. I think I have done so.

"One of the things I have found out to my entire satisfaction is the proper thing for ailments that are due directly to the effects of the climate. For 117 years I have withstood the changeable climate of the United States.

"I have always been a very healthy man, but, of course, subject to the affections which are due to sudden changes in the climate and temperature. During my long life I have known a great many remedies for coughs, colds and diarrhoeas.

"As for Dr. Hartman's remedy, Peruna, I have found it to be the best, if not the only, reliable remedy for these affections. It has been my standby for many years, and I attribute my good health and extreme old age to this remedy.

"It exactly meets all my requirements. It protects me from the evil effects of sudden changes; it keeps me in good appetite; it gives me strength; it keeps my blood in good circulation. I have come to rely upon it almost entirely for the many little things for which I need medicine.

"When epidemics of la grippe first began to make their appearance in this country I was a sufferer from this disease.

"I had several long sieges with the grip. At first I did not know that Peruna was a remedy for this disease. When I heard that la grippe was epidemic catarrh, I tried Peruna for la grippe and found it to be just the thing."

In a later letter, Mr. Brock writes: "I am well and feeling as well as I have for years. The only thing that bothers me is my sight. If I could see better I could walk all over the farm, and it would do me good. I would not be without Peruna."

Yours truly,

*Isaac Brock,*

When old age comes, it brings with it catarrhal diseases. Systemic catarrh is almost universal in old people. This explains why Peruna has become so indispensable to many old people.

Ask your Druggist for Free Peruna Almanac for 1907.

### BIRTH OF A HYMN.

Story of the Origin of "In the Sweet By and By."

A song of national circulation, "In the Sweet By and By," written by S. Fillmore Bennett of Elkhorn, Wis., had its birth in a country store. Mr. Bennett told the story, which is given in "Wisconsin in Three Centuries," as follows:

It was about time for closing business in the evening when J. P. Webster, whose melodies have made Wis-

### MAKING OLD OAK.

One of the Tricks of the Cabinet-makers' Trade.

You will have to go a long way before you find a body of men more clever than those cabinetmakers who produce goods to satisfy the desire of the public for furniture made of old and fancy woods. They can transform whitewood into all kinds of exotic woods by means of chemicals, and a chemist would be surprised if he were to have the run of one of those facto-

### A Poet's Homely Face.

The poet Rogers was afflicted with a notably unpleasant, cadaverous countenance, which, with all his intellectual power, was a mortification to him. To hide his annoyance, he joked about his ugliness incessantly and deceived his friends into supposing him indifferent to it. He once turned to Sydney Smith, who, with Byron and Moore, was dining with him, and said:

"Chantrey wants to perpetuate this miserable face of mine. What pose would you suggest that I should take?"

the house entirely too damp for the coming season. It would be better done in the spring or summer.

Horse Blankets, a complete line of first-class blankets at right prices.  
**MADOLE & WILSON**

ester pleasant. "You mean food?" And then, looking toward his son-in-law, he hesitated with passionate interest. "What is the make of your machine?"

"Thus ended the Forester feud."

#### Why She Couldn't.

"No, I didn't have a very good time," she said. "I wanted to talk, and there wasn't a man there."

"But there were plenty of other girls."

"Oh, of course, but that was no satisfaction, for they all wanted to talk too."

#### Unfair.

Another unfair thing in life—the bride, with a wealth of hair, wears a veil, but the groom, who has a bald spot and really needs a veil to cover it, is denied the privilege.

The noblest motive is the public good.  
—Virgil.

## Dyspepsia of Women

Caused by Female Disorders and Cured by Lydia E. Pinkham's Vegetable Compound.

A great many women suffer with a form of indigestion or dyspepsia which does not seem to yield to ordinary treatment. While the symptoms seem to be similar to those of ordinary indigestion, yet the medicines universally prescribed do not seem to restore the patient's normal condition.

Mrs. Pinkham claims that there is a kind of dyspepsia that is caused by a derangement of the female organism, and which, while it causes a disturbance similar to ordinary indigestion, cannot be relieved without a medicine which not only acts as a stomach tonic, but has a peculiar tonic effect on the female organism.

As proof of this theory we call attention to the case of Mrs. Henry Beaubien, 58 Sparks St., Ottawa, Ont., who was completely cured by Lydia E. Pinkham's Vegetable Compound after everything else had failed. She writes: Dear Mrs. Pinkham:

"I had been troubled with indigestion and general stomach disorders for nearly a year. I had a soreness in my stomach and was unable to digest my food. I dieted and doctored without success; but Lydia E. Pinkham's Vegetable Compound brought me permanent relief. I used three bottles and it cured me of my stomach trouble and built up my general health. I now enjoy a splendid appetite, can eat all kinds of food, have no trouble with indigestion, and know that I owe it all to Lydia E. Pinkham's Vegetable Compound."

No other medicine in the world has received such widespread and unqualified endorsement, or has such a record of cures of female troubles, as has Lydia E. Pinkham's Vegetable Compound.

the birth in a country store. Mr. Bennett told the story, which is given in "Wisconsin in Three Centuries," as follows:

It was about time for closing business in the evening when J. P. Webster, whose melodies have made Wisconsin famous, came into the store, feeling somewhat depressed.

I said to Webster, "What is the matter now?"

He replied, "It is no matter; it will be all right by and by."

The idea of the hymn came to me like a flash of sunshine, and I replied: "The sweet by and by. Why would not that make a good hymn?"

"Maybe it would," he said indifferently.

I then turned to my desk and penned the hymn as fast as I could write. I handed it to Mr. Webster. As he read it his eyes kindled and his whole demeanor changed. Stepping to the desk, he began writing the notes instantly.

In a few moments he requested Mr. Bright to hand him his violin, and he played with little hesitation the beautiful melody from the notes. A few moments later he had jotted down the notes for the different parts and the chorus.

I do not think it was more than thirty minutes from the time I took my pencil to write the words before the hymn and the notes had all been completed and four of us were singing it exactly as it appeared in the Signet Ring a few days later and as it has been sung the world over ever since.

## A NAVAL REBUKE.

Two Admirals, a Captain and a Fool in Manila Bay.

When Dewey's fleet was at Manila the late Admiral Chichester was then a captain. On one occasion Admiral Diederichs, the German, sent out the Irene on an unrevealed errand and without the customary notification to the commander of the blockading fleet, Admiral Dewey had suffered, he thought, sufficiently from that sort of thing, and so the admiral sent a vessel across the Irene's bows and notified her captain that she would not be permitted to depart without a statement as to her destination. It was not Admiral Diederichs' mission to quarrel with both the American and the English fleets on this critical occasion, so he sought to find out Captain Chichester's purpose in case of a collision. Going on board Chichester's ship, he angrily exclaimed, "Did you see what Dewey did to my ship?"

"Yes," replied Chichester. "What would you have done if it had been an English ship?"

"Well," said Chichester, conveniently assuming that the Irene's captain had sailed without orders from Diederichs, "I'd have put my captain in arrest, and then I'd have gone on board the Olympia and apologized to Admiral Dewey for having such a fool in command of one of my ships."

## Wearing Glasses.

Wearing glasses need not be permanent. If the first hint of derangement in the eyes is heeded a short time spent under the direction of an oculist will safely tide over the difficulty. It is most restful to close the eyes frequently for a few minutes. This rest does them great good. Particularly should this be done in trains and street cars. Many a headache and smarting pain may thus be saved. Traveling in public conveyances is exceedingly hard on the eyes, even for those that are strong and perfect. The gaze should be confined to the interior of the car. Looking out of the windows to the rapidly changing scenery is a great strain.

duce goods to satisfy the desire of the public for furniture made of old and fancy woods. They can transform whitewood into all kinds of exotic woods by means of chemicals, and a chemist would be surprised if he were to have the run of one of those factories for a day.

The manufacture of "old" oak is one of the easiest of their processes. The boards, moldings, panels or whatever pieces are required are made of oak which has just had time to dry sufficiently to prevent excessive warping.

They are then placed in a dark room, on the floor of which and quite close to the furniture to be aged, are placed several bowls, plates and so forth, of liquid ammonia. The room is then hermetically closed up, and the wood is left for a month or so, according to the age which is required. The coloration will extend to a depth of nearly a quarter of an inch if the room is kept closed for a few months.

That is why there is so much old oak furniture about. Of course, a little reflection would show that it could not be genuine—the forests of the middle ages would not have furnished one-half of it—but people do not always reflect. —London Graphic.

## Shoe Buckles.

When Evander Berry Wall, king of the dudes for twelve years and really the most inconspicuous man about town, because he was homely of face and a very bad dresser, besides being rather short and blotchy, undertook to reintroduce shoe buckles he made his first big failure as the sartorial dictator of our "Jeunesse doree." I think it was poor Al Claggett who said: "Why, Berry, you make a fool of yourself. Shoe buckles go with long stockings and knee pants. You can't wear 'em with socks and trousers. They interfere with the set of the trousers around the feet. Then, of course, you've got to have a low quartered shoe. Cut it out, Berry, cut it out." Wall immediately quit.

## Have you Insured your Skin?

A North-West farmer died recently from blood poisoning following the prick of a rusty nail. A tin tack on which he had, penetrated a Chicago boy's toe, and he died later from lock-jaw. Both these deaths could have been averted if a box of Zam-Buk had been handy. The air is full of poisonous germs and microbes which settle on wounds and—and what? If left to go their own way they set up festering suppuration and frequently blood poisoning. If Zam-Buk is applied these harmful germs are killed and the wound is healed.

One of the greatest living chemists has proved that Zam-Buk has more power to kill harmful microbes in wounds than crude carbolic acid, and it does it painlessly. A little Zam-Buk applied to cut, a sore, a burn, or a bruise which breaks the skin, prevents the wound from taking the wrong turn, and speedily heals it.

Mrs. Bright, of Johnstone, N. B., says:—"I got my finger poisoned by a prick from a needle, and as it got very bad I applied some old-fashioned remedies. It continued to get worse, and I then tried Zam-Buk. This both cleaned the wound and healed it and soon all trace of the injury was gone."

In cases of cuts, burns bruises and other injuries Zam-Buk is the best "insurance." It is equally good for eczema, chronic ulceration, ringworm, scaling sores, abscesses, inflamed patches, running sores, bad leg, old wounds, etc. Also for chapped hands. Of all druggists at fifty cents a box, or post free from the Zam-Buk Co., Toronto, upon receipt of price, six boxes for \$2.50.

friends into supposing him indifferent to it. He once turned to Sydney Smith, who, with Byron and Moore, was dining with him, and said:

"Chantrey wants to perpetuate this miserable face of mine. What pose would you suggest that I should take?"

"If you really wish to spare the world as much as possible," said the wit, "I would, if I were you, be taken at my prayers, my face buried in my hands."

Rogers laughed with the other persons present, but he shot a malignant glance at the jester and, it said, never fully forgave him for the bonmot.

## High Finance.

"Say," began Burroughs, "lend me a five, will you?"

"See here," replied Markley. "If you'd only save your own money you wouldn't have to borrow from your friends."

"But by borrowing from my friends I do save my own money."

## Sleep.

Now blessings light on him that first invented sleep. It covers a man all over, thoughts and all, like a cloak; it is meat for the hungry, drink for the thirsty, heat for the cold and cold for the hot.—Cervantes.

## Quite Different.

He—But I thought you'd forgiven me for that and promised to forget it! She—Yes; but I didn't promise to let you forget I'd forgiven it!

Some men are born great, some achieve greatness and some couldn't tell to save their necks how it happened.

**Vapo-Cresolene**  
Established 1879  
Whooping Cough, Croup, Bronchitis  
Cough, Grip, Asthma, Diphtheria  
Cresolene is a boon to Asthmatics

Does it not seem more effective to breathe in a remedy to cure disease of the breathing organs than to take the remedy into the stomach?

It cures because the air rendered strongly antiseptic is carried over the diseased surface with every breath, giving prolonged and constant treatment. It is invaluable to mothers with small children.

Those of a consumptive tendency find immediate relief from coughs or inflamed conditions of the throat.

Sold by druggists.

## ETHICS OF DEBT.

### Extraordinary Defence of a Unitarian Minister.

An extraordinary defence, which did not appeal to Justice Willis, was put forward in the King's Lynn County Court recently by the Rev. J. M. Barnes, a B.A. of Cambridge, England, who was formerly Unitarian minister in the town, and who now lives at Streatham.

He was sued by a King's Lynn firm for £2 18s 1d. for groceries supplied to him, and, while admitting that he owed the amount legally, Mr. Barnes said his defence to the action was entirely an eternal one.

He claimed that now, having no settled income, the debt should be cancelled.

Ethically speaking, he could not regard himself as a debtor until the State guaranteed him employment of a kind in keeping with his education, and with sufficient remuneration on which to support himself, his wife and family.

Until this was done for the thousands like himself, who through no fault of their own were before the abyss, he could only regard the plaintiff as his debtor, in that, having more of this world's goods than he needed, he owed it to society to give of his surplus to those who in the struggle for existence had not been so fortunate as to obtain an economic advantage over others.

He asked the judge to enquire of the plaintiff what was his ethical title to the wealth he possessed, and not what his legal claim was upon the debtor.

Judge Willis said that he should do no such thing. He was surprised that Mr. Barnes should have advanced such a defence, and he would get no sympathy from him.

He gave judgment for the amount claimed, and said that he would order Mr. Barnes ethically, and with due regard to all interests, to pay 10s per month.

## CARE OF THE BABY.

A mother's work and worry in caring for her little ones is greatly lightened if she has on hand a safe remedy for the cure of indigestion, colic, sour stomach, constipation, diarrhoea, simple fevers and the other little ailments that are apt to come to children suddenly. For these troubles Baby's Own Tablets are better than any other medicine. They are mildly laxative, prompt in their action, and a few doses usually leaves the child in perfect health. They do not contain an atom of opiate or poisonous soothing stuff. They always do good—they cannot possibly do harm and may be given with equal safety to the new born infant or well grown child. Mrs. Reginald James, Fenaghvale, Ont., says: "I have used Baby's Own Tablets and find them unexcelled as a medicine for children. They promote sleep and general good health." You can get the Tablets from your druggist or by mail at 25 cents a box by writing The Dr. Williams' Medicine

## MODERN BULLET WOUNDS.

A most interesting and far-reaching experiment on a large scale was performed at the battlefield of Mukden. Several sanitary officers with good surgical training being present, out of 100 soldiers wounded in the abdomen 50 were operated upon by laparotomy, the 50 others left alone, the only treatment consisting of absolute rest and in keeping the external wound opening clean. Of the 50 soldiers operated upon 40 died, of the non-operated 40 survived. This striking result indicated the manner of treatment of abdominal wounds throughout the whole war. Laparotomy on or in the rear of the battlefield was afterward hardly ever performed, but strict care was taken that all soldiers wounded in the abdomen had absolute rest for the first three days.

## STARVED BY ANAEMIA.

### Health Restored by the Rich Blood Dr. Williams' Pink Pills Actually Make.

Thousands and thousands of young girls throughout Canada are literally passing into hopeless decline for the want of the new rich red blood so abundantly supplied by Dr. Williams' Pink Pills. They are distressingly weak, pale or sallow, appetite fickle, subject to headaches, dizziness, are breathless and the heart palpitates violently at the least exertion. The doctors call this anaemia—which is the medical name for bloodlessness. Dr. Williams' Pink Pills actually make new blood—they cure anaemia just as surely as food cures hunger. Here is a bit of the strongest kind of evidence: "Dr. Williams' Pink Pills and nothing else saved my two daughters when doctors had failed to help them." This statement is made by Mrs. Joseph Martel, St. Oliver street, Quebec. She adds: "My daughters are aged respectively twenty-two and twenty-three years. For two years they suffered from the weakness and distress of anaemia, and had I learned of Dr. Williams' Pink Pills earlier, it would not only have saved me money, but much worry and anxiety as well. Both girls were as pale as a sheet. They suffered from headaches, poor appetite, and grew so feeble that they could hardly go about. They were under a doctor's care, but did not improve a bit. I despaired of ever seeing them in good health again, when a friend called my attention to Dr. Williams' Pink Pills. Soon after they began the pills there was an improvement in their condition and in less than a couple of months they were again enjoying good health, active, robust girls. I am so grateful for what Dr. Williams' Pink Pills have done for my children that I strongly recommend them to every mother who has a weak, pale-faced boy or girl."

Dr. Williams' Pink Pills do only one thing, but they do it well—they actually make new, rich blood. They don't tinker with symptoms. They act on

# DARE HE?

## OR, A SAD LIFE STORY

### CHAPTER VII.—(Continued).

"You look as if you had a headache, old chap," he says, sitting down upon his friend's bed.

"If you had been going through as many kitchen ranges as I have this morning, perhaps you would have a headache," replies Jim, gravely. "You know that I am going to be married as soon as I get home."

Byng nods; and Burgoyne, while inwardly blessing the fact that spares him any congratulations, takes himself to task for having made the announcement so lugubriously as to render felicitation obviously inapplicable.

"When are you going to introduce me to Miss Wilson?" asks Byng presently. "If you shirk it much longer I shall think that you are ashamed of me."

Jim glances affectionately, yet not quite comfortably, at his young friend, and the thought flashes across his mind that, in his last remark, the latter has put the saddle on the wrong horse.

"You have so large an acquaintance in Florence already," he says, with some stiffness, "that I did not know that you would care to add to it."

"One cannot have too much of a good thing," replies the other jocosely. "You know I love my fellow-creatures; and in this case," he adds civilly, "I do care very much."

Burgoyne's eyes are bent on the paper before him, which contains the melancholy enumeration of his firearms—"A 500 double-barrelled express, by Henry, of Edinburgh; a 450 single-barrelled ditto, by same maker," etc., etc.—as he says slowly:

"I shall be very happy."

His acceptance of the proposition can hardly be called eager; but of this Byng appears unaware.

"When shall it be then? To-morrow—this afternoon?"

"No-o-o; not to-day, I think. It has been arranged that we are to go to San Miniato—Amelia, her sister, and I."

"Three of you?" cries Byng, raising his eyebrows. "Then why not four? Why may not I come too?"

There being, in point of fact, no reason why he should not, and Cecilia's morning prayer being still ringing in her future brother-in-law's ears, he gives a dull and lagging assent; so that at about three o'clock the two men present themselves at the door of the Wilson's apartment at the Anglo-American Hotel. That Sybilla is not expecting visitors is evident by the fact that, at the moment of their entrance, she is taking her own temperature—a very favorite relaxation of hers—with a clinical thermometer. She removes the instrument from her mouth without indecent haste, and holds out a languid white hand to Byng.

"So you are going off on a long afternoon's pleasuring?" she says, with a pathetic smile. "I am so glad that neither of my sisters is going to stay at home with me. We invalids must guard against growing selfish, though I think that is perhaps more the danger with malades imaginaires; we real ones have learnt our lesson of suffering better, I hope."

"You do not look so very ill," replies Byng, in his sympathetic voice, letting his eyes rest caressingly on the prostrate figure, which has yet no smallest sign of emaciation about it.

enthusiastic in the wrong places, and passing over the right ones unnoticed. If she keep to a vague generality of handsome adjectives, she will surely do well enough, and, on this high holiday that her heart is holding, he cannot be cross to her.

As to Byng, he is emphatically of the school of divinity taught by Tom Moore, nor was he ever known, when lacking "the lips that he loved," to fail to make love to the "lips that are near." His taste is too good for him to have chosen Cecilia for a companion; but since fate has allotted her to him for the afternoon, he finds no difficulty in making the best of her. Nor, to do her justice, is she destitute of charms of a certain kind, though her face has the inevitable air of commonness incident upon a very short nose and a very long upper lip. But she has a good deal of bloom, and of crisp, showy-colored hair, and a very considerable eye power. Byng's attachment to the fair sex being of far too stout a quality to be blunted by such trifles as an inch too much or too little of nose or lip, he also, like Amelia, is thoroughly prepared to enjoy himself.

Up the turning via Galileo they climb, to the Basilica at the top—stool drive of all tourists—hackneyed as only Yankeeism and Cockneydom, rushing hand in hand through all earth's sacredness, can hackney. But ever hackneying is powerless to take off the freshness to the eye that sees it for the first time, of that view when he beholds the Lily City lying close at his feet, so close that it seems he could throw a stone into her Arno.

They have left their sacre, and, as naturally happens in a partie carree—more especially when one couple are betrothed lovers—have broken into pairs. Burgoyne leans pensively on the terrace parapet, and his sombre eyes rest on the band of sister hills, joining hands in perpetual watch round valley and town; hills over which, in this late spring, there is more a promise than a performance of that green and many colored wealth of verdure and blossom that one associates with Firenze's fair name. But it is a promise that is plainly on the verge of a bounteous fulfillment. Then his look droops slowly to the city herself. In what a little space comparatively does the Florence that is immortal lie! The Duomo, the Lily Campanile "made up of dew and sunshine," the Baptistery, Santo Croce, the Palazzo Vecchio; he could compass them in a ten minutes' walk. And around this small nucleus of the undying dead and their work, what a nation of gleaming villas of the polyglot living—a nation of every tongue, and people, and language! All over the hills is the sheen of white walls, the verdure of tended gardens; they stretch away almost to where the Apennines raise their cold white fronts against the sky.

He rouses himself to remember that Amelia is beside him, and that he ought to say something to her. So he makes a rather banal observation upon the smallest of the enciente that encloses so much loveliness.

"Yes, is not it tiny?" replies she, with the eager pleasure of having a remark made to her which she cannot go wrong in answering. "Think of London! Why, the whole thing is not as big as South Kensington or Bayswater!"

val, Ont., says: "I have used Baby's Own Tablets and find them unexcelled as a medicine for children. They promote sleep and general good health. You can get the Tablets from your druggist or by mail at 25 cents a box by writing The Dr. Williams' Medicine Co., Brockville, Ont.

"What did papa say?" "He showed me the door." "And what did you say?" "I said it was certainly a very handsome door, but not what I had come to talk about. That made him laugh, and a minute later you were mine!"

**Not a Nauseating Pill.**—The excipient of a pill is the substance which enfold the ingredients and makes up the pill mass. That of Parmelee's Vegetable Pills is so compounded as to preserve their moisture, and they can be carried into any latitude without impairing their strength. Many pills, in order to keep them from adhering, are rolled in powders, which prove nauseating to the taste. Parmelee's Vegetable Pills are so prepared that they are agreeable to the most delicate.

The Doctor—"You have a bad cold, Mr. Jiggs. I'll give you some pills for it." Jiggs—"Oh, never mind, doctor. You can have it for nothing."

**MARK THIS DISTINCTION.**—A purely local disease of the skin, like barber's itch, is cured by Weaver's Ointment alone. But where the blood is loaded with impurity, such as Salt Rheum, Weaver's Syrup also should be used.

"Jessie, I've told you again and again not to spend when older persons are talking; but wait until they stop. I've told that already, mamma. They never do stop."

**Kidney Duty.** It is the particular function of the kidneys to filter out poisons which pass through them into the blood. When the kidneys are diseased they cannot do their whole duty, and would have the help and strength that South American Kidney Cure will afford in any and all forms of kidney disorder. It relieves in 6 hours.

"I'll give you a position as clerk to start with," said the merchant, "and say you will. You are young. Is that sufficient?" "Oh, perfectly," replied the clerk, standing up. "But, sir, do you think the firm can afford it?"

How to cure the Sufferer. Parmelee's Vegetable Pills are the result of scientific study of the effects of extracts of various herbs and roots upon the human system. They are so compounded that they are not only pleasant to the taste, but they are also so prepared that they are agreeable to the most delicate.

"What did papa say?" "He showed me the door." "And what did you say?" "I said it was certainly a very handsome door, but not what I had come to talk about. That made him laugh, and a minute later you were mine!"

that I strongly recommend them to every mother who has a weak, pale-faced boy or girl."

Dr. Williams' Pink Pills do only one thing, but they do it well—they actually make new, rich blood. They don't tinker with symptoms. They act in the bowels. They simply change bad blood into good blood and thus strike straight at the root of such common ailments as headaches, sideaches and backaches, indigestion, anaemia, nervous exhaustion, neuralgia, St. Vitus dance, partial paralysis, and the special painful secret ailments of growing girls and women. Sold by all medicine dealers or by mail at 50 cents a box or six boxes for \$2.50 from the Dr. Williams' Medicine Co., Brockville, Ont.

"That man may seem to be somewhat uneducated, and yet he makes a fine living by his pen." "Why, I would never take him for a writer." "He isn't; he breeds pigs."

Give Holloway's Corn Cure a trial. It removed ten corns from one pair of feet without any pain. What it has done once it will do again.

Mistress—"Why, Bridget, what on earth are you doing with all the broken dishes on the shelf?" Bridget—"Cure, munn, you fowld me Oi war to replace every one Oi broke."

**ITCH, Mange, Prairie Scratches and every form of contagious Itch on human or animal cured in 30 minutes by Wolford's Sanitary Lotion. It never fails.**

Banks—"You're putting your boy early to work." Jinks—"Yes, he's a clever lad, for he's learnt everything the master knows." "He has?" "He has that. That master said: 'I can't hammer anything more into that head of his.'"

Pleasant as syrup; nothing equals it as a worm medicine; the name is Mother Graves' Worm Exterminator. The greatest worm destroyer of the age.

"You talked all through my solo," said the musician a little resentfully. "Oh, that's all right," said the chattering person; "I wasn't saying anything you would care about hearing."

**IT'S EASY TO LET a cold hang on.** Each night at day we are sure it will be gone, but it stays with us. Allen's Lung Balm will check its advance and restore health.

She—"How did you know I was going to wear my hair curled this evening?" He—"I saw it in the papers this morning."

**These Worrying Piles!**—One application of Dr. Agnew's Ointment will give you comfort. Applied every night for three to six nights and a cure is effected in the most stubborn cases of Blind, Bleeding, or Itching Piles. Dr. Agnew's Ointment cures Eczema and all itching and burning skin diseases. It acts like magic. 35 cents.—15

"So she was led to the altar at last?" remarked the girl in blue. "Led!" repeated the bride's dearest friend; "led! I fancy you didn't see her. She didn't have to be led. When she started down the aisle you couldn't have driven her off with a regiment of cavalry!"

#### ACCORDING TO CONTRACT.

A man who was very miserly hoarded up his stacks of hay year after year in the hope of making double the price he was offered for them.

A well-known hay and straw buyer in the district one day asked the price of a stack. An enormous price was asked, which the buyer accepted.

"How about the terms of settlement?" asked the old miser.

"Well, you see," said the buyer, "my terms are to settle when I fetch the last load away."

"That's a bargain," said the miser, shaking the other's hand. The old chap valued every load so away except the last, and that the buyer never did fetch away.

have learnt our lesson of suffering better, I hope."

"You do not look so very ill," replies Byng, in his sympathetic voice, letting his eyes rest caressingly on the prostrate figure, which has yet no smallest sign of emaciation about it.

"Ah, that is because of my color," replies Sybilla, with an animation slightly tinged with resentment. "You, too, fall into that common error. My London doctor tells me that there is no such unerring indication of radical delicacy of constitution as a fixed pink color like mine; the more feverish I am, the deeper it grows. It is very hard—smiling again sadly—"for one gets no pity!"

"Where is Cecilia?" cries Jim, brusquely, and fidgeting in his chair. "Why is not she ready?"

As he speaks, the young lady in question enters—so obviously arrayed for conquest, in so patently new a hat, and such immaculate pale gloves, that across Burgoyne's mind there flashes, in vexed mirth, the recollection of the immortal caution addressed by Major O'Dowd to his friend and comrade, "Mind your oil, Dob, my boy!" Would he not do well to repeat it to his friend?

#### CHAPTER VIII.

They are off now, there being nothing further to retard them, leaving Sybilla tele-a-tele with her thermometer. They are off, sociably packed in one fiacre.

"Four precious souls, and all agog. To dash through thick and thin."

Not, indeed, that there is much dash about the Florentine cab-horses—saddest among God's many sad creatures—with not a sound leg among them, with staring coats and staring ribs, and poor broken knees; and with their sadness emphasized by the feathers stuck in their tired heads, as if to mock their wretchedness by a sort of melancholy smartness! Sad as they are, it must be owned that they are the only sad things in the cheerful Florentine streets, where no one seems over-busy, where, out of the deep-eaved, green-shuttered houses, people lean, talking to acquaintances on the shadowed pavement below. All the narrow thoroughfares are full of bustling life; but there is no haggard squalor apparently, no dreadful gin-palace gaiety. It does not follow here that a man must be drunk because he sings. And down the straight, colorful streets one looks—down a vista of houses diversely tall, each with its cream yellow face and its green shutters, varied here and there by the towering bulk of some giant-blocked mountain-palace, through whose grim, barred windows a woman peeps, or a little dog shows his pointed nose—looks to where, in dwindling perspective, the view is closed by a narrow picture of lucent purple hill. Fiesole or Bellosguardo—names to which the tongue cleaves lovingly. Through the gay streets, over bridge and Blue Arno, our travellers go; their driver cracking a prodigious whip, and with a tiny red dog, absurdly shaven, and with nothing but a small woolly head and tail left of the original design, seated gravely beside him. Away they go, pleasuring; but pleasure and pleasuring are not always identical.

Burgoyne sits opposite Amelia; and as for Cecilia, it is to be supposed that her headache is for the moment dulled, since the same carriage rug covers her knees and those of Byng. Burgoyne does not look at Amelia; nor though his eyes are fixed upon the passing objects, does he at first see aught of them. His vision is turned inwards, and to his own soul he is mechanically repeating in dismal recitative, "A double-barrelled, central-fire, breech-loading gun, by Lancaster; made strong enough at the breech to shoot a spherical bullet."

As for Amelia, her features are not of a build to express any emotion with much brilliancy; but over them lies a deep and brooding content. Amelia has not had much undiluted happiness in her life, but she is exceedingly happy to-day. She is even strangely free from the carking fear which usually assails her, of praising mistakenly, of being

much loveliness.

"Yes, is not it tiny?" replies she, with the eager pleasure of having a remark made to her which she cannot go wrong in answering. "Think of London! Why, the whole thing is not as big as South Kensington or Bayswater!"

He shudders. Must the accursed suburb pursue him even here? "Let us go into the church," he says, in a tone that a little dulls his companion's buoyancy.

She follows him, crestfallenly, asking herself whether she has answered amiss here also. She does not trust herself to any comment upon the interior.

Byng and Cecilia are standing before the high altar, from over which a mosaic Madonna stiffly beams upon them; and as the other couple approach them, Burgoyne hears the words "drawing-room grate" issue from his future sister-in-law's lips.

"Bravo Cis!" he says, in a dry aside; you are getting on nicely! I did not think that you would have reached the drawing-room grate till to-morrow."

To avoid intruding further on her delicate confidences, and also to escape from two Americans, who are nasally twanging Hare and Horner at each other, varied by trips into Baedeker, he passes into a side chapel made famous by one of the loveliest tombs that ever feigned to simulate in marble death's ugliness. The Yankee's voices are high and shrill, but they had need to be higher and shriller still before they could break the slumber of him whose resting place Jim has invaded in his flight from Cecilia and New York.

Was ever rest so beautiful as this of the young sleeper? A priest he was, nay cardinal, and youthful and lovely and chaste! and now in how divine a slumber is he laid? But how should that four hundred year's slumber not be divine, watched by such a gentle Mary-Mother as is watching him; smiling as if to tell him that he does well to sleep, that sleep is better than waking, that death is better than life! There is a sunken look about his fair eyelids, as if he had gone through suffering to his rest; and his reposeful hands are thin, but below him, as he lies in his spotless marble tranquility, upon his sarcophagus, the rose garlands wave in lovely frieze, and the riotous horses rear and plunge in fulness of life.

Burgoyne has not perceived that Amelia did not follow him. She has, in point of fact, remained in the body of the church, immersed in her guide-book steadily working through the marble screen and pulpit, and still five good minutes off the side chapel in which her lover stands in so deeply brown a study, that he is not aware of the intrusion upon his solitude of two

**Rylee Bros Limited**  
Toronto, Ont.

women, until he is roused with a leap by the voice of one of them addressing—not him, of whose presence she is obviously as unaware as was he of hers, until this moment—but her companion. "Oh, mother! am I not a fool, at my age, too? but I cannot help it, it makes me cry so!"

Burgoyne does not need the evidence of his eyes. His ears and his startled heart have enough assured him whose are the tears called forth by that indeed most touching effigy at which he himself has been so pensively staring.

The mother's answer is inaudible; and then again comes the voice of Elizabeth Le Marchant, tearful and vibrating.

"You know I have seen so few beautiful things in my life, I shall get used to them presently; it is only sheer happiness that makes me—"

She stops abruptly, having evidently discovered for herself, or been made aware by her mother of his vicinity; and even if she had not done so, he feels that he must lose no time in announcing himself.

"Florence is a place that does make one often choky," he says, eagerly taking the hand, which she hesitatingly, and with some confusion, offers him.

It is not quite true; Florence has never made him feel choky; and, if he is experiencing that sensation now, it is certainly not the dead cardinal of Portugal

Ensnared by the wily and brazen suddenness of this demand Miss Le Marchant has evidently no evasion ready, and, after an almost imperceptible pause of hesitation, answers:

"We are at 12 Bis, Piazza d'Azeglio." She is looking doubtfully and half uneasily in his face, as she gives him this answer, but he has scarcely time for a flash of self-congratulation at having obtained the information, which he had never realized the eagerness of his desire for until this moment, before he becomes aware that his interlocutor's eyes are no longer meeting his, but have wandered to some object over his shoulder. What that object is he is not long left in doubt. Whether it is a genuine accident, or one of those spurious ones, of which those who profit by them are the artificers, Jim does not know; and, as he is at the time, and will be when he thinks of the circumstance to the end of his life, too angry to question Byng on the subject, it is pretty certain that he never will know; but so it is that at this moment, the voice of his protegee breaks upon his ear.

"You are not going to give us the slip like this, old chap—oh, I beg your pardon!"

But begging pardon ever so sweetly does not alter the fact that he has rushed, like a bull in a china shop, into the middle of the dialogue. All four look at each other for a second; then, since there is no help for it, Jim presents his disciple, and the next moment the latter has slid into talk with Elizabeth, and she is responding with an ease and freedom from embarrassment such as had never marked her sparse and hardly won utterances to the elder man.

Byng had the advantage of him, as he somewhat bitterly thinks. Byng has no connection with "old times;" those poor old times which she and her mother have so unaccountably taken en gippe. He seems suddenly relegated, as by some natural affinity, to the mother. On their two last meetings the eagerness to converse has been all on his side; yet now he has nothing to say to her. It is she who addresses him.

"I hope that you found your young lady flourishing," she says civilly.

He gives a slight inward start, though—as he is thankful to feel—his body is quiet. "His young lady!" Yes, of course he has a young lady! Has there been any danger during the last five minutes of her forgetting that fact? and has Mrs. Le Marchant done him an unnecessary service in recalling it?

"Oh, yes, thanks, she is all right!" "Is she still in Florence?"

"Yes, she is here; by-the-bye"—looking round with a sudden sense that he ought to have missed her—"what has become of her? Oh, here she is!"

For even while the words are on his lips, Amelia and Cecilia come into sight. Amelia with a shut Baedeker, and the serene look of an easy conscience and a thoroughly performed duty on her amiable face; Cecilia with a something of search and disquiet in her large rolling eye, which would have made him laugh at another time.

(To be continued.)

The efficacy of Bickle's Anti-Consumptive Syrup in curing coughs and colds and arresting inflammation of the lungs, can be established by hundreds of testimonials from all sorts and conditions of men. It is a standard remedy in these ailments and all affections of the throat and lungs. It is highly recommended by medicine vendors, because they know and appreciate its value as a curative. Try it.

Parson Timmins—"Well, John, how did you like my sermon?" John—"Very well indeed, sir. I always did like that sermon."

WHAT DO PEOPLE NEED who are run down, anemic, pale, listless? "Ferrovim," the best tonic. It builds, makes strong, it gives new life. There are many tonics but only one "Ferrovim."

WANTED FIREMEN AND BRAKEMEN for all Railroads. Experience unnecessary. Firemen \$100, become engineers and earn \$200 monthly. Brakemen \$75, become Conductors and earn \$150. Positions awaiting strong, competent young men. State age, height and weight—(important.) Name position preferred. RAILWAY ASSOCIATION, Room 112, 227 Monroe St., Brooklyn, N.Y.

## LADIES' BEAVER SKATE

Skaters who make a point of good appearance like the Ladies' Beaver, which is also to be recommended for the comfort it affords the wearer. It's the skate for rink use.

FOR SALE BY ALL UP-TO-DATE DEALERS. MADE BY

The STARR MANUFACTURING CO., Limited,  
DARTMOUTH, N. S., CANADA.

BRANCH, 126 Wellington Street West, TORONTO

Manufacturers also of the famous "Mienac" and "Rex" Hockey sticks (Copyrighted.)

## "OSHAWA" Steel Shingles.

Wind,  
Water,  
Storm  
and  
Fire  
Proof

Locked  
on  
All  
Four  
Sides

Made from Painted or Galvanized Steel, at prices varying from \$2.25 to \$5.10 per hundred square feet covering measure. This is the most durable covering on the market, and is an ideal covering for Houses, Barns, Stores, Elevators, Churches, etc. Any handy man can lay the "OSHAWA" shingles. A hammer and snips are the only tools required.

We are the largest and oldest company of the kind under the British flag, and have covered thousands of the best buildings throughout Canada, making them

FIRE, WATER AND LIGHTNING-PROOF.

We also manufacture Corrugated Iron in long sheets, Conductor Pipe and EAVESTROUGH, Etc.

METAL SIDING, in imitation of brick or stone.

METAL CEILINGS, in 2,000 designs.

Write for Catalogue No. 14R and free samples of "OSHAWA" Shingles. Write to-day.

# LAW OF MORAL FRUITAGE

## No Such Thing as Moral Independence and Separateness.

"Be not deceived; God is not mocked, for whatsoever a man soweth that shall he also reap."—Gal. vi., 7.

Truth has many sides; error is born of seeing only one. We can lay so much emphasis on the splendid and too long forgotten truth of the infinite goodness, tenderness and mercy that rules through all the universe as to lose sight of those sterner aspects of moral law which are necessary to strong and properly proportioned moral character.

The truth is, infinite love is so great as to seem to wear at times the aspect of hatred. It is too wise to be weak; too kind to be always tender, soft, easy, and gentle. It speaks in tones of thunder, as well as in the placid breath of eve. It punishes as well as comforts. There is a stern and fearful aspect to the unvarying laws under which we are all living, an aspect which many learn too late.

Men need to remember that not only is there forgiveness, there is justice. So great is the love that is expressed in law that not the least command can be broken with impunity. Evil must fall on the evildoer. The relentless law holds ever, as a man sows so shall he reap. The guilty may find mercy, but there is no undoing what has been done.

This is the undeviating decree. Sin sown cannot be uprooted by easy repentance. Is there greater folly than that of him who sows his wild oats,

### HIS GREED AND INIQUITY,

hoping, whenever he wills, to check their fruitfulness with a flood of tears? He finds his error who plans on a penitence that will give him the pleasure of sin now and shield him from its pains at harvest.

Every voice of nature, every incident of life speaks of this same law. None can sow in the fields of this world the seeds of hate, of strife, of oppression, injustice, malice, lust, and shame and escape the stern fact that this world is so ordered that every deed, every word and even thought is vital, freighted with life, and none may know how long it

shall live and continue to bear its fruit. Nor can we say to ourselves: "What is all this to me? I will bear my own burden, take my own chances, and, if there be fruit to my sowing of to-day, I will reap with fortitude to-morrow." No man sows to himself alone. We live, not in separate and walled off fields, but on a great open common, where the winds blow free and the ways cross and re-cross; there is no such thing as moral independence and separateness.

I may sow by myself but I cannot reap alone. Others will taste the fruitage of my errors. This is the darkest aspect of all sin, not alone that it sets the trend of evil habit and bears for me its accumulating weight of woe and remorse, its inevitable consequences, but that no man can say where my sowing shall fall, nor how long the fruitage shall go on. Nature, stern and unrelenting, teaches one of her great lessons by allowing every member to suffer

### BY THE WRONG OF ONE.

This is the damage wrought by commercial greed, by the mammoth social sin of to-day, not alone that it sears the soul of the sinner and binds him down to the level of his lusts, but that it crushes other lives; its black train goes on like a plague. The greed of one means the need of many. Thus by our common suffering we learn to make a common fight against sin.

But there is the other side; the good is as fruitful as the bad. The law of the harvest holds here; there are no barren sowings of mercy, helpfulness, and love. No man knows how many generations of kindness will come from the single seed of an everyday good deed.

The struggle goes on; the white seed of good deeds is choking the black. A man's worth to the world, his service to society, and his own inner harvest every day depend on whether he is putting into life seed true or false, from above or below; for no pretenses, phrases, or even prayers shall avail to change the law that as he sows so shall he reap.

HENRY F. COPE.

## THE S. S. LESSON

### INTERNATIONAL LESSON,

DEC. 2.

### Lesson IX. Jesus Before Pilate. Golden

Text: Luke 23. 4.

### THE LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

**Pilate's Title and Office.**—The fact that our gospel narratives uniformly speak of Pontius Pilate as governor makes it proper for us to inquire what was the real position which he occupied under the Roman government, and what his power and authority. In the times of the Roman Republic the highest two magistrates of the capital city itself were called consuls. These consuls were elected for one year only, but while in office they exercised a power and an authority almost equal to that of the kings whom they had supplanted. Under the later empire, however, the office of consul, while still maintained, became of much less importance, dwindling to the mere presidency of the senate, of public games, etc. At the time of Christ the larger provinces of the Roman Empire were governed by officials

formation concerning the dynasty of Herod, and the facts which he records concerning that dynasty are apparently most accurate.

16. I will therefore chastise him—A most cruel and gratuitous punishment which he proposes to inflict by way of conciliating the men who were accusing the prisoner. This offer of Pilate throws much light upon the disgraceful illegality and horrible brutality which Roman officers were often guilty of.

We note that the American Standard Version of the Bible omits verse 17 of this chapter. The fact that it is printed in parentheses in the Authorized or King James Version indicates that it is a clause thrown in by way of explanation. The same explanatory fact which is stated in this verse is found, however, in two other passages: "Now at that feast the governor was wont to release unto the multitude one prisoner, whom they would" (Matt. 27. 15). Compare also Mark 15. 6.

18. Barabbas—All that we knew concerning this fellow-prisoner of Jesus is told in the next verse, from which it is plain that he was a political agitator, and one actually guilty of the crime charged unjustly against Jesus.

20. Desiring to release Jesus—The manifest hypocrisy and vindictiveness of the Jews strengthened Pilate's conviction of the prisoner's innocence.

21. Crucify, crucify him—Crucifixion was the customary Roman method of punishment inflicted on persons of dependent nations not possessing Roman

## CHANGES WEIGHED HERE SOME DRAMATIC SCENES

### 2,000,000 TO ONE AGAINST YOUR BEING HANGED.

### The Three Most Deadly Diseases, Bronchitis, Consumption and Heart Disease.

If you are a Scotsman, you stand a better chance of being killed by accident than if you are English, Welsh or Irish. Thirty-one out of every 1,000 Scotch people who die are killed by accident, and 30 English out of every 1,000. French people are much more careful, for only 15 out of every 1,000 French deaths are attributable to accident. As might be supposed, the risks of death by accident are greater in America than anywhere else. No fewer than 39 per 1,000 of Americans die from accidental causes, says London Answers.

How many of us ever stop to consider the chances that play so great a part in our daily lives? Very few do so, unless, perchance, they happen to be taking out an insurance policy. Insurance companies have, of course, to use a slang term, got risks of all kinds down to a fine point. Their statisticians have calculated chances so carefully that they can quote a premium on anything from the insurance of a house against fire to that of the disablement of a professional fiddler's forefinger. They will insure you against anything from catching measles to having twins, and this being so, they must, of course, make it their business to know exactly the risks the insured run.

### RELIGIOUS WORK FOR LONG LIFE.

Their life tables tell you all sorts of curious things. For instance, that if you are a clergyman you have a better chance of living to man's full span of three score and ten than if your profession is that of a doctor. Yet, oddly enough, a doctor, in spite of the risks he runs from infection, has a better chance of life than an attorney, while the latter's life chances are better than those of a coachman's; 184 coachmen out of 10,000 die for every 168 attorneys. The life chances are worst of all for innkeepers and cabdrivers. If the deathrate for 10,000 Englishmen is 180 per 10,000, that of cabdrivers is 266, and of innkeepers 270.

Between the ages of 25 and 65, a woman's chances of life are distinctly better than those of a man. Roughly speaking, 19 men die between those ages for every 16 women.

While on the gloomy subject of death, it may be worth while to glance at the illness which is most likely to kill you. Statistics show that there are two diseases which are far more deadly than any others—at least to the inhabitants of these islands of ours.

### THE MOST DEADLY DISEASES.

They are bronchitis and consumption. Out of every million English people nearly 3,000 succumb yearly to diseases of the throat, and fully 2,000 to consumption. Third in point of deadliness comes heart disease, which carries off about 1,400 yearly out of each million of the British people. Cancer and apoplexy send each about 500 to their graves, while the danger of smallpox is so slight as to be less than one-hundredth of that of consumption.

With all its fogs, London is not an unhealthy place to live in. Your chances of living to an old age in London are better than in either of the next two largest British towns. Out of every 1,000 London babies no fewer than 124 live to reach the good old age of seventy-five, while of 1,000 Glasgow children only 87 do so. In Manchester your chances of long life diminish still further. It is 100 to 6 against the resident of Manchester reaching the age of seventy-five. If you live at Brighton your chances are much more rosy than in any of the three great cities already mentioned. The betting is only 100 to 15 against the Brighton baby becoming a

### ECCENTRIC BRIDES WHO SAY "NO" AT THE ALTAR.

### Wedding Ceremonies Which Have Been Abruptly Stopped at Last Moment.

There was an extraordinary scene in a New York church the other day, caused by the eccentric action of a youthful bride, Miss May Constance. When she was asked by the clergyman if she took the bridegroom as her husband, she screamed at the top of her voice, "No, no, no!"

While everybody stood aghast, she gave her almost paralyzed suitor a glance of withering contempt, turned on her heel, and marched straight out of the church. The next moment the bridegroom burst into tears and wrung his hands in his grief at this dramatic ending to the marriage ceremony. He, however, had but himself to thank for it. The bride was told that morning by one of the bridesmaids that the fickle young man had actually proposed to her while engaged to Miss Constance, whom he had only escorted to the altar because of his rejection by the other young lady. So she determined on a startling revenge, and carried it out to perfection.

Some time ago before St. Catherine's Church, Moscow, Pennsylvania, was the scene of a similar

### SENSATIONAL ENDING

to a wedding. The "high contracting parties" were Miss Margaret Moors and Mr. Timothy Foley, and the officiating minister was the Rev. Father Walsh. When the bridegroom had duly made his responses, the priest turned to the bride and asked the question whether she took "this man for better or worse," whereupon she interrupted him with the remark, "Father, we are not married yet, are we?"

On receiving an answer in the negative, the bride remarked, "Then I guess we won't be," and without another word turned and walked out of the church.

The wedding of yet another American bride was terminated in the same abrupt fashion. Miss Frances Miller, of Chicago, the bride, had presented the bridegroom with a tie which he was to wear at the ceremony. The young man, however, had not been able to fix it to his satisfaction, and he had accordingly donned another. This was not noticed by the bride until her intended was pledging himself at the altar, and she was much incensed at

### THE SUPPOSED SLIGHT.

On being asked whether she would have the man as her spouse, she sharply replied, "If it is not too late, I will not." The wedding-party did not know what to do or think; but the bride quickly relieved the situation by appealing to her father to take her home, which he did at once. She is still a spinster, and likely to remain one, so far as the jilted bridegroom is concerned.

A Manchester, England, young lady said "No" at the altar a few years ago under circumstances of an unusual order. She had been wooed and won under what amounted to heartless false pretences, and the fact coming to her knowledge at the eleventh hour she determined to balk the impostor at the last moment. So, when the minister demanded to know whether she accepted him for her husband, she responded with an emphatic "Not if I know it," which sent a thrill through the assembled company. Somewhat puzzled at this unexpected reply, the clergyman repeated the words of the Prayer Book whereupon the bride declared, "I will do first!" and fainted away.

While efforts were being made to restore her the bridegroom stole quietly off; and it subsequently transpired that he had been stealing in a more literal sense for a considerable time, and that he was actually a fugitive from justice while posing as

empire, however, the office of consul, while still maintained, became of much less importance, dwindling to the mere presidency of the senate, of public games, etc. At the time of Christ the larger provinces of the Roman Empire were governed by officers called proconsuls, who exercised the authority of consuls in their respective provinces. They were also called proprietors, or governors. Subordinate to these proconsuls, or provincial governors, again, were the procurators, who had charge of the imperial revenue, and administered justice in cases relating thereto. In the smaller provinces, which were, so to speak, appendages of the greater proconsular provinces, the procurators also sometimes discharged the functions of the governor or the proconsul of the province. Judea was one of the smaller provinces which together constituted the proconsular province of Syria. Pontius Pilate held the position of procurator of Judea and was subject to the governor or proconsul of the larger province of Syria. Perhaps the reason for the fact that he is uniformly called governor in our English Bible, is that the Greek word so translated, like its English equivalent, is used in a broader sense, to designate any person having executive authority in a state or province. The Jewish historian, Josephus, however, is careful to speak of Pilate only by his proper title, procurator, and in the German and other translations of the Bible the title applied to Pilate also is one which more carefully distinguishes his office from that of his superior, the governor of Syria. Two other Roman procurators spoken of in the New Testament under the title of governor are Felix (Acts 23, 24) and Festus (Acts 24, 27). Judean procurators as a matter of fact exercised a much higher authority than officers of the same rank in other Roman provinces; in judicial matters their word was supreme, except in cases involving persons who were Roman citizens, where appeal was possible to the emperor at Rome. Hence the remark of Agrippa to Festus concerning Paul, "This man might have been set at liberty, if he had not appealed unto Caesar" (Acts 26, 32). Subordinate to the Roman procurator Pilate, the Sanhedrin was permitted to exercise the functions of supreme court of the nation, especially in all civil and religious affairs. In criminal cases, however, fewer prerogatives were allowed in the Sanhedrin, and the right to pass the sentence of death or to execute the same was absolutely forbidden it. This fact made it necessary for the Jews to bring some formal charge against Jesus before the Roman procurator in order to obtain from him the sentence of death which they desired.

Verse 13. Pilate called together the chief priests and the rulers and the people—Pilate's official residence was the palace of Herod at Caesarea and only at the time of the great Jewish feasts does he seem to have resided in Jerusalem, occupying during his stay in each case apartments in the palace of Herod in that city.

14. And said unto them—His address to the people and the members of the Sanhedrin was a formal one delivered from his customary seat of judgment. The public examination of the prisoner which Pilate had just held had convinced the procurator of the innocence of him whom the Jews had so vehemently accused. This fact he does not hesitate to state as he faces the company of Jesus's accusers with the words, "Behold I, having examined him before you, found no fault in this man touching the things whereof ye accuse him."

15. Nor yet Herod—Herod Antipas, called in the New Testament also Herod the tetrarch, the same who had put John the Baptist to death. He was the son of Herod the Great. The examination of Jesus by Herod referred to in this verse was presumably only an informal one and one which constituted no part of the regular trial. It is referred to again in Acts 4, 27. A careful reading of Luke's entire gospel indicates that he apparently possessed special in-

fluence, and his position was one of great importance. The Jews strengthened Pilate's conviction of the prisoner's innocence.

21. Crucify, crucify him—Crucifixion was the customary Roman method of punishment inflicted on persons of dependent nations not possessing Roman citizenship.

22. Why, what evil hath this man done—The judge condescends to argue the case with the plaintiff, a grave reflection on the haughtiness and independence of the former. One thing to be noted in this connection, however, is the fact that Pilate did actually take successive steps which he hoped would secure the consent of the Jews to the prisoner's acquittal: (1) He publicly declared his innocence. (2) He supplemented his own verdict by the public announcement of that of Herod which coincided with his own. (3) He sought to release Jesus in compliance with an established custom. (4) He proposed to the Jews to make scourging a substitute for the extreme penalty of death. (5) As a last resort he appealed to the compassion of the accusers.

23. But they were urgent with loud voices, asking that he might be crucified—It is at this point in the narrative that Matthew adds the words, "So when Pilate saw that he prevailed nothing, but rather that a tumult was arising, he took water, and washed his hands before the multitude, saying, I am innocent of the blood of this righteous man; see ye to it. And all the people answered and said, His blood be on us, and on our children" (Matt. 27, 24, 25).

24. Gave sentence that what they asked for should be done—It is clearly evident from the entire narrative that Pilate is determined not to sacrifice the favor of the people merely for the sake of rescuing from their hands a person in whom he had no special interest.

25. But Jesus he delivered up to their will—Matthew records the fact that the scourging which Pilate had at first suggested as a substitute for the death penalty was inflicted before Jesus was delivered to the Jews to be crucified.

#### SENTENCE SERMONS.

Only the hopeful can help.  
All joy were but discord without sorrow.

The only way to lift life is to lay life down.

The cure for our own cares is care for others.

There is nothing heroic in a home-made heresy.

Only a dead creed can be embalmed in phrases.

The secret of being a saint is being a saint in secret.

You cannot lift up the people on whom you look down.

No man loses any of his own light by kindling it in others.

A man's sensitiveness usually is in inverse ratio to his service.

They seldom transgress any law who follow where love leads.

It's no use looking like a lemon when you talk of loving your neighbor.

Judged by some standards pickles ought to be powerful promoters of piety.

The people who are praying to be nothing are answered before they begin.

The only way to make sure of a clean heart is to watch against the little smuts.

Most of us would rather do a lot of regulation abroad than practice a little righteousness at home.

Many think they are defending faith when they are only fighting against the necessity of thinking.

It's a wise old world that waits for the indorsement of every day honesty on the checks of extraordinary holiness.

It's no use spending Sunday praying the Lord to enter your heart when you are spending the week barricading it with bad business.

It doesn't take long to choose between a sinner who swears once in a while and a saint who makes every one swear all the while.

chances of long life diminish still further. It is 100 to 6 against the resident of Manchester reaching the age of seventy-five. If you live at Brighton your chances are much more rosy than in any of the three great cities already mentioned. The betting is only 100 to 15 against the Brighton baby becoming a septuagenarian.

Tables giving expectation of life make interesting reading, for they exhibit most plainly the superiority in this respect of

#### THE SO-CALLED WEAKER SEX.

For instance, a ten-year-old boy can only expect to live just under 48 years, while a ten-year-old girl is justified in expecting to live another 51 years 6 months. This superiority holds good all the way through life, and even at 65 a woman's expectation of life is 11 years, against 9 years 9 months for a man of the same age.

To put the expectation of life in another, and perhaps clearer way it is 332 to 1 that an average boy between ten and fifteen will not die within the next twelve months. When you are twenty, the chances are 199 to 1 in your favor. At seventy-five it is still 8 to 1 that you survive for another year.

If you are between twenty and thirty, the chances are about 8 to 1 against your getting married during the next twelve months. Married people live longer by about two years than widowers. If the wife dies first, the man survives on an average 9½ years. But the average widow has a prospect of 11½ years more of life after her husband's death.

The lives of monarchs, always excepting that of our own rulers, are bad risks. The Tsar's life, for instance, is only worth five years' purchase. In other words, it is only 5 to 1 against his surviving for twelve months.

According to the census of 1901, the population of the United Kingdom, was then 41,454,578. The number of executions in this country is, roughly, 15 a year, so that your chances of being hanged within twelve months are about 2,000,000 to 1, while your chances of being hanged in a life-time of fifty years are 60,000 to 1.

#### SUPERSTITIONS ABOUT BABY.

In Spain the infant's face is swept with a pine bough to bring good luck. In Ireland a belt of woman's hair is placed about the child to keep harm away. Garlic, salt, bread, and steak are put into the cradle of a new-born babe in Holland. The Grecian mother, before putting her child in the cradle, turns three times round before the fire while singing her favorite song, to ward off evil spirits. The Turkish mother loads her child with amulets as soon as it is born, and a small bit of mud, steeped in hot water, prepared by previous charms, is stuck on its forehead. At the birth of a child in Lower Brittany, the neighboring women take it in charge, wash it, crack its joints, and rub its head with oil to solder the cranial bones; it is then wrapped in a tight bundle, and its lips are anointed with brandy to make it a full Breton. In the Vosges, peasant children born at the new moon are supposed to have tongues better hung than others, while those born at the last quarter are supposed to have less tongue but better reasoning powers. A daughter born during the waning moon is always precocious.

#### WORKERS OF THE KINGDOM.

Farming in Great Britain cannot be termed a highly lucrative calling; therefore the supply has never, perhaps, anywhere surpassed the demand. But it has great compensating advantages, and to-day there are 1,153,185 males actually engaged in following agriculture for a livelihood. Next come the miners, who number 937,482. Next to these two numerous classes may be set, those engaged in commercial pursuits (631,933), which includes clerks and the shop assistant class. The fourth is the mill hand (394,742), embodying all branches of textile manufacture in the kingdom.

di: first" and fainted away.

While efforts were being made to restore her the bridegroom stole quietly off; and it subsequently transpired that he had been stealing in a more literal sense for a considerable time, and that he was actually a fugitive from justice while posing as

#### A MAN OF WEALTH.

On one occasion, in a San Francisco church, a wedding-party was treated to the edifying spectacle of a bride rejecting a bridegroom because he would not undertake to obey!

This reversal of the usual order of things matrimonial could not have been permitted even if the bridegroom had been willing. But, in order to get the young lady to the altar, he consented to make the promise as she desired, though without the least intention of doing so, whether permissible or not.

The service proceeded in the usual way until it was the bride's turn to give her pledges, but, when asked if she would have the bridegroom as her wedded husband, she replied, with a toss of her head, "Not until he promises to obey me in all things."

The clergyman was evidently shocked at this condition, and remarked that it could not be introduced, in the service, which required the wife to render obedience, and not the husband. The girl, however, refused to dispense with the promise, and the wedding was not proceeded with.

Not long since a St. Louis girl, who had been forced into an engagement with a wealthy elderly suitor by her ambitious parents, gave vent to her outraged feelings in the course of the wedding ceremony. It was a great function with a church crowded with guests and most elaborately decorated. To the bride, however, it was all

#### A HOLLOW MOCKERY.

and, in answer to the fateful question as to taking the husband that had been forced on her, she declared, in a loud voice, "As this is the first time I have been asked, I say once and for all I will not."

The congregation were thunderstruck by this unexpected hitch in the proceedings, and before they had recovered from their astonishment the bride had sped from the church and driven rapidly away with her lover of her own choice, to whom she was united a couple of hours later in a suburban church.

It would be hard, indeed, to divine the motive which prompted the action of a Dutch girl in saying "No" at the altar. The young man to whom she had engaged herself was an eligible suitor in all respects, yet when they were about to be made one they amazed the officiating clergyman by declining to be married.

Overwhelmed with grief at his rejection at the eleventh hour, the unfortunate suitor hid himself in Germany, where the apparently repentant bride

very soon afterwards went in search of him and begged him to return home and marry her.

Moved by her tears and entreaties, i.e. at length consented, but, incredible as it may seem, only to again undergo the bitterness of rejection at the altar. When asked the all-important question, the fickle-minded bride actually said "No" for the second time; and small wonder that the outraged bridegroom thereupon again disappeared, and this time for ever.

#### KNEELING DOWN TO DIE.

Though a camel is supposed to have carried Mohammed in four leaps from Jerusalem to Mecca, seven miles an hour is the latter day camel's limit. It cannot maintain this rate for over two hours either. Its usual speed is five miles an hour—a slow pace beyond which it is dangerous to urge it, lest, as Asiatics say, it might break its heart and die literally on the spot. When a camel is pressed beyond this speed, and is spent, it kneels down, and not all the wolves of Asia will make it budge again. The camel remains where it kneels, and where it kneels it dies. A fire under its nose is useless.

# HOME.

## SOME DAINTY DISHES.

**Ginger Snaps.**—One cup of brown sugar, one cup of butter and lard mixed, one cup New Orleans molasses, one teaspoonful ginger, one half cup of sweet milk, two teaspoonfuls of baking powder, flour enough to roll. Bake in a hot oven.

**Potato Soup.**—Pare five or six potatoes and slice also, peel two onions and slice with the potatoes. Put in stew-pan and boil with quite a little water; salt and pepper. When almost done add 1 teaspoon of butter. Beat one or two eggs in a large dish, then stir gently while pouring soup boiling hot over the eggs. This is delicious on cold evenings with either crackers or corn bread, especially with corn bread.

**Fruit Cake.**—Two pounds of raisins, seeded; two pounds of currants, one half lemon peel, one teaspoonful of cinnamon, one teaspoonful cloves, one teaspoonful mace, six eggs, the whites beaten separately; one wine glass of brandy, two cups of almond nuts, chopped fine, three teaspoonfuls of baking powder, one pound of butter, two pounds of flour, one and one-half pounds of light brown sugar. Cream the butter and sugar well.

**To make Lime Water.**—Take a piece of unslacked lime about the size of a walnut, drop it into two quarts of filtered water, contained in an earthen vessel, stir thoroughly, allow it to settle and use only from the top, replacing the water and stirring as consumed.

**Butter-Scotch.**—Melt one and a half ounces of butter in a preserving pan, and add to it eight ounces of moist sugar. Stir over a moderate fire for ten minutes, or until a little dropped into cold water is brittle. When sufficiently cooked, pour at once on to buttered plates. The grated rind of half a lemon is an improvement to this.

**Milky icing for cakes** should be made thus: Place one and a half cupfuls of icing sugar in a basin and add a teaspoonful of lemon essence, or, if preferred, the grated rind of a lemon. Then stir in slowly sufficient boiling milk to make the icing soft enough to spread easily.

**A Novelty in Mutton Chops.**—Take all the superfluous fat from some mutton chops, season with pepper and salt, and wrap up in buttered paper. Fold the paper neatly together and fry till the chops are browned. Serve in the peppers with a garnish of fried parsley. This is an excellent way of cooking chops, and will often induce an invalid who objects to them to make a hearty meal.

**Buttered Eggs with Gravy.**—Beat two eggs with a tablespoonful of milk. Let one ounce of butter melt in a small saucepan, stir the eggs into the butter, and continue stirring over a brisk fire until the eggs are a firm custard. Season nicely, place on a square of buttered toast, and pour a little thick brown gravy over. Garnish with parsley and serve hot.

**Pickled eggs** are prepared thus: Boil six or eight eggs till hard, when cold remove the shells and put the eggs in vinegar in which beetroot has been pickled. The eggs will soon become a deep red. Serve with salad round. In order to make the eggs stand upright, cut off a thin slice from the large end. Dusting the eggs with chopped parsley and the powdered yolk of an egg makes a pretty garnish.

## ROAST GOOSE WITH APPLE.

Prepare the goose for stuffing in the ordinary way. For the stuffing crumble a loaf of stale bread, add a pint of chopped apples, one small onion chopped fine, and half a cupful of butter. Season with salt and pepper, mix well and cook for a moment, then fill up the goose and sew the opening up securely. This

"Mother! Why, she don't work for anybody."

"I thought you said she worked for all of you."

"Oh, yes, for us she does; but there is no money in it."

## HOUSEHOLD HELPS.

Hot water should never be used to remove onion juice, as it causes it to set. Enamelled saucepans can be kept scrupulously clean by rubbing with salt moistened with vinegar.

Hairbrushes should be washed in lukewarm water in which borax, soda, or ammonia has been dissolved.

A small piece of Brussels carpet, sprinkled with powdered brick or emery powder, will clean knives quickly and thoroughly.

**Ivory Knife Handles.**—For cleaning ivory handles of knives sawdust wetted with ammonia or spirits of wine is generally effectual. Lemon juice and whiting will also remove stains on the handles.

Gold paint can be satisfactorily made by mixing half an ounce of good quality gold-bronze with one and a quarter ounces of Japan gold-size. If necessary, thin with turps. Clean the article to be gilded, and paint thin and evenly with a soft brush.

Gold chains, brooches and other jewelry can be thoroughly cleaned by scrubbing lightly with an old nailbrush dipped in a lather of warm soap and water. Rinse well, then lay the articles while wet in a bag of boxwood sawdust. Shake gently, then rub dry with a cloth. Bran is sometimes used instead of sawdust, but it does not answer the purpose so effectually.

## LAUGHABLE INCIDENTS

### LITTLE ADVENTURES THAT RAISE SMILES.

#### Medical Man Chased by a Lunatic — A Man Who Could Not Get Up.

A young medical man had quite an exciting adventure a short time after he had been appointed to the medical staff at an English asylum. He was a somewhat nervous young man, and was not altogether sure regarding the attitude which one of the patients adopted towards him. This patient was a big fellow, cast in the mould of a Sampson.

The frantic alarm of the poor doctor may be imagined when, while out in the grounds by himself one day, he saw the patient approaching him at a run. The doctor thought it advisable to take refuge in flight. Then a long chase ensued, along walks, over flower-beds, across lawns, behind gardening sheds, a chase which lasted until the doctor fell to the ground, utterly exhausted.

The end of the harrowing story is, that the patient ran up to him, tapped him playfully on the shoulder, and said, "Tiggy!" He was playing "touch."

While a workman was engaged in taking water from a fire plug in Commercial Street, Leeds, he turned the handle too far. The result was a tremendous burst of water, which caused the drenched workman to fly ignominiously. Then there was the uncommon spectacle of a waterspout in the centre of

#### THE TOWN'S PRINCIPAL STREET.

The plucky workman, mustering up his courage, returned to give battle to the waterspout. He turned the handle the wrong way, with the result that the column of water rose to a height of thirty feet.

The poor workman retreated again, while many people in the street got wet, and retired to a respectable distance. Nothing daunted, the workman again tackled the waterspout; he made another dash for the handle, encouraged by a large crowd which had gathered. The street was practically flooded for

## WONDERFUL ILLUSIONIST

### HOW INDIAN FAKIRS PERFORM THEIR CLEVER FEATS.

#### An Insight Into the Methods of Performing These Marvellous Feats.

The Indian fakir is the world's most wonderful illusionist. It is easy to declare his feats are all humbug; it is easy to laugh at persons who, having seen his performances, regard him with awe and wonderment; yet it is a fact that no European juggler, illusionist, scientist, or other person, has successfully performed any of the important feats accomplished by Indian fakirs. This article does not attempt to show how the tricks are done. It merely gives the opinion of those best acquainted with the subject—experts in occultism and hypnotism.

Understand, in the first place, that everything in a fakir's performance is illusionary. Any attempt to photograph it results in failure. The plate reveals nothing. You are simply made to see things which do not exist.

And what things? This is one trick, which you can see being performed in India in many cities on the days of general festivities. Round a fakir, a wiry little man, whose clothing consists only of a loin-cloth, are assembled a vast audience. The little fellow in the centre gives a shrill whistle, and throws up into the air what appears to be a rope. You wait for this rope to fall, but it doesn't.

#### THE BOY WHO CLIMBS TO THE SKY.

It straightens itself out, and looks just as if it were hanging from the sky. The fakir claps his hands, and gives vent to another whistle. Apparently out of nowhere, for the crowd are quite fifteen feet from the fakir, a boy appears, clothed in the manner of his master. The fakir picks up the boy, and flings him into the air, towards the dangling rope.

You hold your breath while the boy clutches hold of the rope, and shins up it, monkey fashion, till he disappears from sight, in the clear sky. A few moments later, up goes the fakir, until he, too, is lost to view. Suddenly, from the sky you see and hear sections of the boy's body fall and strike the ground with a dull thud. Then the fakir reappears, descending the rope, first as a mere speck in the heavens, but gradually becoming larger as he nears the ground. The fakir gathers the boy's head and limbs and body, sticks them together, and behold! the boy, all smiles and activity, runs once round the fakir, and then disappears as mysteriously as he came.

#### WATER FROM A COCOANUT.

This, the favorite feat of Indian fakirs, has been witnessed scores of times by officers and other Europeans whose word is indisputable. The officers of a British warship, having several civil officials aboard, vouch for the following particulars. Their ship had come to a halt in an East Indian port, after a journey of many thousand miles, when the fakir made his appearance, swimming through the surf and scrambling to the deck by the anchor-chains. Thus he had no confederate, nor any means of assistance aboard.

First he took from the hand of an officer the half of a cocoanut shell, from which, when held aloft, he caused twelve pailfuls of water to flow to the deck. A large earthenware dish was next borrowed from the pantry. The fakir poured into it a gallon of water, and held it on his outstretched left hand, placing the other hand on his forehead. As the crowd of officers and men stood watching in wonderment, the dish began to shrink in size, until it entirely disappeared. They still stared as a brown object, like a grain of sand, gradually grew larger and larger, and assumed its normal dimensions, and was found not to have spilled a

## ON THE FARM.

### IMPROVEMENT OF CORN.

Since the kind of corn harvested depends so much upon the kind of plants from which the seed is selected, it is of vital importance to give great attention to selection, writes Mr. C. P. Hartley. For silage purposes the stalk should be rich, succulent, leafy and remain green and tender until the ear has reached considerable development. But if ear corn is the only product desired, the qualities of the stalk should be such as will best lead to the proper development and support of one or more good ears. The productiveness of the stalk is, of course, the point of most importance. A stalk great in circumference, near the ground and tapering gradually to the tassel, with sufficient foliage, of vigorous appearance, free from disease and bearing a good ear or ears at a convenient height, is a desirable stalk from which to select seed.

A thick, stout stalk can withstand extremes of weather for a longer period and with less injury than a slender stalk, and is less apt to blow down and cause the ears to decay on the ground. The height at which the ear is born is a point of considerable importance, and seed selection with reference to this point is governed by the locality. In fertile districts in the south, ears are often produced so high as to make the work of shucking very laborious. The aim of the grower should be to obtain corn that will ear high enough so that corn harvesters can be used to cut the corn below the ears. Besides the difficulty of gathering ears high up on the stalk, when in such position they exert an increased strain on the stalk and render it more liable to be broken by wild storms.

If the corn is to be shucked by hand and shelled or sold for milling purposes, a variety that produces one large ear to the stalk can be most economically grown, and if shredders are to be used and the ears are to be fed to cattle, a variety that produces a greater number though smaller ears per stalk, will give better satisfaction.

While in the field selecting seed ears, one must always have in mind the type of ear toward which he is striving. It is a good plan to reserve for comparison an ear that comes nearest the ideal ear, but it must be remembered the ideal ear will not be found, because no ear is in all respects perfect. Success depends on a strict adherence from year to year to the type it is desired to attain. The leading qualities that will recommend the ears of a variety suited to most general purposes are, high percentage of shelled corn to cob, soundness of ears to kernels, high nutritive value of the kernels, uniformity in size and shape of ears and purity in color of grain and cobs.

The proportion of grain to cob is influenced by the length and solidity of kernels in proportion to size and composition of cob, filling out at butts and tips, space between the rows of kernels, uniformity in shape and arrangement of kernels. While great weight of grain in proportion to weight of cob is highly desirable, it must not be understood that it is desirable to have as small a cob as possible, as with too small a cob the pressure of the kernels cause many of the cobs to break, allowing the tip portion of the ears to drop out of the husks before the harvest.

A larger cob with proportionately longer kernels and less space between the row of kernels would be a great improvement. The necessity of having well-matured ears with dry, sound kernels and cobs is so great that it is not apt to be overlooked by even the most careless grower. In selecting for long kernels, the quality of the kernel must not be overlooked. The best shaped kernels are those of good length which gradually broaden from the base or point of attachment on the cob to the

the goose for stuffing in the ordinary way. For the stuffing crumble a loaf of stale bread, add a pint of chopped apples, one small onion chopped fine, and half a cupful of butter. Season with salt and pepper, mix well and cook for a moment, then fill up the goose and sew the opening up securely. This quantity is sufficient to stuff a fat young goose weighing ten pounds. Spread the goose with butter, sprinkle with salt and pepper, and pour in the pan a cupful of hot water in which a little beef extract has been dissolved. Cook in a moderate oven for two hours or more, turning occasionally so as to have the bird brown evenly. When thoroughly done, remove from the pan, pour off the fat, add hot water to the remainder, thicken with flour, season and serve.

**Sunshine Cake.**—Take four eggs, one cup of sugar, two ounces of butter, one-half juice of a fresh lemon, the same peeled fine, one-half gill of rose water, one cup of cream. Beat the eggs, sugar, butter, lemon rind, and juice all well, not separating the eggs. Then add the flour and beat twenty minutes. Lastly one scant teaspoon of soda dissolved in warm water and  $\frac{1}{2}$  cup of sour cream. Beat for ten minutes more and put in a square pan, warmed, lined with buttered paper. Let it bake in a brisk oven thirty or forty minutes, an even golden brown at the top—a square cake. When cold enough to cut split in two and spread with a stiff lemon jelly. Put on the top and let the cake stand in the ice box till needed. Do not use till at least twelve hours after baking. Do not ice the top with filling or caramel. If made well the lemon jelly is a great improvement on other fillings and it does not clog. It is delicate and sunshiny.

#### HINTS FOR THE HOME SEWER.

When making a wide hem, cut a strip of rather stiff paper as long as the width of the hem is to be and an inch or two wide, turn the edge of the article down, then fold the hem to the length of the paper, put your goods under the machine and sew it, measuring it every six or eight inches, and creasing it down. In making a sleeve, put the cuff on before sewing up the sleeve. When sewing it into the garment, put the seam at the notch where it should go and pin it, then start and baste it in at the point where you want the gathers to commence, and baste around to where the gathers begin at the back of the sleeve; fasten by taking two or three stitches, one on top of another; gather at the top of the sleeve, drawing the thread until it is of the same length as the space you wish to fill; tack it fast, turn it over, scatter the gathers evenly, or as you want them, and baste in place. Baste in only the one sleeve until you have it tried to see if it is all right, as there is no use in having to change both. It is best to put on a wide flounce by hand. Divide the flounce and skirt each into eight equal parts, using pins to mark the skirt and notches to mark the divisions of the flounce. Place the flounce on the skirt so that the edges of both are even, and pin the notches fast to where the pins are in the skirt, being sure to get the lower edges even all around; then, as you gather the flounce, draw the gathering thread up to just the length between the pins; tack it down and proceed in the same way all around. Put the skirt over the sewing machine leaf, with the top toward the arm. It is very easy then to get the gathers even and to keep them straight while you sew on the flounce.

#### MOTHER'S WORK.

"My mother gets me up, builds the fire, and gets my breakfast and sends me off," said a bright youth.  
"Then she gets my father up, gets his breakfast and sends him off. Then she gives the other children their breakfast, and sends them to school; then she and the baby have their breakfast."  
"How old is the baby?" asked the reporter. "Oh, she is most two, but she can talk and walk as well as any of us."  
"I get two dollars a week, and father gets five dollars a day."  
"How much does your mother get?"  
"With a bewildered look the boy said:—

thirty feet.

The poor workman retreated again, while many people in the street got wet, and retired to a respectable distance. Nothing daunted, the workman again tackled the waterspout; he made another dash for the handle, encouraged by a large crowd which had gathered. The street was practically flooded for a long way around, and the man had a most exciting time in his heroic endeavors.

At last he succeeded, and emerged from the contest, a bedraggled-looking creature, amidst loud cheers.

Another awkward little adventure with a jet of water occurred when Mme. Calve appeared in Carmen at the Connecticut Opera House. A huge crowd of students from Yale College gathered around the stage door to welcome her, and, like all students, they soon became very lively. Their pranks got so exciting, that they were called upon to disperse. As is the nature of students, they refused, and their wildness increased.

The theatre officials then got out the fire-brigade hose-pipe, and turned a jet of water upon them. Just at that moment Mme. Calve herself appeared, with the result that she was

#### DRENCHED FROM HEAD TO FOOT.

She took her ducking good-humoredly, and sang her part in Carmen with more than ordinary fervor.

Just as awkward an incident occurred at the Lyric Theatre, London, while the play was in full progress. Without the slightest warning, the water sprinklers commenced to work. These sprinklers are fixed all about the stage, so that the flames could be put out very rapidly in case of fire.

The result was that the performers and orchestra received a sound drenching, as it was found impossible to stop the sprinklers until the water was turned off at the main. Naturally the sudden flight of the artists and instrumentalists occasioned considerable merriment amongst the audience, the hilarity continuing for some time after the place was eventually resumed.

A very ludicrous adventure happened to a London man who was seen sitting on the roadway outside Highgate Police Station. The nature of it soon transpired—he could not get up. The difficulty arose from the fact that the man had sat down on some warm tar, left in the road by workmen, who had been laying wooden blocks. The police very kindly provided the man with enough brown paper to cover the deficiencies of his sartorial equipment, so that he might be able to sit down in the police station.

#### WITHOUT STICKING FAST!

Quite gruesome is an adventure which happened to some laborers who were unloading the cargo of a vessel at the Albert Dock London. The lid of a large receptacle became unfastened, and a quantity of liquor ran from it. The strong smell from the broached cask gave sufficient indication that the liquid was spirits. As this was running to waste, a number of the laborers drank some of it, and pronounced it to be an excellent drink. The Customs officials came to make investigations. Upon examining the cask they found it contained a huge lizard, which had been shipped as a medical specimen. Of course, it had been immersed in spirit in order that it might be preserved.—Pearson's Weekly.

#### HOW TO GET FRESH FISH.

Fleusburg, a seaport town on the east coast of Schleswig-Holstein, has an excellent system of bringing to port fish which are intended for immediate consumption. Instead of packing the fish in the hold of the vessel, the fishermen use flat, oblong boxes, drilled with holes to allow free access of water, and into these the live fish are placed as soon as caught, and are towed under water. By this means the fish are kept alive until the harbor is reached, and they are then taken out of the boxes and sold alive on the quay, so that there can be no question as to their absolute freshness.

hand, placing the other hand on his forehead. As the crowd of officers and men stood watching in wonderment, the dish began to shrink in size, until it entirely disappeared. They still stared as a brown object, like a grain of sand, gradually grew larger and larger, and assumed its normal dimensions, and was found not to have spilled a drop of the water poured into it.

#### WHAT THE CLOTH PRODUCED.

Another performance of the same fakir was still more amazing. On first reaching the deck after leaving the water, he had unrolled a large red cloth from the back of his neck, where it had obviously been stowed to keep dry. This he passed round the company for inspection. It was merely an ordinary cloth, of coarse texture. Spreading it flat upon the deck, the fakir walked round it several times, muttering in his throat, and occasionally turning his eyes upwards. All eyes were glued to the cloth, under which something was apparently growing in size.

Suddenly, out hopped a grinning and chattering monkey, which danced all round the deck; it was followed a minute later by an ugly and venomous-looking cobra, wriggling away from the cloth to the feet of the astounded beholders. Once again, something, far larger than the others, began to stir beneath the cloth of mystery. Soon a girl of about fourteen years of age emerged and stood smiling at all around her. While those sturdy Jack Tars stood rubbing their eyes, and pinching themselves to make sure that it was not a dream, the fakir clapped his hands, and monkey, cobra, and girl vanished into the air. Then, quickly folding up the cloth into a bundle, and without soliciting money from officers or crew, the fakir leapt into the sea, swimming away with

#### EASY AND GRACEFUL STROKES.

As an explanation of these marvelous feats, it is generally accepted that Indian fakirs, by long sojourns and meditation alone in the jungle and by hereditary, or some secret power, are enabled, by merely forming pictures in their own minds, to produce illusions in the minds of those persons who crowd about them, expecting to see some wonderful feat. The pictures the fakirs conjure up they mentally impress upon the minds of their spectators. It is different from hypnotism, in that not one person, but a hundred or a thousand, willing or unwilling, become the victims of the fakirs.

This collective hallucination, as experts term it, is induced by fakirs by reason of their knowledge of the relations that exist between objective and subjective states of existence. For instance, if we conceive in our mind a picture of a thing we have seen before, an objective form of that thing comes into existence within our mind, and is composed of the substance of our own mind.

If, by continual practice we gain sufficient power to hold on to that image, and prevent its being driven away by other thoughts, it will become comparatively dense, and be projected upon the mental sphere of others, so that they may actually believe they see that which really exists only as an image within our mind.

On the other hand, if we cannot hold on to that one thought—that mental picture—and control it at will, we cannot produce its reflection upon the minds of others. Europeans fail to reproduce the feats of fakirs through weakness of concentration and of control of their own thoughts—which faculties are extraordinarily strong, even in the average Hindoo.—Pearson's Weekly.

#### PROOF!

"No," he declared, "I wouldn't get down on my knees to ask any girl to be my wife."  
"I don't blame you," she answered. "It would be ridiculous for anybody to get on his knees before the girl who would be your wife."

well-matured ears with dry, sound kernels and cobs is so great that it is not apt to be overlooked by even the most careless grower. In selecting for long kernels, the quality of the kernel must not be overlooked. The best shaped kernels are those of good length which gradually broaden from the base or point of attachment on the cob to the cap, thus leaving the least space unoccupied. Purity of color is one of the easiest results for the corn breeder to accomplish and is very desirable for milling corns. Some markets desire a golden-yellow meal and others a pure white, but there is no special demand for meal from a mixed corn. If it is desirable to have the variety mature earlier, it is necessary to perform seed selection just as soon as the corn begins to ripen and to select ears only from the early-maturing stalks. On the other hand, if a later maturing corn is wanted, the selection should be performed after the corn is quite ripe, seed being taken from stalks still remaining green. There seems to be quite a general demand throughout the country for earlier maturing varieties. In general, the early varieties are less productive than varieties requiring longer growing seasons.

#### SUCCESSFUL HOG RAISING.

I have raised hogs for years and make no statements but what practical experience will prove to be correct, writes Mr. W. H. Underwood. I once bought at a state fair a boar pig that was a beauty and had all the fine points which I thought necessary for his purpose. After paying a large price and taking the pig home, I was sure that a prize had been secured, but alas, when breeding time arrived the perfect beauty developed into a perfect failure. The pig had been crowded and stuffed until he was absolutely worthless for breeding purposes.

Be careful in the selection of breeders to secure strong, vigorous constitutions, and do not buy animals for breeding purposes that have been overcrowded. This will do for the pork barrel, but never for breeders.

The greatest profit in raising hogs for the market lies in forcing their feeding from time of birth until ready to be sold. One day's poor feeding will more than counterbalance two days of good feeding. We must not neglect them a single day. A business man cannot neglect his store one or two days every week and expect to make as much money as the man who gives it attention every day.

In selecting brood sows I always select the best. The sows will generally breed at six to eight months, although it is better to wait until they are ten to twelve months old. Two litters of pigs per year are too many for the average sow, although some will stand it. At farrowing time see that the sows have a quiet, warm, dry place. Pigs should be estrated at two to four weeks of age, and care should be taken to avoid cold, damp weather. It is dangerous to allow them to take cold. Some farmers claim they cannot make any money by raising fall pigs, as they either become stunted or diseased. Such is often the fact, but if they are given warm quarters they can be easily taken through the winter in a good growing condition and obtain the full benefit of early spring pasture. I am feeding fall pigs ground corn and oats twice a day.

#### REINDEER EXPRESS.

The capacity of the reindeer for teamwork is remarkable. His hoofs are very broad and do not penetrate the snow crusts. His average weight is about 400lb. He will swiftly draw a sled carrying 600lb., and with this load can cover thirty, fifty, and even ninety miles a day. The reindeer teams now carry the mails from Kotzebue to Point Barrow, Alaska, a distance of 650 miles—the most northerly post route in the world. No food is carried for the deer. At the end of his journey, or at any stopping-place, he is turned loose, and at once breaks through the snow to the white moss which serves as food.

## Make Your Selection Before the Rush

In a Short Time we will be very busy.

Drop in and make your selections of Xmas Slippers, Fancy Evening Slippers, Overgaiters, Leggings, or Fancy Dress Boots. By making a small deposit on them we will put them aside for you until Xmas eve.

—FANCY—

### EVENING SLIPPERS

Just received a new stock at

**\$1.50, \$2, \$2.50, \$3**

THE **J. J. HAINES** SHOE HOUSES, Napanee, Belleville, and Trenton.  
Largest dealers in this Section of Canada.

## THE BEST FLOUR.

### DAFOE'S NONESUCH

### DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

**CHOICE CORN MEAL** and **BUCK-WHEAT FLOUR** always on hand.

**FEED GRINDING** a specialty, with the best feed mills known to the trade.

A full stock of the best **ANTHRACITE COAL**. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,

16th January, 1906.

## COAL!

OUR CELEBRATED

## PLYMOUTH COAL!

All sizes for prompt delivery.

We also carry in stock Steam Coal, Blacksmithing Coal

—and—

Blue Grass Cannel Coal

for a bright grate fire.

All at close prices FOR CASH.

### Johnny Get Your Hair Cut.

J. N. OSBORNE will cut it right, or give you a nice shave.

### Their First Xmas in Napanee.

The Campbell Art Co's (New York) fine art calendars now on display at The Medical Hall—Fred L. Hooper.

### Hogs Wanted.

Will ship hogs Monday next, Dec. 3rd. Highest price paid for good select hogs.

J. W. HALL.

### Enjoy An Easy Shave.

By attaching a "Shave-ezy" Razor Guard to your own Razor, makes shaving easy, safe and enjoyable. Satisfaction guaranteed. Sole Agents.

MADOLE & WILSON.

### Coal Facts.

Now is the time to get in your stock of Coal for the winter before your lawn gets soft. If you want the best grade of Anthracite, Steam or Cannel Coal you can get it by calling up VanLuvén's Office, Phone 92. All coal kept under cover and well screened before delivering.

### New Cash Bargains—Chinnecks.

20 per cent off all kinds of brooches for this week only ending Dec. 7th 14 k., and brooches with pearls, &c., gold filled with brilliants, Baroque pearl, &c. China Sale this week again.

F. Chinneck's Jewellery Store.

### Dance at Bath.

The young bachelors, of Bath and Adolphustown, held an assembly at Bath Tuesday night. There were about seventy-five couples on the floor, many from Kingston, Adolphustown and Napanee attended. Excellent music was supplied by Crosby & O'Connor's orchestra.

### Xmas Literature.

Mr. Jas. Gorden will show a fine stock of Xmas Literature in Mr. Alexander's Cheese Office, opposite the Dominion Bank, during the Saturdays of December, and invites inspection. He also expects to spend two days in each of the following villages:—Newburgh, Camden East, Yarker, Enterprise, Tamworth and Marlbank, before Xmas. The dates will be given later.

52-b-p

### Election of Officers.

Napanee Lodge, No. 86, I. O. O. F., elected the following officers on Tuesday evening:

Noble Grand—J. A. Pringle,  
Vice Grand—E. McAfee,  
Rec. Secy—F. J. Vanalstine,  
Per. Secy—E. McLaughlin,  
Treas.—G. B. Joy,  
Trustees—F. W. Vandusen, W. A. Steacy, H. E. Smith.  
Covenant Committee—G. B. Joy, S. Dryden, M. R. Reid.

### Something Nice to Break the Fast.

Cracked Wheat, Rolled Wheat, Gold Dust Corn Meal, Farina, Rolled Oats, Graham Flour, Split Peas, Pearl Barley, Buckwheat Flour.

All the above are bulk goods and sold by the pound and you will find them to give you much better satisfaction, and go further than the Package goods, as they are all freshly ground and from one of the best mills in the Dominion.

THE COXALL CO.

Mitts, Gloves, all kinds to fit Boys and Men, for every day and Sunday.

At BOYLE & SON

### Hard-to-please People

are the kind of people to whom

## COUNTY COUNCIL.

Council met in its last session on Tuesday, 27th Nov., at 2 p.m.  
Members all present; Warden Bogart presiding.

Minutes of last day of previous session were read and confirmed.

The following accounts were submitted: Sawyer-Massey Co. \$8.50 paid; Sawyer-Massey Co. \$1.20 paid; Gibbard Furniture Co. \$50 paid; Hart & Riddell \$15.55; Sawyer-Massey Co. \$90 paid; H. M. Lerocch, K. C. \$80.00 paid; G. B. Joy \$4.00 paid; Sawyer-Massey, \$82.60; Dominion Rock Drill Co. \$58.35; Napanee Water Works Co. \$21.64; Victoria Industrial School, \$22.50, care of Manson Abrams; Alexander Industrial school for Lillian Files, \$45.24.

The accounts not paid were referred to the various committees.

The following report re County roads was submitted by the Roads and Bridges committee, was read and filed for future reference.

The municipalities in the county are entitled to share the amount of \$16,000 as follows:

|                    |           |
|--------------------|-----------|
| Adolphustown       | \$ 757 01 |
| Amherst Island     | 797 20    |
| Bath               | 128 18    |
| Camden             | 3389 01   |
| Denbigh, A and A.  | 65 00     |
| Ernestown          | 3081 92   |
| Kaladar, A and A.  | 86 94     |
| N. Fredericksburgh | 1396 88   |
| S. Fredericksburgh | 1413 81   |
| Napanee            | 504 52    |
| Newburgh           | 184 06    |
| Richmond           | 2026 80   |
| Sheffield          | 1120 03   |

\$ 16,000.00

### Filed for future reference.

Mr. Robt. Saul was heard in respect to payment for his work on Brandon's bridge, the measurements of which are in dispute.

Mr. Miller reported that Mr. J. Vandyck had furnished the machinery to operate in U. E. L. division for twenty-one days on the roads, which was laid on the table for this present.

Moved by Mr. Baker, seconded by Mr. Creighton, that Mr. F. F. Miller, civil engineer, be engaged to measure the masonry at Brandon's bridge in conjunction with Messrs Martin and Hall, and that Mr. Saul be asked to accompany them, and report at this session. Carried.

Councillor Paul's account for committee services, overlooked at last session, \$10.50, was on motion ordered to be paid.

A communication from Bath School Board, asking for payment of the supplementary grant of \$150 made by the Government for this year, was laid on the table for future reference.

From Newburgh High School Board, asking for their annual grant of \$1,855. Laid on table and Clerk ordered to write the Treasurer of Newburgh High School for a statement of the attendance from the village and county.

From Board of Education, Napanee, asking for annual grant of \$2,950.00. The Clerk was instructed to ask for information as to the attendance, and the communication was laid on the table.

A report of the Special committee to arrange the matter in dispute between Messrs Creighton and Miller, re the expenditure of money by Mr. Creighton on Close Lane, on the Hamburg Road, stating that they were unable to settle the dispute, there being a question as to the services performed by Mr. Creighton, and the moving expenses of the machinery to Ernestown. Also Mr. Miller contends that the total over expenditure should be borne by South Fredericksburgh. They therefore desire to refer the matter back to the Council for their final adjustment. The payment of the order given to Mr. Creighton was still withheld.

The report was laid on the table until tomorrow morning.

Council adjourned until 9.30 a.m. to-morrow.

Balance of Report next week.

### IN ARMOR TIMES.

Strength of English War Horses In the Days of Henry VIII.

The size of the English war horse reached its maximum in the reign of Henry VIII., when the relations of body armor to "hand guns" were analogous to those of the early ship armor and cannon. There was good reason to

Messrs. J. J. Scott (Conservative) and Allan Stucholme (Labor) were nominated in East Hamilton for the Legislature.

The coasting steamer J. H. Jones has been wrecked near the Christian Islands, and over a score of lives have been lost.

Herbert Pritchard, son of the fire chief of Chatham, was drowned by the upsetting of a canoe. Two other young men in the canoe escaped by swimming.

Rioting in Hamilton was serious on Saturday night and police and soldiers repeatedly charged the mobs. The police used their batons freely. The riot act was read.

Mr. Stubbs, of Peterboro, has been engaged by the W. M. Sunday school for Christmas night. He has a full line of entirely new views and moving pictures. Full particulars later.

George R. R. Cockburn, President of the wrecked Ontario Bank, charged with signing false Government returns of that institution, in the Police Court elected to be tried by Magistrate Denison.

E. LOYST has large stock of flour, Royal Household and all other grades, all kinds of feed, large quantities at the lowest prices. He wishes to sell out in the next month. Salt, Coal Oil Groceries. Highest price for eggs cash or trade. A call solicited.

A nine year old girl was seized by a man in the middle of the lower bridge, at Belleville, who grabbed her around the neck. Her screams brought relief and the miscreant jumped off the bridge and disappeared in the darkness. The little girl secured the villain's hat which may be a clue that will lead to his arrest. Several similar cases have been reported of late and women are afraid to venture out.

## A Christmas Warning.

Don't buy one present until you have seen the large assortment of new Christmas goods, at prices to suit all purchasers, at The Medical Hall. Some lines never sold in Napanee before. Fred L. Hooper.

## Cash Bargain—20 per cent off.

This week only ending Dec. 7th, all kinds of newest up-to-date 14 k gold, gold filled and plated brooches. Buy now ready for Xmas only three weeks off. CHINA Sale continued one week longer.—F. Chinnick's Jewelry Store.

## A Practical Gift.

And one not soon to be forgotten is a pair of Stevens & Co's (American) glasses, properly fitted by the expert optician in charge of the new optical department at The Medical Hall—Fred L. Hooper.

Cars ran in Hamilton on Wednesday night without interference from the strikers' sympathizers, and it is thought a settlement of the strike is imminent.

A Sale of Handkerchiefs, Home-made Cake and Candy will be held under the auspices of the Ladies Aid of the Eastern Methodist Church, in the Town Hall, on Friday, the 14th December. This will be a good opportunity to secure seasonal gifts.

Warranted the most wonderful Blemish Cure ever known. Sold by F. L. HOOPER.

In Parliament on Wednesday, the address passed both Houses, and the way is now clear for the budget on Thursday. Mr. R. L. Borden questioned the Premier regarding the Government's attitude towards the coal strike at Lethbridge, but Sir Wilfrid would not go any further than to state that the Government were doing all in their power to settle the difficulty.

Mr. McGilvery, of Hespler, has been engaged by the Western church as choir leader. He has had a large experience along his line and comes well recommended. He has been engaged in several of the different cities of the Province in this position, and comes highly recommended. The church is to be congratulated on securing the services of a leader so capable. Mr. and Mrs. McGilvery will take up their residence in Napanee in about two weeks.

We clip the following from the Peterborough Review from an article in reference to the Re-organization of Messrs Fair & Co of which firm Mr. J. F. Moore has become a member:—"Mr. Jas. F. Moore, who will be a Director of the Company, claims the title of the Shamrock as the land of his birth, having been born at Downpatrick, County Down, Ireland. He spent four years with this firm and then came to Canada and for five years was connected with the stores of the Hudson Bay Company at Calgary, Alta. Later he managed the business of R. Barfett at Port Hope until it was wound up, and for the past two years, has been manager for Madill Bros. at Napanee. In his new position, Mr. Moore will have the superintendency of the dress and silk goods departments, and also of the dressmaking department. Mr. Moore will also have charge of the interior decorating and window dressing, and will be associated with Mr. Browning in looking after the advertising interests of the business.

## Hard-to-please People

are the kind of people to whom we like to show VIORIS, our new perfume. VIORIS pleases everyone, but the supreme test of its excellence is the taste of the fastidious. Confidentially, we sell more VIORIS to such people than all other odors combined. If you wonder why, a call at our store will convince you.

T. B. WALLACE,  
The Prescription Druggist.

Red Cross Drug Store,  
Napanee.

## OBITUARY.

Amidst wide spread sympathy and followed by a large number of relatives and friends, all that was mortal of the late Mrs. Fraser Hinch, of Hinch street, was laid in the vault at Camden East, to await interment in the cemetery, and hereafter the Resurrection of Eternal Life. The beautiful and comforting burial service of the Church of England, was read in St. Luke's church, by the rector, Rev. C. E. S. Radcliffe, B. C. L., and an address delivered on "Faith," St. John 3, v. 36. Mrs. William Skinner, of Yarker, a former music pupil of the deceased kindly presided at the organ, and the choir who were out in good strength sang very feelingly, Hymns—490—537—277. Mrs. Fraser Hinch's loss will be felt throughout the neighborhood, for she was a loving wife and mother, an excellent neighbor and a true daughter of the Church of England, which she loved. "May she rest in peace and light perpetual shine upon her."

The next attraction at the Brisco Opera House will be the Victor Band which will appear here on December 11th. The band is said to be first-class, and to number about thirty instruments.

In the hearing of the case against Mr. Charles McGill, former Manager of the Ontario Bank, the Police Magistrate expressed the opinion that the sending of money to New York without the authority of the board was theft.

In Parliament on Wednesday the business consisted principally of answering questions. Sir Wilfrid Laurier announced that the Government were in favor of municipal control of rates for electric power, but until the Waterways Commission reported he was not prepared to say what might be done regarding the export of electric energy.

## TRY THIS FOR YOUR COUGH.

To relieve a cough or break up a cold in twenty-four hours, the following simple formula, the ingredients of which can be obtained of any good prescription druggist at small cost, is all that will be required: Virgin Oil of Pine (Pure), one-half ounce; Glycerine, two ounces; good Whisky, a half pint. Shake well and take in teaspoonful doses every four hours. The desired results can not be obtained unless the ingredients are pure. It is therefore better to purchase the ingredients separately and prepare the mixture yourself. Virgin Oil of Pine (Pure) should be purchased in the original half-ounce vials, which druggists buy for dispensing. Each vial is securely sealed in a round wooden case which protects the Oil from exposure to light. Around the wooden case is an engraved wrapper with the name—"Virgin Oil of Pine (Pure)"—plainly printed thereon. There are many imitations and cheap productions of Pine, but these only create nausea, and never effect the desired results.

A few good Second Hand Stoves on hand  
MADOLE & WILSON

## Strength of English War Horses In the Days of Henry VIII.

The size of the English war horse reached its maximum in the reign of Henry VIII., when the relations of body armor to "hand guns" were analogous to those of the early ship armor and cannon. There was good reason to believe, says the London Spectator, that by adding a little to the thickness of the coat of steel the soft, low velocity bullet of the day could be kept out. So it was for a time. But the additional weight required a still larger horse to carry it. The charger had to be armored as well as his rider, and the collection in the Tower of London shows the actual weight which it carried. The panoply of Charles Brandon, Duke of Suffolk, the brother-in-law of Henry VIII., still exists. That of the horse covers the whole of the hind quarters, the back of the neck, forehead, muzzle, ears, shoulders and chest. It is exactly like a piece of boiler plating and fastened by rivets.

The rider sat in a saddle, the front of which was a steel shield ten inches high, covering the stomach and thighs as the "breastwork" on an ironclad's deck covers the base of the turret. The total weight is eighty pounds fifteen ounces. To this add the weight of the rider's armor, ninety-nine pounds nine ounces, and of the rider himself, say sixteen stone (224 pounds), and the total is twenty-eight stone twelve pounds eight ounces, or 404 pounds 8 ounces. This bears out Hollinshead's statement that in the days of Henry VIII., "who erected a noble studerie for breeding horses, especially the greatest sort," such as were kept for burden, those animals would bear four hundredweight commonly.

## Shot an Angel.

Now and again we hear of strange and rare birds being shot in England, but how many sportsmen except Mr. Wells' clergyman can claim to have shot an angel? One such man exists, though it is doubtful whether he is proud of his skill. It was nighttime, and he was passing Crayford parish churchyard with his gun over his shoulder when he saw what he took for a ghost. He leveled his piece and fired, but his aim was wild. He had failed to wing his quarry. Investigation showed that the ghost was a sculptured angel on a tomb, and he had shot off one of its toes!—London Chronicle.

## A Collector of Snuffboxes.

The only expensive personal fancy of Frederick the Great, it is said, was his hobby for collecting snuffboxes, of which he left as many as 130, approximately valued at \$1,300,000. Lord Malmesbury says that one could hardly approach the king without sneezing. Two thousand pounds weight of Spanish snuff had always to be kept in store, but smoking, on the other hand, was an abomination to Frederick.

## Choice of Evil.

Smiley—I hope you won't mind if I bring a friend home to dinner tonight, dear. Mrs. Smiley—Oh, no, sir. That is better than being brought home by a friend after dinner.

## Girl Friendship.

Edith—Did you sing for Mr. Boreleigh last night. Ada—Yes, I sang almost a whole hour for him. Edith—I'm so glad to hear it! I've always had the greatest aversion to that man!

In reality history is of no avail. Humanity is caught every day with traps that have served before.

## THE DRAPIER LETTERS.

Dean Swift's Battle For the Rights  
of Ireland.

The Drapier letters, six of which, signed "M. B. Drapier," appeared in a Dublin newspaper in 1724, mark an era in Irish history. They were the work of Dean Swift, the author of "Gulliver's Travels." The occasion calling them forth was the grant of a patent in 1723 to William Wood, an Englishman of Birmingham, to coin halfpence and farthings to the extent of £108,000 to be current in Ireland, where there was a deficiency of copper coinage. Public feeling in Ireland was in a state of irritation at its treatment by England, and Swift took advantage of this coinage business to advocate the rights of Ireland. Under the mask of a plain, honest, patriotic tradesman he counseled all true patriots not only to refuse to take the new coinage, but to refrain from using any English manufactures whatever. The result was tremendous. No one would take Wood's money, and associations were formed for refusing the currency. The publication of the first three letters had so roused the temper of Ireland that it was now easy for Swift to come to the real point of issue. In the fourth letter he accordingly treats of the royal prerogative. The government instantly took alarm and offered a reward of £300 for the discovery of the author of this fourth letter. Its printer was thrown into prison. But all was in vain. The government yielded to the storm. Wood's patent was surrendered, the patentee being indemnified by a grant of £3,000 yearly for twelve years. Thus, through the force and animation of Swift's arguments, victoriously terminated the first grand struggle for the independence of Ireland.—London Tit-Bits.

## SANITARY CONCRETE.

Building Material of the Future and  
Its Advantages.

The advantages of concrete on the mechanical side are these: It is proof against fire, wind and water, rats, insects and dry rot and the danger of electricity. It needs no painting or repair. Fire or water overflow inside can do only local damage to the contents of a room and no more.

It becomes stronger and harder with age, which is, of course, an advantage, except when additions or alterations

## PERSONALS

Mr. Fred Brisco, Chatham, spent a few days last week in Napanee.

Miss Price, who charmed everyone with her sweet singing, in the Western Church, on Sunday evening, was the guest of Mr. and Mrs. Chas. Stevens, while in Napanee.

Mr. Leonard Clark, Utica, N. Y., spent last week renewing acquaintances at Colebrooke, after an absence of forty years.

Mr. and Mrs. Edward Purcell, Colebrooke, leave shortly for Edmonton, Alta.

Dr. L. E. Taylor, Toronto, spent last guest of his sister, Mrs. H. M. P. Deroche, Deseronto.

Rev. Perry Scott was renewing acquaintances in Napanee, this week.

Mr. Blake Perry, Schneckady, N. Y., is visiting relatives and friends here, while recuperating from his recent illness.

Mr. Stanley Boyce, Colebrooke, and Miss Lena Fields, Gretna, spent Saturday and Sunday the guests of their cousins, Mr. and Mrs. Wm. A. Boyce, Newburgh.

Master Rollason Hambly, son of Mr. Geo. Hambly, is in Kingston General Hospital suffering from Typhoid fever.

Mr. and Mrs. Ben Brisco have returned from their trip to the west.

Mrs. Stewart Daly is spending a few days in Ottawa.

Miss Eleanor Deroche is visiting friends in Toronto.

Mr. and Mrs. H. C. Campbell left this week for Indianapolis, Ind.

Rev. Father O'Connor spent last week in his former parish, Kemptville.

Mrs. John Blanchard is visiting her daughter, Mrs. F. W. Coates, Kingston who is ill.

Mrs. R. A. Crockey was "At Home" on Monday eve.

Rev. D. O. Crossley, Whitby, was the guest of Mr. and Mrs. A. E. Paul while in town last week.

Mr. Geo. E. Hinch, of Camden East, died at Wolfe Island on Thursday.

Miss Mary Mouck, Belleville, spent Wednesday the guest of Mr. and Mrs. R. J. Wales.

Mrs. G. D. Hawley was "At Home" on Tuesday afternoon.

Mrs. Alex Henry Jr., spent last week the guest of Mr. and Mrs. Fred Smith.

Miss Helen Trimble expects to return from Toronto to-day, after a couple of week's visit with friends in that city.

Dr. Beeman, Newburgh, is in Montreal this week.

Mr. John Foster, of Newburgh, returned from the west on Tuesday.

Mrs. Dibb was "At Home" on Tuesday eve.

Mrs. J. P. Hamley spent last week with friends in Toronto.

Miss Madge Clapp returned to Toronto this week.

Miss May Bentley, formerly of Napanee, was married in New York recently.

Mrs. Fred Richardson, of Napanee, was visiting friends in Belleville, this week.

Mr. Fred W. Shibley, of New York, is expected in Napanee next Saturday, on his way home from Sharbot Lake.

Miss Jesse Clark, of Kingston, is spending a few days this week, with friends in Napanee.

Mr. L. Parker Ford, of Providence, R. I., spent last Wednesday evening with Mr. and Mrs. Clarence M. Warner, Napanee.

Mr. and Mrs. Alex Henry, jr., of Toronto, spent Sunday with friends in Napanee, and Mrs. Henry remained for a week visiting Mr. and Mrs. Fred Smith.

Mr. George Perry, of Napanee, is spending a few days in Ottawa this week.

Miss Dell Miller, of Richmond

## OUR \$2.00 HATS.

Our \$2 Derbies and Soft Hats are the products of the best hat makers in the business. They not only use the best materials and trimmings, but they show constantly all the New Shapes and broad variety. Here are exactly the hats to show off the new suit of clothes or overcoat. We've correct Hats for young, middle-aged and elderly men.

Our \$2 "Tiger Brand" Fedora and "Imperial" Stiff Hats are sold in many stores at \$2.50. We import these Hats direct from the manufacturer in large quantities and pass them on to our customers at the close price of \$2, knowing they will give perfect satisfaction and constantly increase our Hat sales.

Christie makes the best wool fedora in the world, we sell them at \$1.

The New York "Knickerbocker" is one of the very best stiff Hats made in the United States. They are sold everywhere at \$3—We have the exclusive agency for Napanee. We would like to show you what an immense range of Hats we carry.

This store caters exclusively to men's and boys' wants in Clothing, Hats and Caps, Shirts, Collars, Ties, Underwear, hose, etc. Our assortment is larger and prices lower than any store in this vicinity. When in want of any of these lines we would consider it a pleasure to show you our well assorted and "Up-to-date" stock.

## Special Sale of Men's Ordered Pants and Linen Handkerchiefs, SATURDAY, DEC. 8th.

On the above date we will make to order all \$4 Pants at \$3.25; \$5 at \$3.75; \$6 for \$4.50; \$7 for \$5.25.—On the same date regular 25c pure Linen Handkerchiefs.—Special 3 for 50 Cents.

## J. L. BOYES.

electricity. It needs no painting or repair. Fire or water overflow inside can do only local damage to the contents of a room and no more.

It becomes stronger and harder with age, which is, of course, an advantage, except when additions or alterations are made, involving hard work to cut the walls and floors. There are no leaky roofs, no damp or cold east or north rooms. There is great economy of heating. Being a firm mass throughout, like a house made of baked clay, there is no vibration, and in case one spot of the foundation should be undermined the well knit structure might not show so much as a crack. It is practically earthquake proof.

Concrete is healthful because it leaves no fissures for dust or for insects which spread disease. It is cool in summer and warm in winter, and with a minimum of exertion can be kept sweet and clean. On the artistic side, as the house beautiful, it lends itself to sculpture and painting, and as an object on the landscape it can be made a joy to the eyes.—Country Life In America.

The Stock of the late Robt. Denison is now being sold at a bargain, at the Store.

## UNDERWEAR.

# FRED CURRY,

Toronto, spent Sunday with friends in Napanee, and Mrs. Henry remained for a week visiting Mr. and Mrs. Fred Smith.

Mr. George Perry, of Napanee, is spending a few days in Ottawa this week.

Miss Dell Miller, of Richmond, Province of Quebec, is visiting Mr. and Mrs. John Thompson, Napanee.

Mrs. Bushnell is visiting friends in Schnectady.

Mrs. Walter Coxall returned from Toronto, on Wednesday after a two months visit with her daughter, Mrs. M. J. Getty.

Mr. Matthew Shannon, Richmond, was a caller at our office on Thursday.

Don't forget the Firemen's oyster supper next Wednesday evening. A good feed of oysters and an excellent programme will go a long way towards making one forget the struggles of a hard winter.

### A Brooch Cash Bargain Sale.

20 per cent Discount for next week ending Dec. 7th only, a large and new stock of Pearl set 14 k Brooches, filled and silver brooches. Avoid Xmas rush. China Sale continued this week too.—F. Chinneck's Jewellery Store.

### Thankfulness.

I am no friend to the people who receive the bounties of Providence without visible gratitude. When the sixpence falls into your hat you may laugh. When the messenger of an unexpected blessing takes you by the hand and lifts you up and bids you walk you may leap and run and sing for joy, even as the lame man whom St. Peter healed skipped pliously and rejoiced aloud as he passed through the beautiful gate of the temple. There is no virtue in solemn indifference. Joy is as much a duty as beneficence is. Thankfulness is the other side of mercy.—Henry Van Dyke.

### Facial Horticulture.

"A new milkman left our milk today," announced Dorothy.

"Did he have whiskers?" asked her mother, thinking perhaps it was the proprietor.

"No," said the four-year-old; "he didn't have whiskers, but he had the roots."

Axes, saws, cow chains, axe handles, horse blankets, Halters, Girths.

Everything in gold and filled brooches, only for this week ending Dec. 7th. Buy now and avoid the rush only three weeks off. China sale this week again.—F. Chinneck's Jewellery Store.

### YARKER.

The county council has placed a new iron bridge over the Branch in place of the old wooden one, and the county road has been gravelled from the Branch bridge to the township line, at Geo. Lampton's. An iron bridge has been placed over outlet from Varty Lake on concrete piers. The council is doing the wise thing in making all their work substantial.

Practice is the order of the day now for Christmas tree entertainments. There will be two in Yarker, Methodist and Anglican, and both promise to be equal if not better than previous years.

Our village was almost in total darkness, or seemed like it, in having to return to oil lamps, owing to the dynamo of Conuoly & Benjamin Mfg. Co. giving out.

A new furnace is being put in the residence of Mr. Doller.

All engaged in the sale of stoves and furnaces report big sales this year. Wood is hard to get, yet there is plenty available if men could be obtained to cut it, so we are forced to change from wood to coal stoves.

Everything now seems to be full up of water owing to the steady rains. Very little travel now owing to the muddy roads.

Between the township road outfit and the county one, Camden will soon be in possession of good roads.

More interest is being taken in Sunday school work, in the country now than in the past. The effect of the convention is now evident.

Gertrude Connolly, who has been ill in New York arrived home on Wednesday.

The Benjamin Manufacturing company have purchased a new dynamo from the Westinghouse firm.

The bridge over the Napanee river here, has had a cedar covering put over it.

W. H. Woodhouse is on the sick list.

Cord wood and Block wood for sale. Robt. Light

### A GOLDEN WEDDING

The home of Mr. and Mrs. John Denison, Richmond, was the scene of a happy gathering on Dec. 2nd, when the family about twenty-five in all, met to celebrate their Golden Wedding. After a dainty wedding breakfast, they all repaired to the drawing room where Mr. and Mrs. Denison were completely surprised with an address read by their eldest son, S. C. Denison, during which their daughter Mrs. Moore, of Brockville, on behalf of the gathering, presented them with a gold headed ebony cane, a silk umbrella with mother of pearl handle mounted with gold, a gold scarf pin, a gold brooch set with Mrs. Denison's birth stone surrounded by diamonds, and a gold lined marmalade spoon.

The happy bride and groom of fifty years, were then congratulated by all present, after which a flash light was taken of the company. Mr. and Mrs. Denison, who are active and in good health, look scarcely beyond middle age and bid fair to celebrate their Diamond Jubilee. Following is the address:—

Dear Parents—

It affords us, your children and grandchildren, much pleasure to meet to offer greetings on this the golden anniversary of your marriage, it being a privilege that few families enjoy.

While we thank our Heavenly Father that you are both spared and that the family circle has not been broken by death, we also thank Him and you that it has not been broken by discord but that each can extend to the other the hand of true friendship and love. We have not forgotten that as children we did not always think as you would have us, but by your wise counsel and patient example we have been guided past many obstacles that have beset our paths and brought to see things in harmony with you.

Although our own homes have been established for years, yet our hearts still cling to you and the old homestead and we always feel that here with you is "Home, Sweet Home."

We seriously realize that we can never repay your life-long care and devotion, but we beg you to accept these tokens of our appreciation and love.

Many have been the happy reunions of the past, and we hope and pray that you may be left with us for many years more to reflect the life of our Saviour you love so well; for of your lines it may be said you have. "Let your light so shine before men that they may see your good works and glorify your Father which is in Heaven." Your sweet influence has not only rested on us your children but also on those whose lots have been cast with ours to complete the family circle. From our infancy it has been your constant endeavor to fill our minds with scriptural truths, and to lead us into the true light, and we trust that we may all solive that there will not be a link missing in the family chain when we walk the golden streets of the New Jerusalem.

### Umbrellas.

Presenting an unusual opportunity to purchase handsome holiday gifts at reasonable prices. 50c to \$8.00.

Joseph Brawley, the proprietor of the American hotel, Sydenham, Ont., arrived at the Commercial hotel on Wednesday afternoon, accompanied by an attractive and handsomely-attired young lady. The couple kept the boys, guessing as to who they were. The stranger soon got busy, however, and with the assistance of a cabbiethy were not long in locating Rev. F. Deatry Woodcock, who promptly united them in marriage. The bride was Miss McGarvey, of Sheffield township. Mr. and Mrs. Brawley left Thursday morning for Syracuse, Boston, New York and Washington, accompanied by the best wishes of all who had the pleasure of meeting them—Brockville Times.

### Good Perfumes for Xmas.

You will find at WALLACE'S Red Cross Drug Store, a line of good perfumes (the very best) put up in handsome packages suitable for Xmas gifts, ranging in price from 25 cents to \$7.50, the 25 cent size containing exactly the same quality of perfume as the more expensive packages—(this is a fact we wish to emphasize) as many stores offer Xmas Perfumes (and very Christmasy too) the value of which is all in the box, not the perfume.

### CAMDEN EAST

A very sad funeral took place at St. Luke's church, Camden East, when the late Mr. George E. Hinch was buried Tuesday morning last at 11 a. m. The church was crowded as Mr. Hinch was a general favorite, many had to go away. Mrs. Wm. Skinner, of Yarker, most kindly played the organ and a large choir sang Hymns 52, 205, 288. The address was on "Repentance" the teaching of Advent which is necessary for all, "for he that is without sin let him cast the first stone of rebuke on reproach of a brother." The pallbearers were two friends, two members of the Workmen and two Orangemen. The Widow, and children and sisters and family of the deceased, have the sincere sympathy of all and a cloud of gloom and storm, has hung over the village since the news of Mr. Hinch's death, was first reported which it will take some time to disperse.

Services in Parish of Camden East as follows: Sunday Dec. 9th. (D.V.) Yarker—St. Anthony's church 10.30 a. m.; Newburgh—St. John's at 3 p. m.; Camden East—St. Luke's at 7 p. m.; The offerings during the day will be for the mission fund of the Diocese of Ontario at all the churches as usual during Advent.

# A Fur Jacket Makes an Ideal Xmas Gift.

Fathers, husbands and brothers will welcome suggestions for Xmas giving to their daughters, wives and sisters. Fur Jackets are rich and beautiful presents. Those who can afford such should make doubly sure by dealing with the most reliable fur house, and also should be willing to spend enough to be certain of getting the very best, and a jacket that will give years of perfect satisfaction.

Persian Lamb, finest quality, collar of same, latest style \$70 to \$175.—Near Seal and Astrachan good quality well made \$35 and \$40.

Fur Lined ¾ length coats, Beaver and Amazon shell, and best rat and Hanster linings \$35 to \$75.

Men's Coon Coats, a specialty with us, the finest pelts procurable, bust 40 to 50 inches, \$45 to \$70.

## Splendid Showing of Silk Petticoats.

No store can show you a larger and more varied assortment of fine Petticoats than is to be found here. Our Petticoat Department has always been the delight of the women who wanted the very latest style and best quality at the minimum cost. The Petticoats we put on sale emphasize our supremacy in selling undergarments at low prices. The collection consists of fine, crisp, rustling, durable and perfect fitting in every popular color, \$5.00 to \$20.00.

Our stock of Satin, Mohair, and Moreen Petticoats is a representation of all the newest and best styles in dependable qualities, \$1.00 to \$5.00.

BOYLE & SON

#### DENBIGH.

The funeral of the late Mrs. Samuel Buffain, and her infant babe, took place at the Methodist church and cemetery at Vennachar on the 1st inst.

The Municipal Council met on the same date at the Denbigh House. The members were all present. one of them Mr. E. Marquardt moved for an adjournment in order to give them an opportunity to attend the funeral referred to, but, since the last meeting had been adjourned for that date and place, quite a number of Ratepayers from various distances were expected to attend, it was decided to proceed with the business. Among other matters a resolution was passed unanimously to prepare a Petition to his Honor the Judge of the County Court, asking for the establishment of a Division Court in this Municipality. Relief was also granted to a number of indigent ratepayers, by way of remitting their Municipal taxes. Orders were granted to the different School Sections in the Municipality for the amount of rates due to each. Some Public road and Statute Labor difficulties were adjusted, and Deputy Returning Officers appointed to act at the next ensuing Municipal Election, and considerable other business of importance was transacted.

Dr. A. W. Tennent and Mr. Wm. Chatson have treated themselves to a combined pleasure and business trip to Ottawa City.

We had considerable stormy weather last week and have snow enough for fair sleighing.

#### SERVICES APPRECIATED

Napanee Dec. 4th 1906.  
S. WOODCOCK, Esq.  
Chief of the Fire Brigade,  
Napanee, Ont.

Dear Sir.

I am directed by the General Manager of the Bell Telephone Co., of Canada, to express the appreciation of the Company of your prompt and efficient service of your Brigade in protecting the premises and property of the Company when threatened by fire recently, and I am also instructed to hand to you as a contribution to the funds of the Brigade, ten dollars with the Company's hearty thanks.

Expressing my own gratitude for your timely assistance.

I remain, yours very truly,

EDITH M. SCOTT  
Local Manager.

#### THANKS

The members of the Excelsior Fire Brigade take this means of publicly expressing their thanks to the Local Manager, not only for the donation, but for this appreciation of the services of the fire brigade.

S. WOODCOCK, chief.

BOYLE & SON.

#### SPECIAL SESSION.

December 6th, 1906.

Council met as per adjournment on Wednesday evening.

The clerk read the sewer by-law to raise the sum of \$5000 to pay for the Dundas street sewer.

On motion the council went into Committee of the whole on the second reading of the by-law.

The by-law was taken up clause by clause, and the several clauses adopted with the blanks filled in.

Committee rose and reported the by-law read a second time and blanks filled in, and committee asked leave to sit again.

The second sewer by-law to raise \$250 to construct the sewer necessary to connect the Canning Factory sewer with the Dundas street sewer was taken up, and read a first time.

On motion the council went into committee of the whole on the second reading of the by-law.

The by-law was read clause by clause the blanks filled in.

The Committee rose and reported the by-law read a second time with the blanks filled in.

Council adjourned.

ITCH, Mange, Prairie Scratches and every form of contagious Itch on human or animals cured in 30 minutes by Wolford's Sanitary Lotion. It never fails. Sold by F. L. HOOPER.

#### JAN'Y 2ND 1907—THE DATE

A despatch from Toronto announces that Ralph Connor's new story, "The Doctor" has been secured by the Family Herald and Weekly Star of Montreal, for exclusive newspaper publication. This is a big surprise. Such stories are seldom sold to newspapers for months after the book is issued, but the Family Herald is in a position to pay the price and land the prize. Their subscribers are to be congratulated. It is said the opening chapters will be published on January 2, 1907, so as to give all their subscribers ample time to renew their subscriptions. In the meantime there will be a rush from new subscribers, and no wonder, for the Family Herald with their beautiful picture, and Ralph Connor's story is certainly a dollar's worth to be had every day.

Napanee Branch.

under good cultivation, 10 acres woodland, 80 acres new land ready to stump. Good orchard, 4 splendid wells. Fine brick residence, lawn and shade trees. 2 large barns, tenant house, new poultry house, hog house, etc. Very convenient to church, school, post office and blacksmith shop. 8 miles from Napanee, 4 miles from Bath, and 3 miles from station. For further particulars enquire of

30-4m JOHN M. HAWLEY.

#### FOR SALE.

That desirable farm known as the Blanchard Farm, situated about one mile south of Napanee containing 240 acres more or less. Will be sold as a whole or in two parts. (1) The north part with the buildings containing 140 acres more or less, and (2) the south part containing 100 acres more or less; on which there is a good barn.

For terms and further information apply to M. C. BOGART, Real Estate Agent, Napanee, Ont. 42-3m

#### IN THE SURROGATE COURT OF THE COUNTY OF LENNOX AND ADDINGTON.—IN THE ESTATE OF SARAH McKILLIP.—Deceased.

NOTICE is hereby given pursuant to R. S. O. 1897, Chapter 125, Section 38 that all creditors and others having claims against the estate of the said Sarah McKillop late of the Town of Napanee, in the County of Lennox and Addington, Spinster, deceased, are required on or before

1st DAY OF JANUARY, A. D. 1907,

to send by post prepaid or to deliver to Herrington, Warner & Grange, Solicitors for the Executor, of the said Sarah McKillop, their names, addresses and full statement and particulars of their claims and the nature of the securities, if any, held by them, And further take notice that after the said 1st day of January, A. D. 1907, the said Executor will proceed to distribute the assets of the said deceased among the parties entitled thereby having regard only to the claims of which they shall then have notice, and that the said Executor will not be liable for the said assets or any part thereof to any person or persons of whose claims notice shall not have been received at the time of said distribution.

HERRINGTON, WARNER & GRANGE,  
Solicitors for the Executor.  
Dated at Napanee this 13th day of November A. D. 1906. 50d

RAW FURS.

## COLLIER BROS. SYMINGTON'S

# WHAT THE KINGDOM IS THE GREATEST MARKET

## Dr. Lyman Abbott Speaks on a Popular Misconception.

Men still are thinking about the celestial kingdom and still hoping for a civic and political rule and yet thinking they must fix their eyes on the golden city and all that. We are not to keep our eyes on the green fields and the pearly gates of the Celestial City, but to be preparing in this world for the heaven hereafter. We are to try to answer our own prayer: "Thy kingdom come; thy will be done, in earth as it is in heaven." What is this kingdom of God in the earth? What we pray for and ought to look for is a state of society in which there are square and honest lives, adjusting themselves to a standard of righteousness. We mean the domination of the golden rule; honesty and integrity in business affairs; peace and good will; riddance of restless discontent, and in place of it calm; peace with our neighbor; peace with God; joy and holiness of spirit; joy and healthful living in conformity to the laws of nature that are the laws of God. We mean a city in which men shall live squarely, have good will toward one another and where all men shall share in the universal well being.

### THERE IS PROGRESS.

A glance back in history shows that all through the nineteen centuries since Christ was born the world has been moving along toward peace. Slavery, after a long reign, has been abolished in a great measure, and to-day we have a court for the settlement of international disputes, and it is no exaggeration to say that it is more than probable that in ten years from now we shall have an international Parliament, at least of advice, determining laws for the nations. The world has been moving along, not always by the church and ministry, but by a thousand influences, coming from the All Father, toward a universal welfare.

I ask you to take part in this great world movement that has been going on for twenty centuries to bring about the kingdom of God on the earth. In order to do it you need not leave your present place or vocation, or take upon yourself new activities. No, you must begin at home. The home is the foundation of every social organization. The kingdom of God is an organization and the beginning is the home, and there is not one of us who cannot do something to make righteousness and peace and happiness in our home; in the home of our neighbor; to teach our children square, honest, upright conduct; to inspire our children with the spirit

of peace in place of the spirit of restlessness, and so to minister in our home that it shall be one of sunshine and gladness. Great and noble work is done in founding homes for orphans, but is it any better to go out in the streets and find some children there and make them pure and sweet and happy than to take the children God has given you and make them pure and sweet and happy? You have not to leave your vocation, whatever it is. What does the kingdom of God mean? It means, first of all, square dealing in business. It means the carpenter's making a good joint, the plumber's making a pipe that will not burst, the employer of labor paying fair wages, the workman's doing his work—it means square, upright, honest dealing of a man with his fellow man. This is religion. It is the thing Christ came to establish on earth. To do the right thing is more religious than to talk about it. For a carpenter to make a square joint is more religious than for me to tell him to do it. It means the carrying of peace and good will into our daily life. It means the using of one's influence to make commerce not a war, but an emulation for service, not a struggle to see how much we can get but to see how much we can achieve.

### GO INTO POLITICS.

I call you to go into politics. I hear every now and then men saying, "Our best citizens take no interest in politics." That is not true. The man that does not take any interest in politics is not one of our best men; he is one of our worst men, and the more influential and rich he is the worse he is. Look across the sea and note what men in Russia are doing and suffering in order that they may get the citizenship God has given us. He said: "I give you the keeping of this nation." You can diffuse all through this nation the spirit of righteousness and of peace and good will. You can make the kingdom of God come on this continent of America, and this best of citizens folds his hands and says: "That is not what interests me." Best man! No, no. I will tell you the hope of our country to-day. It is that men in different parties are taking more interest in the kingdom of God (they do not call it so) than they are in the victory of party politics. When a man is doing that, whether it be by his vote at the ballot box or in the Legislature, he is doing religious work, just what Christ called him to do—working for the coming of the kingdom of God on the earth.

—A great concourse of people. Among Christian nations public execution has since fallen into disapproval and has been largely discontinued.

He saved others—Doubtless some who were present among those who uttered these words recalled the case of Lazarus especially which had occurred so near Jerusalem only a short time before.

36. Offering him vinegar—The ordinary sour wine, or "posca," which the soldiers were accustomed to drink. Apparently they could not reach his lips with a cup held in the hand; otherwise the sponge would not have been placed on a stalk. Comp. John 19. 29, "They put a sponge full of vinegar upon hyssop, and brought it to his mouth." There is, however, no reason for supposing that the feet of Jesus were on a level with the heads of the spectators as pictures of the crucifixion sometimes represent.

38. And there was also a superscription

## NIJNI NOVGOROD FAIR IN ITS OLD GLORY THIS YEAR.

### Remarkable Gathering of Mussulmans of the Great Russian Empire.

During the last two and a half years neither the German commercial traveller nor his wares have had much chance to get along the Siberian railroad. Now that the twin line of steel, running for six thousand miles from Moscow to Vladivostok, is free from the conveyance of troops, the Siberian towns, which have been starving for goods, are demanding large supplies and speedy deliveries. In the disturbed condition of the country, however, German firms have shown no eagerness to risk the lives of their travellers in a region where the value of life is decreasingly regarded, nor to forward goods for which there is a very problematic prospect of payment. Accordingly, Mahomet has had to come to the mountain, and this year, writes Foster Fraser in the London Standard, Nijni Novgorod is basking in its old glory.

The fair has provided opportunity for a remarkable gathering—a congress representing twenty million Mussulmans at the Russian Empire—Moslems from South Russia, men who have taken to the garb and customs of the West, and who, with their hair cropped a la Française and imperials, dark gray lounge jackets and patent leather boots, might easily be mistaken for Parisians; Moslems from Mongolia and Bokhara, men slim and sallow and sedate, with shaven heads and henna dyed beards; men in long flowing and embroidered sheepskin coats, boots of red and turbans of green, who, for sitting, find the floor more comfortable than chairs.

### THE SHREWD TATARS.

The Tatars are the cleverest merchants who come to Nijni Novgorod. Whether it be in the selling of "overland" tea—believed by the Muscovite to have been brought by caravan from China, but which has been sent around by ship to Odessa and trained to Nijni—or in making a fuss with precious stones which he hints have been stolen from the mines, and therefore are to be obtained at a bargain, but which are imitation, made in a Parisian factory, the Tatar scores.

He stands by his shed or stall, looking cold and grimy, his fur cap down over his ears, and his hands hid in the sleeves of his skin coat, which is badly tanned and most unappetizing in odor. He has wondrous stacks of skins, from silver fox down to rat. You can walk the better part of a mile past shops crowded with skins, most requiring to be cured. For a year Siberia is hunted for skins to supply the Nijni Novgorod mart. The tribes of the north stalk in the winter; colonies of political exiles have sometimes little other means of winning a livelihood than by getting skins.

Over hundreds of miles of trackless snow the skins are hauled till a river is reached. Then by boat they are brought to some place where the Siberian railway can be touched or are taken to some affluent of the Volga. The Tatar merchant has his buyers everywhere. In his stealthy but still methodical way he meets the skins at certain points and arrives at Nijni Novgorod with perhaps a couple of thousand pounds worth of goods.

### CONDUCTING A SALE.

The market is conducted on strictly Eastern principles. There is no fixed price. Everything is worth what it will fetch. The Tatar asks twice as much as a thing is worth, aware all the time that you know he is asking double what he will accept. You offer half what the thing is worth, aware that he knows that you intend to increase the offer. So,

Persians who had turquoise and opal stones to sell, and we spent a rainy afternoon in haggling.

Yet there is a fascination in the multitude of articles. At times one can imagine that all the manufacturers of shoddy articles have dumped their things on Volga-side. Try to picture a third of a mile of tombstones for sale—though, Hibernian like, most of the stones are of wood. Here the merchant from the far interior may acquire a really striking monument which will make him the envy of his neighbors who have never been to the fair. A whole street is devoted to the sale of ikons, pictures of saints set out in Byzantine style in flaming gilt, and to be found in every Russian house in the right hand corner at the upper end of the room.

There are streets sacred to the sale of Russian boots—there must be millions of them. Battalions of sacks laden with raisins block one thoroughfare; another road is a maze of bales of wool. A row of shops is given up to

### THE SALE OF UMBRELLAS.

and there is merryment watching the astonished countenance of a simple peasant woman having an umbrella opened in her face for the first time. Miles upon miles of cotton goods are here, with no nonsensical half shades about them, but strong and unmistakable reds and greens and blues and yellows. Half a street is given up to cheap German toys.

In the centre of the fair is a large red brick arcade, with shops selling the usual tinsel and expensive things, with the usual band playing in the afternoon, and the usual row of wooden faced individuals sitting on benches and stolidly enjoying the music. There is the usual pestering by importunate dealers. And there are literally billions of postcards.

Last evening at sundown I climbed the hill of the quaint walled fortress which guards Nijni Novgorod. The falling sun was burnishing the domes of innumerable churches, a hundred sweet toned bells, beaten with wooden hammers, made the evening melodious. There was the heavy tramp of full killed Russian soldiers mounting the hill to the fortress; there was the distant babel of a city doing business at the top of its voice; down below on the Volga was the scurrying of tugboats hauling mammoth cattle boats and snakelike rafts into place, and the constant shrill whirling hoots of the sirens; away eastward, Siberia-ward, stretched a flat and unbroken land to the very horizon, with a lowering purple sky deadening to black.

## STORIES FROM FAR NORTH

### CREW OF U. S. STEAMER TELL A GREAT SERIES OF YARNS.

#### Captain of the Olga Reported to Have Killed Engineer—Miners Picked Up.

Among the most harrowing stories of the northern seas is that brought down by the United States revenue cutter Thetis, which reached Victoria, B. C., the other day after a five months' cruise in the Arctic. Captain Hamlett of the Thetis tells of murder, and of attempted murder; of arrests made after long pursuit, of finds of gold and copper, and of the discovery of a people on Prince Albert Island who had never before been seen white men, and whose utensils were of beaten copper and bone.

The crew of the whaler Olga, belonging to the fleet the Thetis had gone to succor, made the ethnological discoveries. The whalers were starving and reduced to the eating of dog harness, before they found an active people on Prince Albert land. Rich deposits of native copper were found by the whalers, brought out some large nuggets of pure copper. Wood was very scarce; in fact, so little was to be found that an arrow shaft, about a yard long, with a copper

## THE S. S. LESSON

### INTERNATIONAL LESSON,

DEC. 9.

#### Lesson X. Jesus on the Cross. Golden

Text: Luke 23. 34.

#### THE LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

Intervening Events.—The narrative of Luke from which our last and our present lessons are taken omits several important incidents in the trial of Jesus before Pilate recorded by the three other evangelists. Matthew, Mark and John all mention the abuse and mockery to

Take a rounded tablespoonful of this mixture and push off into hot, deep fat.

**Fricassee Steak.**—Cut the steak from the round or rump into small squares, and flour them lightly. Put some dripping into a frying-pan. Slice into it a Spanish onion, and add some cooked tomatoes. If in season (if not, half a teaspoonful of tomato pulp will do); lay in the pieces of steak and fry them a nice brown. Put the pieces of steak into a saucepan, strain the contents of a frying-pan over, add a teaspoonful of boiling water and stock, and simmer gently for a good hour. Serve with boiled rice, as if for curry. The slices of onion can be left in with the steak if liked.

#### HINTS FOR THE HOME.

**To Harden the Iceing on Cakes.**—Stand them when iceed in a dry place for four or five days. The iceing should be mixed very stiffly and flattened with a knife dipped into boiling water.

**To Remove Stains from Flannel.**—Take the yolk of a raw egg, mix it with a tablespoonful of glycerine, and apply to the spot; let this soak in well before washing the garment in a lather of boiled soap.

**Make Celery Salt.**—Procure some celery seed, dry it thoroughly on a baking sheet, pound it in a mortar till quite fine, and add two parts to one of dried salt.

Scratches in varnish will entirely disappear if a coarse cloth that has been saturated with linseed oil be laid over them. This simple remedy is invaluable to those who have the care of carriages and other highly polished furniture.

**To Make Boots Wear Well.**—When buying new boots, never wear them before putting on the sole two coats of varnish. This treatment makes the boots last twice as long, besides rendering them watertight.

Never throw away egg shells, for they should be washed and added to the stockpot to clear the soup.

Clothes pers boiled a few minutes and dried quickly about once a month become more durable.

**On Bruises.**—When the skin is not lacerated, treat them by applying a pad of lint in eau-de-Cologne and keeping the pad in position by a bandage.

To clean plaster of Paris ornaments, cover them with a thick layer of starch and let it dry. Remove with a stiff brush.

When cooking fruit, especially dried prunes, apples, etc., add a pinch of salt and you will be surprised at the improved flavor. A pinch of salt is sufficient for a fruit tart.

When making stock never allow it to stand in the saucepan all night, but strain off into the basin while still hot. Remove the fat before adding the meat and liquor to the bones again.

**To Clean a White Fur Rug.**—Put the rug on to a firm table and rub it well with bran moistened with hot water. Rub next with a flannel till the fur is quite dry, then with a piece of book muslin apply dry bran in the same manner. Afterwards put some magnesia into a muslin bag and well rub into the fur. It is an improvement to stretch the skin before beginning this process. To accomplish this, first sponge the hide with a mixture of salt and water, taking care not to wet the fur, put the skin, fur downwards, on to a table, and, with the hand, stretch it as far as possible. Keep it in the desired position by nailing it with tin-tacks on to the table.

**To Make Paper Stick to Metal.**—Dip the metal into a strong hot solution of washing soda and wipe it dry with a clean duster. Then apply onion juice to the surface of the metal, when any paper will adhere so firmly that it will be found difficult to separate them.

**To Restore Scorched Linen.**—Add to half a pint of vinegar half an ounce of soap and two ounces of fuller's earth, boil till thoroughly mixed. Spread some of the paste on the scorched article with a knife; let it dry on and the scorch will disappear. The mixture should be kept in a covered jar for use.

shudder to learn that Panizzi, a member of a similar lawless band called charcoal-burners—Carbonari—who was exiled from Italy, was for many years the chief librarian at the British Museum!

The election and initiation of members into the Black Hand was exhaustive and terrifying to all but those of strong nerve. After strict inquiries and a unanimous vote, the candidate would be summoned to a meeting; after firing at a crucifix to show he had no sentiment that would prevent his being faithful to the band, he was blindfolded and accused of being a spy, whereupon the chief would order the company assembled to

#### REND HIM LIMB FROM LIMB.

If he did not flinch, they tore the bandage from his eyes, and he found a dozen musket barrels presented at his body; this test passed with no sign of fear, he would be told to pick a coin from the floor, and as he stooped the members tried to strike the coin with their daggers, often passing them through the neophyte's fingers.

Then a vein was opened in his arm, and he signed the oath of secrecy and fidelity in his own blood.

Besides being established at San Francisco and New York, the Black Hand is represented at St. Louis, Chicago and New Orleans. At the latter place it was particularly active and violent sixteen years ago. In May, 1890, a band of Maffiosi laid in ambush for a company of the Stoppaghiera, a secret society opposed to the Black Hand, and killed and wounded six. Forty murders had already occurred among Italians and Sicilians in that city, so the police made a special effort in connection with this new crime and arrested six persons. But during the trial all the witnesses were assassinated.

#### MAFIA ALMOST BEATEN.

In spite of this, the prisoners were convicted, but counsel appealed successfully for a new trial. Mr. Hennessy, the Chief of the Police, made such exhaustive research pending the fresh trial that the Mafia feared its entire discovery and annihilation both in America and Europe.

Ten members of the Black Hand were deputed to assassinate him, and a volley of bullets was discharged at him from a dark alley one midnight. He emptied his revolver, fully twenty shots being exchanged. Eleven Sicilians were arrested on suspicion, but in spite of overwhelming evidence, the jury, intimidated by threats of murder, found six not guilty, giving them, as they alleged, the benefit of the doubt. A fresh charge preferred against them, however, sent them back to the county gaol.

The populace of New Orleans were now wildly excited and indignant. Led by a lawyer named Parkinson and several prominent public officials, 2,000 persons assembled at the Clay statue on March 14th, 1891, and, armed with guns and revolvers, stormed the prison where the nineteen accused lay.

#### JUSTICE WITHOUT THE LAW.

Some of the assassins had secreted themselves in the women's quarters, hastily vacated for their benefit; but they were all found and either shot down in the prison or taken out, hanged from the nearest lamp-post, and riddled with bullets.

The United States had to pay \$25,000 to the Italian Government for the widows and orphans of the persons killed, but a severe blow had been dealt at the Mafia for the time being. This rough treatment, however, served to win for the Black Hand the sympathy of many Italian gentlemen in the United States who had never before countenanced their wicked acts.

"I am inexpressibly sorry, Mr. Smithers," she said, "to learn that when you called the other day Tiger bit you." "Oh, that's all right," he said, with a forced effort to be cheerful. "No, it isn't," she sobbed; "the poor little fellow has been ill ever since."

merchant that in suspecting his clerk he probably was making a mistake.

The difficulty a forger has to contend against when imitating someone's handwriting is in disguising his own. Experts are always on the lookout for foreign characteristics, for they very often lead to the identity of the forger.

#### PHOTOGRAPHIC TEST.

Were it not for the camera, the detection of forgeries would be almost impossible. Quite recently a cheque for the sum of £200 was honored at a London bank. It proved to have been forged. An eminent expert who was called in examined with a powerful hand-lens the signature on the cheque without finding anything suggestive of forgery. He then put the cheque to the photographic test, and found upon the resultant negative unmistakable signs of erasure and "shading." The forger, whoever he was, had first sketched the name in pencil and then filled it in with ink, "shading" the down strokes afterwards with a fine pen.—London Answers.

#### GERMANY'S PENSION SCHEME.

##### Large Sums Paid Out Since Bismarck Inaugurated Scheme.

The 25th Anniversary of the late Prince Bismarck's announcement in the Reichstag that the Emperor was determined that the state should systematically assist the working people, male or female, by accident, sick and old age insurance, was commented on widely in the German press recently, which generally approved or disapproved the results, according to the political opinions of the commentators. During the last twenty years \$555,750,000 has been paid out for sickness, \$232,750,000 for accidents, and \$13,500,000 for old age.

The law also provides for compulsory contributions by employers and employees. In cases of sickness two-thirds of the expenses are paid by the employer and one-third by the employee. In accident cases all the expenses are paid by the employer, and in cases of old age pensions half the amount is paid by the employer and half by the employee, the Government supplementing each pension with \$12.50 yearly. The total of the various funds is \$375,000,000, and the amount paid in since the law was passed is \$1,656,750,000. Sixty million persons have profited by this legislation.

#### \$1,200 LOST—REWARD 6 CENTS.

##### Woman in England Bestows Munificent Reward Upon Honest Lad.

A correspondent of the London Daily Mail sends an account of the loss and recovery of a bag of gold, containing £240, and the "generous" reward of threepence paid to the finder.

The bag was found on a seat at Newton Heath Railway Station by a boy, who at once took it to the lost property office. From subsequent inquiries it was found that the money was the property of a lady who had been on a visit to Newton Heath, and who did not miss the bag until she arrived at Victoria Station, Manchester. She duly reported the loss, but could give no idea where she had left her property.

After recovering her gold the lady rewarded the finder with threepence.

#### EXPENSIVE SPORT.

Automobiling is an expensive pastime at best. If the German Government can carry through the Reichstag a Bill which it has recently introduced, the sport will become still more expensive. The Bill provides that automobilists must pay a life annuity to persons dependent on those who may be killed by their cars and to persons permanently injured by accidents. The Courts are to fix the amount, which is to be paid by the owner, whether he was in the car or not.

will more than pay for the extra care and feed. At present I have a herd of Jerseys and make butter for private customers at 30 cents a pound the year around. The demand is always greater than the supply. The butter is made in rolls or sizes to suit the customers, put on wooden plates, covered with parchment paper, and marketed once a week. I use the deep setting plan of skimming.

Pasture in summer and feed silage with clover in winter. Some grain is fed the year round varying the amount to suit the needs. I have always found that the greater variety of grains and rough feed, the better the results. I would not advise feeding silage exclusively. But no one who keeps six or more cows can afford to be without a silo. Silage, undoubtedly, is the best and cheapest winter feed yet discovered. I aim to make my cows average 250 pounds of butter a year.

#### VALUE OF A HAND SEPARATOR.

Every progressive dairyman should have a hand separator. You can then give the calves fresh, sweet skim milk. It is expensive to feed calves on whole milk, especially when you can sell the butter for 25 cents per pound and supply the fat taken from the milk by skim-milk or oilcake at a few cents per pound.

From the other side, the separator is certainly a splendid investment as a labor saver. It is also valuable as a means of getting all the butter fat from the milk. Get a good standard machine, but don't get a very small size unless you have only a very few cows. For ten to twelve cows we would certainly recommend a 450 to 650-pound per hour separator.

Wash the machine every time it is used. Don't believe the agent who tells you that you can wash his machine by simply dipping the parts in warm water. Anyone who has handled vessels, in which milk has been kept, knows that that is not so. Use a brush, not a dish rag, to wash each piece of the separator, then pour boiling hot water over the parts and allow to dry.

Use plenty of oil on the bearings and thus greatly increase the life of the machine. Fasten the separator securely to the floor, take three minutes to speed it up, heat up the bowl with a little lukewarm water before separating, then flush out with a little clean water after the milk has run through, to get all the cream.

#### MADE THEM HAPPY.

##### Gave Money and Food to Hungry Men and Urchins.

The incidents of the London streets were a never-failing source of inspiration to Dickens, as every reader of the master knows. Last week among the poor porters and street arabs of Covent Garden fruit market a thing happened which would have rejoiced the heart of the author of "The Cricket on the Hearth." A rich man came out of an adjoining hotel in the morning and talked with the groups of idle and hungry men and boys, and selecting one among them, made him the dispenser of his bounty. The sum of £100 was given away in notes and gold, and the generous donor disappeared, to turn up next day to give half crowns and a breakfast in a coffee house to a crowd of little ragged urchins in the market. This market philanthropist may not be pursuing the most business-like or useful method of doing good to the poor, but he has made a discovery by which the kindly-disposed rich folk may profit. He has found the delight to himself of seeing the money he gives gladdening the poor and hungry, and awakening their better nature, is far better worth the money than sending it to a fund or a public charity, which has no personality, and may not have much human nature. The hero of the Covent Garden is a wealthy Lancashire manufacturer, who has had huge enjoyment out of his adventure.

# HOME.

## SELECTED RECIPES.

**Tomato Soup**—One pint of beef broth, half cup of sweet milk, half cup strained tomato, one tablespoonful butter rolled in flour, salt and pepper to taste.

**Dumplings**—One pint of flour, two tablespoonfuls baking powder, a little salt, one scant cup milk; make a soft dough, drop quickly, and cook ten minutes without lifting the cover.

**Orange Pudding**—Six small, sweet oranges cut up, one cup sugar poured over them and let stand. Make a custard of one pint of milk, a little salt, yolks of three eggs, well beaten, two tablespoonfuls flour in a little cold milk add to boiling milk and pour over the oranges. Beat the whites of eggs to a stiff froth, add one tablespoonful powdered sugar, pour over the custard; set in the oven to brown. Eat cold.

**Suet Pudding**—One cup suet, chopped fine, one cup raisins, half cup molasses, one cup milk, half teaspoonful soda, one teaspoonful cream of tartar, two eggs and salt. Steam three hours.

**Cottage Pudding**—One egg, one tablespoonful of butter, three-fourths cup of sugar, one-half cup of milk, two cups of flour, two teaspoonfuls baking powder; flavor with lemon extract and bake in a hot oven; serve with hot liquid sauce.

**Fried Cakes**—One cup sugar, one cup sweet milk, two eggs, three tablespoonfuls melted butter, two teaspoonfuls baking powder, flour enough to handle well; fry in hot lard.

**Vanilla Cookies**—One cup sugar, two-thirds cup butter, two eggs, one and one-half teaspoonfuls baking powder, one teaspoonful vanilla, one tablespoonful sweet milk, add flour enough to roll out.

**Ginger Snaps**—Put one teaspoonful of soda and one of ginger into a teacup and fill with molasses, and beat until very light, then put three tablespoonfuls of lard into a cup and pour three tablespoonfuls boiling water over it; mix with enough flour to roll out well and bake in a quick oven.

**Drop Cookies**—One cup sugar, half cup butter, one cup milk, one egg, two cups flour, two heaping teaspoonfuls baking powder, one-fourth nutmeg, drop in tins and bake in a quick oven.

**Cocoanut Pudding**—Grate one cocoanut, three dried biscuits, rolled fine, or the same quantity in stale bread, eight eggs, one-fourth pound butter, a little salt, one quart milk to be boiled and poured on the dry bread, the cocoanut to be poured in the last thing. If the pudding is plainer, put in less butter and more bread and milk, according to your own judgment.

**Rice and Apple Pudding**—Core as many nice apples as will fill the dish, boil them in light syrup, prepare one-fourth pound of rice in milk, with sugar and salt, put some of the rice in the dish, then put in the apples and fill up the intervals with rice. Bake in the oven till it is a fine color.

**Boiled Leg of Lamb**—Plunge the joint into a pan of boiling water, and when it boils up, draw it to the side of the fire and let it cool a little. If the joint weighs about five pounds cook it gently for an hour and a quarter. When cooked pour white sauce over it and garnish with boiled carrots or cauliflower.

**Delicious codfish balls** are made by taking 1 cupful of codfish, 2 cupfuls of raw potatoes, cut into small pieces, 1 egg, 3/4 teaspoonful of butter and a dash of pepper. Put the raw potatoes and codfish in boiling water and boil till the potatoes are tender. Then drain carefully and mash, adding the beaten egg, butter and pepper. Take a rounded tablespoonful of this mixture and push out into hot, deep fat.

**Fricassee Steak**—Cut the steak from the round or rump into small squares, and flour them lightly. Put some dri-

For Chilblains—These two recipes have been sent me by a kind correspondent, who says they are excellent: (1) For unbroken chilblains: one ounce of glycerine, one ounce of sulphurous acid (not sulphuric acid), and two ounces of rosewater. Mix all together thoroughly, and apply night and morning. (2) For broken chilblains: Locatelli's balsam, four drachms; citrine ointment, one drachm; balsam of Peru, ten drops. Spread this salve on cotton wool or lint and apply night and morning.

## TERRIBLE BLACK HAND

### THE SECRET TERROR OF AMERICAN MILLIONAIRES.

#### How This Society Had Its Origin—Introduced Into America by Foreign Emigrants.

But few people realize how serious is the problem presented by the criminal societies of the United States. The chief of these, the Society of the Black Hand, or the Mafia, as it is sometimes called, is one of the most mysterious associations ever formed. Precisely how long it has baffled the detectives of the world it would be difficult to say. But the list of crimes attempted or carried out by it is simply appalling.

In 1903 an attempt was made to blow up the Cunard liner Umbria by means of an infernal machine containing 100 lbs. of dynamite. A warning letter was, however, received in time to prevent the disaster. The letter explained that "The Society has declared war against England and has ordered the destruction of every British steamer flying the British flag that sails out of New York Harbor." Superintendent Murray, of the Bureau of Combustibles, who examined the machine, declared that it was the largest and cleverest he had ever seen. The affair was a mystery at the time, and has remained so ever since.

#### GRIM FOUR-MONTHS' RECORD.

But it is chiefly against private persons, and with the object of gain, that the Black Hand is directed. As the society has over 5,000 members in New York alone, it is not surprising to learn that in four months 54 persons were killed or maimed, 7 buildings blown up, and 700 attempts at blackmail made under threats of death.

The late Mr. Russell Sage was in constant fear of assassination through his refusal to pay blackmail; while Mr. Wesson, the revolver manufacturer, is said to have paid over \$5,000,000 as the result of demands by the society.

The Black Hand of America undoubtedly had its origin as a branch of the terrible Mafia, and was introduced by foreign emigrants. The inception of the Mafia itself is said to be as follows: In 1282 a young citizen of Palermo and his betrothed were about to be married. While the lover sought the priest, a drunken sergeant of the French garrison staggered up to the girl and kissed her. The girl fell in the struggle, striking her head against a pillar.

#### QUICK RETRIBUTION.

At this moment her lover returned, and, seeing what had occurred, stabbed the sergeant to the heart. The incident led to the revolt of Palermo against the French, the Italian cry being "Morte Alla Francia Italia Anclera!"—"Death to the French is Italy's cry." When the frenzy of revolution passed and the day of French retribution came, the citizens formed themselves into a patriotic league, making Mafia their password.

Societies of this sort are extremely cautious. Orders to commit murders would arrive in Italy and Spain from Geneva and London, and it makes one shudder to learn that Panizzi, a member of a similar lawless band called charcoal-burners or carbonari—who was exiled from Italy, was for many years the chief librarian at the British

## TELL-TALE HANDWRITING

### PROFESSIONAL FORGER IS AN ARTIST AT HIS WORK.

#### Handwriting Expert Called Upon to Settle Many Curious Cases.

Yes, said an expert in handwriting, it is no easy matter to tell which is a bona-fide one, for the professional forger of to-day is an artist in his lawless work. Fifty or sixty years ago handwriting experts were conspicuous by their absence; now there are scores of them in London alone, and the leading ones are constantly brought before the public in connection with law cases—big, sensational and curious.

Many handwriting experts started life as lithographers, much of whose work, as you are aware, consists in making facsimiles of letters and circulars by tracing the original writing on to a stone. A lithographer, after he has been at his trade for two or three years, cannot fail to note every mannerism in a hand, and he soon draws up in his mind a philosophy of handwritings. A man who has been trained as a lithographer is undoubtedly the most reliable handwriting expert.

#### PENMANSHIP VARIES.

Curious as it may sound, it is nevertheless a fact that no man or woman signs his or her name exactly alike. One's handwriting varies according to the pen used and to temper. A man who is agitated signs his name very differently from the way he does when his mind is calm. The health, too, has a great effect on handwriting. The person who crowds his writing is a martyr to indigestion, while the man suffering from heart trouble writes his letters irregularly and seldom joins them. A good doctor, upon receiving a note from a patient whom he is attending for heart disease, kidney trouble, and so on, can, by studying the handwriting—the joinings, the slope, the slope of certain letters, etc.—discover how that person is progressing.

#### LOVERS' TIFF SETTLED.

Professional handwriting experts have much curious work to do. I am called upon almost daily to banish or confirm suspicions in matrimonial squabbles. Some weeks ago a young lady brought me a birthday card she had received bearing a few words, but no name, written with a pen. She was anxious to know whether the sender was a certain young man with whom she had quarrelled three months before and not afterwards seen. She showed me a letter she had received from him in days of yore, and, though the handwriting on the birthday-card was disguised, proved beyond a shadow of doubt, on comparing it with the letter, that it was from the young fellow in question. The lady was very pleased when I pointed this out to her, and I have since heard that the quarrel has been patched up and that the parties are to be married a few weeks hence.

#### CLERK WAS GUILTY.

Last February a well-known city merchant received a gaudily-colored valentine. He brought it to me, stating that he thought the sender was a clerk in his employ to whom he had refused an advance in salary. He wanted to know whether he had surmised correctly. The word "miser" was written on the valentine in ink, and on comparing this with the usual writing of the clerk in question I discovered similar peculiarities in both, proving that the clerk was the guilty party. However, for the foolish young fellow's sake, I kept my knowledge to myself, pointing out to the merchant that in suspecting his clerk he probably was making a mistake.

The difficulty a forger has to contend against when imitating someone's handwriting is in disguising his own. Ex-

## ON THE FARM

### HORSES THE MARKET DEMANDS.

I have always insisted that the draft horse is the best type for the farmer to raise, writes Mr. James Hope. He can do it to better advantage and make more money at it than by attempting to raise fast horses. During the past summer I have watched the draft horse market with interest. It is true that for the most part, draft horses from the middle of June to the middle of August this year brought slightly lower prices than they did before that time and since. The fault, however was with the horses and not with the market. Had the horses during that time been of as high grade as usual they would have sold for as many dollars.

The taste in the horse market is changing, as is also the manner and time of buying. For instance, the lumberman, fearing that if he waits until the usual time, he will not be able to get what he wants, appears at the leading horse markets many weeks ahead of his usual trips, fills his orders and is thus enabled to get what he wants. Further than this, eastern dealers are not only represented in the wholesale centres but have their agents scouring the country trying to buy at first hand. Price does not seem to cut much figure.

The greatest demand for the drafter is in the large cities. Take it all in all, he is the most easily handled of all breeds. He returns a larger net profit and is always saleable at most any time after he is five months old. There is no land too high for the profitable production of draft horses, but there is a right and wrong way of going about it.

It stands to reason that the higher the price of the land on which the horse is bred, the higher should be the aim of the breeder. It is an old saying and a true one that it costs as much to rear a horse that sells for \$100 as it does for one that brings three times as much. Hence it is largely a selection of breeding stock. When it comes to buying a high-class sire, the question of cost must not be given undue weight. It pays to get a good mare with strong points, one that will bring sizable and well proportioned colts. A true drafter with large bones, correct in conformation, a good actor and highly bred, will always do well. It is a safe proposition to select a big horse, short of leg and with plenty of substance.

Sometimes it may be necessary to introduce a little more range or shorten up the backs of mares in a certain district, but even then it will be found that the properly fashioned sire will take the shorter road to the end than one mare or less of a monstrosity in the direction indicated. In short, in the breeding of present day drafters, we must use sires that are considered good by competent judges. It is the very qualities that the judge observes that sell the colts for big money.

### HOME DAIRY TO CONSUMER.

I have been in the dairy business for about 25 years, have conducted a retail milk business for 12 years and a wholesale milk and butter business for private customers a good part of that time, says Mr. Peter Gearhart. During this period I have had much experience with various breeds of cattle and their care. As to breeds, if I were starting a herd for a milk dairy, I would get either Holstein or a milk strain of the Red Durham or Shorthorn family.

If I wanted a butter herd I would get either Jersey or Guernsey. But in any event, pure-bred cattle. They must have better care than our native stock, but will more than pay for the extra care and feed. At present I have a herd of Jerseys and make butter for private customers at 30 cents a pound the year around. The demand is always greater than the supply. The butter is made

potatoes are tender. Then drain carefully and mash, adding the beaten egg, butter and pepper. Take a rounded tablespoonful of this mixture and push off into hot, deep fat.

**Fricassee Steak.**—Cut the steak from the round or rump into small squares, and flour them lightly. Put some dripping into a frying-pan. Slice into it a Spanish onion, and add some cooked tomatoes, if in season (if not, half a teaspoonful of tomato pulp will do); lay in the pieces of steak and fry them a nice brown. Put the pieces of steak into a saucepan, strain the contents of a frying-pan over, add a teaspoonful of boiling water and stock, and simmer gently for a good hour. Serve with boiled rice, as if for curry. The slices of onion can be left in with the steak if liked.

#### HINTS FOR THE HOME.

**To Harden the Icing on Cakes.**—Stand them when iced in a dry place for four or five days. The icing should be mixed very stiffly and flattened with a knife dipped into boiling water.

**To Remove Stains from Flannel.**—Take the yolk of a raw egg, mix it with a tablespoonful of glycerine, and apply to the spot; let this soak in well before washing the garment in a lather of boiled soap.

**Make Celery Salt.**—Procure some celery seed, dry it thoroughly on a baking sheet, pound it in a mortar till quite fine, and add two parts to one of dried salt.

Scratches in varnish will entirely disappear if a coarse cloth that has been saturated with linseed oil be laid over them. This simple remedy is invaluable to those who have the care of carriages and other highly polished furniture.

**To Make Boots Wear Well.**—When buying new boots, never wear them before putting on the sole two coats of varnish. This treatment makes the boots last twice as long, besides rendering them watertight.

Never throw away egg shells. If they should be washed and added to the stockpot to clear the soup.

Clothes pegs boiled a few minutes and dried quickly about once a month become more durable.

**On Bruises.**—When the skin is not lacerated, treat them by applying a pad of lint in eau-de-Cologne and keeping the pad in position by a bandage.

To clean plaster of Paris ornaments, cover them with a thick layer of starch and let it dry. Remove with a stiff brush.

When cooking fruit, especially dried prunes, apples, etc., add a pinch of salt and you will be surprised at the improved flavor. A pinch of salt is sufficient for a fruit tart.

When making stock never allow it to stand in the saucepan all night, but strain off into the basin while still hot. Remove the fat before adding the meat and liquor to the bones again.

**To Clean a White Fur Rug.**—Put the rug on to a firm table and rub it well with bran moistened with hot water. Rub next with a flannel till the fur is quite dry, then with a piece of book muslin apply dry bran in the same manner. Afterwards put some magnesia into a muslin bag and well rub into the fur. It is an improvement to stretch the skin before beginning this process. To accomplish this, first sponge the hide with a mixture of salt and water, taking care not to wet the fur, put the skin fur downwards, on to a table, and, with the hand, stretch it as far as possible. Keep it in the desired position by nailing it with tin-tacks on to the table.

**To Make Paper Stick to Metal.**—Dip the metal into a strong hot solution of washing soda and wipe it dry with a clean duster. Then apply onion juice to the surface of the metal, when any paper will adhere so firmly that it will be found difficult to separate them.

**To Restore Scorched Linen.**—Add to half a pint of vinegar half an ounce of soap and two ounces of fuller's earth, boil till thoroughly mixed. Spread some of the paste on the scorched article with a knife; let it dry on and the scorch will disappear. The mixture should be kept in a covered jar for use.

Orders to commit murderers would arrive in Italy and Spain from Geneva and London, and it makes one shudder to learn that Panizzi, a member of a similar lawless band called charcoal-burners — Carbonari — who was exiled from Italy, was for many years the chief librarian at the British Museum!

The election and initiation of members into the Black Hand was exhaustive and terrifying to all but those of strong nerve. After strict inquiries and a unanimous vote, the candidate would be summoned to a meeting; after firing at a crucifix to show he had no sentiment that would prevent his being faithful to the band, he was blindfolded and accused of being a spy, whereupon the chief would order the company assembled to

#### REND HIM LIMB FROM LIMB.

If he did not flinch, they tore the bandage from his eyes, and he found a dozen musket barrels presented at his body; this test passed with no sign of fear, he would be told to pick a coin from the floor, and as he stooped the members tried to strike the coin with their daggers, often passing them through the neophyte's fingers.

Then a vein was opened in his arm, and he signed the oath of secrecy and fidelity in his own blood.

Besides being established at San Francisco and New York, the Black Hand is represented at St. Louis, Chicago and New Orleans. At the latter place it was particularly active and violent sixteen years ago. In May, 1890, a band of Mafiosi laid in ambush for a company of the Stoppaghiera, a secret society opposed to the Black Hand, and killed and wounded six. Forty murders had already occurred among Italians and Sicilians in that city, so the police made a special effort in connection with this new crime and arrested six persons. But during the trial all the witnesses were assassinated.

#### MAFIA ALMOST BEATEN.

In spite of this, the prisoners were convicted, but counsel appealed successfully for a new trial. Mr. Hennessy, the Chief of the Police, made such exhaustive research pending the fresh trial that the Mafia feared its entire discovery and annihilation both in America and Europe.

Ten members of the Black Hand were deputed to assassinate him, and a volley of bullets was discharged at him from a dark alley one midnight. He emptied his revolver, fully twenty shots being exchanged. Eleven Sicilians were arrested on suspicion, but in spite of overwhelming evidence, the jury, intimidated by threats of murder, found six not guilty, giving them, as they alleged, the benefit of the doubt. A fresh charge preferred against them, however, sent them back to the county gaol.

The populace of New Orleans were now wildly excited and indignant. Led by a lawyer named Parkerson and several prominent public officials, 2,000 persons assembled at the Clay statue on March 14th, 1891, and, armed with guns and revolvers, stormed the prison where the nineteen accused lay.

#### JUSTICE WITHOUT THE LAW.

Some of the assassins had secreted themselves in the women's quarters, hastily vacated for their benefit; but they were all found and either shot down in the prison or taken out, hanged from the nearest lamp-post, and riddled with bullets.

The United States had to pay \$25,000 to the Italian Government for the widows and orphans of the persons killed, but a severe blow had been dealt at the Mafia for the time being. This rough treatment, however, served to win for the Black Hand the sympathy of many Italian gentlemen in the United States who had never before countenanced their wicked acts.

"I am inexpressibly sorry, Mr. Smithers," she said, "to learn that when you called the other day Tiger bit you." "Oh, that's all right," he said, with a forced effort to be cheerful. "No, it isn't," she scolded; "the poor little fellow has been ill ever since."

For the young fellow's sake, I kept my knowledge to myself, pointing out to the merchant that in suspecting his clerk he probably was making a mistake.

The difficulty a forger has to contend against when imitating someone's handwriting is in disguising his own. Experts are always on the lookout for foreign characteristics, for they very often lead to the identity of the forger.

#### PHOTOGRAPHIC TEST.

Were it not for the camera, the detection of forgeries would be almost impossible. Quite recently a cheque for the sum of £200 was honored at a London bank. It proved to have been forged. An eminent expert who was called in examined with a powerful hand-lens the signature on the cheque without finding anything suggestive of forgery. He then put the cheque to the photographic test, and found upon the resultant negative unmistakable signs of erasure and "shading." The forger, whoever he was, had first sketched the name in pencil and then filled it in with ink, "shading" the down strokes afterwards with a fine pen.—London Answers.

#### GERMANY'S PENSION SCHEME.

##### Large Sums Paid Out Since Bismarck Inaugurated Scheme.

The 25th Anniversary of the late Prince Bismarck's announcement in the Reichstag that the Emperor was determined that the state should systematically assist the working people, male or female, by accident, sick and old age insurance, was commented on widely in the German press recently, which generally approved or disapproved the results, according to the political opinions of the commentators. During the last twenty years \$555,750,000 has been paid out for sickness, \$232,750,000 for accidents, and \$13,500,000 for old age.

The law also provides for compulsory contributions by employers and employees. In cases of sickness two-thirds of the expenses are paid by the employer and one-third by the employee. In accident cases all the expenses are paid by the employer, and in cases of old age pensions half the amount is paid by the employer and half by the employee, the Government supplementing each pension with \$12.50 yearly. The total of the various funds is \$375,000,000, and the amount paid in since the law was passed is \$1,656,750,000. Sixty million persons have profited by this legislation.

#### \$1,200 LOST—REWARD 6 CENTS.

##### Woman in England Bestows Munificent Reward Upon Honest Lad.

A correspondent of the London Daily Mail sends an account of the loss and recovery of a bag of gold, containing £240, and the "generous" reward of threepence paid to the finder.

The bag was found on a seat at Newton Heath Railway Station by a boy, who at once took it to the lost property office. From subsequent inquiries it was found that the money was the property of a lady who had been on a visit to Newton Heath, and who did not miss the bag until she arrived at Victoria Station, Manchester. She duly reported the loss, but could give no idea where she had left her property.

After recovering her gold the lady rewarded the finder with threepence.

#### EXPENSIVE SPORT.

Automobiling is an expensive pastime at best. If the German Government can carry through the Reichstag a Bill which it has recently introduced, the sport will become still more expensive. The Bill provides that automobilists must pay a life annuity to persons dependent on those who may be killed by their cars and to persons permanently injured by accidents. The Courts are to fix the amount, which is to be paid by the owner, whether he was in the car or not.

better care than our native stock, but will more than pay for the extra care and feed. At present I have a herd of Jerseys and make butter for private customers at 30 cents a pound the year around. The demand is always greater than the supply. The butter is made in rolls or sizes to suit the customers, put on wooden plates, covered with parchment paper, and marketed once a week. I use the deep setting plan of skimming.

Pasture in summer and feed silage with clover in winter. Some grain is fed the year round varying the amount to suit the needs. I have always found that the greater variety of grains and rough feed, the better the results. I would not advise feeding silage exclusively. But no one who keeps six or more cows can afford to be without a silo. Silage, undoubtedly, is the best and cheapest winter feed yet discovered. I aim to make my cows average 250 pounds of butter a year.

#### VALUE OF A HAND SEPARATOR.

Every progressive dairyman should have a hand separator. You can then give the calves fresh, sweet skim milk. It is expensive to feed calves on whole milk, especially when you can sell the butter for 25 cents per pound and supply the fat taken from the milk by skim-milk or oilcake at a few cents per pound.

From the other side, the separator is certainly a splendid investment as a labor saver. It is also valuable as a means of getting all the butter fat from the milk. Get a good standard machine, but don't get a very small one unless you have only a very few cows. For ten to twelve cows we would certainly recommend a 450 to 650-pound per hour separator.

Wash the machine every time it is used. Don't believe the agent who tells you that you can wash his machine by simply dipping the parts in warm water. Anyone who has handled vessels, in which milk has been kept, knows that that is not so. Use a brush, not a dish rag, to wash each piece of the separator, then pour boiling hot water over the parts and allow to dry.

Use plenty of oil on the bearings and thus greatly increase the life of the machine. Fasten the separator securely to the floor, take three minutes to speed it up, heat up the bowl with a little lukewarm water before separating, then flush out with a little clean water after the milk has run through, to get all the cream.

#### MADE THEM HAPPY.

##### Gave Money and Food to Hungry Men and Urchins.

The incidents of the London streets were a never-failing source of inspiration to Dickens, as every reader of the master knows. Last week among the poor porters and street arabs of Covent Garden fruit market a thing happened which would have rejoiced the heart of the author of "The Cricket on the Hearth." A rich man came out of an adjoining hotel in the morning and talked with the groups of idle and hungry men and boys, and selecting one among them, made him the dispenser of his bounty. The sum of £100 was given away in notes and gold, and the generous donor disappeared, to turn up next day to give half crowns and a breakfast in a coffee house to a crowd of little ragged urchins in the market. This market philanthropist may not be pursuing the most business-like or useful method of doing good to the poor, but he has made a discovery by which the kindly-disposed rich folk may profit. He has found the delight to himself of seeing the money he gives gladdening the poor and hungry, and awakening their better nature, is far better worth the money than sending it to a fund or a public charity, which has no personality, and may not have much human nature. The hero of the Covent Garden is a wealthy Lancashire manufacturer, who has had huge enjoyment out of his adventure.

# BRITISH WARSHIPS SICK

**EIGHT PER CENT. ON THE INEFFECTIVE LIST.**

**False Economy of the Government Is Responsible for Many Mishaps.**

The docking of the battleship *Hindustan* at Portsmouth, Eng., recently owing to defects in her steering gear, adds another to the list of British warships which have been put out of action temporarily by mishaps. According to the last published return, 8 per cent. of the effective warship strength of the British navy was in this plight when the statistics were collected. This proportion does not include the battleships and cruisers in dockyard hands undergoing repairs and refits that have been necessitated by wear and tear.

When the attempts were being made to refloat the *Montagu*, the battleship Duncan touched a pinnacle rock of the Outer Shutter reef. Her double bottom was pierced, and one of her after-compartments flooded. She is now in dockyard hands at Portsmouth, and will not be seaworthy for several weeks.

## BUMPED ON ROCK.

The armored cruiser *Good Hope* is also on the "sick list." Several alarmist stories regarding the nature of her accident have been circulated. The following are the facts of the case:—

On the evening of June 26th, when the naval manoeuvres were in progress, the *Good Hope* left Plymouth for a given rendezvous. She had orders to escape by way of the eastern Channel, in order to avoid hostile torpedo craft, though warships and liners invariably use the western entrance to the Sound, as the water there is much deeper.

There was a good deal of fog when the *Good Hope* went out. She proceeded cautiously, but bumped suddenly on a rock, which is supposed to have been the Outer Shagstone.

Her outer plating was holed, but not her inner skin, and the pumps easily kept the double bottom free of water. The vessel proceeded, and carried out her assigned work during the manoeuvres, but when she came to be docked it was found that her plating had been fractured and strained for a considerable length, and it will be some time before she is again ready for sea.

## FALSE ECONOMY.

The grounding of the battleship *Dominion* on the North Atlantic station is the latest episode in the chapter of accidents. She has holed herself and is making water, which means that she will have to go into dockyard for a considerable time.

The new battleship *Hibernia*, which will be commissioned shortly, and was placed in the Keyham Extension Basin at Devonport a few days ago to prepare for her trials, has been discovered to have a defective armor plate in her broadside belting. To unbuild this and fit a new plate will delay the completion of the ship by another two months.

The frequency of accidents of this nature is having a disquieting effect on men who have the interest of the sea service at heart. It is pointed out in connection with the *Hindustan* accident that when she went for repairs into the King Edward Dock at Gibraltar, Spanish labor was largely employed.

Many experts hold to the opinion that the false economy in this direction is responsible for the *Hindustan* having to undergo repairs again.

## SOMETHING UP HIS SLEEVE.

**Sir John Fisher's Surprise for Foreign Navies.**

A remarkable vessel for the Royal Navy is being fitted out alongside the shipyard of Sir James Laing & Sons at Sunderland. She is a sequel to an experiment made some time ago when

# ABOUT UNKNOWN BRAZIL

**GREAT SOUTH AMERICAN REPUBLIC IS LITTLE KNOWN.**

**Covers as Much Ground in South America as Does the United States in the North.**

One of the most eminent statesmen and journalists of the great South American republic is the Honorable Leao Veloso.

He contributes to Appleton's Magazine an article on Brazil To-day, which is full of information for the general reader. He says incidentally:

"Brazil is very little known to foreigners, who heretofore have been satisfied with knowing it to be the largest and most populous of South American republics.

"Brazil is indeed a large country — much larger than anyone realizes until he appreciates the fact that its territory covers as much ground in South America as does the United States in North, and that in the Eastern hemisphere only the colossal empires of Russia and China can rival the dominions of this vast republic of the south. Its coast line, bathed by the waters of the Atlantic, extends north and south 3,600 miles, and its inland plateaus in some places reach the watersheds of the Andes, which hug the Pacific Coast. This great block of territory, which borders upon every South American country except Chili, is situated between five degrees ten seconds latitude north and 33 degrees 46 minutes ten seconds south, and while most of it lies in the torrid or tropical zone, there is a wide tract which belongs to and enjoys all the advantages of

## THE TEMPERATE ZONE.

"Nature has done all in its power to facilitate communication between the various parts of the country. It would take a fifteen-knot steamer ten days to cover its coast line. Brazil possesses the greatest river system in the world, the principal factor of which is the Amazon river, many of whose tributaries can be navigated for 1,000 miles and whose stream is penetrated for 2,000 miles and more by ocean steamers plying between New York, Manaus and Iquitos. In the south, starting from Montevideo, the capital of the Republic of Uruguay, Brazilian steamers reach the inland state of Matto Grosso and require over a month for the return trip. These two systems, that of the Amazon and that of La Plata, form a great bow whose centre is in Western Brazil. Parallel with the Atlantic and forming the string to this great bow, the great San Francisco, a river almost unheard of abroad, stretches its navigable waters for over 1,000 miles.

"Brazil's population is to-day calculated at 20,000,000, and this does not include the Indians or savage tribes which still exist in large numbers in unexplored regions. This figure shows how thinly the country is populated and betrays

## THE WEAK POINT

in its development and progress. What Brazil needs is immigration and former governments have spared neither money nor effort in bringing people from all lands.

"Rio de Janeiro, the capital of Brazil, has approximately 1,000,000 inhabitants, and this figure is destined to increase rapidly, owing to the great improvements which have been inaugurated and pushed to conclusion during the last three years. First in importance of these fundamental improvements is the fight for the complete-sanitation of the city which is being brought to a successful close. The Havana system of prophylaxis, consisting in the extinction of the mosquito which transmits yellow fever, has been successfully applied, and the terrible scourge which at one time gave Rio de Janeiro the name of the White Man's Death, is to-

# REVEREND THOMAS LORD

**NINETY-EIGHT YEARS OLD, BUT GOES ON PREACHING.**

**Enjoys a Walk, His Memory is Good, His Voice Clear and His Sight Serviceable.**

If not actually the oldest surviving minister of the Gospel in England, the Reverend Thomas Lord is certainly the oldest preacher who still preaches. He will be 99 next April and yet on a recent Sunday, he delivered two sermons at a church where he held a pastorate over 70 years ago. Trim and scrupulously fresh and neat in person — though old-fashioned enough to wear still something in the nature of a stock, Mr. Lord is instinct with old-world courtesy. He is almost as alert in body as in mind, and he enjoys a brisk walk as much as he does a substantial dinner. His memory is unimpaired, his hearing excellent, his voice rich and pleasing and his sight, though not what it used to be, is still serviceable.

He was born at Olney, where his father had a little shoemaking business. When he was still a small shaver, his father moved to Northampton where young Tom was brought up as a shoemaker and he diligently practiced his craft until his success as a lay preacher brought with it an inevitable call to the ministry. He has been thrice married. His first wife died after two years, but with his second wife, he lived for 53 years; and he is one of the few people who have enjoyed a golden wedding with a second wife. His third wife remained with him seven years.

## EXTREME OLD AGE.

has come to Mr. Lord with none of its usual attendant terrors, save the loss of loved ones. But he has no secrets to impart by which others might hope to attain longevity with equal freedom from mental and physical infirmities. He knows of nothing in particular to which he attributed his immunity from most of the heavy burdens of advanced years. He has never been a faddist in the matter of foods. He has never smoked tobacco. He used to enjoy a glass of ale, and had no scruples about drinking, until he came to the conclusion that for the sake of the weaker brethren he ought to become a total abstainer. He had always worked hard, but never too hard, and has enjoyed his work. He has gone in for moderation in all things. But so in an equal measure have thousands of people on whom, nevertheless, the infirmities of old age have lain heavily. Inheritance will hardly account for Mr. Lord's remarkable exemption from the common lot of humanity. In the earlier days of his ministry, he was far from being a strong man, and found preaching such a severe strain that he had frequently to lie down between sermons.

Perhaps it is Mr. Lord's optimism more than anything else, that has rendered the down-hill stage of life such a smooth one for him. His outlook on life has always been a cheerful one, and cheerfulness, the modern doctors say, is

## THE BEST KIND OF TONIC.

Mr. Lord believes that on the whole, the world is growing steadily better instead of worse. In his youth, Northampton had a population of 10,000. Its boot and shoe industry was then carried on with Ruskinian simplicity. There were no huge factories, no steam whistles, no railways—none of the things that characterize the Northampton of today with its population of 100,000. And yet Mr. Lord declares that the Northampton of his boyhood was a lower, dirtier, more vicious place from every point of view than the hustling city of the present. The whole standard of life was lower, he says, and the comfort of it incalculably less. The agricultural laborer of these times, too, he says, despite the outcry concerning the decadence of

# CAREER ENDS IN CRIME

**FAIL OF MAYOR SCHMITZ, OF SAN FRANCISCO.**

**Chief Magistrate Indicted With Having Murderers on the Police Force.**

The career of Eugene Schmitz as mayor of San Francisco is one of the most unfortunate and saddening it is possible to contemplate. A man of splendid appearance, a native son of the Golden State, a musician of no mean skill, he was elected to the mayoralty over four years ago under circumstances that made him a national figure.

There had been a great strike in San Francisco. The city was divided into two classes, the members of the Employers' Association on the one side, and the labor unions on the other. During the strike it was charged that the then mayor of San Francisco had permitted the police force to be used in an improper way, and had sworn in as special policemen a number of convicts, thugs and murderers.

## PLEDGED TO HONESTY.

Then the Union Labor Party, an organization composed of delegates from various labor unions, nominated Eugene E. Schmitz for mayor, and after the fullest discussion he was elected by a vote nearly as great as that of his two opponents. He pledged himself to an honest administration of the law and to an equal consideration of all classes and conditions of people. He pledged himself to the purchase and operation of municipal railways, and he pledged himself to fight vigorously against the encroachments of corporations on public streets.

## BEGAN WELL.

During the first term he made an excellent record. As a representative, honest man from the ranks of the plain people, he made the hearts of the plain people glad by doing things he should do and leaving undone the things that ought not to be done. He strengthened the school department by the appointment of some really capable directors, he got rid of a dishonest chief of police, and put in his place a fairly efficient man, he appointed a Board of Works that prevented corporate encroachments on the public streets, and at the end of his term he appealed to the people for re-election.

His old enemies of the Employers' Association had watched his administration, had seen that he was doing right and they rallied to his standard. He was triumphantly re-elected by a large majority and more than ever was a remarkable and growing figure in the public eye.

## CORPORATION CORRUPTIONS.

But unfortunately Mayor Schmitz, when he became important to the corporations, was tempted by them. An honest, clean man in every relation of life until he had achieved political success, he seemed to waver when the corporation corruptors approached him.

## EXTORTING MONEY.

During the earthquake and fire he seems to have acted a man's part in a manly way, but when it was over he broke down completely. The United Railway Company wanted trolley franchises on all their lines. This concession was worth more than \$10,000,000. The market price on the securities after it was granted proved that fact. It was charged openly that the corruption fund paid by the United Railroads to get permission from the board of supervisors and have it signed by the Mayor was over \$700,000, and that is one of the things the grand jury is now investigating. Whether or not Schmitz actually received that money is not yet proved, but the charge of extorting a large sum of money by blackmail from the French

## Sir John Fisher's Surprise for Foreign Navies.

A remarkable vessel for the Royal Navy is being fitted out, alongside the shipyard of Sir James Laing & Sons at Sunderland. She is a sequel to an experiment made some time ago, when an old cruiser was converted at Portsmouth into a floating workshop to attend on a fleet at sea for the execution of repairs, the experiment evidently being very successful, as the vessel at Laing's is especially built for the same purpose on much more extended lines.

It would, in fact, not be inapt to describe her as a seagoing dockyard, so extensively is she being fitted with shipyard and engineering machinery. Considerable secrecy has been preserved with regard to her, all officials connected with her construction being sworn under the official secrets act. She was launched without ceremony some months ago and christened the India Brahma, which name might suggest that she was meant for an eastern trader, but her internal fitting is now so far advanced that her purpose is obvious and she is now officially referred to as his Majesty's ship the *Exoclops*.

Externally what most distinguishes her is the number of smokestacks and the positions of some of them. The latter are to carry the smoke from the funnels and workshops below. She is a vessel of 11,000 tons dimensions, length 450 feet, breadth 55 feet, depth 40 feet. An important part of the ship is the electrically-generating station, as all machines and cranes are to be worked by electric motors, and of course she will be fitted with wireless telegraph apparatus.

The vessel, which will carry a crew of about three hundred men, mostly artificers, is expected to be ready for sea about next Easter.

## "WORLD'S COMMODORE."

### British Captain's 50 Years' Command in Mercantile Marine Service.

The world's oldest sea captain, Mr. T. E. Parker, who has just arrived at Liverpool with his vessel, the *Holt Hill*, after three years' voyage, celebrated the completion of his fiftieth year of continuous command in the merchant service.

The Merchant Service Guild, who have been waiting his arrival, have conferred upon him the honorary title of Commodore of the World's Mercantile Marine Service, with the concurrence of the Guilds in America and on the continent.

Captain Parker, who is eighty years of age, related how he brought the first sample of gold dust and quartz to London from South Africa in 1860.

Twenty years ago he was the hero of one of the most peculiar wrecks on record. His ship, the *Ellenbrook*, while weathering Cape Horn, was caught between two enormous swells, one running from the south and the other from the west. The ship fell into a trough and turned turtle. Captain Parker held on to the wreck for three days and was picked up by a passing ship.

## TOOTHBRUSHES FOR CHILDREN.

### German Scholars are Having Their Mouths Looked after.

Within recent years increasing attention has been bestowed abroad on the state of a child's teeth. At Strasburg a dental clinic has opened at the University for the treatment of school-children. It consists of a waiting room, an operating room, and a doctor's room. Hither all the schoolchildren are sent, in order, by their teachers. Each child is quickly examined, as many as 80 children being dealt with in an hour, and nearly 300 per day, by a single doctor. Teaching goes hand in hand with treatment. The doctor tells the child how to use a tooth brush, sees that it uses one, and then sends him home to practice with it. The movement is spreading. In Wiesbaden and Mulhausen school dental clinics are to be erected.

city which is being brought to a successful close. The Havana system of prophylaxis, consisting in the extinction of the mosquito which transmits yellow fever, has been successfully applied, and the terrible scourge which at one time gave Rio de Janeiro the name of the White Man's Death, is today practically banished from the capital city."

## MINING DANGERS INCREASE.

### Death Rate from Accidents in Coal Mines in Britain Increases.

In the United Kingdom last year 10,820 more persons were employed in coal mining, 353 fewer in mines under the Metalliferous Mines Act, and 2,758 fewer under the Quarries Act than in 1904.

A curious feature is the increase in female employment. Of the surface workers at the coal-pits, numbering 167,251, no less than 5,929, or 3.54 per cent., were females, this being an increase of 416 as compared with 1904. At the metalliferous mines there were 11,865 surface workers, including 225 women and girls.

The coal mine death rate from accidents was 1.35 per 1,000 workers, being an increase on 1904, when the rate was 1.24. An increase is also shown for the metalliferous mines, from 1.19 in 1904 to 1.58 in 1905.

In all, 887,524 persons were employed in and about the mines of the United Kingdom, and 94,319 in and about the quarries.

## WHAT IS A WASTREL?

### Meaning of New Popular Term Applied to Old London's Spendthrifts.

The use of the term "Wastrel," which has been universally applied to the Socialists, Progressives, and other municipal spendthrifts, is becoming so universal that it is interesting to read the following account of the derivation of the word and its use in various parts of England which has been provided for us by a distinguished scholar:—

"Wastrel" is properly a substance thrown away because it is useless. It is used for rubbish and refuse.

To law it is the term employed for waste land, for instance the land in Cornwall covered with tin refuse from the mines is said to "lie in wastrel."

About 20 years ago the practice sprang up of calling persons—such as the "submerged tenth" or neglected children—"wastrels" because they were of no use. Also, in some parts of England a spendthrift is called a "wastrel." It is especially so said in Yorkshire and Cumberland. A "wastrel-shon" (in York-shire) is a place where work is expensively and yet badly done.

The idea of waste runs through the word in all its significance. A knife that is made for show and not for use is called a wastrel. And in Lancashire crooked, cheap dishes and plates sold by wandering postmen are generally called "wastrels."

## CHANGED HIS TUNE.

In one of the Western States of America there is a judge who is very proud of two things: his rigid observance of the law and the pugilistic ability of his son.

These hobbies came into violent conflict once, but the problem was happily solved. It happened that the judge's farm was on the boundary of his State, and one day he was sitting on the fence that separated it from the next State. While he was there his son and an acquaintance came along quarrelling, and, just as they got in front of the judge, began to fight.

The latter thereupon exclaimed in his most official tones:—

"In the name of the law I command you both to keep the peace!"

Just at that moment the support upon which the judge was sitting gave way and dropped him on the other side of the fence.

Instantly regaining his feet, he shouted to his son:—

"Give it to him hot, Jim! I'm out of my jurisdiction."

umpion or his boyhood was a lower, dirtier, more vicious place from every point of view than the hustling city of the present. The whole standard of life was lower, he says, and the comfort of it incalculably less. The agricultural laborer of these times, too, he says, despite the outcry concerning the decadence of agriculture and the destruction of rustic simplicity, is a great improvement on the bumpkin of 70 or 80 years ago.

## WHAT ARE IKONS?

### They Represent Saints, and are Considered Very Holy by Russians.

Many people doubtless have wondered at the word "ikon," which has occurred so frequently recently in telegrams from Russia.

Most of the papers, when they condescend to translate the term, refer to it as "sacred picture." But that is only half the truth.

The ikon is painted, it is true, but it is also stamped out in metal bas-relief, or carved in wood, silver or gold. Always, it represents some saint. And, of course, it is very holy. That is why they hanged three peasants at Windau the other day on the mere suspicion of having mutilated one.

Whole villages in the Vladimir province are engaged in manufacturing these ikons, for which there is an enormous demand, as every Russian household possesses at least one; and most, several.

The cheapest ikons are sold at a shilling the hundred; but the price ranges upward to many hundreds, or even thousands, of pounds apiece. These latter expensive ones are of gold, elaborately chased and studded with precious stones.

Some of the more famous ikons, preserved in the great cathedrals of St. Petersburg, Moscow, etc., are practically priceless, the jewels alone with which they are bedecked being not infrequently worth from £30,000 to £80,000. Others are deemed so sacred, that they are only exposed to the vulgar gaze once in three, four or five years.

## ENGLISH GIRL WEDS MATADOR.

### Idol of Spain Captured by Daughter of Wealthy Britisher.

One of Spain's most famous toreadors, Rafael Gonzalez—famously known as "Machaquito," or "The Little Hammer"—has just been married at Cartagena to Miss Clementson, the daughter of a wealthy British resident.

Half the women in Spain are envious of the young English girl, for Machaquito is the idol of the whole nation. He was one of the most daring of the matadors who appeared at the great Coronation bullfight.

After making his appearance in the arena and saluting King Alfonso and Queen Victoria, he gravely marked out a ring with his sword and stepped inside it. A roar of applause went up from the vast audience, for the act signified that Machaquito would not retreat from that spot until either he or the bull was killed. Without stepping from the ring he fought off the charges of the bull until his sword had reached its heart.

It was at a bullfight that Miss Clementson first saw Machaquito, and then, carried away by his cool daring, she threw her fan to him. The matador picked it up, kissed it, and the courtship began from that day. For the Coronation bullfight Machaquito received \$1,500 in addition to innumerable gifts of jewellery, and his revenue, and his revenue, at a low estimate, amounts to \$50,000 a year.

## TREE THAT RAINS.

In the Canary Islands there is a tree of the laurel family that occasionally rains down in the early evening quite a gopious shower of water drops from its tufted foliage. The water comes out through innumerable little pores situated at the edge of the leaves.

get permission from the board of supervisors and have it signed by the Mayor was over \$700,000, and that is one of the things the grand jury is now investigating. Whether or not Schmitz actually received that money is not yet proved, but the charge of extorting a large sum of money by blackmail from the French restaurant keepers is backed by direct testimony.

## FRANCHISE HUNTERS.

The corporations that for years have had San Francisco by the throat are only too glad to flatter and bribe a man who had once opposed them. The United Railways in San Francisco, like the United Railways anywhere, when any sort of franchises are wanted, have no more consideration for the victim they are about to destroy than has the wolf for the lamb who furnishes him a necessary supper. So long as the public streets of American citizens may be turned over to private corporations by the vote of a board of aldermen and a mayor, so long will aldermen and mayors be corrupted.—New York American.

## ROSE TO BE KING.

### The Romantic History of a Telegraph Operator.

There is at present in Paris, France, a monarch who at one period of his career was a telegraphist. The story of his advancement reads like romance. Mademba is the name of this sovereign. He is of dusky hue, and hails from the vicinity of the Niger. He owes his royal rank of King of Sousouding to General Archinard. When he arrived at man's estate he entered the postal service.

With his rifle in hand he constructed the telegraph lines during a period of revolt in 1880-1881. In 1887, when General Gallieni was appointed governor of the forces of the French Soudan, Mademba was made a diplomatic agent, and commanded the auxiliary cavalry troops in the expedition organized against a rebel chief. In 1890-91 the French Soudan was still in revolt, the rebels pillaging and burning everywhere. The district of Sousouding was particularly devastated.

When the rebellion came to an end General Archinard remembered the exertions of the telegraphist. He considered that his conception of morality and authority ought to be applied to the natives. And so it came about that Mademba was made King of Sousouding, the name of the town that had been burnt by the rebels. He was given as subjects 500 prisoners of war, bandits all, who were not worth the cord necessary for hanging them.

Once invested with royalty, Mademba set to work to make these black ruffians industrious cultivators. Soon prosperity returned to the district. The rebels and thieves speedily became thrifty workers in cultivating cotton and fathers of families. For the rest, Mademba is a loyal friend to France. In 1896, on the proposition of General Trentinian, he was made a chevalier of the Legion of Honor and thanked for the services he had rendered to the country of his adoption.

## LONDON EAST END HAPPINESS.

### Bishop of London Pays Tribute to Home of East End Workmen.

"Let a man be in work," said the Bishop of London to a gathering of 4,000 men in the People's Palace, Mile End, London. "Let him be a straightforward honest man, and love his wife and she love him, and there is no happier home in all the world than the home of a working man in East London."

The Bishop added that he knew the men of the East End. He had been round to more of their homes than he could count, and had married as many as forty-nine of them on a Christmas Day at Bethnal Green.

He wished to unite them in a chivalrous spirit towards women, and to form a league of public opinion which should set its face against conduct unworthy of a man.

Not a soul of all the millions that have come into the open hands of Count Boni de Castellane has remained in them—that is all that can be said to his credit. He has not pocketed the Gould millions; he has simply thrown them away. With empty hands and empty pockets Boni faces a crowd of angry creditors that would bleed him dry even though more of the Gould millions were given him. Maitre Cruppi has plainly stated that it is not the intention of the Countess to pay one cent of these debts. Literally all that remains to Count Boni is the \$5 a day he gets as pay for being a French Deputy, the dole his family gives him and the clothes on his back.

### HORRIBLE SUFFERINGS.

#### Thirty-two Thousand Political Exiles Sent to Siberia.

Siberian journals are full of the horrible suffering which the political exiles undergo in Tobolsk, Irkutsk, and other sections of that desolate land. During the last eleven months, as many as 35,000 persons have been sent thither. About 2,000 have escaped, but the rest remain to endure a living death. They are sent to the marshes where nothing grows but a rank grass, and where no trade or craft can enable them to earn enough to prolong their miserable existence.

The Russian Government allows them exactly 2½ cents per day. The money sent by their friends rarely reaches them, being intercepted by the Czar's officials. In summer they keep body and soul together with fish caught in the rivers and coarse rye bread. In winter fish is worth its weight in gold and bread unheard of. Then they eat the grass from the frozen marshes. Little wonder that scurvy, cholera and typhus rage among them. This is not the worst, for they are obliged to live in the mud huts of the native Ostiaks, infected with that Siberian scourge, leprosy. It is not surprising that these exiles, most of them delicately reared men and women, envy their more fortunate comrades who have perished on the stockades of Russian fortresses for their political opinions and have thus escaped this certain, but slow, death known as perpetual exile. They have no hope for anything better and cannot even find a solace for their sufferings in work—for there is none to be done in this frozen wilderness.

In spite of the heavy death-rate, their numbers are steadily increasing, for every week brings out fresh victims. In fact, the numbers of political exiles have increased to such an extent that the Russian Government has decided to run special exile trains daily from St. Petersburg to Siberia. These trains carry only political prisoners, who are herded together like cattle in unwarmed wagons. They run at the speed of the so-called postal or courier trains.

And yet, in spite of these terrible sufferings, men and women in Russia are bent upon fighting for freedom. Within the last few weeks \$5,000 lbs. of dynamite, 400,000 bullets and 4,000 rifles have been found by the police, secreted in private houses in Moscow, St. Petersburg and other large towns. Never before have Russian prisons and Siberian marshes been so crowded with political prisoners as at the present time.

### ANIMAL SURGERY.

Animal surgery has now reached such a high degree of development that almost every operation to which human patients submit is made use of to prolong the lives of pet animals. The animal surgeon can rejuvenate the aged dog by fitting it with a perfect set of false teeth, and he can substitute a glass eye for the optic lost by a cat. Quite a number of dogs and cats which are minus a leg have been fitted with artificial substitutes, usually of leather; whereas in former days they would, after losing a limb, have been either killed or left to limp about on three legs. In one recent case a cat, having swallowed a small hatpin, was placed under the X-rays, and the pin, having been located, was drawn out by a skillful operation.

### A NEW CULT THAT MAY LEAD TO THE MILLENIUM.

#### It Aims to Realize a Life Hitherto Dreamed of by World's Thinkers.

Manchester, England, has produced a new school of thought which has been christened Sciensocracy.

Its followers believe that in days to come the rule of many will be superseded by the rule of science.

Their first general principle is freedom of individuality. Under its sway men would regard bread and labor as the fundamental religious law of life.

Sciencocrats say that every man should participate in the production of those things of which he enjoys the fruits.

Government, they further say, exists only that one class may keep another in subjection, and they advocate the adoption of a definite, consistent, and scientific policy.

#### "SCIENSADVISM."

The Conservative party exists, according to the followers of the new cult, to administer the country in the interests of the rulers. The Liberals exist as a means of checking the Conservatives; while the Labor and Socialist parties seek to break down the authority of the others and substitute for plutocracy a democracy which might be more evil in its effects.

The Sciencocrats seek to achieve their objects by establishing, as a first step, what they call a "Sciensadvism," a national assembly of scientists convened for advisory work, and open to every man or woman with an idea which could be called to the affairs of life.

Instead of making laws as governments now do, through Parliament, the Sciensadvism would make laws through its administrators, it being a belief with the followers of this school of thought that social science could be accelerated just as mechanical science has been.

#### IDEAL HUMANS.

They want to increase the rate of human evolution, to bring order out of chaos, to feed the hungry, clothe the naked, and ultimately abolish preventable disease and death.

They desire to build up a race of ideal men and women, who shall have opportunities of realizing "a life such as hitherto the world's greatest thinkers have only dreamed about."

The application of science to life will, they consider, restore the people to health, wealth and prosperity.

#### HOIST WITH HIS OWN PETARD.

Over-shrewd lawyers often furnish their advisories with weapons.

"Did you see this tree that has been mentioned, by the roadside?" an advocate inquired.

"Yes, sir; I saw it very plainly."

"It was conspicuous, then?"

The witness seemed puzzled by the new word. He repeated his former assertion.

"What is the difference," sneered the lawyer, "between plain and conspicuous?"

But he was hoist by his own petard. The witness innocently answered:

"I can see you plainly, sir, among the other lawyers, though you are not a bit conspicuous."

In another instance a blow directed against the character of a witness forcibly recoiled:

"You were in the company of these people?" he was asked.

"Of two friends, sir."

"Friends! Two thieves, I suppose you mean?"

"That may be so," was the dry retort, "they were both lawyers."

Seeds—"You say he left no money?" Baggs—"No. You see, he lost his health getting wealthy, and then lost his wealth trying to get healthy."

### LORD LYTTON GIVES THEM SOME GOOD ADVICE.

#### Teach Children How to Handle Money and Matters of Sex—Should Marry Young.

"Let girls marry at eighteen and boys at twenty, and the world will be relieved of some of its gravest problems." This was the advice given by a speaker at a conference of the Parents' National Educational Union at Brighton, England, recently, following an address by Lord Lytton.

Lord Lytton gave what he called "A young man's lecture to his parents."

"The time has come for parents to realize they have made some grave mistakes," he said. "In the first place, it is a mistake for a rich father to bring up his son in ignorance of the responsibilities of an inheritance. Some fathers go on as if they expected to live forever. Every boy should be taught

#### HOW TO HANDLE MONEY.

not alone for his own sake, but because he may some time have charge of other people's money.

"But a question more vital still is that of sex. There is a tendency among parents nowadays to assume an unwise timidity in speaking of such matters. If instead of being timid and obscure in their advice parents would be quite frank it would prevent much evil from which the world now suffers. To many girls the real meaning of marriage is a sealed book, and this is largely the fault of their mothers. From whom can they better look for advice than from their mothers? Yet the latter often remain silent because of a want of courage to speak plainly.

"Society is full of misery due to the blunders of parents in failing to speak out. How much of the evil in our great cities comes from this it would be dismal to contemplate. As a young man, I say to fathers, 'Speak to your sons, and remember that the best education a father can give is in the example of your own life.'"

It was here that M. Roger Goelji Hampson,

#### A BELGIAN PROFESSOR,

suggested fixing the marriageable ages at eighteen for girls and twenty for boys. "With this encouraged by parents, all the evils we have been talking of would disappear," he said. "The great trouble is that men and women marry too late in life. Let us urge them to marry earlier."

Lady Campbell suggested that there was a growing disinclination to marry among girls. "It is due to a selfish love of luxury and a dislike to begin married life in a humble way," she said. "Girls want to begin where their parents left off, and not at the beginning. If it were not for this selfish consideration of luxury, we should perhaps have earlier marriages."

#### HOW TO OBTAIN SYMPATHY.

He was a lawyer, and he well knew how to play upon the feelings of his fellow-men. Upon an occasion like the present, when he was pleading the cause of a plaintiff, who was a pretty little girl of nine, he shone to advantage.

"Gentlemen," he said, "can you stand by and see this poor child cheated out of what is, I argue, lawfully and legally her own? See—he lifted her in his arms—'how pretty and helpless one poor little is. Hush, hush, little one. Do not cry'—for the juvenile litigant was sobbing fit to break her heart—"the good gentleman in the big box over there will see that justice is done to you."

He put the youngster down, and his quick eye told him that the stroke had done good work among the jury. In fact, the eyes of one or two were moist.

Then the defending counsel arose. "Little girl," he said, addressing the plaintiff, "why did you cry just now?" "Please, sir," said the still sobbing child, "I—I had to. He pinched me so hard, it hurts now."

### CAUSED THE REVOCATION OF THE ON-THE-KNEE ORDER.

#### What Caused the Open Insubordination at the Portsmouth Navy Yard.

No longer will Lieutenant Collard, R.N., or any other officer of the British navy, be able to order seamen or stokers to kneel before him. The 200-year-old order of on the knee is to be abolished. This is the result of the recent mutiny of stokers at the naval barracks at Portsmouth.

The details of the mutiny, of course, are familiar to our readers, but the secret history of the outbreak shows that the stokers mutinied in order to attract public attention to the brutal German methods of treating the men in vogue among several of the officers and notably Lieutenant Collard.

At the new year the officers at the barracks were charged. Commodore W. G. Stopford, son of the admiral, was placed in command. With him were a commander and

#### LIEUTENANT COLLARD.

The latter, a gunnery officer, came into closer touch on his duties with the men than the other officers.

Lieutenant Collard is very unpopular with the men. Four years ago he was court-martialled for brutality to a stoker and lost six months' seniority as punishment.

Six months ago, he again got into trouble. One of the stokers on parade was slightly deaf. In consequence he did not obey a trivial order quickly enough. Lieutenant Collard ordered the man as a punishment to kneel before him on both knees. The lieutenant shouted, "Down on your knees, you dirty dog," and compelled the man to kneel. Next day the stoker, not being a sworn man as are seamen, employed Lawyer King of Portsmouth to bring a civil action against Lieutenant Collard for damages charging "assault, insult and degradation." The stoker won and secured damages of \$1,000 and costs. Soon afterward the man was dismissed from the service, ostensibly on account of his deafness. This man was in Portsmouth at the time of the rioting.

#### A RIGOROUS COURT OF INQUIRY

has been held on the insubordination at Portsmouth. It was secret. Many of the stokers complained of brutality of other officers, but not to such an extent as they complained of Lieutenant Collard. The newspapers generally have been bitter in their attacks on this officer. As a result, perhaps of a hint from the naval authorities, Lieutenant Collard will send in his papers, but action may be withheld until the mutinous clouds have blown away, when his resignation may be accepted or he may be sent to sea duty off the Gold Coast, or in the Red Sea, the two most unpleasant and profitless appointments in the navy.

Yet he has been instrumental in having a two-centuries-old obnoxious order abolished and brutal German methods of treating men by officers, forever tabooed.

#### MINERS OF THE WORLD.

More than half the total miners of the world were in 1904 engaged in getting coal. Great Britain employing over 835,000, the United States 594,000, Germany 543,000, France 171,000, Belgium 138,000, Austria 119,000, and India nearly 93,000. The total output of coal was 886,000,000 tons, of the estimated value of more than \$1,495,000,000.

#### CURIOUS RELATIONSHIP.

A remarkable double wedding has been celebrated in a Viennese church. A manufacturer named Muller married a widow, while at the same time his son married the widow's daughter. Thus the father becomes father-in-law of his own son, and the mother also mother-in-law of her daughter.

# It Quiets the Cough

This is one reason why Ayer's Cherry Pectoral is so valuable in consumption. It stops the wear and tear of useless coughing. But it does more—it controls the inflammation, quiets the fever, soothes, heals. Ask your doctor about this.

The best kind of a testimonial—  
"Sold for over sixty years."

## Deafness Cannot be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous surface.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars free.

F. J. CHENEY, Toledo, O.  
Sold by Druggists, 75c.  
Take Hall's Family Pills for constipation.

## SHARPTON

Odessa cheese factory closed on Saturday, two weeks earlier than usual.

A great deal of hay has been shipped at \$7 and \$8 a ton.

It is said that the price of pork has an upward tendency.

The school is progressing favorably under the able management of Miss Carpenter. The new law respecting the hire of teachers causes much comment.

As we approach nomination people are getting warmed up over election matters. The average elector seems to be under the impression that our business in the township and county councils is not ably managed.

S. Somerville plastered D. Karin's kitchen.

The attendance at Sharpton school is larger than usual.

Miss Mary Jane Smith is visiting her sister, Mrs. S. Somerville.

Bert Babcock is preparing to move from the neighborhood.

S. Somerville and G. McEwen laid the cement floor in J. Smith's drive shed.

D. Parks and bride have returned, after visiting friends in Brookville.

B. Parks was visiting friends at Eriusville.

A great offer—The Napanee Express from now until January 1908 for \$1.00. Send your order early.

Our sale of Stoves, Ranges and Furnaces exceeds anything in the history of this store, which speaks volumes for the quality of the goods in this line which we are offering, each and every one is guaranteed to you.

## READ AND YOU WILL LEARN

That the leading medical writers and teachers of all the several schools of practice endorse and recommend, in the strongest terms possible, each and every ingredient entering into the composition of Dr. Pierce's Golden Medical Discovery for the cure of weak stomach, dyspepsia, catarrh of stomach, "liver complaint," torpid liver, or biliousness, chronic bowel affections, and all catarrhal diseases of whatever region, name or nature. It is also a specific remedy for all such chronic or long standing cases of catarrhal affections and their resultants, as bronchial, throat and lung diseases (except consumption) accompanied with severe coughs. It is not so good for acute colds and coughs, but for lingering, or chronic cases it is especially efficacious in producing perfect cures. It contains Black Cherry bark, Golden Seal root, Bloodroot, Stone root, Mandrake root and Queen's root—all of which are highly praised as remedies for all the above mentioned affections by such eminent medical writers and teachers as Prof. Bartholow, of Jefferson Med. College, Prof. Hare, of the Univ. of Pa.; Prof. Finley Ellingwood, M. D., of Bennett Med. College, Chicago; Prof. John King, M. D., late of Cincinnati; Prof. John M. Scudder, M. D., late of Cincinnati; Prof. Edwin M. Hale, M. D., of Hahnemann Med. College, Chicago, and scores of others equally eminent in their several schools of practice.

The "Golden Medical Discovery" is the only medicine put up for sale through druggists for like purposes, that has any such professional endorsement—worth more than any number of ordinary testimonials. Open publicity of its formula on the bottle wrapper is the best possible guaranty of its merits. A glance at this published formula will show that "Golden Medical Discovery" contains no poisonous or harmful agents and no alcohol—chemically pure, triple-refined glycerine being used instead. Glycerine is entirely unobjectionable and besides is a most useful ingredient in the cure of all stomach as well as bronchial, throat and lung affections. There is the highest medical

These spaces are known to astronomers by the name of "coal sacks." They contain no stars fainter than the twelfth magnitude and, in fact, appear to mark those parts of the universe which are comparatively thin. On the other hand, in other parts of the heavens we have not by any means reached the limit of telescopic resolvability. It is curious, though, that these intensely dark "holes" in the bright empyrean are mostly to be found in those parts of the heavens where most stars abound, notably in the Milky Way.

These remarkable blank spots have been a favorite theme of discussion and argument among all astronomers, for, whatever the real shape or distribution of that universe may be, they point to the almost certain inference that in a particular direction at least there is an actual limit to the number of stars, and if there is a limit in one direction we have every right to suppose that such is the case in others, and that we have only to wait for telescopes strong enough to resolve those parts which are still unresolvable to discover that a point can be reached when all the stars of the universe are unfolded to our gaze.

If, now, we admit that the number of visible stars is limited, the next question to be asked is, What is the order or shape of their distribution? Various astronomers have had various theories about this matter. Herschel was inclined to think that the visible universe was in the shape of a disk, though his views in this direction were considerably modified during the later

House of Commons, the following are the leaders being: Sir Wilfrid Laurier, Mr. Borden, Messrs Bourassa and Maclean. Mr. Bourassa has two followers and Mr. Maclean follows himself, and that is about all he is able to do, judging by the result of his effort in the North Bruce bye-election.

## SAMPLES OF CHOICE GRAIN FOR THE IMPROVEMENT OF SEED.

To the Editor of The Express.—

Dear Sir—By instruction of the Hon. Minister of Agriculture a distribution will be made this season of samples of grain to Canadian farmers for the improvement of seed. The stock for distribution is of the very best and has been secured mainly from the excellent crops recently had at the branch Experimental Farms at Indian Head, Sask., and at Brandon, Man. The distribution will consist of samples of oats, spring wheat, barley, Indian corn (for ensilage only) and potatoes. The quantity of oats to be sent will be 4 lbs., and of wheat or barley 5 lbs., sufficient in each case to sow one-twentieth of an acre. The samples of Indian Corn and potatoes will weigh 3 lbs. each. A quantity of each of the following varieties has been secured for this distribution:—

OATS.—Banner, Wide-Awake, White Giant, Danish Island, Thousand Dollar, Improved Ligowo (white varieties) and Goldfinder (yellow).

WHEAT.—Red Fife, Preston, Pringle's Chaplain, Percy, Stanley Huron and White Fife.

BARLEY.—Six-rowed. — Mensury, Odessa, Mansfield and Claude. Two-rowed—Standwell, Invincible, Canadian Thorpe and Sidney.

INDIAN CORN (for ensilage)—Early sort, Angel of Midnight, Compton's Early and Longfellow; later varieties, Selected Learning, Early Mastodon and White Cap Yellow Dent.

POTATOES.—Carman, No. 1. Early White Prize, Rochester Rose, Money Maker and Late Puritan.

Only one sample can be sent to each applicant, hence if an individual receives a sample of oats he cannot also receive one of wheat, barley or potatoes. Lists of names from one individual, or applications for more than one sample for one household cannot be entertained. The samples will be sent free of charge through the mail.

According to report, most of the sportsmen have been more successful, and game less scarce than in previous seasons.

We have had beautiful fall weather, and considerable ploughing was done last week. This week however, it has been snowing nearly every day, and we have now snow enough to make very fair sleighing.

Herbert Thompson who was working in a lumber camp near Webwood, had the misfortune to get one of his legs broken by a falling tree. Several other young men, farmers sons, from here, were working in the same camp, where they intended to put in the winter, but they all came home with their comrades and report that considerable sickness especially Typhoid fever is prevalent in most camps in that part of the country.

James Slater who some time ago got one of his hands pierced with a prong of a hay fork and was reported to be improving, has had to go to the hospital for treatment, as his wound got much worse, and more painful. His hand and arm are badly swollen, and serious consequences are feared.

Word has just been received that Mrs. Samuel Buffam, of Vennachar, died on Saturday of child birth at the age of only 27 years. Deceased was a daughter of the late Geo. M. Sweetman of Vennachar, and leaves besides her husband and new born babe, one th ee year old daughter, her aged mother, who has for some time been in poor health, four brothers and one sister. The bereaved family has the sincere sympathy of the whole community.

being used instead. Glycerine is entirely unobjectionable and besides is a most useful ingredient in the cure of all stomach as well as bronchial, throat and lung affections. There is the highest medical authority for its use in all such cases. The "Discovery" is a concentrated glyceric extract of native, medicinal roots and is safe and reliable.

A booklet of extracts from eminent, medical authorities, endorsing its ingredients mailed free on request. Address Dr. R. V. Pierce, Buffalo, N. Y.

## PROBLEMS OF SPACE

### ENIGMAS THAT SCIENCE IS STRIVING TO SOLVE.

The Question of an Infinity of Worlds and Their Distribution in an Infinity of Space—Distance of the Nearest External Universe.

There can be no subject more calculated to impress a man's mind with his own insignificance compared with the overwhelming power and glory of his Creator than the study and contemplation of the firmament in all its boundless infinity. It is not to be wondered at that from the earliest ages the subject has never failed to exercise a fascination over men and that those who by their genius and learning have most nearly succeeded in solving its mysteries have always been revered and esteemed to be among the wisest men of their day. More has been done within the last fifty years than in all the rest of the world's history toward the piercing of the veil which shuts off from our eyes the beauties and mysteries of faroff realms, and doubtless by means of the spectroscopic and increased size in the lenses of our telescopes we shall be enabled before long to unravel still more secrets of the universe.

The question as to whether space is finite or infinite can never be satisfactorily argued out or indeed even thought of, for the human mind is incapable of grasping the existence of a limit to space, even in its most abstract form, but the question of the infinity of worlds and their distribution in the infinity of space lies more closely within the scope of human intellect, for we have many material facts and calculations to go upon in discovering the probable answer to this most fascinating question.

Only as far back as the seventeenth century astronomers placed the number of stars in the universe as a little over 1,000, but this was absurd, as the real number visible to the naked eye is about 7,000, and perhaps treble that number can be seen by persons with exceptionally good eyesight. When the heavens, however, are examined through a telescope the number of visible stars is enormously increased. In fact, it has been calculated that the most powerful reveals as many as 100,000,000! Yet what is that vast number compared with infinity? It cannot even be likened to a grain of sand on the seashore, and yet if we think the matter out carefully we shall see that the number of visible stars cannot really be infinite, for if they were the heavens would be a complete blaze of light. This, of course, we know is far from being the case, and indeed there cannot be any doubt that in certain parts of the heavens at least the number of visible stars is already known, for even with the very strongest telescopes there are blank spaces which are absolutely devoid of stars below a certain magnitude or even the veriest trace of nebulous light.

was inclined to think that the visible universe was in the shape of a disk, though his views in this direction were considerably modified during the later part of his life. Struve considered that the universe was in the shape of a disk of limited thickness, but infinite length, a theory which is hard to support, as, unless the ultimate extinction of light in space is believed in, that part of the heavens which lay toward the plane of the disk would necessarily shine with the brightness of the sun. Proctor, though finding it impossible to define any particular shape for the visible universe, as a whole, was of the opinion that the brightest part of it—namely, the Milky Way—was in the form of a spiral. This latter theory, however, has many objections to contend with. Other astronomers have had different theories on this question, but all, or nearly all, appear to admit an ultimate limit to the size of the visible universe, or, in other words, believe that the galaxy of worlds which surround us form, in fact, but an islet in the vast infinity of space.

It would appear at first sight that any attempt to solve the question of the existence of external galaxies and their distance was absolutely futile, yet such is not the case. The result of calculation is that the nearest external universe is so far distant that light from it travelling at the speed of 186,000 miles a second would take nearly 90,000,000 years to reach us!—*Chambers' Journal*.

### Unstamped Letters in England.

Many people are unaware of the fact that the sender of an unstamped letter can be proceeded against for the postage. The moment a person posts an unpaid letter he becomes a debtor to the postoffice. If it is refused by the addressee the sender is liable for the postage. An enormous number of unstamped letters are posted every year. No record is kept of the exact number. Many large firms give instructions at the postoffice that unstamped letters are not to be delivered to them. They are then returned to the senders, and in the case of frequent offenders legal steps are taken.—*London Lady*.

Many housewives think it cheaper to buy than to bake. That is because their baking isn't successful every time. Their failures run the cost up. Get

## THE "HOLY HOUSE."

Legend of the Home of Mary and the Saviour.

Let me give the main outlines of the legend. At Nazareth was preserved with pious care the house of Our Lady. The dwelling place in which she received the gracious message of the incarnation, the lowly home which sheltered the holy family for so many years, was a very precious sanctuary. On May 10, 1291, a month after the taking of Tripoli and Ptolemais, this holy house was carried by the hands of angels from Nazareth to a place in Dalmatia between Fiume and Tersatz on the Adriatic shore.

It was a one roomed edifice, built of red square stones, fastened with cement, and bore proof of age and oriental design. It stood without any foundations and had a wooden decorated ceiling. The walls were covered with frescoes; there were a door and a narrow window; inside were an altar of stone, an ancient crucifix, a small cupboard, containing a few vessels of common use; a chimney and hearth, above which was a cedar statue of Our Lady with the Holy Child in her arms. The pastor of the place learned in a vision that the building was the house of Our Lady, the stone altar that at which St. Peter celebrated mass and the statue the work of St. Luke the Evangelist. In proof of the vision he was cured of a serious illness. A deputation of four responsible persons forthwith were sent to Nazareth to investigate the mystery, and they found that the house was no longer to be found.

Measurement and other means taken proved that the house that had suddenly appeared in Dalmatia was indeed none other than that which had as suddenly left Palestine. Three years after, on Dec. 10, 1294, the holy house again disappeared and under the pontificate of Celestine V. came to Recanati, a little town in the march of Ancona, when it fixed itself in a laurel grove belonging to a pious lady called Loreto. It was discovered by some shepherds and soon became recognized and was henceforth a much frequented place of pilgrimage. Eight months afterward the house removed to a small hill, three miles from Recanati, to land belonging to two brothers, who, however, fell out shortly afterward over the division of wealth which began to flow to the new shrine.

To save strife between the brothers the house was suddenly lifted once more and this time settled down finally in the midst of the public way, which had to be diverted in consequence. Here, too, in the course of time a chapel was built, which gave way in time to the present basilica. The famous pilgrimage of Loreto goes on today. Popes, kings and princes have visited this shrine and left great gifts. Later on a festival with liturgical rites was instituted, and in time the feast of the translation of the holy house was extended to many countries. —Fortnightly Review.

### Disuading a Tempter.

A pompous Chicago merchant, arrogantly carrying the signs of his prosperity about him, accepted an acquaintance of his who conducts a successful rescue mission and said:

"James, I'd like to attend one of your meetings."

"Certainly," rejoined the minister, "but leave your watch and diamonds with the hotel clerk."

"What?" asked the merchant in astonishment. "Are not the men of your mission converted thieves?"

"True," answered the mission leader softly, "but George, you look like a

## BY-LAW NO.

OF THE CORPORATION OF THE TOWN OF NAPANEE.

A By-Law to authorize the issue of debentures of the Town of Napanee to the amount of \$2250.00, for the purpose of raising \$2250.00, to provide for cost of extending the Dundas street sewer along West street from Dundas street to Thomas street and connecting with the Canning Factory sewer.

WHEREAS the Corporation of the Town of Napanee has constructed a sewer from the banks of the Napanee River along West street to Dundas street and along Dundas street westerly to the creek crossing the same.

AND WHEREAS it is desirable to continue said sewer along West street to Thomas street to connect with the Canning Factory sewer at a cost of \$2250.00.

AND WHEREAS it is desirable that the amount necessary to defray the cost of this said extension of said sewer should be raised on the credit of the said Town.

AND WHEREAS in order thereto it will be necessary to issue debentures of the Town of Napanee for the sum of \$2250.00 as hereinafter provided, (which is the amount of the debt intended to be created by this By-Law) the proceeds of said debentures to be applied to said purpose and no other.

AND WHEREAS it is desirable to issue the said debentures at one time and to make the principal of said debt repayable by yearly sums during the period of twenty years being the currency of the said debentures, said yearly sums being of such respective amounts that the aggregate amount payable in each year for principal and interest at the rate of four per centum per annum in respect of the said debt shall be as nearly as possible equal to the amount so payable in each of the other nineteen years of the said period.

AND WHEREAS the total amount required to be raised annually by special rate for paying the said debt and interest as hereinafter provided is \$165.56.

AND WHEREAS, the amount of the whole rateable property of the Town of Napanee, according to the last revised Assessment Roll is \$1,104,883.

And whereas the amount of the existing debenture debt of the said municipality is \$68,739.86, exclusive of local improvement debts secured by special Acts rates or assessments whereof no part of principal or interest is in arrear.

THEREFORE the Municipal Council of the Corporation of the Town of Napanee, enacts as follows:—

1.—That for the purpose of raising the sum of \$2250.00 as afore said debentures of the said Town of Napanee amounting to the sum of \$2250 as afore said, in the sum of \$165.56 each shall be issued on the First day of May, A. D. 1908, each of which debentures shall be dated on the date of the issue thereof and shall be payable one on the First day of May in each of the years 1908 to 1927 inclusive, at the office of the Treasurer of the Town of Napanee, without interest, the interest on the said loan calculated at the rate of four per centum per annum being already included in the amount of the said debentures.

2.—It shall be lawful for the Mayor of the said Municipality and he is hereby authorized and instructed to sign and issue the said debentures hereby authorized to be issued and to cause the same to be signed by the Treasurer of the said Municipality and the Clerk of the said Municipality is hereby authorized and instructed to attach the seal of the said Municipality to the said debentures.

3.—THAT during the currency of the said debentures there shall be raised annually by special rate, on all the rateable property of the Town of Napanee the sum of \$165.56 for the purpose of paying the amount due in each of the said years for principal and interest in respect of the said debt.

4.—THIS By-law shall take effect on the day of the date of the final passing thereof.

5.—THE votes of the electors of the said Town of Napanee, shall be taken on this By-law on Monday the Seventh day of January 1907 commencing at the hour of nine o'clock in the forenoon, and continuing till five o'clock in the afternoon of the same day, by the following Deputy Returning Officers, and at the following places, that is to say:—

The average family in Canada uses about 25 pounds of tea per year. If Red Rose Tea were used entirely, not more than 20 pounds would be required. You save real money when you use Red Rose Tea.

### POINTED PARAGRAPHS.

You haven't as long to live as you used to have.

Some people are so agreeable that they are disagreeable.

Heroism is generally a foolish act with a successful termination.

Some people not only insist upon giving advice, but asking questions at the same time.

When a married woman hears about women who are working on salaries she is liable to say, "Well, I earn all I get."

The surest way to tame a man is to take his money away from him. When a man has no money even a woman can run over him.

People talk of nursing their wrath as if they are bloodthirsty for revenge, but leave an angry man alone and in two days he will have forgotten what he got angry about.—Acheson Globe.

### No Cure For Insomnia.

A sufferer from insomnia may work hard at physical and mental labor, yet the night cometh when no man can work. The insomniac, utterly fatigued, falls into a slumber—not a sound, re-

freshing, dreamless slumber, but a coma, lethargy, a torpor, born of fatigue. In a few hours the demon says "Awake!" and the insomniac starts instantly into waking, with bright, staring, witless, sleepless eyes. Is there no cure? None. Insomnia comes with age. You cannot cure your years. You used to sleep yesterday when you were young. "Not poppy nor mandragora nor all the drowsy sirups of the world can medicine thee to that sweet sleep which yesterday thou hadst."—San Francisco Argonaut.

### East and West.

The chief distinction between the genius of the eastern civilization and that of the west, according to an oriental, lies in this: With you the individual is the hub of the universe—even charity begins at home with you—while with us of the east it is the whole, the state, not the individual, that we emphasize. An individual is nothing; the state, the whole, is everything. We sacrifice thousands of individuals, we sacrifice our children and our wives upon the altar of national honor, without hesitation, without regret.—Forum.

# YOUR BRAIN HOLDS THE NERVE STRINGS

converted. "Are not the men of your mission converted thieves?"

"True," answered the mission leader softly, "but, George, you look so easy and wholesome. Really, I don't want my men to regret that they promised me never to steal again."

#### Historic Pharsalia.

It was on his way to the battlefield of Pharsalia that Caesar uttered the famous saying to the fishermen. He had come down to Brindisi to cross to Dyrrachium and, finding no galley, commanded the owner of a small sailing boat to put him across the Adriatic. On the voyage a violent storm occurred, and even the experienced mariners were terrified. But the great captain said: "Have no fear. You carry Caesar and his fortunes."

#### The Northern Substitute.

"In that tropical country," the returned traveler was explaining, "most of the houses are constructed with an inclosure in the center, which they call the court."

"I see," said the hostess. "In our colder latitude the parlor is generally used for that purpose."—Chicago Tribune.

#### His Deep Grief.

Visitor—I do hope that poor Jack, your brother, does not grieve too much at my having broken our engagement. I feel sure he must be very unhappy. What did he say, dear? The Sister—Oh, he said what a lucky thing it was you broke it off this week instead of next, as it saved him from having to buy you a birthday present!

## RESULTS OF BLOOD POISONING

The wonderful value of Zam-Buk, the herbal balm, in cases of chronic ulcers, sores, etc., is illustrated by the experience of Mrs. W. E. Rice, of London Junction (Ont.). She says:

"I cannot be thankful enough for the lay Zam-Buk came to Canada. For nine years I had been a sufferer from running sores on my legs caused by blood-poisoning. I had tried every kind of ointment and salve that I had heard of, but none of them seemed equal to my case. Last winter I was worse than ever, and could not bear to stand on my feet for five minutes. The pain was so acute that I could not bear to have my slippers on."

"I heard of Zam-Buk, and decided to give it a fair trial. From first commencing with it it did me good, and it has now cured me. Whereas before I could not stand on my feet for five minutes at a time, I can now not only stand, but walk about without feeling any pain whatever. I feel like a new woman. I have waited to see if the cure was permanent before making any statement, and now I am very willing to give any testimony. I shall be pleased to answer any inquiries, and if any one cares to come and see me, I shall be pleased to tell them what Zam-Buk has done for me."

It is by working such cures as the above that Zam-Buk has made for itself its world-wide reputation. It is a certain cure for cuts, burns, bruises, eczema, pimples, running sores, spreading scabs, scalp diseases, poisoned wounds, festering sores, piles, ulcers, bad legs, abscesses, boils, ringworm, rhytoid, scrofula, barber's rash, blackheads, ache, stiffness, rheumatism and all injured, diseased or inflamed conditions of skin and tissue. Of all druggists at 50c a box, or postpaid from the Zam-Buk Co., Colborne St., Toronto, upon receipt of price. 6 boxes or \$2.50.

same day, by the following Deputy Returning Officers, and at the following places, that is to say:—

# THE NERVE STRINGS

AND IF DISEASE TAKES HOLD OF THE NERVES THE BRAIN LOSES CONTROL OF ALL THE FORCES THAT CONTRIBUTE TO HEALTH AND MENTAL AND PHYSICAL COLLAPSE ARE AS CERTAIN AS SUNSET

## South American Nervine

begins at the beginning to prevent and eradicate disease—it acts on the nerves that control the vital organs of the body, gives strength to the whole nervous system, fills the blood with that richness and purity that is so essential to health—because, remember this, that when these nerves become weakened and exhausted it means indigestion, torpid liver, stagnant kidneys, the heart flutters and becomes irregular and weak, the lungs fail to have the nourishment and weaken, and the climax, naturally enough, is debility—and the next stage may be consumption. All such dire consequences may be saved by the wonderful potency of South American Nervine.

South American Nervine is greatest blood purifier of modern medicine. South American Nervine is woman's best friend in very deed.

You persist and it never fails.

**SOUTH AMERICAN RHEUMATIC CURE** cures in from one to three days.  
**SOUTH AMERICAN KIDNEY CURE** for diabetes, Bright's disease and all bladder troubles.

Sold by Fred L. Hooper.

## Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIR,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

**Douglas' Egyptian Liniment.**

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

Respectfully yours,

NATHANIEL W. REID.

# Royal Baking Powder

## Absolutely Pure

**DISTINCTIVELY A CREAM OF TARTAR BAKING POWDER**

Royal does not contain an atom of phosphatic acid (which is the product of bones digested in sulphuric acid) or of alum (which is one-third sulphuric acid) substances adopted for other baking powders because of their cheapness.

ROYAL BAKING POWDER CO., NEW YORK.

### MAN AND HIS BELIEFS.

#### The Seven Great Religious Bodies of the World.

The population of the earth at the death of the Emperor Augustus was estimated at 50,000,000. Today it is calculated that this globe has a population of 1,933,150,000. Out of this vast number of more than a billion and a half of human beings it is asserted that all but an infinitesimal fraction of 1 per cent believe in and worship in some degree a supreme ruler of the universe.

There are seven great religions in the world. The Christian religion has the greatest number of adherents, 563,000,000. Of this number 350,000,000 are Catholics and 213,000,000 Protestants. These two great divisions are subdivided into innumerable sects differing from one another on some point of dogma or church government. Next in importance comes the worship of ancestors and Confucianism, whose followers are 283,000,000 in number. This belief is confined almost exclusively to the Chinese and Japanese. In India there are 223,000,000 Brahmans. This form of religion has decreased somewhat during recent years, owing perhaps to the continual ravages of plague and famine in that country. But it still holds the third place among the seven great religions. Brahmanism is hard pressed, however, by the faith of Islam. There are 222,000,000 of these followers of the doctrines of Mohammed. The fifth on the list are the Polytheists, the believers in many gods, who number 130,000,000. The devotees of Buddha come next, 107,000,000 strong. These, too, have their stronghold in

India. The smallest of the seven great religions of the world is Taoism, with 44,000,000 adherents in the Chinese empire and in Tibet.

The next greatest religion, in point of numbers, to Taoism is the belief of Japan, Shintoism. This has but 18,000,000 believers. The Jewish faith now counts but half that number of adherents. But, unlike the other great religions, the followers of the teachings of Moses are not centered in any particular country, but are scattered all about the world. Compared with the foregoing, the religions of the Parsees, while one of the most beautiful theoretically, has about the smallest following of any distinct belief in the world, 150,000. This sect has its home in India and is best known to the outside world by its curious burial customs, the famed "towers of silence."—Exchange.

After a girl has worked for six months to get a young man, lying awake nights to think up new schemes of fascination, it is amazing to witness the coolness with which she can look up into his eyes after he has finally proposed and murmur tenderly, "You hypnotist!"—Somerville Journal.

#### The Burglar's Jimmy.

Why does the burglar call the tool with which he opens windows and doors a "Jimmy?" No one seems to be sure. Perhaps it is merely a pet name. The French burglar calls his jimmy "Frere Jacques," which is first cousin to "Jimmy."

In prosperity the proud man knows nobody; in adversity nobody knows him.—Duquoin Call.

## A BY-LAW.

To prohibit the sale of liquor in the Township of Richmond.

The Municipal Council of the Township of Richmond, hereby enacts as follows:

1.—That the sale by retail of spirituous, fermented, or other manufactured liquors is and shall be prohibited in every tavern, inn or other house or place of public entertainment in the said municipality, and the sale thereof except by wholesale, is and shall be prohibited in every shop or place other than a house of public entertainment in the said municipality.

2.—That the vote of the electors of the said Township of Richmond will be taken on the by-law by the deputy-returning officer hereinafter named on Monday the 7th day of January, One Thousand Nine Hundred and Seven, commencing at nine o'clock in the morning and continuing till five o'clock in the afternoon at the undermentioned places:

For Polling Sub-division No. 1, the poll shall be held at the residence of Wm. Schermohr, on Lot No. 18, in the 2nd Con. of Richmond and that Lia E. Grooms shall be Deputy-Returning Officer. For Polling Sub-division No. 2, the poll shall be held in the Town Hall, in the village of Selby, and that Geo. S. Saxsmith shall be Deputy-Returning Officer. For Polling Sub-division No. 3, the poll shall be held at the Grist Mill, Forest Mills, and that Wm. Provins shall be Deputy-Returning Officer. For Polling Sub-division No. 4, the poll shall be held at the Orange Hall, in the village of Roblin, and that Geo. S. Richardson shall be Deputy-Returning Officer.

3.—That on the 15th day of December, A. D. 1906, at the Town Hall, in the village of Selby, at the hour of 10 o'clock in the forenoon the reeve shall appoint in writing, signed by himself, two persons to attend at the final summing up of the votes by the clerk, and one person to attend at each polling place on behalf of the persons interested in and desirous of promoting the passing of this by-law, and a like number on behalf of the persons interested in and desirous of opposing the passing of this by-law.

4.—That the Clerk of the said Municipal Council of the Township of Richmond, shall attend at the Town Hall, Selby, at the hour of 12 o'clock on the 9th day of January, A. D. 1907 to sum up the number of votes given for and against this By-Law.

5.—This By-law shall come into operation, and be of full force and effect on and after the first day of May next after the final passing thereof. Council Chamber, December 3rd 1906.

Reeve.

### NOTICE.

Take notice that the above is a true copy of a proposed By-law which has been taken into consideration by the Municipal Council of the township of Richmond, and which will be finally passed by the said Council (in the event of the assent of the electors being obtained thereto, as provided by the Liquor License Act) after one month from the first publication thereof in the "Napinee Express" the date of which first publication was Friday, the Seventh day of December, 1906, and that at the hour, day and place therein fixed for taking the votes of the

## One of Three Things Always Cause RHEUMATISM

Do you know the system rids itself of waste matter through bowels and kidneys? Yes, but by the skin as well.

As a matter of fact, the skin rids the system of more urea than the kidneys do.

If the skin, or bowels, or kidneys are unhealthy—they won't throw off enough urea. This urea is changed into uric acid—carried by the blood to joints and nerves—causing Rheumatism.

One never inherits Rheumatism. One does inherit weak kidneys, irregular bowels and bad skin action.

## Fruit-A-Tives

OR "FRUIT LIVER TABLETS"

will positively cure Rheumatism because they increase the eliminating action of skin, kidneys and bowels—and make these three organs so vigorous and healthy that there can be no urea or waste retained in the system to poison the blood and irritate the nerves.

FRUIT-A-TIVES are fruit juices, combined with tonics—the whole forming the most effective cure for Rheumatism.

50c. a box or 6 boxes for \$2.50. Sent on receipt of price if your druggist does not handle them.

FRUIT-A-TIVES LIMITED - OTTAWA.

### FORMS OF INSANITY.

#### Premonitory Symptoms by Which They May Be Detected.

There are certain premonitory symptoms of the more prevalent forms of insanity that can be counted on, as a general thing, as infallible.

In paresis, which is claiming its victims in tremendous numbers, there are many physical signs that are almost incontrovertible.

The exaggerated twitching of the facial muscles in conversation, the occasional tendency of the eye to turn outward, the weakness of the legs, the flabbiness of all muscles, are preliminary symptoms that give warning that a man is about to break down.

With the victim of mania—the maniac—the symptoms are often similar to those found in melancholia, though generally the disease gives the victim an appearance of great elation. The eyes are abnormally bright; the features are alert and tense and an air of tremendous excitement is apparent. This is from a constant fear that something is about to happen.

Another form of insanity is prevalent among younger persons. Excessive strain, continual worry or trouble, allied to a weakened physical system, are the causes. It manifests itself through the gradual loss of some faculty that has been all right till now.

The loss of memory for details is an alarming symptom and one that should be given careful and immediate attention. The patient, if taken at the right time, may be cured, but not after the disease has got a firm hold on him.

Paranoia, which is a very prevalent type of insanity, is almost invariably indicated by a peculiarly self-satisfied, conceited expression of countenance.

The patient poses, sneers contemptuously and in every way shows his tre-

## Gray's Syrup of Red

### Cures Coughs

GRAY'S SYRUP does that one thing, and does it well. It's no "cure-all," but a CURE for all throat and lung troubles.

GRAY'S SYRUP OF RED SPRUCE GUM stops the irritating tickle—takes away the soreness—soothes and heals the throat—and CURES COUGHS to stay

# Syrup of Red Spruce Gum

and does it well. It's no "cure-all," but a CURE for all throat and lung troubles. GRAY'S SYRUP OF RED SPRUCE GUM stops the irritating tickle—takes away the soreness—soothes and heals the throat—and CURES COUGHS to stay cured.

None the less effective because it is pleasant to take.

ABRAM WINTERS,

Clark.

An inquiry into the wreck of the steamer Resolute was concluded, and judgment will be given next week.

The Parliament on Monday it was private member's day, and a good deal of information was given by the Ministers respecting the canal policy, bonuses for immigrants, the express service on the Intercolonial, and the Lethbridge strike settlement. Mr. Aylsworth answered Mr. Robitaille's inquiries his North Bruce utterance.

Horse Blankets, a complete line of first-class blankets at right prices.  
MADOLE & WILSON

Paranoia, which is a very prevalent type of insanity, is almost invariably indicated by a peculiarly self satisfied, conceited expression of countenance.

The patient poses, sneers contemptuously and in every way shows his tremendously "stage struck" condition. He is absolutely controlled by the "ego." Everything to him is "I, I, I." He is a monomaniac with one set idea, a single purpose.—Dr. Graeme M. Hammond in New York World.

By the Pound.

Little Elsie—Mamma, how much do people pay a pound for babies? Mamma—Babies are not sold by the pound, my dear. Little Elsie—Then why do they always weigh them as soon as they are born?—St. Louis Post-Dispatch.

Bigamy.

Effie—Papa, a man who has a wife too much is a bigamist, is he not? Papa (thoughtfully)—Not always, dear. Illustrated Bits

# FEARFUL PAINS

SUGGESTIONS HOW WOMEN MAY FIND RELIEF.

While no woman is entirely free from periodical suffering it does not seem to be the plan of nature that women should suffer so severely. This is a severe strain on a woman's vitality. When pain exists something is wrong which should be set right or it will lead to a serious derangement of the whole female organism.

Thousands of women have testified in grateful letters to Mrs. Pinkham that Lydia E. Pinkham's Vegetable Compound overcomes women's special pains and irregularities.

It provides a safe and sure way of escape from distressing and dangerous weaknesses and diseases.

The two following letters tell so convincingly what Lydia E. Pinkham's Vegetable Compound will do for women, they cannot fail to bring hope to thousands of sufferers.

Miss Matilda Richardson of 177 Wellington Street, Kingston, Ont., writes:

Dear Mrs. Pinkham:—  
"Some four years ago my usually good health began to fail. I had severe pains in my back, my head ached, I would have dizzy spells, and during my monthly periods I would suffer intense pain. I was advised to try Lydia E. Pinkham's Vegetable Compound, and I am so glad that I did, for it brought new life and health to me. My monthly periods were natural and painless, and my general health improved. I have not had an ache or a pain since, and I feel it a duty as well as a pleasure to tell you what your medicine has done for me."

Mme. Louise McKenzie, of Mount Carmel, Montreal, Canada, writes:

Dear Mrs. Pinkham:—  
"I had heard so much good about Lydia E. Pinkham's Vegetable Compound before

I started to take it for painful periods so that when it cured me I was not surprised. I had suffered with blinding headaches and pain until it seemed that I must scream. These pains lasted from five to ten days every month, and you can understand how glad I was to get relief. I am in the best of health, and am pleased to give you this testimonial for what your medicine has done for me."

Such testimony should be accepted by all women as convincing evidence that Lydia E. Pinkham's Vegetable Compound stands without a peer as a remedy for all the distressing ills of women.

The success of Lydia E. Pinkham's Vegetable Compound rests upon the well-earned gratitude of Canadian women.

When women are troubled with irregularities, displacements or ulceration of the organs, that bearing-down feeling, inflammation, backache, bloating, (or flatulency), general debility, indigestion and nervous prostration, or are beset with such symptoms as dizziness, faintness, lassitude, excitability, irritability, nervousness, sleeplessness, melancholy, they should remember there is one tried and true remedy. Lydia E. Pinkham's Vegetable Compound at once removes such troubles. Refuse to buy any other medicine, for you need the best.

Don't hesitate to write to Mrs. Pinkham if there is anything about your sickness you do not understand. She will treat you with kindness and her advice is free. No woman ever regretted writing her and she has helped thousands. Address Lynn, Mass.

Ask Mrs. Pinkham's Advice—A Woman Best Understands Woman's Ills.

TOWN COUNCIL.

Council Chamber  
December 3rd, 1906.

Council met in regular session Mayor Lowry presiding.  
Councillors present—Kimmerly, Normile, Meng, Williams, Graham.  
Minutes of previous session were read and on motion confirmed.

COMMUNICATIONS.

From Robert Mill asking for bonus on salary for past two years of \$250. Laid on the table.

From G. T. Ry., re well, reporting repairs completed. Fyled.

From Superintendent of Brockville Asylum, re medical examination of Thos. Ledgerwood. Fyled.

From Belleville Portland Cement Co., asking for electric power, also communication from Kingston, re rates for current, for power purposes. Laid on the table.

From the chief of the fire department inclosing yearly report, in reference to fires attended, and amount of hose on hand and its condition.—Referred to Fire, Water and Light Committee to report.

Councillor Simpson entered and took his seat.

From the Fire Company asking for senior salary. Laid on the table.

From Inspector of Asylums, re list of patients. Fyled.

The Street Committee reported that they had consulted the Town solicitor on the matter of damage to the highway and the matter of Mr. Butcher's complaint. The solicitor reported that the town had no action in reference to the highway, and that the town had nothing to do with Mr. Butcher's complaint, as that was a matter between complainant and Mr. H. B. Sherwood.

The Fire, Water and Light Committee reported, that they had secured an assistant engineer at the power house.

The Poor and Sanitary Committee reported, that the list of persons from the town of Napanee, at present in Asylums of the Province, number twelve. The report was referred back too the Poor and Sanitary committee wite power to act.

The Poor and Sanitary committee reported, that Mr. S. Snider was in a helpless condition and without means.

The Mayor reported a destitute case on Mill street, the man hailing from Toronto, also that Geo. Perkins, Salem, was sick and in need of attention.

A petition was presented from Henry Clancy, Geo. Sampson and others asking for an arc light at Vine's Corner. On motion the prayer of the petition was granted.

The request of the Principal of the Collegiate Institute for lights, was left in the hands of the Fire, Water and Light committee with power to act.

On motion the printing committee were instructed to report on the cost of 200 copies of the Government Auditor's statement, printed for distribution and appended thereto, a statement of the Auditor's expenses.

Mrs. J. R. Perry asked for \$3 ft. 4 in. tile for a drain, and Mr. Thos. Pybus asked for 70 feet 6-inch tile for a drain. On motion the requests were granted.

The request of Mr. R. Mill for a bonus for extra services was laid over until the next meeting of council.

On motion the firemen were granted their salary \$300.

The Clerk was instructed to write the Belleville Portland Cement Co., that the present council could not enter into a contract with them for power.

On motion Mr. Chalmers was instructed to collect the charges for current supplied before the meters were installed.

ACCOUNTS.

The following accounts were ordered paid:—Potter & Blanchard, \$2.00; C. Pollard, poundage \$1.25; Bell Telephone Co., messages \$1.20; Ryerson Pringle, sand for streets, \$121.75; Wm. Templeton \$27.10; John Vinalstine, carting wood \$6.15; Gas Co., account was referred to Town Property committee with power to act.

The clerk was instructed to render the Eastern church their account for heat and light; Jas. Graham, account

PROMINENT HOSPITALS SAY

PE-RU-NA DOES WONDERS

IN RELIEVING ALL CATARRHAL DISEASES.

SISTERS OF THE GOOD SHEPHERD, MONTREAL.

HOSPITALS ALL OVER THE CONTINENT FIND PE-RU-NA VALUABLE IN TREATING ALL CATARRHAL DISEASES.

CATARRH of the respiratory organs is a common ailment in Canada for at least two-thirds of the year.

This condition is no doubt caused by the long, severe winters experienced in this part of the continent.

Therefore, when Peruna was discovered by Canadian people to be a reliable remedy for these catarrhal diseases, it at once became a popular medicine, not only among individuals and in families, but in the great hospitals, where it was used as a preventative and relief in hundreds of cases.

These institutions do not hesitate to give their endorsement of the remedy which has been so helpful in the treatment of their poor and sick.

Among these institutions is that of the Sisters of Good Shepherd, who gave the following endorsement:

*The Peruna Company,  
Columbus, Ohio.*

*Having used Peruna for the past few months, for our sick and poor, we are happy to say that it has given us great satisfaction.*

*The Sisters of the Good Shepherd,  
August 20, 1903. Montreal*

After a continued use of the remedy, this institution has found no reason to change its good opinion of the remedy and expresses its satisfaction in the following terms:

*Montreal, Nov. 7, 1903.  
We found Peruna a relief in several cases.*

*We can say it is a good tonic and we are very thankful.*

*Sisters of the Good Shepherd.*

When catarrh once fastens itself upon the system, it becomes an obstinate disease to eradicate.

A systemic remedy—one that reaches every internal organ of the body—is an absolute necessity.

Peruna is just such a remedy. It searches out the cause of the disease, healing and strengthening the mucous membranes, and thus giving Nature an opportunity to perform her part of the restorative process.

One of the many hospitals which have found Peruna of value in treating old and obstinate cases of catarrh is the Hospital St. John, who write, as follows:

*"We are happy to tell you that your Peruna has given us satisfaction. Three patients have tried it, one 68 years old, Renoni Dupuis, afflicted with catarrh, is much relieved, more than he has been for a number of years.*

*"A young girl, 15 years old, had an obstinate cough, which half a bottle of Peruna caused to disappear.*

*"As to myself, two bottles have convinced me that Peruna is magnificent as a tonic.*

*"Before the treatment I could not walk for a quarter of an hour without experiencing much fatigue. Now I can walk a mile easily.*

*"Through these three cases we desire to make known to the public the efficiency of your remedy."*

*Hospital St. John, of St. Johns, Province of Quebec.*

A later letter received from the same institution reads as follows:

*"Three weeks ago I wrote to tell you how satisfactory we found Peruna. We recommend it highly for colds, coughs, catarrh and neuralgia.*

*"I have used it myself as a tonic with the best results, taken as directed, half a teaspoonful every half hour."*

Peruna not only promptly relieves coughs and colds in their first stages, but is equally prompt and efficient for catarrhal diseases in the chronic stage.

Of course, it is only reasonable to suppose that a great deal less medicine will be necessary to cure a slight attack of catarrh than would be required to relieve the ailment after it had been allowed to become chronic.

Directions for taking the remedy will be found on each bottle, also in Dr. Hartman's book, called "The Ills of Life," which can be obtained from your druggist for the asking.

For special instructions write to Dr. Hartman, President of the Hartman Sanitarium, Columbus, Ohio.

Ask your Druggist for Free Peruna Almanac for 1907.

A PROPOSAL IN JAPAN.

*Quaint Custom of Placing a Plant in an Empty Flowerpot.*

Old customs appear to be fast disappearing in Japan, a fact which cannot be wondered at considering the childishness which lay at the root of many of the most picturesque, but in some of the Japanese islands the quaintest marriage formalities are observed.

In houses wherein reside one or more daughters of a marriageable age an

Red and White Wine.

"Amisapprehension about the strength of red and white wines exists," said a vine grower. "Because red wine has a darker, richer look people think it is more intoxicating. The opposite, really, is the case. Red wines are made by fermenting grape juice, skins and seeds together. White wines are made by fermenting juice alone. In the skins and seeds there is a lot of tannin, and red wine contains much tannin, while white wine contains none. This tannin, an astringent,

Nineteen persons lost their lives during the moose-hunting season in New England.

A Philadelphia paper points out the advantage of a newspaper to a retail dealer in this trenchant way: No retailer can reasonably expect to thrive unless he courts the public favor. The difficult may be wooed, the indifferent interested, the antagonistic converted by a proper use of the types. The newspaper must be pressed into service as the merchant's spokesman. No other medium can so effectively present his cause.

### New Books At The Library.

The following new books have just been placed in the Public Library. As the list is a varied one, it will afford pleasure and instruction to all readers, young and old. Cut out this list and watch for next week's addition.

1—Lavender and Old Lace.—One of the sweetest stories of human love and sympathy. The quiet tenderness of the story appeals to every one, and especially to those who find solace in being alone with a charming book. It is already in demand.

2—The Master's Violin.—By the same author as the previous book, is full of sentiment, tender yet brightened by flashes of pure human humour it abounds in picturesque imagery and is further enhanced by delicate touches of uplifting philosophy.

3—Helena's Love Story.—By the author of "When It Was Dark." It is an impression love story in which a beautiful woman of gentle nature has to choose between two aspirants for her hand. The emotions of the two men are the very antithesis of each other. It is a most fascinating story.

4—Saul of Tarsus.—By Elizabeth Miller.—A remarkably story of the early Christians. This work is far above the average novel of the day and will be in great demand by those looking for an exciting and emotional love story.

5—Pack of Pook's Hill.—A Kipling book, and one with which the children will be pleased.

6—Frank Brown.—By Frank T. Rullen.—A capital book for a boy who has a longing for the sea.

7—A Specimen Spinster.—By Mrs. Yeigh.—A most interesting novel in great demand.

8—The Governance of England.—By Sidney Low.—A philosophical and historical treatise of constitutional government in Great Britain. It is lucid and instructive.

9—Camp Fires in the Canadian Rockies.—By Hornaday & Phillips. A faithful record of a summer outing in British Columbia. The authors are genuine sportsmen and their literary effort is most creditable.

10—Select Readings on Public Finance.—By Professor Charles J. Bullock of Harvard University.—This volume brings together under one cover the collateral reading needed for a general course in public finance.

11—Poems every Child Should know

12—Myths every child should know

13—Heroes every child should know

14—The Romance of Missionary Heroism.—A book of true and thrilling adventures.

15—Inventors at work.—A book which weaves together in a readable way a great deal of useful information about modern science and invention.

16—The \$30,000 Bequest.—By Mark Twain. This book is a collection of short stories; like everything that comes from the pen of this author. This book is well worth reading.

17—The Invasion of 1910.—The title is sufficient to attract the reader

18—The House of Defence.—By F. Benson.—Is a very good story, dealing with a morphine fiend. The interest is well sustained and many of the situations are dramatic.

19—Bimbi.—Stories for children. Decidedly entertaining and charming as well as being instructive on many subjects of art.

20—Legends Children Ought to Know.—An instructive and entertaining book, telling of events in history and literature in a pleasant way.

21—The Heart that Knows.—By Chas. G. L. Roberts. It is a pathetic story which arouses our sympathy and charity towards others.

ishness which lay at the root of many of the most picturesque, but in some of the Japanese islands the quaintest marriage formalities are observed.

In houses wherein reside one or more daughters of a marriageable age an empty flowerpot of an ornamental character is encircled by a ring and suspended from the window or veranda by three light chains.

The Juliets of Japan are, of course, as attractive to the Romeos as those of other lands. But instead of serenades by moonlight and other delicate ways of making an impression it is etiquette for the Japanese lover to approach the dwelling of his lady bearing some choice plant in his hand, which he boldly, but let us hope, reverently, proceeds to plant in the empty vase.

This takes place at a time when he is fully assured that both mother and daughter are at home, neither of whom, of course, is at all conscious that the young man is taking such a liberty with the flowerpot outside their window. This act of placing a pretty plant in the empty flowerpot is equivalent to a formal proposal to the young lady who dwells within.

The youthful gardener, having settled his plant to his mind, retires, and the lady is free to act as she pleases. If he is the right man she takes every care of the gift, waters it and tends it carefully with her own hands, that all the world may see the donor is accepted as a suitor. But if he is not a favorite or if stern parents object the poor plant is torn from the vase and the next morning lies limp and withered on the veranda or on the path below.—McCall's Magazine.

Cannes, the perfume making town of southern France, smells so powerfully of flowers in the busy season that visitors are often afflicted with a flower headache.

seeds together. White wines are made by fermenting juice alone. In the skins and seeds there is a lot of tannin, and red wine contains much tannin, while white wine contains none. This tannin, an astringent, closes the pores of the stomach and prevents the alcohol in the red wine from entering the blood freely and going, as the saying is, to the head. White wine, champagne for instance, has no tannin, and hence its intoxicating properties are much more keenly to be feared than those of the tannin filled red wine."

### Industrious Chinese Children.

The Chinese are a wonderfully industrious people, and their children learn very early to make themselves useful. In the streets of a Chinese town it is no uncommon sight to see two children who are so young that they can hardly talk trotting along with a bamboo pole on their shoulders, by which they are carrying home a pail of water. If one child is stronger than the other the pole is hung near his shoulder, for thus he takes the "heavy end of the pole."

### Fame and Fortune.

"That young physician is working hard."

"Yes," answered the veteran practitioner. "He is on the track of a discovery that will mean fame and fortune. He is trying to invent a new name that will make some old ailment fashionable."

### Barely Remembered.

"I suppose your late uncle didn't fail to remember you in his will," said the sympathetic friend.

"You can hardly call it a remembrance," replied the poor relation. "It was more like a faint recollection."

difficult may be wooed, the indifferent interested, the antagonistic converted by a proper use of the types. The newspaper must be pressed into service as the merchant's spokesman. No other medium can so effectively present his cause.

## HIS WIFE'S LUNGS BOTH AFFECTED

But the Great Consumptive Preventative brought Health and Happiness to his Home

"Our doctor said there was no cure for my wife as both her lungs were affected," says Mr. L. H. Walter, of Pearl Street, Brockville, Ont. "It was a sad disappointment to us both, just starting out in life, only married a short time. But before she had finished the first bottle of Psychine the pain in her lungs quickly went away, and after taking six bottles Mrs. Walter was a new creature and perfectly well again."

That is just one of the many families into which Psychine has brought hope, health and happiness. It is a living proof that Psychine cures Consumption. But don't wait for Consumption. Cure your LaGrippe, your Cough, your Bronchitis, your Catarrh, or your Pneumonia with the remedy that never fails—

## PSYCHINE

(Pronounced Si-keen)

50c. Per Bottle

Larger sizes \$1 and \$2—all druggists.  
DR. T. A. SLOCUM, Limited, Toronto.

# Anæmia

In every street of every Canadian town you will meet with anæmic girls and women! Look at the pale lips, the waxy complexion, the dark rings round the eyes, the springless carriage! Are you a sufferer? Anæmia means that the blood is deficient in red corpuscles—those minute bodies which carry oxygen and carry energy to all the organs. Bileans replenish those corpuscles. Bileans so act upon stomach, liver and intestines that every bit of food you take is transformed into nutriment. This is how they cure indigestion, cure anæmia, cure general debility. Assimilated nutriment alone can cure anæmia. Bileans ensure perfect assimilation. Prove them! Send 1c. stamp for trial box.

but nothing seemed able to give me back my lost strength. Such was my state when Bileans were brought to my notice. The first few doses of this herbal remedy relieved me somewhat, and a little perseverance with their use restored me to health. Bileans are a splendid remedy, and I cannot speak too highly of them.

**Bileans are also a Cure for**

Indigestion, constipation, piles, female ailments and irregularities, liver chill, rheumatism, kidney disease, blood impurities, wind spasms, pains in the chest and between the shoulders, liver congestion, biliousness, sick headache, etc. Send one cent to the Bilean Co., Toronto, and free sample box will be mailed you. All druggists sell at 50c. a box, or post free from the Company upon receipt of price (6 boxes for \$2.50).

# Bileans for Biliousness

# COLTSFOOTE

**COLTSFOOTE**  
Colds, Whooping Cough, Croup, Coughs  
of every description and character,  
lung troubles, Asthma, Sore  
throats, etc., are all cured by this  
safe and permanent remedy.  
or sale by all dealers.  
only 25 cents a Bottle.

On all sides we receive thousands of  
testimonials from grateful people  
expressing their appreciation of—

# COLTSFOOTE EXPECTORANT

## IN COURT.

An old sailor was being examined in an assault case by a cute lawyer, who questioned his veracity regarding a matter of time.

"You had no watch, and yet you are positive that the defendant was only ten minutes absent. I doubt if you are able to estimate ten minutes of time correctly," he said.

"Try me," said the old tar.

The lawyer drew his watch from his pocket, and said, "When I call out 'Now,' you allow ten minutes to pass, and when it is up call out 'Time's up.'"

The old salt nodded, and the lawyer called out "Now." Slowly the time passed, and the lawyer with watch in hand tried to wheedle him into an admission, that time was up. The sailor paid no heed, and exactly at the end of the ten minutes shouted "Time's up." The bewildered lawyer turned round confused at the Court's loud laughter, and his eyes lighted on the court-room clock behind him, which had assisted the old sailor in his task.

## A CRIPPLE CURED.

Helpless and Bent with Rheumatism—  
Cured by Dr. Williams' Pink Pills.

"I was a helpless cripple. I was bent in form and could not straighten up. Crutches were my only means of moving about. I tried many medicines, but they all failed until I began using Dr. Williams' Pink Pills—they cured me." George Schaw, of Short Beach, N. S., made the above almost startling statement to a reporter a few days ago. Mr. Schaw is now a well built man strong and broad shouldered. Like thousands of other Nova Scotians, he is a fisherman, and is consequently exposed to all kinds of weather, just the conditions to set the rheumatism poison in the blood at work. Mr. Schaw adds: "It is impossible to overrate the severity of the attack. The trouble was located in my back and right hip. I had to quit work and was mostly indoors. There was a time when I never expected to stand erect again, but Dr. Williams' Pink Pills straightened me up again, not only that, but they made me the strong, hearty man you see me today. I can never describe the awful pain I suffered before I used these pills. I tried many medicines and had treatment from several doctors, but to no avail. My legs became so stiff that in order to move at all I had to use crutches. Finally the doctors decided that I was incurable, and told me they could render no further assistance. I continued to suffer day and night, and then came the turning point of my life. A friend from a distance came to see me and it was from him I learned that Dr. Williams' Pink Pills were a great cure for rheumatism. At once I got a supply

## A NEW ISLAND WAS MADE

ONCE SAID TO HAVE BEEN THROWN  
UP NEAR ALASKA.

U. S. Revenue Cutter Visits It, and Gave  
It the Name Perry Island—  
Made a Landing On It.

The Technical World gives the following description of an island said to have been cast up by an earthquake near Alaska: Early in May some fishermen brought the news to Dawson City that a small island had suddenly arisen from the ocean.

This new island was "born" on or about the 18th of last April—that fateful date so memorable in the history of San Francisco. At first the stranger island was only a few hundred feet above the ocean's level, but it kept gradually rising, until it is now estimated to be nearly 700 feet high.

As it is comparatively a small island the sides are very steep—in places almost vertical. It was terrifically hot—some of it in a semi-molten state—and naturally the heat made a vast commotion in the sea. For a long distance in all directions the waters were heated to a boiling temperature.

## FAST CLOUDS OF STEAM

Constantly arose from the surface of the sea, totally obscuring at times the view of the island.

At first the new island itself sent forth blinding clouds of smoke and stifling fumes, so that the fishermen dared not approach the rugged and abrupt shores.

These were the reports that were first brought down to Dawson City. Credence was not at first given to these fishermen stories, but investigations made later proved beyond all doubt that a new island had suddenly arisen above the ocean. That it was a volcanic island—the outlet to subterranean fires—was equally true.

Several vessels early visited the newly created island, but none of them ventured very near. More recently the U. S. revenue cutter Perry visited the island—in fact, has made several visits and made some casual investigations.

Some photographs were taken by an officer of the Perry when the island was still very hot. By virtue of being the first living creature to set foot on this new-born island, the officers gave this, the latest of the Aleutian Islands, the name of "Perry Island."

## AN APPROPRIATE CHRISTENING.

Perry Island is now one of the Bogoslof group of the Aleutian Islands. It is situated between Fina Island and Castle

# DARE HE?

## OR, A SAD LIFE STORY

### CHAPTER VIII.—(Continued).

A sudden instinct, with which his will has nothing to do, makes him flash a look back at Mrs. Le Marchant, as if to gauge the effect produced upon her by his betrothed; and, following her glance, he finds that it is resting on Cecilia. She thinks that he is engaged to Cecilia. The mistake is intolerable to him, and yet a second's reflection tells him that it is a natural one. In a second he sees his Amelia as she presents herself to a strange eye. Miss Wilson is only thirty-one, but upon her has already come that set solid look of middle age, which overtakes some women before they are well over the borders of youth, and which other women manage to slay off till they are within near hail of forty. Yes; the mistake is quite a natural one. Most people would suppose that the showy Cecilia, still fairly youthful, and with so many obvious and well-produced "points," must be his choice; and yet, as I have said, the idea that anyone should credit him with her ownership is intolerable to him.

"Here she is!" he cries precipitately. "The one to the right side, the other is her sister; may I—may I present them to you?"

Perhaps it is his irritated fancy that dictates the idea, but it seems to him as if he detected a sort of surprise in Mrs. Le Marchant's face, when he effects the introduction he has proposed, and to which she accedes courteously, after a pause of hesitation about as long as had followed his inquiry of Elizabeth as to their address.

Five minutes later they have all sauntered out again on the terrace, and Burgoyne is again leaning on the wall; but this time he has no fear of hearing of Bayswater, for it is Elizabeth who is beside him. Since last he looked at it half an hour ago, a sort of glorification has passed over the divine view. Down where the river twists through the plain country, there is a light dainty mist, but the mountains have put on their fullest glory. They are not green, or brown, or purple, or blue; but clad in that ineffable raiment woven by the sun, that defies our weak vocabulary to provide it with a name. A little snow-chain lies on the sun-warmed neck of Morello, and along the tops of the further Apennines, right against the acute blue of the heavens, lies a line of snow, that looks like a fleecy-soft cloud resting from its journeyings, on their crests; but it is no cloud, nor is there any speck upon the gigantic complete arch that over-arches town and valley and radiant mountains. In the folds of these last, the shadows slumber; but over all the city is the great gold glory of spring. The one thing in Florence that frowns among so many smiles is the scowling Pitti, and that, from here, is invisible. Nearer to him against the azure, stand the solemn flame-shaped cypresses arow, and beside them—as unlike as life to death—a band of quivering poplars, a sort of transparent gold-green in their young spring livery. The air is so clear that one can go high to counting the marbles on the Duomo walls. In a more transparent amber light, fuller of joy and gaiety, cannot the saved be dancing around, as in Fra Angelico's divine picture? cannot they be walking in the New Jerusalem

there this afternoon, and I did not want to ring at the wrong bell."

A short silence. Jim's head is partly hidden by his Galignani.

"Did Miss or Mrs. Le Marchant ask you to call?"

Byng laughs.

"Both of them are as innocent of it as the babe unborn!"

"You asked yourself then?" (in a snubbing voice).

Byng nods.

"And she said yes?"

The plural pronoun has dropped out of sight, but neither of them perceives it. The younger man shakes his sleek head. Jim lays down his paper with an air of decision.

"If she did not say 'Yes'—if she said 'No,' he begins, with an accent of severity, 'I fail to understand—'"

"She did not say 'No,'" interrupts Byng, still half laughing, and yet reddening as well. "She began to say it; but I suppose that I looked so broken-hearted—I am sure I felt it—that she stopped."

As Jim makes no rejoinder, he continues by-and-by:

"After all, she can but send me away. One is always being sent away" (Jim wishes he could think this truer than he does); "but now and again one is not sent, and those are the times that pay for the others! I'll risk it."

There is a hopeful ring in his voice as he ends, and again a pause comes, broken a third time by the younger man.

"Come, now, Jim"—looking with a straight and disarming good-humor into his friend's overcast countenance—"speak up! Do you know of any cause or impediment why I should not?"

Thus handsomely and fairly appealed to, Burgoyne, who is by nature a just man, begins to put his conscience through her paces as to the real source of his dislike to the idea of his companion's taking advantage of that introduction which he himself has been the means—however unwillingly—of procuring for him. It is true that Byng's mother had adjured him, with tears in her eyes, to preserve her boy from undesirable acquaintances; but can he, Burgoyne, honestly say that he looks upon Elizabeth Le Marchant as an undesirable acquaintance for any one? The result of his investigations is the discovery of how infinitesimal a share in his motives regard for his young friend's welfare he had. The discovery is no sooner made than he acts upon it.

"My dear boy," he says—and to his credit says it heartily—"I see no earthly reason why you should not go; you could not make nicer friends."

"Then why will not you come too?" asks Byng, with boyish generosity.

The other shakes his head. "They had much rather I stayed away; they have taken me en grippe."

"Pooh! Nonsense! You fancy it."

"I think not"—speaking slowly and thoughtfully—"I am not a fanciful person, nor apt to imagine that my acquaintances bother their heads about me one way or another; but when people try their best, in the first instance, to avoid recognizing you at all, and on every subsequent occasion endeavor to disappear as soon as you come in sight, it is not a very forced assumption that they are not exactly greedy for your society."

This reasoning is so close that Byng is for the moment silenced; and it is the other who shortly resumes:

"I think it is because I remind them of

Grippe or Influenza to call it, is one of the diseases known.

*Scott's Emulsion* of Liver Oil and Hypophosphites, in its digested form, is the best known to medical science.

It is so easily digested that it does not disturb the system, making no effort to strengthen nerves.

Use *Scott's* Influenza.

Invaluable for ALL DRUGGISTS

# The Mark That Tells

Pen-Angle trade-mark (in red) on every Pen-Angle garment, tells you it will stand won't shrink,—your own dealer so guarantees it. Underwear thus trademarked is softer, warmer, more flexible, better wearing.

## BETTER UNDERWEAR

As he opens the door of the Wilson's sitting-room, his future father-in-law brushes past him, with evident signs of discomposure all over his clerical figure and spectacled face; and on entering, he finds equal, if not superior, marks of upset equanimity on the countenances of three women that are the room's occupants. Over the wood fire—Sybilla alternately roasts and freezes her family, and this is one of her roasting days—Cecilia is stooping, in evident search of some object that has been committed, or tried to be committed, to the flames. The other two are looking on with an air of vexed interest. Sybilla is the first to address him.

"You have appeared at a not very happy moment," she says, with a sigh; "we have been having a family breeze; it has sent my temperature up nicely! It is 100, 100, Point 2."

The mention of Sybilla's temperature is always enough to put Jim in a rage. It is therefore in no very feeling tone that he returns:

"If it were 1,000, Point 99, I should not be surprised, in this atmosphere! Good heavens, Cis, are not you hot enough already?"

The young lady thus apostrophized rises, with some precipitation, and with a very heated complexion, from her knees, holding in her hand, however, the object of her quest—a rather charred small parcel, done up in white paper, and with a fragment of white ribbon still adhering here and there to it.

"Father behaves so childishly," she says, with irritated unedificence.

"You must own that it was enough to provoke him," strikes in Amelia's mild voice.

"What was enough to provoke him? How has he shown his childishness? For Heaven's sake, some of you explain!" cries Jim impatiently, looking from one to the other.

But with this request none of the three appears in any hurry to comply. There is a distinct pause before Cecilia, seeing that neither of her seniors shows any signs of relieving her of the burden of explanation, takes that burden upon herself.

"The fact is," she says, setting her little rescued packet on the table beside her, and beginning to fan herself, "that Mr. Dashwood, the man to whom I was engaged, has chosen to marry. I am sure—with a shrug—"no one has the least desire to deny his perfect right to do so; and this morning there arrived by post a bit of his wedding cake! I suppose he meant it civilly; but father chose to take it as an insult to himself, and, though it was addressed to me, he threw it into the fire. I am very fond of wedding cake; so, as soon as father's back was turned, I fished it out again!"

Jim laughs, with more vigor perhaps than heartfelt amusement.

"Bravo, Cis! You are a real philosopher! We might all learn a lesson from you."

"What have you done with your nice friend?" asks Sybilla, languidly. "Amelia, dear, this couvre-pied is slipping off me again. What a sympathetic

to choose crockery, was I not? Am I not?"

Amelia's answer is conveyed by a series of nods and winks executed behind her sisters' backs, which he presently understands to imply that she desires a private interview. It is not immediately that he grasps what she is driving at, since dumb-show is often puzzling to the person at whom it is aimed, though clear as day to the dumb-shower. As soon, however, as he masters what her wish is, he hastens to comply with it; and five minutes later finds them tete-a-tete in the hideous little dining-room which had been the scene of their reunion, and of many after-meetings.

"I could not say so, of course, before her," remarks Miss Wilson, as soon as they are out of earshot, or she might have insisted upon my going. She is very unselfish sometimes; but the fact is, I do not think I ought to leave Sybilla again to-day. You see, she was alone the whole of yesterday afternoon; and when we came back we found her in a very low way. She had been reading her book of prescriptions which she has had for the last ten years bound up together—and we rather dread her bringing it out, as she always fancies she is going to have the disease prescribed for."

"Humph!"

"And, after all, happiness ought not to make one selfish, ought it?" says Amelia, with a gentle sigh of abnegation, as she ruffles her pale-haired head against his coat sleeve. "I have so much of you now—oh, so much!—not to speak of—"

"Cecilia, of course, is incapacitated by grief?" interrupts Jim brusquely. "She mountains like another fair one. But your father? He will be at home, will he not?"

"Yes, he will be at home," replies Amelia, slowly and doubtfully, as if not finding a very satisfactory solution in this suggested arrangement; "but, as you know, it never answers to leave father and Sybilla alone together for long. You see, he does not believe there is anything the matter with her; he thinks that she is as well as you or I" (a gush of warm feeling towards his father-in-law rushes over Jim's heart); "and though he tries to prevent himself from showing it to her, yet I am afraid, poor dear, that he is not very successful."

Jim laughs.

"And to-day," continues Amelia, "he is naturally a good deal upset about Cecilia, and that wedding cake; it was very impertinent to send it, was not it, though she does not seem to see it? I hope—with a wistful smile, and a repetition of the fond friction of her head against his sleeve—"that when you throw me over—"

This is a hypothesis, suggested with perhaps unwise frequency by poor Miss Wilson, which never fails to exasperate Jim.

"If we are going to talk nonsense," he breaks in brusquely, and with no attempt to return or reward her caressing gesture, "I may as well go."

"Go to the Piazza d'Azeglio," says she coaxingly, her spirits raised by the harshness of tone of his interruption of her speech, and half persuading herself that it owes its birth to the supposition being too painful to be faced by him.

He looks at her strangely for a moment, then—

"Why do you wish me to go to the Piazza d'Azeglio?" he asks, in a tone that is no longer overtly cross, only constrained and odd. "Why are you driving me there?"

"Because I think you would like it," she answers; "because"—taking his hand and passing her lips, which he feels to be trembling a little, very gently over the back of it—"because all through your life I want you to have exactly what you like, always."

He draws his hand away; not unkindly, but as if shocked at the humility of her action.

"That is so likely," he says, mournfully.

"What have you done with your nice friend?" asks Sybilla, languidly.

"Amelia, dear, this couvrepied is slipping off me again. What a sympathetic voice he has! I am sure he has been a great deal with sick people."

"I left him putting on his best tie to go out calling. No, calm yourself, Cecilia, not on you; it is not your turn to-day."

"Whose turn is it, then?" asks the girl, with an interest not at all blunted by the mortifying incident of the cake, which, indeed, she has begun to nibble with apparent relish.

Jim hesitates a second—a second during which it strikes him with a shock that he already finds a difficulty in pronouncing Elizabeth Le Marchant's name. He manages to evade the necessity even now by a circumlocution.

"I believe it is the Piazza d'Azeglio upon which that luminary is to shine."

"Is he going to see that lovely creature to whom you introduced me yesterday?" cries Amelia, with good-natured enthusiasm. "I heard her telling him that she lived in the Piazza d'Azeglio. Oh, Jim, how pretty she is! One ought to pay for being allowed to look at her."

Many women, whose plainness is uncontested, are able to be just to their better-favored sisters; but Amelia is more than just—she is lavishly generous.

Burgoyne rewards her with an affectionate look—a look such as would make her swear that, besides Miss Le Marchant, as beside Dumain's fair love,

"Juno but an Ethiop were!"

"She looks as if she had had a history; that always improves a woman's appearance," says Cecilia pensively, holding a fragment of the fateful cake suspended in air, and regarding it with a melancholy eye. "Has she?"

"I never asked her."

"Why did not you go too?" inquires Amelia, judiciously striking in, as is her habit, as often as she perceives that her younger sister is beginning to get too obviously upon her own fiancée's nerves; a catastrophe which something in the tone of his last remark tells her—though she does not quite understand why it should be imminent. "They are old friends of yours, are not they? They may be hurt if they find that a perfect stranger like Mr. Byng is in a greater hurry to visit them than you are."

Before Burgoyne's mental vision rises a picture of Elizabeth's heavenly eye wandering indifferently over the dear old friend's shoulder to find its home in that of the perfect stranger. But he says kindly, and even playfully:

"Why did not I go too? Because I was under the impression that I was engaged to go with another lovely being

her action.

"That is so likely," he says, mournfully.

(To be continued).

**BE SURE YOU GET THE KIND YOU HAVE ALWAYS HAD.** "The D & L" Menthol Plaster. For rheumatism, neuralgia, etc., nothing is better. Made only by Davis & Lawrence Co.

Miss Antiqua—"And did he say he remembered me when I was a girl?"

Youngman—"No; he said he remembered you when he was a boy."

**ITCH, Mange, Prairie Scratches and every form of contagious Itch on human or animals cured in 30 minutes by Wolford's Sanitary Lotion. It never fails.**

**HOG'S HOLLOW.**

An old lady living not far from Toronto retired early one Sunday evening, leaving her daughter to entertain two city men. From time to time she called down, "Are they gone yet?" The answer was always "No," until finally one of the visitors suggested that they answer "Yes," and hear what she would say. It was—

"Wasn't them boys hogs on the but-ter at supper?"

**Heart relief in half an hour.**—A lady in New York State, writing of her cure by Dr. Agnew's Cure for the Heart, says: "I feel like one brought back from the dead, so great was my suffering from heart trouble and so almost miraculous my recovery through the agency of this powerful treatment. I owe my life to it."—19

"If Nature had made me an ostrich," said old Grouch, "I suppose I could eat your cooking." "That would be very nice," answered his imperturbable spouse; "then I could get some plumes for my hat."

You cannot be happy while you have corns. Then do not delay in getting a bottle of Holloway's Corn Cure. It removes all kinds of corns without pain. Failure with it is unknown.

"A jealous girl, that Elsie." "How is that?" "I told her four weeks ago in the strictest confidence that I was secretly engaged, and up to now she hasn't told a single person."

**TONS OF IRON** consumed each year in medicine. In **Dr. Williams' Pink Pills**, the best tonic, it is so cleverly manipulated that the weak and sickly get all possible nourishment and benefit from it.

One of the things a conceited youth can't understand is how any girl can be so foolish as to turn him down for some other chap.

**When Rheumatism doubles a man up** physician and sufferer alike lose heart and often despair of a cure, but here's the exception. Wm. Perry of Norwood, Ont., says: "I was nearly doubled up with rheumatism. I got three bottles of South American Cure and they cured me. It's the quickest acting medicine I ever saw."—18

Somehow the bargains a woman acquires seldom look like bargains a few days later, when she has occasion to visit another store.

**A Successful Medicine.**—Everyone wishes to be successful in any undertaking in which he may merge. It is therefore, extremely gratifying to the proprietors of Parnelee's Vegetable Pills to know that their efforts to compound a medicine which would prove a blessing to mankind have been successful beyond their expectations. The endorsement of these Pills by the public is a guarantee that a pill has been produced which will fulfil everything claimed for it.

"For goodness' sake, what's that noise?" "The girl next door is having her voice cultivated." "Apparently the process of cultivation has reached the harrowing season."

**WANTED.**

Ladies to do plain and light sewing at home, whole or spare time; good pay; send stamp for full particulars. National Manufacturing Company. Montreal.

**AFTER TEN YEARS.**

Mr. G. L. Stephenson, of Peterborough, says: "For over ten years I suffered constantly with Piles, first itching, then Bleeding; pain almost unbearable; life a burden. Tried everything in vain. I used Dr. Leonhardt's Hem-Roid. I had taken but a few doses when I began to notice an improvement. Now I am completely cured."

A \$1,000 guarantee with every box of Hem-Roid. \$1. All dealers, or The Wilson-Fyle Co., Limited Niagara Falls, Ont.

First Lawyer: "How did you come out in settling up old Gotrox's estate?"

Second Lawyer: "It was a hard struggle." First Lawyer: "Really?" Second Lawyer: "Yes, I had to work hard to keep the heirs from getting part of the estate."

**Trial Proves its Excellence.**—The best testimonial one can have of the virtue of Dr. Thomas' Electric Oil in the treatment of bodily pains, coughs, colds and affections of the respiratory organs, is a trial of it. If not found the sovereign remedy it is reputed to be, then it may be rejected as useless, and all that has been said in its praise denounced as untruthful.

China and Japan are pre-eminently the seaweed-eating nations of the world. Among no other people are seaweeds so extensively eaten and relished as food substances.

**LAZY OLD SORES**, painful and disfiguring, will not linger long after treatment with Weaver's Cerate has been begun. Also, cleanse the blood with Weaver's Syrup.

A woman always believes a man when he declares he loves her, even though she doesn't believe anything else he says.

**Eyes and Nose ran Water.**—C. G. Archer, of Brexton, Maine, says: "I have had catarrh for several years. Water would run from my eyes and nose for days at a time. About four months ago I was induced to try Dr. Agnew's Catarrhal Powder, and since using the wonderful remedy I have not had an attack. It relieves in ten minutes." 50 cents.—17

**Drill-Sergeant (to awkward squad)**—"The bullet of our new rifle will go right through eighteen inches of solid wood!" Remember that, you block-heads!

Help your children grow strong and robust by counteracting anything that causes ill-health. One great cause of disease in children is worms. Remove them with Mother Graves' Worm Exterminator. It never fails.

**FALLING OUT OF THE HAIR.**

**Why Men Go Bald So Much Sooner**

A question that often arises and is seldom answered twice in the same way is as to why the hair falls out on the top of the head and not at the back or on the sides. The old-fashioned theory is that baldness occurs within the lines marked by a man's hat, and as nobody has ever offered conclusive proof to the contrary, that explanation may be the correct one.

The case was stated not so very long ago to two very intelligent barbers. One of them thought that the reason why baldness occurred at the top of the head was that the brain came closest to the surface there, and this being an age in which many brains are kept going at high tension, the abnormal amount of blood thus carried to the cranium produced a kind of fever in the upper scalp. Fevers, as is well known, often result in the falling out of the hair.

The second barber gave variety to the discussion by enlarging upon the notion that he had formed from the observation and reflection of many years.

"You will notice," said he, "that the first hair a baby has comes on the top of the head, and falls out before the child is many weeks old. The hair that comes to stay grows thicker and stronger on

the sides and at the back, and I have an idea that the growth on the top of the head is always the weakest from infancy to old age."

"But how do you account for the fact that women do not grow bald as men do?"

"Account for it! I don't have to account for it," replied the ready-witted barber. "It isn't so. Why, I used to work in an establishment where they had nine chairs in the men's department and eleven in the women's, and I want to tell you that I learnt some things there that the average man—and the average barber, too, for that matter—doesn't know. If you knew any women who have false hair so arranged that nobody can tell it from their own natural tresses, you wouldn't ask why men grow bald and women don't."

**That Cutting Acid** that arises from the stomach and almost strangles, is caused by fermentation of the food in the stomach. It is a foretaste of indigestion and dyspepsia. Take one of Dr. Von Stan's Pineapple Tablets immediately after eating, and it will prevent this distress and aid digestion. 60 in a box, 35 cents.—16

He had lent her his stylographic pen and she commenced to write a letter. She—"Oh, it writes beautifully. I declare I'm in love with this pen." He—"I'm in love with the holder." She saw the point.

Often what appear to be the most trivial occurrences of life prove to be the most momentous. Many are disposed to regard a cold as a slight thing, deserving of little consideration, and this neglect often results in most serious ailments entailing years of suffering. Drive out colds and coughs with Bickel's Anti-Consumptive Syrup, the recognized remedy for all affections of the throat and lungs.

"Have you any children, Jones?" "Oh, yes! You know Robinson?" "Which Robinson?" "Which Robinson—William?" "Yes." "Know him very well. What's that got to do with it?" "I'm going to tell you. He and I had fifty-one between us." "What are you talking about? You must be crazy! What do you mean?" "It's correct. He lives on one side of the orphan asylum and I on the other!"

**Your Doctor**

Can cure your Cough or Cold, no question about that, but—why go to all the trouble and inconvenience of looking him up, and then of having his prescription filled, when you can step into any drug store in Canada and obtain a bottle of **SHILOH'S CURE** for a quarter.

Why pay two to five dollars when a twenty-five cent bottle of **SHILOH** will cure you as quickly?

Why not do as hundreds of thousands of Canadians have done for the past thirty-four years: let **SHILOH** be your doctor whenever a Cough or Cold appears.

**SHILOH** will cure you, and all druggists back up this statement with a positive guarantee.

The next time you have a Cough or Cold cure it with

**SHILOH**

ISSUE NO. 43-06.

# CHANGES IN THE TARIFF

## A Number of Duties Decreased and Others Increased.

A despatch from Ottawa says: Mr. Fielding delivered his budget speech on Thursday. The new proposition which he presented, gives really five tariffs. They are as follows:—

- First, the general tariff.
- Second, the intermediate tariff.
- Third, the British preference.
- Fourth, the German surtax.
- Fifth, the French treaty tariff.

Three of these tariffs are figured out, and as a consequence we have as a basis of operations a three column schedule. The general tariff, which is applicable to all countries not otherwise provided for, differs from that hitherto in force and as the highest of the three. It decreases a number of duties and increases others. The principal changes are as follows:—

- Manufactures of lead, reduced from 25 per cent. to 30 per cent.
- Silverware, increased from 30 per cent. to 35 per cent.
- Clocks and watches, increased from 25 to 30 per cent.
- Typecasting and typesetting machines, increased from 10 to 20 per cent.
- Mowing machines, harvesters, reapers, binders, reduced from 20 to 17½ per cent.
- Axes, scythes and sickles, reduced from 25 to 22½ per cent.
- Shovels and spades, reduced from 35 to 32½ per cent.
- Telephone and telegraph instruments, raised from 25 to 27½ per cent.
- Confectionery, specific rate of ½ cent. per lb., dropped.
- Silk for neckties, increased from 10 to 30 per cent.
- Silk, manufactures, increased from 35 to 37½ per cent.
- Cardboard reduced from 35 to 25 per cent.
- Playing cards increased from 6 to 8 cents a pack.
- Glue, mullage, etc., increased from 25 to 27½ per cent.
- Perfumery increased from 30 to 35 per cent.
- Gasoline, formerly dutiable at 2½ cents a gallon, now free.
- Building brick and manufactures of clay increased from 20 to 22½ per cent.

- Baths, bath tubs, increased from 30 to 35 per cent.
- Canned meats increased from 25 to 27½ per cent.
- Beans increased from 15 to 25 cents a bushel.
- Peas and buckwheat increased from 10 to 15 cents per bushel.
- Pearl barley increased from 20 per cent. to 30 per cent.
- Vegetables increased from 25 per cent. to 30 per cent.
- Oranges and lemons are made free.
- Coal slack, now dutiable at 14c the short ton in place of varying rates.
- Hats and caps increased from 30 to 35 per cent.
- Satchels, purses, and pocket-books increased from 30 to 35 per cent.
- Collars and cuffs increased from 35 to 37½ per cent.
- Jewelry increased from 30 to 35 per cent.
- Brushes of all kinds increased from 25 to 27½ per cent.

On the old tariff these rates were subject to a discount of one-third if the articles came from Britain. The new scheme abolishes this arrangement and provides instead a special rate for each article. Between the British preference and the general tariff there is a half-way schedule called the intermediate tariff. This tariff is for foreign countries that will reduce their tariff in favor of Canada. It does not come into operation until agreements have been reached on both sides. The general result of the tariff as altered is difficult to estimate, but it is concluded that it will increase the revenues.

Provision is made in the new tariff to prevent dumping and also providing for a surtax on the goods of these nations treating Canada's products on less favorable terms than those of other countries. This means the retention of the surtax on German goods. It is also provided that a case of conspiracy or combine to raise prices to the unfair treatment of the consumer, the tariff barriers may be lowered to an extent which will ensure reasonable competition.

The estimates for the next fiscal year reach the total of \$105,689,519.

## HAPPENINGS FROM ALL OVER THE GLOBE.

### Telegraph: Briefs From Our Own and Other Countries of Recent Occurrence.

#### CANADA.

Indians of Qu'Appelle district raised 50,000 bushels of wheat this season. The Hindoos in Vancouver will not work for \$1.50 a day, but insist on \$1.75. The Niagara Frontier Bridge Company is applying for a charter to bridge Niagara.

The Government has received over one million dollars from the succession duties.

Over nine and one-half miles of new gas mains were laid in Victoria the past year.

Prince Albert, Sask., sawmills will cut sixty million feet of lumber, valued at \$1,200,000, next year.

The C. P. R. was fined \$200 at Swift Current, Sask., for starting a prairie fire by sparks from the engine.

Winnipeg has another extreme. A church pew in the congregation of the Sons of Jacob has been seized for debt.

Bert Wright, yard engine fireman on the C. P. R. at Sudbury, has fallen heir to a business in Bristol, Eng., worth £75,000.

Joseph Miller, a C. P. R. brakeman, was thrown from a train by two tramps near Piapot, Alberta, and nearly died before he was found.

To the end of September the aggregate earnings of the Temiskaming Railway since January first were \$388,300, and the net profits \$144,511.

New Westminster Chinese laundrymen have shut their places up and stand united for an increase in prices for domestic washing.

St. Paul and Vancouver capitalists will erect an eight-storey building in Hastings street, Vancouver, for a new department store venture.

The C. P. R. have purchased the power plant of the Capital Power Company at Deschenes, and it is said will electrify their Pontiac Junction line.

Robert Walker, a young criminal, was sentenced at Montreal on Friday to twenty years imprisonment for shooting Detective Leluquet, who surprised him while robbing a store.

The Lethbridge coal strike was settled at a conference at Indianapolis, on Saturday between Premier Scott, Deputy Minister King and President Mitchell of the Miners' Federation.

The Canadian Northern Railway Company has let or is letting contracts for over four and a half million dollars' worth of rolling stock, and the contracts will keep several Canadian works busy till next fall.

The religious census at Ottawa records that the Anglicans are the strongest Protestant denomination in the city. They had 2,754 families out of the 8,870 in the city. The Presbyterians have four less, and the Methodists 1,666.

Over five thousand boxes of Japanese oranges, the first shipment to arrive this season, were condemned by Provincial Fruit Inspector Thomas Cunningham at Vancouver. No less than five different species of scale and a lot of fungi were found.

#### GREAT BRITAIN.

The Duke and Duchess of Connaught leave England for the east in January. Archdeacon Lloyd has made an appeal in England for five clergymen and fifty-five catechists for work in the west.

The London Daily Mail strongly advocates the appointment of a Canadian Ambassador at Washington.

The British South African Company has offered the Salvation Army a million acres of land in Rhodesia for colonization purposes.

Six of the British stokers who mutilated at Portsmouth have been sentenced

# HEALTH

## CLIMATE AND CONSUMPTION.

Only a few years ago one suffering from consumption was thought to be incurably ill, and doomed to a death which, although perhaps slow, was inevitable. Modern scientific knowledge has changed all that. It is now known that tuberculosis taken in time is quite amenable to treatment, and indeed often gets well of itself without any special effort on the part of patient or physician.

The modern treatment is mainly climatic, that is to say, a removal, if possible, to some part of the world where the climatic conditions are such that the patient can pass most of his time in the open air. But if this were all that is needed the question would be a much more simple one than it really is. It is indeed the main, but not the only thing.

It is desirable also that the place of residence of the consumptive shall be dry, sunny, and free from high winds and dust. Whether it shall be in the mountains or near sea-level, in the so-called temperate zone or in the tropics, is a matter to be determined by circumstances. Some persons prefer warm air to cold; others suffer from heat and feel well in cold weather. Naturally the patient's inclinations are to be consulted in such a case, for it would be cruel and disastrous to send a lover of the tropics to winter in Minnesota, and equally cruel to compel a snowbird to live in the West Indies.

A climate that will be beneficial in one stage of the disease may be harmful in another. Elevated regions, for example, are suitable as a rule only for cases of consumption in the early stages and may aggravate the condition at a later stage, when the patient has had one or more hemorrhages. At a very advanced stage no climate, however ideal, will compensate for the fatigue and dangers of a long journey, and home is the only place.

But after all that can be said for the climatic treatment of consumption, the main thing is the open air, and that one can get without the trouble and expense of travel by simply keeping windows open day and night. It is harder to follow out the open-air treatment in a large city than it is in Colorado or southern California or Jamaica, but it can be done, and no one need forego its benefits while there are windows in walls, or while there is space in which to pitch a tent.—Youth's Companion.

## FOR THE HOME NURSE.

The home nurse should have fresh, clean washgowns, but without enough starch to make them rattle. They should clear the floor by several inches. Her shoes should be the list shoes worn by nuns—at least they should have rubber heels. Her hair should be simply and very neatly arranged, and her hands should be exquisitely cared for.

Creaking shoes, rustling papers, loud whisperings and similar nerve-racking

# THE WORLD'S MARKETS

## REPORTS FROM THE LEADING TRADING CENTRES.

### Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, Dec. 4. — Flour — Ontario wheat 90 per cent. patents are quoted at \$2.70 in buyers' sacks outside for export. Manitoba first patents, \$4.50; second patents, \$4, and strong bakers', \$3.90, Toronto.

Bran—The market is steady at \$16 to \$16.50 in bulk outside. Shorts are quoted at \$18.50 to \$19 outside.

Bran—Wanted at \$16 outside, without offerings.

Wheat—No. 2 white offered at 77½¢ outside; No. 2 red at 71¢ outside, with 70¢ bid on C.P.R. No. 2 mixed offered at 71¢ C.P.R., without bids. No. 1 Northern, 80½¢ bid on track Point Edward, with sellers at 81¢, November shipment from Fort William.

Barley—No. 3 extra. 50¢ bid east on C.P.R.

Peas—No. 2 wanted at 81¢ outside,

\$20.50; shorts, \$22.50 to \$23; milled moultie, \$21 to \$25 per ton, and straight grain, \$28 to \$30. Provisions—Barrels short cut mess, \$22 to \$24; half-barrels, \$11.75 to \$12.50; clear fat backs, \$23.50; long cut heavy mess, \$20.50; half-barrels do, \$10.75; dry salt long clear bacon, \$12 to 12½¢; barrels plate beef, \$12 to \$13; half-barrels do, \$6.50 to \$7; barrels heavy mess beef, \$11; half-barrels do, \$6; compound lard, 8 to 9½¢; pure lard, 12½ to 13¢; kettle rendered, 13½ to 14¢; hams, 14 to 15½¢; breakfast bacon, 10 to 16¢; Windsor bacon, 15 to 16½¢; fresh killed abattoir dressed hogs, \$9 to \$9.25; alive, \$6.75. ## UNITED STATES MARKETS.

Duluth, Dec. 4.—Wheat—No. 1 Northern, 79¢; No. 2 Northern, 77½¢; December, 77½¢; May, 79½¢; July, 80½¢.

Milwaukee, Dec. 4.—Wheat—Steady; No. 1 Northern, 81 to 82¢; No. 2 Northern, 77 to 81¢; May, 78 to 78½¢ bid. Rye —No. 1, 69 to 69½¢. Barley—No. 2, 55½¢; sample, 43 to 55¢.

Minneapolis, Dec. 4.—Wheat—December, 77½ to 77¾¢; May, 79½¢; July, 80½¢; No. 1 hard, 82½¢; No. 1 Northern, 81½¢; No. 2 Northern, 79½¢; No. 3

# WHOLE TOW

## Three Hundred P Wounded at

A despatch from Dortmund, Germany, says: A "Robur" factory, situated close to the town of Annen, seven miles southwest of here, blew up on Wednesday evening and was wined from the

Northern, 80½¢ bid on track Point Edward, with sellers at 81c, November shipment from Fort William.

Barley—No. 3 extra, 50c bid east on C.P.R.

Peas—No. 2 wanted at 81c outside, without sellers.

Oats—A car of No. 2 white sold at 36½¢ on a 6c rate to Toronto.

Corn—No. 3 American yellow offered at 52c, track, Toronto, with 51c bid, and it also offered at 51½¢ to arrive Toronto, without bids.

#### COUNTRY PRODUCE.

Beans—Hand-picked selling at \$1.50 to \$1.60, and primes at \$1.35.

Honey—Strained quoted at 10 to 12c per lb. and combs at \$2 to \$2.50 per dozen.

Hops—New quoted at 18 to 22c.

Hay—No. 1 timothy scarce, and quoted at \$11 to \$11.25 on truck here; No. 2 quoted at \$8.50.

Straw—\$6.50 to \$7 per ton.

Potatoes—Ontario, 60 to 70c per bag on track, and New Brunswick, 75 to 80c per bag.

Poultry—Turkeys, fresh killed, 12 to 15c; chickens, dressed, 8 to 9c; alive, 6 to 7c per lb; fowl, alive, 4 to 5c; ducks, dressed, 8 to 9c; do, alive, 6 to 7c per lb; geese, dressed, 8 to 10c per lb.

#### THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 23 to 24c; tubs, 20 to 22c; large rolls, 20 to 23c; creamery prints sell at 26 to 27c, and solids at 24½ to 25c.

Eggs—Storage, 23c per dozen, and lined 21 to 22c; new laid nominal at 30c.

Cheese—Large cheese, 13½¢, and twins at 14c.

#### HOG PRODUCTS.

Dressed hogs in car lots are unchanged. Bacon, long clear, 11½ to 12c per lb in case lots; mess pork, \$21 to \$21.50; short cut, \$23.

Hams—Light to medium, 15 to 15½¢; do, heavy, 14 to 14½¢; rolls, 12c; shoulders, 11 to 11½¢; backs, 16 to 16½¢; breakfast bacon, 15½ to 16c.

Lard—Treees, 12½¢; tubs, 12½¢; pails, 12½¢.

#### BUSINESS AT MONTREAL.

Montreal, Dec. 4.—Grain—Business in Manitoba wheat continues quiet; No. 2 oats in store are quoted at 42½¢; No. 3, 41½ to 42c; and No. 4, 40½ to 41c. Flour—There was no change in the local flour situation. Manitoba spring wheat, \$1.60; strong bakers', \$1.10; winter wheat patents, \$1.10 to \$1.25; straight rollers, \$1.75 to \$3.80; do, in bags, \$1.65 to \$1.75; extras, \$1.50 to \$1.60. Feed—Manitoba bran, in bags, \$20; shorts, \$22 per ton; Ontario bran, in bags, \$20 to

ern, 77 to 81c; May, 78 to 80c. Barley—No. 2, 55½¢; sample, 43 to 55c.

Minneapolis, Dec. 4.—Wheat—December, 77½ to 77¾¢; May, 79¾¢; July, 80¾¢; No. 1 hard, 82¾¢; No. 1 Northern, 81¾¢; No. 2 Northern, 79¾¢; No. 3 Northern, 76½ to 77½¢. Flour—First patents, \$4.30 to \$4.40; second patents, \$4.15 to \$4.25; first clears, \$3.25 to \$3.35; second clears, \$2.40 to \$2.60. Bran—\$17.

#### CATTLE MARKET.

Toronto, Dec. 4.—Another rather light run at the City Cattle Market gave trade a brisk tone this morning.

Export Cattle—Choice, \$4.40 to \$4.60; good, \$4 to \$4.40; cows, \$3.50 to \$3.75; bulls, \$3.50 to \$3.75.

Butcher Cattle—Extra choice, \$4.30 to \$4.50; choice, \$4 to \$4.40; medium, \$3.75 to \$4; common, \$2.75 to \$3.25; bulls, \$3 to \$3.25.

Stockers and Feeders—Choice, \$3.25 to \$3.65; common, \$2.75 to \$3; bulls, \$2 to \$2.25; heavy feeders, \$3.65 to \$3.75; short-keeps, \$3.85 to \$4.10.

Milch Cows—Choice, \$40 to \$50; common, \$25 to \$35; springers, \$25 to \$40.

Calves—Unchanged at 2c to 6c per pound.

Sheep and Lambs—Export ewes, \$4.50 to \$4.85; bucks and culls, \$3 to \$3.50; lambs, \$5 to \$6.

Hogs—Unchanged at \$6.10 per cwt. for choice selects and \$6.15 for lights and fats, fed and watered.

#### JAPS ON THROUGH TRAINS.

##### A New Departure Initiated by the Canadian Pacific.

A Montreal despatch says: The Canadian Pacific management will introduce Japanese attendants in the through train service between Montreal and Vancouver. The Japanese will be employed as supplementary to the present train staff, and their functions will be to render a somewhat similar service on first and second class cars to that performed by the porters on sleeping cars. The Japanese staff employed for this purpose will be engaged by General Superintendent Marpole at Vancouver, and as the innovation has been approved by Vice-President McNicoll and Passenger Traffic Manager Kerr, it is expected that the Japs will shortly be familiar figures on the through trains. They will relieve the brakemen of the rather irksome duty of cleaning cars and waiting on the passengers, and thus enable them to give their undivided attention to the working of the trains.

The British South African Company has offered the Salvation Army a million acres of land in Rhodesia for colonization purposes.

Six of the British stokers who mutilated at Portsmouth have been sentenced to terms varying from six weeks to eighteen months.

While performing a delicate operation at Cheltenham, Tuesday, Dr. G. B. Ferguson, ex-President of the British Medical Association, dropped dead.

Madame Adelina Patti has announced that her voice is no longer for sale.

Lieut. Collard, whose order caused the mutiny at Portsmouth, is to be court-martialled.

#### UNITED STATES.

There was a falling off in football casualties this season in the United States, due, it is thought, to modified rules. Eleven players were killed and 104 injured.

Requests aggregating more than \$1,000,000 are to be distributed to charity by the will of Daniel B. Shipman, the paint manufacturer, of Chicago, who died last Thursday unattended by a single relative.

Chancellor Benjamin Andrews has had an order posted warning the classes of the Nebraska State University that any student found guilty of chewing tobacco will be expelled from the institution. Over a year ago smoking on the campus was prohibited.

The buildings at the northwest corner of Eighth avenue and Forty-sixth street, New York, have been bought by a corporation controlled by negroes, which will open a department store there for colored people. A banking institution will be established in connection with the enterprise.

Earle Kephart, an eighteen year blind boy known all over Pennsylvania for his wonderful ability to play the piano or pipe-organ, died at Councilville on Tuesday. Just before death his sight partially returned and he bade good bye after looking on his loved ones for the first time.

#### GENERAL.

Bulgarian bandits have pillaged and burned two Serbian villages.

Important archeological discoveries have been made in central Asia.

A debate in the Austrian lower House of Parliament ended in a free fight.

Japan has decided to connect Mukden and Fusan by a bridge across the Yalu. Sixteen Bulgarian peasants have been murdered by a band of Turks and Greeks.

Chinese in the Lianchow district have shown themselves hostile to missionaries.

The Australian Federal Government is contemplating the prosecution of the Australian branch of the Standard Oil Trust.

Nineteen persons lost their lives during the moose-hunting season in New England.

Students of the Ontario Agricultural College won the combined judging contest and the individual prize at the International Live Stock Show at Chicago.

#### GUNS ON AIRSHIP.

##### New Engine of War is Being Prepared in Germany.

The New York Herald of Wednesday published the following from Berlin: Despite the recent purchase of the Parseval airship by the Kaiser's technical commission, German military authorities are constructing in secrecy a new and improved airship at the ballooning department at Tegel. The airship will be fitted with all the modern improvements, experience gained in the Parseval and Zeppelin dirigibles being utilized. This vessel will be armed with guns and other means of offence. The technical commission has also offered a certain sum to Count Zeppelin for the purchase of his latest airship. It is not expected, however, that in view of the small amount offered Count Zeppelin will accept.

A despatch from Dortmund, Germany, says: A "Robur" factory, situated close to the town of Annen, seven miles southwest of here, blew up on Wednesday evening and was wiped from the face of the earth. It is estimated that 300 persons were killed or wounded. Up to half-past 1 o'clock Thursday morning eight dead bodies had been recovered, and eighty of the severely wounded persons had been conveyed to hospitals. The work of rescue now going on is attended with the greatest danger from the possibility of a renewal of the explosions. The accident occurred at about half-past 8 o'clock. There were

## DOMINION PARLIAMENT

### NOTES OF PROCEEDINGS IN THE HOUSE OF COMMONS.

#### INSURANCE REFORM.

The Insurance Commission expects to have its report before Parliament when it resumes after the Christmas holidays. The commission, it is understood, is securing a copy of the recommendations of the recent Chicago convention concerning insurance reform.

#### PACKING HOUSES.

Mr. Fisher stated in reply to a question by Mr. Chisholm that the report of Mr. W. W. Moore, chief of the markets division of the Department of Agriculture, on his investigation into the condition of packing-houses in the Dominion, disclosed generally a satisfactory condition of affairs. As the report went into details concerning the private business of packing-houses, it was thought better that the report should not be laid upon the table of the House.

#### GEORGIAN BAY CANAL.

That two interim reports have been received from the Chief Engineer in charge of the survey of the Georgian Bay Canal, but that no approximate estimate of cost was included, was the information given by Mr. Fisher to Mr. Brabazon. The final report, he added, is expected by the end of January.

#### RIVER THAMES.

Mr. Fisher intimated to the House, in reply to a question by Mr. Clements, that \$2,031 had been expended on the survey of the River Thames, and that no decision had been arrived at on the question of deepening the channel from the mouth of the Thames to the city of Chatham to 18 or 20 feet.

#### AMERICAN SILVER.

In reply to Mr. Uriah Wilson, it was stated by Mr. Fielding that the Government had paid \$2,174.58 in commission and \$4,251.48 in expressage on American silver to the amount of \$576,000, which had been exported by the banks to the United States. The question of continuing the practice was under consideration.

#### HINDOO IMMIGRATION.

Mr. Oliver informed Mr. Ralph Smith that 2,193 Hindoos have arrived in Canada, via British Columbia, from January to date. Of this number 100 had been deported because of disease up to November 1st, and since that date twenty-five had been deported, but a detailed report of the cause for their deportation had not been received at the department. The Immigration Department, Mr. Oliver said, does not contribute in any way to the support of impoverished Hindoos arriving in British Columbia.

#### PRISONERS MUTINIED.

##### Bound Officials, Looted Prison and Escaped.

A despatch from Vladimir, Russia, says: The prisoners confined here mutinied on Tuesday, and as a result 35 are now at liberty. They rose in a body, seized and bound all the officials, including the Governor, looted the prison and got away with a quantity of arms and civilian clothes.

# ESTIMATES FOR 21 MONTHS

## One Hundred and Fifteen Million Dollars Called For.

A despatch from Ottawa says: Estimates for the nine months of the fiscal period ending March 31, 1907, and for the fiscal year ending March 31, 1908, were tabled in the House of Commons on Thursday afternoon. The total estimated expenditure for the two periods amounts to \$115,665,905.73. Of this \$9,376,366.70 is for redemption of debt. The expenditure on consolidated fund for the nine months of 1907 is \$54,186,099.46, and for the fiscal year 1908, \$45,224,645.72; the total capital expenditure for nine months, \$18,419,765, and for 1908, \$38,298,340.

The amount asked for under the head of railways and canals during the year 1908 amounts to \$32,453,340, of which \$2,308,050 is allotted to the Intercolonial Railway, \$401,410 to the Prince Edward Island Railway, \$28,360,000 to the National Transcontinental Railway, and \$1,883,880 to canals. For the nine months of 1907 \$2,519,590 is asked for the

Intercolonial Railway, \$185,500 for the Prince Edward Island Railway, \$10,000,000 for the Transcontinental Railway, and for canals \$1,298,475, the grand total for both periods being \$46,995,000. The estimated expenditure on rebuilding the concrete piers on the Murray Canal is \$18,000 for 1906-07 and \$55,000 for 1908; to build the retaining wall for the Welland Canal, \$90,000 for 1906-07 and \$70,000 for 1908, and the new entrance pier at Matland, \$30,000 for 1906-07 and \$15,000 for 1908. The expenditure on improvements to Quebec harbor for 1906-07 is estimated at \$230,000; for 1908, \$280,000. Harbor and river improvements at Port Arthur and Fort William, \$300,000 for 1906-07 and \$500,000 for 1908. Improvements at St. Andrew's Rapids, Red River, \$125,000 for 1906-07 and \$200,000 for the year ending March 31, 1908. Estimates for the new departmental buildings at Ottawa amount to \$500,000 for 1906-07 and \$400,000 for 1907-08.

sounds are more disturbing to the average sufferer than the clanging of the passing car bells or the rattle and roar of near-by trains.

Don't allow loud talking, gloomy or weepy visitors near the patient. Don't sigh, frown and scold if things don't go as you wish them to, and, above all, be cheerful without being loganous. A low voice, a serene, "unfussy" manner, and a pleasant smile are three blessed attributes for the nurse, amateur or otherwise.

The patient's bed should be a high and narrow iron cot, if possible, as it is much easier for doctor and nurse to handle the patient than it would be on a low, broad bed.

The sick room should if possible be in a quiet part of the house, and adjoining a bathroom. If there is an open fire and coal has to be put on, wrap the coals in pieces of paper or in paper bags, and lay them on the fire instead of shovelling in the usual way. This will save a great deal of ear-racking noise.

Quiet, cheerfulness, and cleanliness are the three essentials that the home nurse should take as her watchwords.

### LAWS FOR MOTORISTS.

#### French Government to Pass a Drastring Measure.

A despatch from Paris says: Senator de Freycinet, whose daughter was hopelessly crippled in a motor accident last May, has drafted an extremely stringent anti-motor bill, which he will introduce in the Senate on Monday. It is understood that M. de Freycinet has the backing of Prime Minister Clemenceau. The introduction to the bill quotes police reports of 50 accidents daily in Paris and the suburbs since May. The bill forbids a motor car from passing another in towns of 200,000 inhabitants or over. A car will be only allowed to leave the kerb to pass a standing vehicle. The speed limit is fixed at seven miles an hour in towns and twelve miles an hour in the country. In case of accidents the chauffeur will be fined 1,000 francs for the first offence, sentenced to a year's imprisonment for the second and three years for the third, with loss of right to run a car. A special corps of motor police is provided for. The bill will possibly be attenuated in Parliament, but severe measures will probably pass, as the country deputies and Senators strongly favor it owing to their constituents' complaints.

### BIG OCEAN STEAMERS.

#### Several New Vessels for the Anglo-Canadian Route.

A despatch from London says: The Liverpool Daily Post-Mercury says that the Dominion Line contemplates ordering two more large powerful steamers for the Canadian service. The Allen Line intends placing a new twin-screw steamer on the Liverpool-Montreal route. The C.P.R. will eventually place two more new steamers on the transatlantic service similar to the Empress of Ireland. Another rumor afloat is that the G.T.R. will make a working agreement with the existing line.

## YOUNG FOLKS

### A RAVEN.

Poor Mrs. Van Loon was a widow; she had four children. The eldest was Dirk, a boy of eight years.

One evening she had no bread, and her children were hungry. She folded her hands, and prayed to God; for she served the Lord, and she believed that He loved and could help her.

When she had finished her prayer, Dirk said to her, "Mother, don't we read in the Bible that God sent ravens to a pious man to bring him bread?"

"Yes," answered the mother, "But that was long, long ago, my dear."

"Well," said Dirk, "then the Lord may send ravens now. I'll go and open the door, else they can't fly in."

In a trice Dirk jumped to the door, which he left wide open, so that the light of the lamp fell on the pavement of the street.

The wealthy burgomaster of the town soon chanced to be passing the open door.

Looking into the room, he was pleased with its clean, tidy appearance, and with the nice little children, who were grouped around the mother. He could not help stepping in, and approaching Mrs. Van Loon, he said, "Eh, my good woman, why is your door open so late as this?"

Mrs. Van Loon was a little confused when she saw such a well-dressed gentleman in her poor home. She quickly rose and dropped a courtesy to the gentleman; then, taking Dirk's cap from his head and smoothing his hair, she answered with a smile, "My little Dirk has done it, sir, that the ravens might fly in to bring us bread."

Now the burgomaster was dressed in a black coat and black trousers, and he wore a black hat. He was quite black all over, except his collar and shirt-front.

"Ah, indeed!" he exclaimed cheerily, "Dirk is right. Here is a raven black, you see, and a large one, too. Come along, Dirk, and I'll show you where the bread is."

The burgomaster took Dirk to his house, and ordered his servant to put two loaves and a small pot of butter into a basket. This he gave to Dirk, who carried it home as quickly as he could. When the other little children saw the bread they began dancing and clapping their hands. The mother gave to each of them a thick slice of bread and butter, which they ate with the greatest relish.

When they had finished their meal, Dirk went to the open door, and, taking his cap from his head, looked up to the sky, and said, "Many thanks, good Lord!" And after having said this he shut the door.

### HOW COMMON SENSE SAVED THE PUPPY.

"Charlie, Charlie, come quick, cried Mabel, in a voice shrill with terror; 'the puppy's in the cistern!'"

Charlie obeyed instantly, dropping the old pan into which he had deposited swarms of potato bugs.

Even the swift thought that they would all crawl into the vines and have to be gathered over again did not stay his footsteps.

What were a few hours' work, even though hard and disagreeable, when compared with the life of his beautiful Newfoundland puppy?

He thought it would be the work of a few minutes to rescue the little fellow. An old tin pail was at hand. Mabel brought the clothesline, and, in a moment or two, the pail descended into the black hollow. Charlie floated it close to the puppy, at the same time calling to him in coaxing and endearing tones. But the poor little animal found it impossible to fasten his feet upon the

## YARD ENGINE RUNS AMUCK

### A Fatal Accident in the Yards at Winnipeg.

A despatch from Winnipeg says: A most remarkable accident occurred in the Canadian Northern Railway yards on Thursday evening. It was more than remarkable, inasmuch as it cost two lives, and two more are fatally injured, while a score of people are more or less hurt. It was a collision between a freight engine, light, and an incoming Northern Pacific passenger train. The fatalities did not result, however, from the effects of the collision of these two engines, but from the rebound of the freight engine, which, with its reversed machinery, tore through the railway yards and ripped up a line of freight cars wherein a gang of civic employees were working.

### DEAD.

William McNeil, foreman civic construction work, and Michael Mudlow, laborer, are dead; and John Suttie and Anthony Olson, laborers, are fatally injured.

Mrs. M. Buchanan, of Trenton, N.J., was injured by the effects of the emergency brakes and jars from the collision, and her head is badly cut. She was conveyed to the Empire Hotel.

There were a large number of other passengers on the Northern Pacific express from the Twin Cities, who were more or less cut and injured by being thrown down, but their injuries were not really serious.

### HOW ACCIDENT HAPPENED.

It appears that the big Mogul engine with its caboose was travelling westward to pick up its train out of the yards in Fort Rouge, and met No. 7, the Northern Pacific express, coming from the south on the main line. They met just west of Spadina Avenue. The passenger engineer brought his train to a standstill, but the engineer and fireman of the freight jumped after reversing. The light engine with reversed gear rebounded after colliding, and, with constantly accelerated speed, tore into Winnipeg. When the switchman noticed the Mogul had no crew there was a wild time in the yards. The wild engine smashed into a few flatcars, where the city workmen were loading the concrete equipment. Two men died and two were horribly mangled when those cars crumpled up from the impact.

### SAMPLES OF CHOICE GRAIN.

#### Minister of Agriculture Will Send Them Free of Charge.

A despatch from Ottawa says: By instruction of the Hon. Minister of Agriculture a distribution will be made this season of samples of superior sorts of grain to Canadian farmers for the improvement of seed. The stock for distribution is of the very best and has been secured mainly from the excellent crops recently had at the branch Experimental farms at Indian Head, Sask., and at Brandon, Man. The distribution will consist of samples of oats, spring wheat, barley, Indian corn (for ensilage only) and potatoes. The quantity of oats to be sent will be 4 lbs., and of wheat or barley 5 lbs., sufficient in each case to sow one-twentieth of an acre. The samples of Indian corn and potatoes will weigh 3 lbs. each. A quantity of each of the following varieties has been secured for this distribution:—

Oats.—Banner, Wide-Awake, White Giant, Danish Island, Thousand Dollar, Improved Ligowo (white varieties), and Goldfinger (yellow).

Wheat.—Red Eye, Preston, Pringle's Champlain, Percy, Stanley, Huron and White Eye.

Barley.—Six-rowed.—Mensury, Odessa, Mansfield and Claude. Two-rowed.—Standwell, incincible, Canadian Thorpe and Sidney.

Indian Corn (for ensilage).—Early sorts, Angel of Midnight, Compton's Early and Longfellow; later varieties, Selected Leaming, Early Mastodon and White Cap Yellow Dent.

Potatoes.—Carman No. 1, Early White Prize, Rochester Rose, Money Maker and Late Puritan.

Only one sample can be sent to each applicant, hence if an individual receives a sample of oats he cannot also receive one of barley or potatoes. Lists of names from one individual, or applications for more than one sample for one household cannot be entertained. The samples will be sent free of charge through the mail.

Applications should be addressed to the Director of Experimental Farms, Ottawa, and may be sent in any time before the 15th of February, after which the lists will be closed, so that the samples asked for may be sent out in good time for sowing. Applicants should mention the variety they prefer, with a second

### POISONED WELL WATER.

#### Kills Five of the Winkenweder Family of Dashwood, Near London.

A despatch from London, Ont., says: A story of the wiping out of almost an entire family is revealed in the death of Jacob Winkenweder of Dashwood, at Victoria Hospital, on Sunday.

The story tells of a family of eight, reduced inside of eight weeks by the poisoned water of a contaminated well, to a broken-hearted mother and two sons.

Something less than two months ago Edward Winkenweder, who up to that time was living in Chicago, came home in delicate health to his father's farm near Dashwood. He gradually failed, and his illness developed into typhoid fever. The best medical attendance was procured, also a trained nurse, and the other members of the family labored incessantly to save his life. All efforts were in vain, however, and the young man died. Inside of two weeks after the first death four other members of the family were taken sick with the same malady, and one by one, at short intervals, the two sisters, Lovina and Melinda, and the father, a man of magnificent physique, also passed away. Jacob, who died on Sunday, was brought to Victoria Hospital, as the depleted family, even with the assistance of two nurses who have been in attendance nearly eight weeks, were utterly unable to give him proper care.

The cause of the deadly outbreak has been unmistakably traced to water used for drinking purposes which was polluted by the decomposing bodies of dead frogs.

The grief-stricken mother of the family is bearing up bravely, although the strain of her terrible bereavement is visibly telling upon her. Two brothers—Arthur, who is on his feet again after a battle with the dreadful disease, and Benjamin, of Napierville, Ill.—are, with their mother, the sole remaining survivors.

### GUELPH STUDENTS LEAD.

#### Won First Prize in Judging Live Stock at Chicago.

A despatch from Chicago says: Students of the Ontario Agricultural College

## WON BLOWN UP

### Persons Killed or Hurt at Westphalia.

Two tremendous detonations, heard throughout the entire surrounding industrial region which is thickly settled. The inhabitants of the neighborhood fled in panic fearing further explosions. The

two tremendous detonations, heard throughout the entire surrounding industrial region which is thickly settled. The inhabitants of the neighborhood fled in panic fearing further explosions. The town of Annen is nothing more than a heap of ruins. Houses were shattered right and left, and no house escaped injury.

Roburit is an explosive of high power, composed of saltpetre, ammonia, sulphur and other ingredients. It is not easily exploded by a blow, and it can be burned with safety in the open air. Its power is second to that of dynamite.

## FIRE TRAGEDY IN ST. LOUIS.

### Six Dead and Thirty-five Injured in Hotel Blaze.

A despatch from St. Louis says: The Lighthouse Hotel, a three-storey structure at the corner of Ninth and Market streets, utilized as a Salvation Army Barracks, was damaged by fire early on Wednesday, when probably 500 homeless men were lodged within it. Six lost their lives and probably thirty-five were injured, about half that number being seriously hurt, some not being expected to live. Four were burned to death and two died from injuries received from jumping from the upper windows. Six others of those who jumped are lying unconscious at the City Hospital, and are not expected to recover. Only two of the dead men have been identified.

lasts. Farmers are advised to apply early to avoid possible disappointment. Those applying for Indian corn or potatoes will please bear in mind that the corn is not usually distributed until March, and that potatoes cannot be mailed from Ottawa until danger from frost in transit is over. No postage is required on mail addressed to the Central Experimental Farm, Ottawa.

## ONTARIO'S BILL OF HEALTH.

### Typhoid and Diphtheria Were Most Prevalent.

A despatch from Toronto says: According to the report of the Provincial Board of Health, the total number of deaths from all causes in September was 2,370, out of a population of 2,101,200, a death rate of 13.5 a thousand. For the same period last year 2,047 deaths were reported, a rate of 12.3 in the thousand. Typhoid fever and diphtheria were the most prevalent of contagious diseases during the period. Of the former 788 cases were reported in September, among which there were 151 deaths, as compared with 350 cases and 48 deaths in the same month last year. There were 371 sufferers from diphtheria, of whom 41 died. In September, 1905, there were 191 cases, and 29 resulted fatally. The prevalence of other contagious diseases may be considered fairly normal. They were as follows: Smallpox, 9 cases and no deaths; scarlet fever, 70 cases and 7 deaths; measles, 119 cases and 1 death; whooping cough, 83 cases and 19 deaths; consumption, 165 cases and 160 deaths.

## RATS HAVE DEBAUCH.

### Gnaw Hole in Beer Duct to Get Gloriously Drunk.

A despatch from London says: A search to ascertain the cause of a leakage in the beer cellar of a restaurant in Birmingham revealed that rats had gnawed a beer duct with the apparent deliberate intention of carousing. A number of the rodents were found wallowing in a shallow flood of beer in various stages of inebriety. Some were helplessly drunk, others were zigzagging about in a befuddled manner, while others were alert, but unable to control their legs. None were able to escape.

Mabel brought the clothesline, and, in a moment or two, the pail descended into the black hollow. Charlie floated close to the puppy, at the same time calling to him in coaxing and endearing tones. But the poor little animal found it impossible to fasten his feet upon the hard and shining sides of the pail. He struggled bravely at the same time crying pitifully.

Mabel, who was watching eagerly, at last began to cry loudly, as she saw the puppy's repeated vain attempts.

"He's going to drown, I know he is," she sobbed aloud; "see, he can hardly keep his head out of water now."

The hired man was just driving into the barn as she made this outcry. He dropped the reins on the horse's back, and, with a few strides, reached the cistern and gave one glance into its depths.

He next jerked the clothesline around so that he had hold of the end that lay on the ground, at the same time calling to Charlie. "Get me that wooden pail on the steps, there."

The wooden pail soon struck the water close to poor puppy's head. He threw out his feet in one last desperate effort. They clung fast, and in another moment the poor little soaked body was in Charlie's arms.

"How did you happen to think of the wooden pail?" asked Mabel, looking at the hired man in awed admiration.

"Common sense," said the man, returning to his waiting horse.

"Common sense," repeated Mabel; "let's go tell mother; you know she is always saying that it's better to have common sense than talent."

## EFFECT OF UNIFORM.

### Swindler Imposes on Numbers of British Naval Officers.

A despatch from London says: A clever swindler, speaking English, French and Spanish, has been victimizing British naval officers at Portsmouth, Gravesend, Woolwich and Folkestone, by methods somewhat resembling those employed by "Captain" Voigt, of Koepenick fame. Appearing in the uniform of a Spanish naval officer and other disguises, which he wears with polite self-assurance, he obtained invitations to the naval officers' messes and borrowed money from them. He has now gone to Dunkirk, where, it seems, he imposed on the American Consul by representing himself as Dr. Liffey, a nephew of Cornelius Vanderbilt, whose yacht is due at Dunkirk from Antwerp. His orders for supplies for the yacht were undertaken by local tradesmen, and commissions were paid to him. He then vanished. He has not got away with large amounts anywhere, but in the aggregate his plunder has been heavy.

## THE RAILWAYS' VICTIMS.

### Chicago's Heavy Sacrifice to the Traction Lines.

A despatch from Chicago says: A record of 132 persons killed and 2,271 injured on the surface and elevated traction lines of Chicago since January 1 last gave impetus to the crusade against the overcrowding of cars which was begun by the officials of the city on Tuesday. The police, afoot and mounted, will assume a measure of control over the operations of traction lines. Granting the expected "permission" from the corporation counsel, the force under Chief Collins will from Wednesday night undertake the task of preventing the overcrowding of all "L" trains and the blockading of surface cars. It is planned to place uniformed policemen on every station of the loop. Just how many passengers will be permitted on each car has not been decided, but the suggestion was made that not more than one and one-half times the seating capacity of each car should be acceptable as safe.

The new Provincial loan of \$3,000,000 has been entirely subscribed.

Applications should be addressed to the Director of Experimental Farms, Ottawa, and may be sent in any time before the 15th of February, after which the lists will be closed, so that the samples asked for may be sent out in good time for sowing. Applicants should mention the variety they prefer, with a second sort as an alternative. Applications will be filled in the order in which they are received, so long as the supply of seed

## SIX INDIANS DROWNED.

### Were Returning From Work in the Lumber Woods Near Sydney Bay.

A despatch from Warton says: Another disaster has occurred on the waters of the Georgian Bay. On Saturday afternoon six Indians of the Cape Croker reserve were drowned in McGregor Harbour almost in sight of home. These laborers, whose names were W. E. Lamorandiere, Xavier Nadjowon, Louis Johnston, Joe Martin, George Mitchell, and Louis Nadjowon, were lumbering for J. P. Newman, lumberman of this town, near Sydney Bay. It was their custom to sail over a distance of three miles to the following Saturday afternoon. The weather during the past week has been stormy, and there have been very heavy seas. It is surmised that a squall struck the boat when quite near home, and as the ropes were frozen, the Indians were unable to lower the sails, and the boat capsized. Three of the Indians clung to the boat, but soon perished in the water. Their bodies, however, drifted to the shore. The bodies of the others have not yet been recovered. There is universal mourning on the Cape Croker reserve, as this is one of the saddest accidents in its history, and four of the men were married. W. E. Lamorandiere, who was drowned, was the Secretary of the band and postmaster of the reserve, having been appointed to this position about three weeks ago, after the death of his father.

## INCREASE OF 387,416.

### Returns of Census of Prairie Provinces are Announced.

A despatch from Ottawa says: At last the complete returns of the quinquennial census of the Prairie Provinces are known. Mr. Fisher submitted the figures to the House on Monday evening. The summary is as follows:—

|                 | 1906.   | 1901.   | Increase |
|-----------------|---------|---------|----------|
| Manitoba .....  | 365,848 | 255,211 | 110,637  |
| Saskatchewan .. | 250,984 | 91,276  | 165,705  |
| Alberta .....   | 184,906 | 73,022  | 111,074  |

Totals .....

The population of Winnipeg is given as 90,201; Calgary, 11,967; Edmonton, 11,163; Brandon, 10,411.

## GUELPH STUDENTS LEAD.

### Won First Prize in Judging Live Stock at Chicago.

A despatch from Chicago says: Students of the Ontario Agricultural College at Guelph, Ont., were awarded the first prize in the judging contest for all animals combined at the International Live Stock Show, in the report made on Monday by Prof. J. F. Shepherd, of North Dakota Agricultural College, the superintendent of the judging.

In the contest of horse-judging for the McLaughlin Bros.' prize, Ontario was fourth.

For individual excellence A. H. Hamer, of Ontario, ranked first, J. O. Olsen, of Kansas, second, and C. C. Nixon, of Ontario, third.

## TO THE KING'S TASTE.

### King Edward's Chef Talks of Royal Employer's Menu.

A despatch from London says: Cedar, the Prince of Wales' chef, has given to a reporter some points regarding the royal gustatory preferences. He says that oysters rank high among the favorite dishes of the King and Prince of Wales, perhaps disputing place with caviare. Both, however, have to pass a doctore before they are served. He has to satisfy himself that everything is pure before it is placed on the royal tables.

## HEAD GROUND AWAY.

### Clifford Morin Killed in Runaway at Port Arthur.

A despatch from Port Arthur says: Clifford, the fifteen-year-old son of Solomon Morin, met with a fatal accident on Wednesday. A horse which he was driving ran away on Lincoln street. The boy fell with his head between the wagon box and the wheel and sustained such injuries that he died within a few minutes. The jaw was broken to a pulp and the whole side of his head ground away.

## FREE BEDS FOR CATS.

In an animal hospital in Philadelphia there is a free bed for cats, endowed by a servant, Ruth Darling, who died in that city some years ago. She had always liked animals, and left her savings to provide free treatment of ailing pets in the Maher Animal Hospital, where it takes the form of a commodious iron cage with the inscription "The Ruth Darling Bed" on it in gold letters. This bed has always a long list of cats waiting to be treated. During one year as many as fifty-six were cared for.

# GRAIN EXPORTS INCREASE

## Review of Season's Business Through Port of Montreal

A despatch from Montreal says: The last ocean steamship left Montreal on Friday, namely the Delama, of the Elders-Dempsey Line, and the business of the port for 1906 will be a matter of record.

The scrutiny of the figures from the opening of navigation up to the present shows some large increases, while, on the other hand, there have been some noticeable decreases in the export of certain commodities. The total shipments of grain and produce for European ports shows a considerable advance over last year, though there is a falling off in some lines.

In spite of the fact that the grain business appeared dull during the last

Summer, the total shipments of grain show a large increase, being 25,460,713 bushels, against 21,959,759 bushels last season. The chief gains were made by wheat and flaxseed. The shipments of the former were 13,388,616 bushels, against 9,916,187 bushels last year. This year's export of flaxseed were 3,015,174 bushels, against one of 270,453 bushels last year. Corn showed a considerable decrease, as did also barley. The shipments of oats showed a slight increase.

In dairy produce the shipments of cheese shows an increase of 21,140 boxes. Butter exports fell off.

Cattle shipments show a gain, being 120,127, against 115,180 head last year.

## SUITABLE

Fine Evening Shoes for ladies in Patent or Vici Kid \$1.50 to 3.00

Overshoes, Moccassins, Leggings, for Men, Women and Children, a large variety to choose from.

The J. J. Haines Shoe Houses.  
Napanee, Belleville, Trenton.

## THE BEST FLOUR.

### DAFOE'S NONESUCH

### DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.

A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,  
16th January, 1906.

## COUNTY COUNCIL.

### WEDNESDAY—SECOND DAY.

Council met at 10 a.m.; members all present. Warden presiding. Minutes of yesterday were read and approved.

#### COMMUNICATIONS

From County of Halton, submitting report of a committee of that Council, in which recommendation is made to reduce the expenses of administration of justice, and asking this Council to consider it, and if they concur in the committee's report, to submit a memorial to the Government that the changes suggested be made. Referred to Judge Madden for his consideration.

From Herrington, Warner and Grange, threatening actions against the county for damages to Mr. C. H. Spencer's threshing engine at Wiggins Bridge, Belleville Road, and also an accident to Mr. Spencer on the Dezeronto Road, at Birrell's Bridge. The damages claimed are, for Dezeronto road accident, \$77.50; at Wiggins' bridge, \$53.27. The accidents referred to occurred on 27th and 29th Sept last, the bridge breaking down under the weight of the heavy machinery, at Wiggins, and the embankment at the side of the road giving way at approach to Birrell's bridge. Referred to Roads and Bridges committee, with instructions to visit the scene of the Birrell bridge accident, and also obtain legal advice in the matter.

The report of the Warden and Clerk, orders issued since last session, was read and adopted.

Col. Clyde submitted several accounts for expenses incurred for repairs to county road machinery when received in Ernestown from U. E. L. Division, \$30. Referred to Roads and Bridges committee.

From W. P. Deroche, Registrar of Court, submitting last Grand Jury report, in which it was recommended that the Grand Jury room be properly furnished, and the electric light installed in the County jail.

Moved by Mr. Martin, seconded by Mr. Hall, that the Chairman of County Property committee be instructed to have jail lighted by electricity.

From Mr. F. C. Anderson, P.S.I., stating that he had not yet been paid his salary by either the Government or

that it was much of an improvement on the former law. It gave the smaller municipalities greater power on the board.

### WEDNESDAY AFTERNOON.

Continued from last week.

The following accounts were ordered to be paid: James Richardson \$7.50, G. S. Hinch \$1.50, Henry's Bookstore \$15.15, F. C. Anderson P.S.I., \$8.70, F. E. Vanluven \$11.900. The following accounts were referred to the County Property committee: S. Gibson, Registrar \$8.50, M. S. Madole \$10.56.

Messrs. Hall, Ming, Robinson and Madole, of Napanee Board of Education, addressed the Council in reference to grant of County to Napanee Collegiate Institute.

Moved by Col. Clyde, seconded by Mr. Miller, that the Chairman of the Roads and Bridges committee procure the services of a competent man to make measurements of Brandon bridge abutments in place of F. F. Miller, who refuses to act.

Council adjourned till to-morrow at 9.30 a.m.

### THURSDAY—THIRD DAY.

Council met at 9.30 a.m. Warden in the chair. Members all present. Communication from F. Burrows, P.S.I., was read and filed. Mr. Martin produced and read a written opinion of Hon. A. B. Aylesworth upholding the validity of By-law 212, appointing Public School Inspectors. Mr. F. C. Anderson, P.S.I., appeared before the Council and addressed them on the subject of his communication.

Moved by Mr. Martin, seconded by Mr. Miller, that the Treasurer be instructed to pay each Public School Inspector of this County the statutory allowance for which the county territory assigned to each Inspector by By-law No. 212 of this County. Carried.

Moved by Col. Clyde, seconded by Mr. Miller, that Mr. Burrows be requested to hand over to Mr. Anderson registers and other matter that he may have in his possession belonging to the territory defined to Mr. Anderson. Carried.

Moved by Mr. Miller, seconded by Mr. Hall, that the Napanee Board of Education be paid \$2,950.00, grant to Collegiate Institute. Carried.

Moved by Mr. Hall, seconded by Mr. Miller, that Mr. Martin send telegram to Jenks & Dresser, Sarnia asking them when County bridges will arrive. Carried.

Moved by Mr. Baker, seconded by Col. Clyde, that the Chairman of County Property Committee place lights in Turnkey's residence. Carried.

Reports from Napanee, Newburgh, Bath, and Kaladar, Anglesea and Effingham, as to expenditure on roads, were read, and on motion were referred to Special Committee on Roads and Bridges.

Account, M. Mylo, S. N. Asselstine and E. Fretts, were on motion referred to Commissioners of U. E. L. Division to settle.

Account, F. Burrows, P.S.I., \$5.90, was ordered paid.

Communication from Newburgh re bridge in village, was read and filed.

The following accounts were referred to County Property Committee: Madole & Wilson, jail, \$34.48; Madole & Wilson, Court House, \$21.09.

Account of Madole & Wilson,

PROGRESS BRAND  
CLOTHING

If you require a new Suit or Overcoat for Christmas your order should be placed at once, as we are pretty well stocked with orders already. We make the best clothing in this section—make it to please the wearer—the risk is all ours. If it is not satisfactory in every respect we will not ask you to take them.

## CHRISTMAS PRESENTS

What about something for your father, brother, or somebody else's brother—we've lots of suitable presents, such as Gloves, Mitts, Ties, Shirts, Collars, Handkerchiefs, Underwear, Sweaters, Cardigan Jackets, Warm Caps, etc. Don't wait until the last moment—you will find it far more satisfactory in buying early, when you can take your own time in selecting.

Drug Store.

**FRED L. HOOPER.**

County, and asking that same be paid. On motion of Messrs. Paul and Baker, the matter was laid on the table until Thursday morning, and that the two school inspectors be asked to attend the session.

Mr. Martin presented an account for bridge flooring for Mink's, Kaylor's and Brandon's bridges, \$112.77, from Elias Jackson.

Moved by Col. Clyde, seconded by Mr. Baker, that the Warden, Mr. Martin and the mover be a special committee to examine and adjust County road and Township road accounts. Carried.

Account, C. A. Anderson, \$1.00, was paid.

Moved by Col. Clyde, seconded by Mr. Paul, that the following continuation class grants be made, to supplement the Government grants, Bath, \$150.00; S. S. No. 12, Ernestown, \$22.50; S. S. No. 7, South Fredericksburgh, \$22.50. Carried.

Council adjourned till 2 o'clock.

**AFTERNOON SESSION.**

Council resumed at 2 p.m.

His Honor Judge Madden was heard respecting the communication from the County of Halton. He stated that he had not had time to look into the matter sufficiently, but as far as he could see the object was to do away with the division and county courts, and make all cases high court cases, if that is the object, there would then be no poor man's court. He fancied that the matter had already been dealt with by the department.

On motion His Honor was thanked for the lucid explanation and information he had furnished the Council.

Mr. Martin stated that Mr. Miller had declined to make the measurements at Brandon's bridge, and the Clerk was instructed to phone Mr. W. R. Ayleworth, Belleville, to see if his services could be secured. Mr. Ayleworth was communicated with, but said his time was fully occupied, and he would be unable to undertake the work.

Mr. J. C. VanDyck was heard respecting his account for use of machinery on the county road, and on motion was given Mr. VanDyck for \$231 for the use of his crusher for twenty-one days, same to be charged to the County machinery account.

Mr. Allen Oliver, an old County Councilor was present and was asked to address the board on the new and old County Councils Act, and made a short speech. The new School act was at present of more interest to him. He thought the Government had made a mistake in its new legislation, and that the County Council should do what it can to remedy it. As it now is, those who had to pay for our schools had no say in the matter, and the duties of school trustees do not amount to much. As to the new County Council Act, he did not know

\$78.06, was referred to Special committee on Roads and Bridges.

Council adjourned till 2 p.m.

Council resumed.

Moved by Col. Clyde, seconded by Mr. Miller, that Mr. Martin get Mr. Kirkpatrick, C.E., of Kingston, to make measurements of Brandon's bridge abutments to-morrow, and tender Mr. Saul balance due him as shown by that measurement. Cd.

Moved by Col. Clyde, seconded by Mr. Miller, that the Chairman of County Property Committee connect Jaylor's residence with the electric light. Carried.

An account of J. R. Dafee, \$14.00, was ordered to be paid.

Council adjourned till to-morrow at 9.30 a.m.

**— FRIDAY—FOURTH DAY.**

Council met at 9.30 a.m. Warden in the chair. Members all present.

Moved by Mr. Paul, seconded by Mr. Baker, that the committee services in connection with settlement of disputes between Councilors Miller and Creighton, \$23.00, be charged one-half to Township of North Fredericksburgh, and one-half to Township South Fredericksburgh. Carried.

Moved by Mr. Miller, seconded by Mr. Creighton, that said committee services be charged to general County account.

Mr. Woods presented first report of County Property Committee, which was read, and on motion was adopted.

Council adjourned till 2 p.m.

Council resumed.

Account of T. B. Wallace, \$6.70, paid.

Communication from Napanee Poultry, Pigeon and Pet Stock Association was read and filed.

Mr. Paul presented first report of Finance committee, which was read, and on motion was adopted.

On motion Col. Clyde's account for committee services on Roads and Bridges committee for \$7.40, was ordered to be paid.

Mr. E. Sheppard was heard asking for remuneration for taking care of fires etc., in Registry Office. On motion the matter was referred to County Property committee to report to-morrow.

Moved by Col. Clyde, seconded by Mr. Miller, that the Commissioners of Napanee County Council Division have a temporary structure at bridge over Sucker Creek at Brandon's erected at once. On motion it was laid on table till to-morrow.

Moved by Col. Clyde, seconded by Mr. Hall, that a grant of \$10.00 be made to Napanee Poultry Association. Carried.

Report of Mr. A. K. Kirkpatrick, C.E., re measurements of Brandon bridge abutments, was presented to Council and considered. Moved by Col. Clyde, seconded by Mr. Miller, that the report be received and adopted, and filed for future reference. Carried.

Council adjourned till to-morrow at 9 a.m.

**SATURDAY—FIFTH DAY.**

Council met at 9 a.m. Warden in the chair. Members all present.

Communication from Secretary of Newburgh Board of Education, was read.

Moved by Col. Clyde, seconded by Mr. Woods, that the Newburgh Board of Education be granted \$1,855.00 for High School. Carried.

Mr. Woods presented second report of County Property committee, which was read, and on motion was adopted.

IN THE SURREGATE COURT OF THE COUNTY OF LENNOX AND ADDINGTON.

IN THE MATTER OF the Estate of Sarah Scanlin, late of the Township of Camden in the County of Lennox and Addington, Married woman. Deceased.

NOTICE IS HEREBY GIVEN pursuant to the Revised Statutes of Ontario 1897 Chap. "129" Sec. "38" and Amending Acts, that all persons having any claims against the Estate of the said Sarah Scanlin, deceased, who died on or about the 13th day of November, A. D. 1906, are required on or before the Seventh Day of January, A. D. 1907, to send by post prepaid or to deliver to the undersigned Solicitors for James Scanlin, Administrator of the Estate of the said Sarah Scanlin, deceased, their names, addresses and descriptions and full particulars of their claim or claims and the nature of the security (if any) held by them duly verified. AND NOTICE IS HEREBY FURTHER GIVEN that after the said Seventh Day of January, A. D. 1907 the said Administrator will proceed to distribute the assets of the said estate among the persons entitled thereto, having regard only to those claims of which he shall have had notice, and the Administrator will not be liable for the assets or any part thereof to any person or persons of whose claims he shall not then have had notice.

DATED at Napanee this 3rd day of December, A. D. 1906.

DEROCH & DEROCH.

Sol'rs for the Administrator,  
James Scanlin.

YARKER

The tea and Xmas tree in connection with the church of England congregation at Yarker, will be held (D. V.) Friday Dec. 21st at Mr. Ewart's Hall. All the members of the church of England and their families, and all who attend the services and consider themselves to belong to the congregation are cordially invited. The children have got up a splendid programme.

The two plays given by the Newburgh Dramatic Club, "The Riots at the Swan" and "My Lord and Livery" were excellent. The characters were well patronized and their efforts applauded the musical portions of the programme were good. Mr. Albert Benjamin made a first class chairman and voiced the thanks of the Guild of St. Anthony's church, Yarker, to the Newburgh Dramatic Club in a neat speech. Proceeds about \$60.00.

A great offer—The Napanee Express from now until January 1908 for \$1.00. Send your order early.

Carvers, we have a special line of Carving Sets in Cases and in pairs from \$1.00 to \$12.00, nice goods and prices right. BOYLE & SON.

is new house.  
 Revival services closed last Friday night, after a successful three weeks' work. The services were conducted by H. McCombe, Toronto. He went from here to Thornhill.  
 Missionary service was held at the Methodist church on Sunday, Dec. 9th. The sermons were preached by Rev. J. L. Hicks, M. A., of Kingston.  
 A great offer—The Napanee Express from now until January 1907 for \$1.00 end your order early.

**Good Perfumes for Xmas.**  
 You will find at WALLACE'S Red Cross Drug Store, a line of good perfumes (the very best) put up in handsome packages suitable for Xmas gifts, ranging in price from 25 cents to \$7.50, the 25 cent size containing exactly the same quality of perfume as the more expensive packages—(this is a fact we wish to emphasize) as many stores offer Xmas Perfumes (and very Christmasy too) the value of which is all in the box, not the perfume.

**MARYSVILLE**  
 Mr. and Mrs. M. J. Hunt accompanied by Mr. and Mrs. Lawrence McDermott, Read, spent Sunday the guests of Mr. and Mrs. P. McAlpine.  
 John Drummey spent Saturday in Belleville.

Hay pressers are quite numerous around here.  
 Frank Murphy Lonsdale, spent Saturday, with his friend, J. S. Meagher.  
 Miss Maggie Stock, Brooklyn, N. Y., is spending a few weeks with her brother, John Stock, station agent. There is no school in section No. 7, this week, owing to the illness of the teacher, Miss Frances Currie.  
 A great offer—The Napanee Express from now until January 1907 for \$1.00. Send your order early.

**Flowers, Holly, Mistletoe**  
 for Christmas. Leave your order now at The Medical Hall, as the demand for these goods at this season is generally greater than the supply. Flowers fresh from the Dale Estate greenhouses. Best English Holly well loaded with berries. Fred L. Hooper.

**NEWBURGH.**  
 Sergeant Beeman of the regulars of Halifax is visiting his parents, Dr. and Mrs. M. I. Beeman.  
 Miss Ella Chant returned home Saturday after spending a month with her brother, Stanley G. Chant, Melwood.  
 Mrs. D. A. Nesbit spent a couple of days in Napanee last week.  
 The concert given in Yarker last Friday evening by the Newburgh Dramatic Club under the auspices of the Ladies Guild, was a decided success, a large crowd was in attendance.  
 Miss Mary Beeman, Miss Annie May Sutton, Pearl Patterson and Pearl Wood, attended the modelites "At Home" at Napanee last Thursday evening.

The children of the Methodist Sunday school, are practicing for their annual entertainment Christmas eve.  
 A new boarder has arrived at Joe Paul's, Newburgh road, it is a son.  
 Mr. Edward Wells is visiting at Mrs. E. J. Madden.  
 Mr. J. S. Yeomans and sister Ella and Miss Emma Yeomans, attended the Newburgh Dramatic Club concert at Yarker Friday evening.  
 A great offer—The Napanee Express from now until January 1908 for \$1.00. Send your order early.

Pocket Knives, Scissors, Razors Gillett Safety, Claus Safety, the celebrated Carbo Magnetic Razors, sold on trial, every one guaranteed or no sale.  
**BOYLE & SON.**

Fresh Chocolate Bon Bons in handsome packages for Xmas at **WALLACE'S.**

**\$1.00. Send your order early.**  
 Carvers, we have a special line of Carving Sets in Cases and in pairs from \$1.00 to \$12.00, nice goods and prices right. **BOYLE & SON.**

Germany's Imperial budget authorizes an appropriation of \$69,500,000 for the navy.

Lieut.-Col First will probably succeed Col. Pinault as Deputy Minister of Militia.

Commander Peary has stated that he believes the pole can be reached on sledges.

A young woman named Harriet Drake was asphyxiated in her room at London, Ont.

True bills have been found in five of the disorderly or rioting cases connected with the Hamilton strike.

Raisuli, the Moroccan bandit, has called on all people about Tangier to prepare for a holy war.

**You're Somewhat Puzzled**  
 in choosing a gift for your friend. If you will inspect the large assortment of new Christmas goods at The Medical Hall, we feel satisfied that the difficulty will be overcome. Avoid further anxiety and act on our suggestion at once. Fred L. Hooper.

France has expelled Mgr. Montagnini, Secretary of the Papal Nunciature at Paris, from the country.

The Railway and Municipal Board approved of Ottawa's by-law to raise \$50,000 to extend the electric light plant.

Coughs, colds, hoarseness, and other throat ailments are quickly relieved by Cresole tablets, ten cents per box. All druggists.

It is stated that the British battle-ship Dominion, which grounded in the St. Lawrence, will never really be fit for service again.

The shareholders of the Ontario Bank accepted the resignations of the Board of Directors and elected a new board, with Mr. H. C. Hammond as President.

**ITCH, Mange, Prairie Scratches** and every form of contagious Itch on human or animals cured in 30 minutes by Wolford's Sanitary Lotion. It never fails. Sold by F. L. HOOPER.

The Pope has issued an encyclical forbidding the Catholics of France to comply with the demands of the separation law, which goes into force on Tuesday.

The Grand Trunk Railway Company are applying for an amendment to their charter, to eliminate the clause requiring them to carry third-class passengers at two cents a mile.

The graduates of the Frontenac Business College, Kingston, continue to take the best plums in the line of lucrative salaries in Eastern Ontario. This is the result of the superior training given in all branches and the modern equipment. Winter term opens January 2nd. Illustrated College catalogue and beautiful Calendar for 1907 mailed free on request.  
**T. N. Stockdale, prin.**

**TRY THIS FOR YOUR COUGH**  
 To relieve a cough or break up a cold in twenty-four hours, the following simple formula, the ingredients of which can be obtained of any good prescription druggists at small cost, is all that will be required: Virgin Oil of Pine (Pure), one-half ounce; Glycerine, two ounces; good Whisky, a half pint. Shake well and take in teaspoonful doses every four hours. The desired results can not be obtained unless the ingredients are pure. It is therefore better to purchase the ingredients separately and prepare the mixture yourself. Virgin Oil of Pine (Pure) should be purchased in the original half-ounce vials, which druggists buy for dispensing. Each vial is securely sealed in a round wooden case which protects the Oil from exposure to light. Around the wooden case is an engraved wrapper with the name—"Virgin Oil of Pine (Pure)"—plainly printed thereon. There are many imitations and cheap productions of Pine, but these only create nausea, and never effect the desired results.  
 1-13.

Clears the Throat and Lungs, heals and allays Inflammation, cures Coughs, Colds, Hoarseness, Whooping Cough, Croup, by removing the cause.  
Nothing better for Children.  
Price 10c. and 25c. a bottle. Dr. T. A. Slocum, Limited, Toronto.

### VICTORIA'S ACCESSION.

Charming Little Story Told by Wilhelmina, Countess of Munster.

The accession of Queen Victoria is described by the Countess of Munster, who was then about seven years of age. Her mother one morning threw herself on her bed and exclaimed, sobbing—  
"Mina! the King is dead. We shall never see his face again."

A shock went through me, and young as I was, I conjured up before me that dear face, the white hair, the indescribable scent of rosewater, which always pervaded the room wherever he was, and the kindly voice.

"O, mamma!" I said, "not dead! Then who will take care of us—of England—now?"

"There is a young Queen now," sobbed my poor mother.

"I don't like her," I said, impatiently bursting into tears; "she sha'n't be my queen," for I had dearly loved the Sailor King.

"Hush!" said my poor, weeping mother, "you must not say that, and you must now repeat the words I say after me, 'God Save the Queen.'"

"Seeing my dear mother's serious face, and hearing the word 'God,' I concluded it was a prayer, so putting my hands reverently together, I repeated the words solemnly. That is all I remember of the Queen's accession."

### BILEANS RESTORE A PROMINENT CANADIAN ARTIST.

One of the most impressive cures of indigestion and allied ailments ever reported has just been effected by Bileans. The subject is Mr. Arthur R. Hand, the prominent artist teacher of painting on china, leather, glass, etc., residing at 2 Woodgreen Place, Toronto.

As a teacher of painting, Mr. Hand has made for himself a wide reputation, but his work was interfered with considerably by acute attacks of digestive disorder. He says:

"I suffered agonies for months previous to taking Bileans, resorted to all kinds of remedies, but found only temporary relief. The indigestion came on quite suddenly, soon after eating, and caused me terrible pain. There was a constant feeling of uncomfortable fullness in the stomach, pains in the chest and under the shoulder blades and rifting and belching of gas.

I had constipation so badly that no medicines seemed to have any effect on the bowels. I dieted a great deal, but the slightest food brought the same distress. After taking a few Bileans I experienced ease and comfort after meals, so I purchased a supply of this vegetable remedy and left all other remedies alone. Bileans cured me. Now my food digests very nicely and my bowels act quite naturally.

"In a few months, through the use of Bileans, my weight increased from 125 to 165 pounds. This increase, too, is

# DARE HE?

## OR, A SAD LIFE STORY

### CHAPTER X.

There is no particular mirth in Burgoyne's mind as he mounts the stone stairs of the house which announces itself as 12 Bis, in the commonplace new square of the Piazza d'Azeglio. But yet it is evident that, if he wishes to be in tune with the mood of the family to whom he is going to pay his respects, he must not be only pithy, but musical. At the door of the entresol, to which he is directed by the porter, opens in answer to his ring, bursts of laughter, among which he can plainly detect the voice of Byng, assail his ear, mingled with music, or rather noise of a sort, but what sort his ear, without fuller evidence than is yet before it, is unable to decide. The person who has admitted him is an elderly Englishwoman, whose features at once strike him as familiar—so familiar that it needs scarcely one reaching back of memory's hand to capture the fact of her having filled the office of nurse at the Moat, at the period when the nursery there had been the scene of those frantic romps in which he himself had taken a prominent part, and in which Elizabeth had been to him by turns so able a second, or so vigorous an adversary. He would like to claim acquaintance with her, and, perhaps if she had made any difficulty as to admitting him, might have screwed up his courage to do so; but as she lets him in without delay or hesitation, he follows her in silence along the passage of a by no means imposing little entresol—they are not so well off as they used to be in his passing thought—is ushered into a small sitting-room; and, entering behind his own name, which has been completely drowned by the din issuing from within, has time, before the consciousness of his own appearance has disturbed it, to take in the details of a group which his entry naturally breaks up. Set slantwise across one angle of the room is an open cottage piano, and beside it stands Elizabeth, her elbow resting on the top, and all her pensive face convulsed with helpless laughter. Upon the music-stool is seated a large collie dog, supported from behind in an upright position by Byng. Before him is a score of music, from which he is obviously supposed to be playing, as indeed he is doing in a sense—that is to say, he is bringing down first one large paw and then another heavily on the keys, accompanying each crash with a short howl to express the agony inflicted upon his nerves by his own performance. The scene is so entirely different a one from what he had expected; the immoderately laughing Elizabeth has so much more kinship with the sweet hoyden of the Moat than with the pale woman with a history of his two last meetings, that for a second or two Burgoyne stands in the doorway as if stunned. It is not till Mrs. Le Marchant, coming out of an inner room, advances to greet him, that he recovers himself.

"How do you do?" she says, smiling, and with less constraint than he has of late learnt to expect. "Are you fond of music?" (putting, as she speaks, her hands up to her ears). "I hope so. Did you ever hear such a shocking noise?"

"I do not know which I admire most, the vocal or the instrumental part of the performance," replies he, laughing; but even as he speaks, both cease. Elizabeth lifts her elbow from the

flurried, and becoming himself nervous, he adds rather stupidly, the hackneyed Swinburnian couplet—

"Time turns the old days to derision,  
Our loves into corpses or wives!"  
though I never could see that that was quite a necessary alternative!"

Ere the words are out of his mouth she has risen with precipitation, and begun hurriedly to rearrange the branches of lilac in a scaldino on the table near her. She is apparently so awkward about it that one odorous white bough falls out on the floor. Before Jim can stoop to pick it up, Byng has rushed to the rescue. In eagerly thanking him, in receiving it back from him and accepting his services in replacing it among its perfumed brothers, the girl, perhaps involuntarily, turns her back upon her former interlocutor, who sits for a moment staring rather blankly at her, and wondering what slings there could have lurked in his apparently harmless words to drive her away so abruptly. Whatever may have driven her away, there is certainly no doubt as to her being gone. Nor as Jim sees her moving about the room, followed by Byng, and showing him her treasures—the little wild red and yellow tulips she plucked in the field this morning; the chicken-skin box she bought at Ciampollina's yesterday, and mixing all that she shows with her delicate light laughter—can he buoy himself up with any reasonable hope of her ever, with her own good will, returning. He must be looking more blank than he is conscious of, for Mrs. Le Marchant's voice sounds quite apologetic in his ears, when, having been, like himself, deserted by her companions, she takes a seat near him.

"Elizabeth is so proud of her bargains," she says, glancing with a lenient smile towards her daughter; "she must show them to everybody."

"She never offered to show them to me," replies Jim, rather morosely; then becoming aware of the almost puerile jealousy evidenced by his last remark, he adds:

"I am afraid I said something that annoyed Miss Le Marchant; I cannot think what it could have been. I told her how wonderfully little changed I thought her in the last ten years, but it could not have been that, could it?"

The mother's eye is still following her child, and, if it were not an absurd assumption, Burgoyne could have fancied that there was a sudden moisture in it.

"She is very sensitive," Mrs. Le Marchant answers slowly; "perhaps it would be safer not to say anything about herself to her."

"Perhaps it would be safer," rejoins Jim, with some ill-humor. "If you were to draw up a list of subjects for me to avoid; I have no wish to play the part of a bull in a china shop; and yet I seem to be always doing it; imprimis (striking the forefinger of his left hand with the right), 'imprimis the Moat.'"

He pauses, as if expecting a disclaimer, but none such comes—"The past generally" (moving on to the second finger and again halting; but with no more result than before). "Yourselves" (reaching the third finger). Still that silence, which, if it mean anything, must mean assent. He looks impatiently in her face, to seek the response which her lips refuse him.

"On your own showing," she says gently, though in a rather troubled voice, "you have the whole field of the present

### ACHING KIDNEYS.

Made Sound and Strong by Dr. Williams' Pink Pills.

There is probably no one in the town of Paris, Ont., who does not know Mr. Samuel G. Robinson, and who will not readily accept his word when he says that Dr. Williams' Pink Pills cured him of an obstinate case of kidney trouble after other treatment had failed to give him more than temporary relief. To a reporter of the Star-Transcript Mr. Robinson freely gave permission to publish a statement of his case in the hope that his experience might benefit some other sufferer. He said: "I have suffered from kidney trouble for about three years. Sometimes my back ached so severely that I was unable to work, and at times it was almost impossible for me to straighten up. I had to urinate very frequently and often had to get up several times during the night. At different times I was under the care of doctors, but I only got relief for a time. I also tried a number of medicines and bachelors' plasters, but none of them helped me and I began to think the trouble could not be cured. One day during a conversation with a friend he asked me why I did not try Dr. Williams' Pink Pills, saying that he had used them and they had done him much good. I decided to try the pills and it was not long before I felt greatly benefited. I continued using the pills for some time longer and I am glad to say that every vestige of the trouble has disappeared and I am now as well as ever. Dr. Williams' Pink Pills have proved a blessing to me and I gladly recommend them to anyone similarly afflicted."

Dr. Williams' Pink Pills are the greatest cure in the world for all the common ailments of men and women—for all weaknesses and weariness, and backaches and headaches of anaemia; all the heaviness and distress of indigestion; all the pains and aches of rheumatism, sciatica and neuralgia, and all the ill health that follows any disturbance of regularity in the blood supply. All these ailments are caused by bad blood and Dr. Williams' Pink Pills actually make new, rich, red blood. They strike straight at the common root of disease. But you must get the genuine pills with the full name Dr. Williams' Pink Pills for Pale People on the wrapper around each box. Sold at 50 cents a box or six boxes for \$2.50 at all dealers or the Dr. Williams' Medicine Co., Brockville, Ont.

as smoothly as an exhalation from a summer meadow.

"If I was rude to you just now," she says, rather tremulously; "if I am ever rude to you in the future, I hope you will put it down to the fact that I—I am very ignorant of—that I know very little of the world."

The two men are gone; so is the child; so is the dog; and Elizabeth is shutting up the piano and removing the score.

"What a noise we made!" she says, smiling at the recollection.

"If you make such a shocking noise again, the signorina and the other lodgers will infinitely interfere."

Mrs. Le Marchant has followed her daughter, and now throws one arm about her slight neck, with a gesture of passionate affection.

"If you knew," she says, in a voice of deep and happy agitation, "what it was to me to hear you laugh as you did to-day!"

"I have a good many arrears in that way to make up, have not I, mammy? And so have you, too," answers the younger woman, laying her sleek head down carelessly on her mother's shoulder; then, in a changed and restless voice: "Oh, if we could stop that man talking about the Moat! Why does he go on hammering about it?"

"Why, indeed?" replies Mrs. Le Marchant with a shrug. "Men are so thick-skinned; but it is rather touching, his having remembered us all these years, is not it? For my part, I had almost

so I purchased a supply of this vegetable remedy and left all other remedies alone. Bileans cured me. Now my food digests very nicely and my bowels act quite naturally.

"In a few months, through the use of Bileans, my weight increased from 125 to 165 pounds. This increase, too, is not useless fat, but sound, healthy flesh."

Not only for indigestion, but for constipation, piles, general debility, anaemia, female ailments, rheumatism, blood impurities, liver and kidney complaint, headache, dizziness, wind, etc., Bileans are widely recommended. They are purely herbal and do not merely relieve these ailments—they cure them permanently. All druggists sell Bileans at 50c. a box, or post free from the Bilean Co., Toronto, on receipt of price. 6 boxes for \$2.50.

Attorney—"You can sue him for breach of promise, madam; but it seems to me preposterous to claim fifty thousand dollars damages." Fair Client—"I want to get so heavy a judgment against him that he'll just have to marry me—the second time!"

Many inherit weak lungs, and as disease usually assails the weakest point, these persons are continually exposed to attacks of cold and pulmonary disturbances. The speedy use of Bickle's Anti-Consumptive Syrup will be found a preventative and a protection, strengthening the organs so that they are not so liable to derangement from exposure or abrupt atmospheric changes. Bickle's Syrup is cheap and good.

Pollens—"Do you think Peters capable of deceiving a friend?" Dodkins—"Oh, no; none of his friends believe a word he says."

An inheritance of weak lungs is a serious handicap, but Allen's Lung Balm taken at the first signs of a cough will ensure immunity from this dangerous defect. Don't trade with unknown curatives.

"There's a queer thing about a cousin's name," said Barney O'Flynn. "He's a cousin, but of what? In his sleep, 'an' he's to be cured as it is said." "Cured by all sorts of the man," as him. He's in the police force."

Death or lunacy seemed the only alternative for a fellow who had highly respected father of Wingham, Ont., who had travelled over two continents in a vain search for a cure for nervous debility and depression. A friend recommended Scott's Emulsion. One bottle cured, and her own written testimony closes with these words: "It has saved my life!"—20

Husband—"You are not economical." Wife—"Well, if you don't call a woman economical who wears her wedding-dress in a second marriage, I'd like to know what you think economy is."

Jim's envy of the possession of a "beggar's kins," who goes by the name of Bertie, has it spread in second-hand clothes and books that is to say, he only goes for those trifles, and achieves some satisfactory results that he is able to employ two or three men to carry to the mother's pawnshop the things he has obtained from charitable people.

man's putting a stick in her ears. "I hope so. Did you ever hear such a shocking noise?"

"I do not know which I admire most, the vocal or the instrumental part of the performance," replies he, laughing; but even as he speaks, both cease.

Elizabeth lifts her elbow from the piano, and Byng removes his hands from under the dog's arms, who, at once, joyful and released, jumps down, upsetting his music-stool with the impetus of his descent, and yet immediately, with all a dog's real good-heartedness, begins to swing a handsome tail, to show that he bears no real malice for the odious practical joke that has been played upon him. The clamorous fall of dog and music-stool reveals an object which had been hidden behind both, in the shape of a little boy, in whose behalf, as it darts across Jim's mind, the eccentric concert, for which he has come in, must have been got up.

"Oh, do go on!" cries the child shrilly. "Oh, do make him do it again! Oh, why do you stop?"

And indeed through the whole of the ensuing conversation this cry recurs at short intervals with the iteration of a guinea-hen. But none of the three performers seem disposed to comply with this request. Two of them sit down decorously on chairs, and the third throws himself upon the floor panting, showing a fine red tongue, and dragging himself luxuriously along on his stomach to show his relief at the corvee being ended. The child has followed Elizabeth, and now stands beside her, tiresomely pulling at her white hands.

"Bertie has come to spend the day with us," she says, looking explanatorily up at Jim; but, speaking with a formality very different, as he feels, from the exuberant ease and mirth that had marked her intercourse with Byng.

Jim had already had a flash of speculation about the child, as to whether he might be a late-come little brother, arrived on the scene at a period subsequent to his own connection with the family, since plainly the span of his small life did not stretch to a decade.

"Bertie is a new friend," he says kindly. "I do not know Bertie."

"His mother, Mrs. Roche, is a cousin of ours; she has a villa on Bellosguardo. Perhaps you know her?"

"I am going to a party at her house on Wednesday," cries Jim, in a tone of eager pleasure at the discovery of this fresh link, and of the vista of probable meetings which it opens up.

"I shall meet you there?" Elizabeth turns her head slightly aside and shakes it as slightly.

"No?"

"We are not going out. The formula implies mourning, and yet the clothes both of Elizabeth and her mother are unmistakably colored ones, and give no indication of an even moderately recent loss. But it is so clear that Miss Le Marchant means to add no explanation that he has to change the subject.

"Though Bertie is not an old friend," he says, smiling, "yet I have come across one here to-day—she opened the door to me; I should have liked to shake hands with her, only she looked so haughty—she never used to look haughty at the Meats."

"Do you mean nurse?" she asks.

"Yes, I knew her in an instant. She is not in the least changed, less even—hesitating a little, as if doubtful whether the stiffness of their new relations warranted a personality—even less than you."

She snatches a hasty look at him, a look upon which he sees, to his surprise, imprinted a character of almost fear.

"You must be laughing at me," she says, in a voice in which he detects an undoubted tremor; "I am very much changed."

There is such obvious apprehension in her whole manner that his one thought—after a first flash of astonishment—is to reassure her.

"Of course I was only speaking of externals," he says quickly; "ten years could hardly be expected to leave any of us quite where we were as to our inner selves;" then, seeing her still look

(reaching the third finger). Still that silence, which, if it meant anything, must mean assent. He looks impatiently in her face, to seek the response which her lips refuse him.

"On your own showing," she says gently, though in a rather troubled voice. "You have the whole field of the present and the future left you; are not they wide enough for you?"

His brows draw together into a painful frown.

"Perhaps I have as little cause to be fond of them as you have of the past."

It is a random shot, a bow drawn at a venture, but it could not have hit more true apparently had it been levelled with the nicest aim.

As her daughter had done before her, Mrs. Le Marchant rises hastily, and leaves him—leaves him to reflect ironically upon how wisely Amelia had acted in insisting upon his visiting these "dear old friends," upon whom the effect of his conversation is so obviously exhilarating.

"I wish I had not come; I wish it was time to go home!"

The small fractious voice that waits the two preceding sentences seems to be Jim's own mouthpiece. It is, in point of fact, the voice of Bertie, who, tired of uttering his unregarded request for the repetition of the concert which had filled him with such delight, has of late been trying the effect of his unassisted powers to bring about the desired consummation, by putting his arms as far as he can round the dog's body, and endeavoring to lug him towards the music-stool. The collie has been enduring this treatment for five minutes—enduring it with an expression of magnanimous patience, which seems to say, that, though it is undoubtedly an unpleasant experience, yet, as it is inflicted upon him by one of his own family, he must of course put up with it, when Elizabeth goes to the rescue, Elizabeth goes alone, since Byng is held in converse by her mother at the other side of the room. Verbal persuasions having entirely failed, she tries to loosen the child's arms; but his grasp, though puny, is obstinate, and the only perceptible result of her endeavors is the utterance by her young friend of the two polite aspirations above recorded.

"He does not want to sing any more to-day," Jim hears her saying in her gentle voice; "you really are hurting him; he is too polite to say so; but you are squeezing him so tight that you really are hurting him. Why now?" with a little accent of pain, "you are hurting me."

Jim has been looking with lack-lustre eye out of the open window at the young plane trees exchanging their frowzy buds for infant leaves; at the one Judas tree pranking in its purple blossoms in the Piazza; but at that low complaint he makes one step across the room, and, whipping off Master Bertie alike from long-mourning dog and plaintive woman, stoops over the latter as she sits upon the floor, passing one hand over the other, upon which the child's angry fingers, transferred from his first victim, have left rosy prints of pain.

"I wish I had not come; I wish it was time to go home!" whimpers the little boy.

"Since he is so anxious to go home, I will take him if you like," says Jim in a stiff voice; "I must be going myself."

She looks up at him from her lowly posture, charming, half-apologetic, wholly peace-making smile flitting across her small face, while she still chafes her hand—that little pinched hand which makes him feel so ridiculously tender.

"Are you, too, sorry that you came?" she asks.

The question takes him by surprise. He is not prepared for so friendly and almost intimate a sequel to her short, shy answers, and her abrupt quitting of him. He hesitates how to answer it; and as he hesitates, she rises and stands beside him. It is not easy for a grown person to rise gracefully from a seat on the floor. Jim catches himself thinking with what a roll and a flounder Cecilia would have executed the same manoeuvre; but Elizabeth, supple and light, rises

voice: "Oh, if we could stop that man talking about the Meats! Why does he go on hammering about it?"

"Why, indeed?" replies Mrs. Le Marchant with a shrug. "Men are so thick-skinned; but it is rather touching, his having remembered us all these years, is not it? For my part, I had almost forgotten his existence—had not you?" "Absolutely!" replies Elizabeth, with emphasis; "and if he will only let me, I am more than willing to forget it over again. Oh, mammy" (turning her face round, and burying it on her mother's breast), "why can't we forget everything? begin everything afresh from now—this delightful now?" (To be continued).

## FUTURE QUEEN'S HOBBIES

PRINCESS ELIZABETH OF BELGIUM  
IS AN M. D.

Patches Punctured Tire, Plays Chess  
Well, and Doctors Poor . . . .  
Patients.

The future Queen of the Belgians, Princess Elizabeth, has made a hobby of medicine and has studied the science so thoroughly that she holds the degree of M. D. Recently she established the Albert and Elizabeth Dispensary in Brussels, a charitable institution for tuberculosis patients. She visits the dispensary every day and gives practical help in treating the poor patients.

Princess Elizabeth, who is the wife of Prince Albert, the heir apparent, commenced her medical studies at the age of sixteen, taking her degree seven years afterwards at Leipzig. It was from her father, Duke Charles Theodore, of Bavaria, who is a famous oculist, that she inherited her love of the healing science.

Medicine, however, is not the only branch of learning the Princess has taken up. She has written a number of books on various subjects, the largest of which perhaps is a collection of anecdotes about animals. In this volume she tells some amusing stories of her own horses and dogs, of which she is passionately fond.

Practical automobilism is another of this versatile Princess' hobbies. As a "chauffeuse" she has nothing to learn. Prince Albert and his wife, who are fond of motoring together without a professional driver, were stopped on one of these spins by a punctured tire, but together they were able to patch it

up without having recourse to a repair depot. The Princess has even been known to use her auto in the hunting field.

#### SIMPLE HOME LIFE

The home life of the Princess and her husband is one of domestic simplicity, which should be an example to their uncle, the King. They occupy the palace of the Marquis d'Assche, which was the American Legation when Belgium Storer was United States Minister to Belgium. Rising at eight o'clock, the Princess spends her mornings in literary work and takes a motor drive with Prince Albert before lunch if the weather is favorable. State business occupies the royal couple after lunch and then the Princess spends an hour with her two little sons, Prince Leopold, the heir presumptive, and Prince Charles.

After five o'clock tea the Princess is at home until seven. Dinner, to which guests eminent in diplomacy, literature and science are invited, is served at eight. The Prince and Princess are fond of a game of chess when alone together.

Princess Elizabeth is one of the four royal ladies who have been decorated with the Papal Order of the Golden Rose, the others being the Queen of Portugal, the Queen of Spain, and the late Empress of Austria.

## TERRIBLE RESULT OF BLOOD POISON

### CHRONIC ULCERS AND SORES FOR 9 YEARS — ZAM-BUK WORKED A MARVELLOUS CURE.

The wonderful value of Zam-Buk, the herbal balm in cases of chronic ulcers, sores, etc., is illustrated by the experience of Mrs. W. E. Rice, of London Junction (Ont.). She says:

"For nine years I had been a sufferer from running sores on my legs caused by blood-poisoning. I had tried every kind of ointment and salve that I had heard of, but none of them seemed equal to my case. Last winter I was worse than ever, and could not bear to stand on my feet for five minutes. The pain was so acute that I could not bear to have my slippers on.

"I heard of Zam-Buk, and decided to give it a fair trial. From first commencing with it it did me good, and it has now cured me. Whereas before I could not stand on my feet for five minutes at a time, I can now not only stand, but walk about without feeling any pain whatever. I feel like a new woman. I have waited to see if the cure was permanent before making any statement, and now I am very willing to give my testimony. I shall be pleased to answer any inquiries, and if any one cares to come and see me

#### PROFESSIONS THAT KILL.

The latest compilations which have been made show that the air in cutlery factories is laden with invisible metal-dust, and this, being carried into the lungs, causes asthma and consumption. The steel-grinders bending over their work, inhale such huge quantities of metal-dust that they rarely live beyond the age of forty. All metal trades are very hazardous, and phthisis or tubercular affections and respiratory diseases are penalties of these pursuits. The rate of mortality amongst brewers is 50 per cent. greater than that among men of ordinary callings. Gout is an enemy which makes itself sorely felt in this occupation. Bakers, too, are more than normally subject to premature death. In the flour there is a very small microbe which has its effect on the teeth, and attacks the drums of the ears, causing deafness.

#### THE ART OF GLOVE-CUTTING.

The cutters of the great glove houses in Brussels and in France earn even higher wages than the cutters of the most fashionable tailors in London and New York. So difficult is this art of cutting gloves that most of the principal cutters are known to the trade by name and by fame, and the peculiar knives which they use in the business are so highly prized that they are handed down from generation to generation as heirlooms.

#### LITTLE LIVES SAVED.

Many a little life is lost because the mother does not have the means at hand to aid her little one at the first signs of illness. In homes where Baby's Own Tablets are kept the mother always feels a sense of security. These Tablets cure colic, indigestion, constipation, simple fever, diarrhoea, teething troubles and other minor ailments of babyhood and childhood. Baby's Own Tablets always do good—they cannot possibly do harm. Thousands of mothers keep these Tablets in the house and use no other medicine for their children. Mrs. Wm. Brown, Deer Park, Toronto, says: "I find Baby's Own Tablets of the greatest help to my little one and would not be without them." Sold by all medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

An Irishman entered a New York Post Office for the purpose of mailing a letter to his fiancée. He paused in perplexity before a board containing three letter-slots bearing the words "City," "Domestic," "Foreign." "Faith," he muttered, "this is a pretty problem. Maggie's a domestic, she lives in the city, and she's a foreigner. What beats me is how I'm to get the letter in the three holes at wanst."

It is a pleasure to comment upon the conservative methods employed by the G. & C. Merriam Company in the publication of the Webster's International Dictionary. Not every little slang word or phrase is put into the book regardless of its scholastic or linguistic qualities. It is this conservatism backed by the scholarship of the editor-in-chief, William T. Harris, Ph. D., LL. D., late United States Commissioner of Education, and hundreds of others of the greatest educators of this and other nations which has made the International the standard in the United States Supreme Court and all the State Supreme Courts, also the standard of the Government Printing Office, and the basis of nearly all the schoolbooks in the country. It is indorsed by every State School Superintendent, universally recommended by College Presidents and Educators, and adhered to as standard by over 99 per cent. of the newspapers. Should you not own such a book? Get the best.

#### WHAT THE CHEMIST ADVISED.

A man went to see a doctor. The doctor examined him carefully and with a grave face told him he was very ill, and asked if he had consulted anyone else.

"Oh," said the man, "I went to see a chemist and asked his advice, and he—" "Chemist!" the doctor broke in angrily. "What was the good of that? The best thing you can do when a chemist gives you a bit of advice is to do exactly the opposite."

"And he," the patient continued, "advised me to come to you."

A woman whose throat had troubled her for a long time grew impatient of the slow progress she was making and consulted her doctor. "Madam, I can never cure you of this throat trouble unless you stop talking and give your throat a complete rest," said the medico. "Oh, doctor," objected the patient, "talking can't affect me! I'm very careful. I never use harsh language!"

ITCH, Mange, Prairie Scratches and every form of contagious Itch on human or animals cured in 30 minutes by Wolford's Sanitary Lotion. It never fails.

Young Yeomanry Officer (airing his exploits in the late war)—"And among other things, don't you know, I had a horse shot under me." Fair Ignoramus—"Poor thing! What was the matter with it?"

## PRINTING PRESSES FOR SALE.

Two 2-revolution Campbell Presses; sizes 40x56 and 43x56. The largest has the patent swing delivery, and both have four inking rollers and plate distribution. They are capable of doing the finest work. These presses will be sold at a very low figure for quick sale. Wilson Publishing Company, 73-81 Adelaide Street West, Toronto.

minutes at a time, I can now not only stand, but walk about without feeling any pain whatever. I feel like a new woman. I have waited to see if the cure was permanent before making any statement, and now I am very willing to give my testimony. I shall be pleased to answer any inquiries, and if any one cares to come and see me, I shall be pleased to tell them what Zam-Buk has done for me."

It is by working such cures as the above that Zam-Buk has made for itself its world-wide reputation. It is a certain cure for cuts, burns, bruises, eczema, pimples, running sores, spreading scabs, scalp diseases, poisoned wounds, festering sores, piles, ulcers, bad legs, abscesses, boils, ringworm, erysipelas, scrofula, barber's rash, blackheads, acne, stiffness, rheumatism, and all injured, diseased or inflamed conditions of skin and tissue. Of all druggists at 50c a box, or postpaid from the Zam-Buk Co., Colborne Street, Toronto, upon receipt of price, 6 boxes for \$2.50.

"There ought to be one head to every household," shouted the orator. "That's right," muttered a worried-looking man in the audience. "You agree with me?" shouted the orator, singling him out. "I do: I have just finished paying for the bonnets of my nine daughters."

Hard and soft corns cannot withstand Holloway's Corn Cure; it is effective every time. Get a bottle at once and be happy.

Wiggs—"Young Screecher has a remarkable imagination. He is a great thinker." Waggs—"Indeed!" Wiggs—"Yes; he thinks he can sing."

All women know what it is to have violent pain; some take one thing, and some another. Our advice is, to place "The D & L" Mental Plaster over the seat of the pain: it will do more to give you comfort than anything.

#### A BIG SUPPLY NECESSARY.

Up and down the drill-ground, first right and then left, an awkward squad had tramped all the morning; but no amount of drill seemed to put any smartness in their movements.

"Stand easy," called their mentor at last, wearily mopping his brow, and inwardly abusing the Fates for making a soldier of him.

"Dullhead," he said to the warrior who had insisted on turning round three times every time the "about" was ordered, under the impression probably, that he was playing blind man's buff. "did you ever hear fish was good for the brain?"

"Aye, sergeant."

"Then for goodness sake go and eat a whale."

over 99 per cent. of the newspapers. Should you not own such a book? Get the best.

Jones—"That was a scathing sermon on mean men the parson gave us last Sunday. Wonder what Smith thought about it?" Brown—"Singular. I met Smith yesterday, and he said he'd like to know your opinion on it."

One trial of Mother Graves' Worm Exterminator will convince you that it has no equal as a worm medicine. Buy a bottle and see if it does not please you.

The next day after she becomes engaged a girl begins to wonder if her happiness will last till she is married.

**Fever the Curse of the Tropics.**—In the slow and tedious recoveries from this and all other disease "Ferrovin" is the best tonic. Remember the name, "FERROVIN."

"It is true that she has money, but she is also very exacting. If you marry her you will have to give up smoking and drinking." "Well, if I don't marry her I'll have to give up eating as well."

**South American Kidney Cure** is the only kidney treatment that has proven equal to correct all the evils that are likely to befall these physical regulators. Hundreds of testimonials to prove the curative merits of this liquid kidney specific in cases of Bright's disease, diabetes, irritation of the bladder, inflammation, dropsical tendency. Don't delay.—22

Small Boy—"Can I have a ride on a donkey, ma?" Ma—"No, dear. Your papa says you are not to have one." Small Boy—"Why can't I have a ride on a donkey?" Ma (to her husband)—"Oh, for goodness' sake, James, give him a ride on your back, and see if it'll keep him quiet."

**A Medicine for the Miner's Pack.**—Prospectors and others going into the mining regions where doctors are few and drug stores not at all, should provide themselves with a supply of Dr. Thomas' Electric Oil. It will offset the effects of exposure, reduce sprains, and when taken internally will prevent and cure colds and sore throat, and as a lubricant will keep the muscles in good condition.

Magistrate—"You say that you did not know you were violating the law. Ah, but, my dear sir, ignorance of the law is no excuse for any man." Prisoner—"That's rather rough on both of us, ain't it, your worship?"

**Mirrors are a nuisance in the house of a man whose face is branded with eczema.** His own reflection shames him. Let him anoint his skin with Weaver's Cerate and purify his blood with Weaver's Syrup.

"I say, boy," remarked the would-be fisherman, "are there any fish in this stream?" "Yes," "Will they bite?" "None of them ever bit me, mister; but you needn't go into the water to fish if you're afraid of them."

**Piles cured in 3 to 6 nights.**—One application gives relief. Dr. Agnew's Ointment is a boon for Itching Piles, or Blind, Bleeding Piles. It relieves quickly and permanently. In skin eruptions it stands without a rival. Thousands of testimonials if you want evidence. 35 cents.—23

Mr. Ketcham—"How is your boy getting along at school?" Mr. Cheatem—"Splendidly, splendidly! I just tell you, my old friend, that boy of mine will make his way in the world, don't you fear. During the eight years he's been going to school they have had thirty-two examinations, and he's managed to dodge every one of 'em."

**A Cure for Costiveness.**—Costiveness comes from the refusal of the excretory organs to perform their duties regularly from contributing causes usually disordered digestion. Parmelee's Vegetable Pills, prepared on scientific principles, are so compounded that certain ingredients in them pass through the stomach and act upon the bowels so as to remove their torpor and arouse them to proper action. Many thousands are prepared to bear testimony to their power in this respect.

of animal cured in 30 minutes by Wolford's Sanitary Lotion. It never fails.

Young Yeomanry Officer (airing his exploits in the late war)—"And among other things, don't you know, I had a horse shot under me." Fair Ignoramus—"Poor thing! What was the matter with it?"

**To Starve is a Fallacy.**—The dictum to stop eating because you have indigestion has long since been exploded. Dr. Von Stan's Pineapple Tablets introduced a new era in the treatment of stomach troubles. It has proved that one may eat his fill of anything and everything he relishes, and one tablet taken after the meal will aid the stomach in doing its work. 60 in a box, 35 cents.—24

"I'm going to buy a parrot!" he declared. "Why?" inquired the friend of the family, "isn't there enough talking going on in your house without that?" "Yes," he replied; "but I'm determined that something shall get a word in edgewise besides my wife."

**In Nature's Storehouse There are Cures.**—Medical experiments have shown conclusively that there are medicinal virtues in even ordinary plants growing up around us which give them a value that cannot be estimated. It is held by some that Nature provides a cure for every disease which neglect and ignorance have visited upon man. However, this may be, it is well known that Parmelee's Vegetable Pills, distilled from roots and herbs, are a sovereign remedy in curing all disorders of the digestion.

"Why, Willie, what are you crying about?" "Cause I don't get no Saturday holiday like the other children does. Boo-hoo!" "But why don't you get out of school on Saturday?" "Cause I ain't old enough to go to school yet. Boo-hoo-hoo!"

## Dear Mother

Your little ones are a constant care in Fall and Winter weather. They will catch cold. Do you know about Shiloh's Consumption Cure, the Lung Tonic, and what it has done for so many? It is said to be the only reliable remedy for all diseases of the air passages in children. It is absolutely harmless and pleasant to take. It is guaranteed to cure or your money is returned. The price is 25c. per bottle, and all dealers in medicine sell 314

# SHILOH

This remedy should be in every household.

## REVOLUTIONS IN PAPERMAKING.

English Company Will Make Paper From the Papyrus.

Reviving a thousand-year-old industry, a band of capitalists and scientists of England are going to introduce a formidable competition into the paper-making of both the United States and Great Britain. These men won't care whether the forests of the world are in the hands of a paper trust or not; for they are going to manufacture news and book as well as wallpaper and kindred articles out of papyrus.

The papyrus farms will be in Egypt. The cultivation of this plant has been extinct for over 1,000 years. The papyrus reeds, at first, will be brought to England and made into pulp in an English mill until sufficient trade has been worked up. Then the papyrus syndicate will build its own mills in Egypt and ship the pulp.

H. E. Winter, secretary of the newly-formed papyrus syndicate, in an interview gave many interesting details.

"Twenty million dollars worth of paper alone is made in England annually. We shall produce a better quality of paper and sell it at a much cheaper price. The present sources of supply for the paper trade are being used up rapidly. Only recently Norway had to legislate to prevent the depletion of its forests. Canada and the United States will soon follow suit.

"We have for some years been working on our scheme. Smedley Norton,

sold at a very low figure for quick sale. Wilson Publishing Company, 73-81 Adelaide Street West, Toronto.

**WEBSTER'S INTERNATIONAL DICTIONARY**  
**NO OTHER CHRISTMAS GIFT**

Highest Awards at the St. Louis and the Portland Expositions.  
**IS IT NOT THE BEST GIFT YOU CAN SELECT?**  
 WEBSTER'S COLLEGIATE DICTIONARY. Largest of our abridgments. Regular and Thin Paper editions. 100 pages and two flaps.  
 Write for "The Story of a Book" Dept. C G. & C. MERREIAM CO., Springfield, Mass.

the author and explorer, was commissioned to revive the seventh century papyrus reed. The Nile grass, commonly known as papyrus, is not the real thing. Mr. Norton discovered some true papyrus seeds in remote parts of Syria and Palestine near the River Jordan and Sea of Galilee and cultivation was begun.

"We have now an immense tract of land situated on the Nile in Egypt. C. B. Clarke, the botanical expert of Kew Gardens, has certified that our plants are the real papyrus. After exhaustive experiments, Dr. Quirin Weiritz, consulting chemist and analyst to the Papermakers' Association of Great Britain, has produced the most admirable pulp. A committee of experts has outlined for us all the methods of cultivation and paper manufacturing and we are now going ahead. Papyrus grows in water from seven to ten feet high. We gather three crops a year. Our land is irrigated by the Nile and is only plowed every five years.

"We will begin manufacture of paper in the spring when we will have 100,000 tons of papyrus ready for the market. Experiments have proved that the yield of papyrus pulp, after bleaching, is much larger than esparto pulp and exceedingly strong. We expect to use it for the manufacture of all the things now being made out of paper. Our proposition is one which will mark a tremendous revelation in the paper trade."

## ASTONISHED THE DOCTOR.

Physician Said She Might Drop Dead At Any Time.

Mrs. Robert Eaton

"The Doctor told me I had heart disease and was liable to drop on the street at any time," says Mrs. Robert Eaton, of Dufferin, Ont. "I was afraid to draw my breath, it pained me so. I was nervous, short of breath, had dizziness, loss of appetite, smothering and sinking spells, and could not sleep. "Sometimes I would have to lie down to keep from falling. My hands and feet would seem to go to sleep and a sort of numbness would come all over me. "I began using Dr. Leonard's Anti-Pill. From the start I improved. I feel much stronger, look better, and altogether Anti-Pill has made a new woman of me. "I am entirely cured." All Dealers or the Wilson-Fyle Co., Limited, Niagara Falls, Ont.

# CANADA AT CHICAGO SHOW

## Two of the Highest Honors Go to Ontario Breeders.

A despatch from Chicago says: Two of the highest honors awarded on Wednesday night at the International Live Stock Show went to Graham Brothers, of Claremont, Canada, whose stallions, Colorito and Dalton King, won the four-year-old and three-year-old hackney stallion contests. The former defeated the famous Prickwillow Connaught, an imported stallion, owned by the Truman Pioneer Stock Farm, of Bushnell, Ill., which won a blue ribbon at the recent Chicago Horse Show.

Right Forward, a four-year-old, belonging to Graham Brothers, of Claremont, Ont., won the stallion championship among the Clydesdales, from a field which comprised some of the best-known breeders in the United States and Canada.

Another Canadian entry, Lanark Queen, won the mare championship. This animal is also a four-year-old, and is the property of Graham, Renfrew Company, Limited, Bedford Park, Ontario.

The world's prize hog, weighing 600 pounds, which was awarded the blue ribbon on Wednesday at the International Exposition, was so fat that it could not walk. Just after the "Porker" had been awarded the honors it was started on its way to Morris and Company's plant to be slaughtered. It was bred in Minnesota.

King Edward VII. of England, as an exhibitor, captured a first prize, when his shire stallion Prem on Thursday won from Lord Rothschild's stallion, Girtion Charming.

## THE WORLD'S MARKETS

### REPORTS FROM THE LEADING TRADE CENTRES.

#### Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, Dec. 11. — Flour — Ontario wheat 90 per cent. patents are quoted at \$2.70 in buyers' sacks outside for export. Manitoba first patents, \$4.50; second patents, \$4; and strong bakers', \$3.90, Toronto.

Corn—No. 3 American yellow, new, nominal at 51½ to 52c on track, Toronto. Old No. 2 yellow nominal at 55½ to 56c, Toronto.

Bran—Wanted at \$20 Toronto, sacks included, without offerings.

Wheat—No. 2 white was 70c bid east, without sellers. No. 2 mixed offered at 70c outside, without bids.

Barley—No. 3 extra offered at 50c outside, without bids.

Peas—No. 2 wanted at 82c west, with sellers at 83c.

Oats—No. 2 white offered at 36½c on a 6c rate to Toronto, with 36c bid, and they also offered at 36½c at 78 p. c. points. No. 2 mixed offered at 38c to arrive, Toronto, without bids.

#### COUNTRY PRODUCE.

Beans—Hand-picked selling at \$1.50 to \$1.60, and primes at \$1.35.

Honey—Strained quoted at 10 to 12c per lb, and combs at \$2 to \$2.50 per dozen.

Hops—New quoted at 18 to 21c.

Hay—No. 1 timothy scarce, and quoted at \$11 to \$11.25 on track here; No. 2 quoted at \$8 to \$8.50.

Straw—\$6.50 to \$7 per ton.

Potatoes—Ontario, 60 to 70c per bag on track, and New Brunswick, 75 to 80c per bag.

Poultry—Turkeys, fresh killed, 12 to 15c; chickens, dressed, 9 to 10c; alive, 6 to 8c per lb; fowl, alive, 4 to 5c; ducks, dressed, 9 to 10c; do., alive, 6 to 8c per lb; geese, dressed, 9 to 11c per lb.

#### THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 23 to 24c; tubs, 20 to 22c; large rolls, 20 to 23c; creamery prints sell at 26 to 27c, and solids at 24½ to 25c.

Eggs — Storage, 23c per dozen, and limed, 21 to 22c; new laid nominal at 30c.

Cheese—Large cheese, 13½c; and twins at 14c.

good, \$4 to \$4.40; cows, \$3.25 to \$3.75; bulls, \$3.50 to \$3.75.

Butcher Cattle—Extra choice, \$4.30 to \$4.65; choice, \$4 to \$4.40; medium, \$3.75 to \$4.15; common, \$2.75 to \$3.25; bulls, \$3 to \$3.25.

Stockers and Feeders—Choice, \$3.25 to \$3.65; common, \$2.75 to \$3; bulls, \$2 to \$2.25; heavy feeders, \$3.65 to \$3.75; short-keeps, \$3.85 to \$3.90.

Milch Cows—Choice, \$40 to \$50; common, \$25 to \$35; springers, \$25 to \$40.

Calves—Trade in calves was steady. Quotations are 2½c to 6c per lb.

Sheep and Lambs—Export ewes, \$4.50 to \$4.85; bucks and culls, \$3 to \$3.50; lambs, \$5.25 to \$6.

Hogs—\$6.40 per cwt. for choice selects and \$6.15 for lights and fats, fed and watered.

### STUDENTS BURNED TO DEATH.

#### Four Perished in Destruction of Cornell Chapter House.

A despatch from Ithaca, N. Y., says: Seven persons met a tragic death on Friday morning in the most disastrous holocaust which ever visited Cornell University. Three of the victims were volunteer firemen of the City of Ithaca, and four of them were students of Cornell University. The firemen were all prominent in this city. They were A. S. Robinson, attorney; John Rumsey, hardware merchant, and Esty Landon, a salesman. The students were O. L. Schmuck, of Hanover, Pa.; F. W. Greele, of South Orange, N. J.; H. W. Nichols, of Chicago, and J. M. McCutcheon, of Pittsburgh. The cause of the fire is unknown.

The entire first floor of the Chi Psi Chapter House raged with flames under the strong north-west wind, and the students were trapped in the dormitory on the third floor. Many of the boys jumped to safety, while those who hesitated were carried to the ground by the falling walls. The money loss is nearly \$200,000.

The firemen killed were manipulating a hose on the north side of the building when the wall collapsed on them and pinned them to slowly roast under the burning debris. When the fire department arrived on the scene the screams of two men appearing in the windows of the south-west tower, over the main entrance, were heard. For some reason the men hesitated to jump from their burning prison, and while the firemen watched the scene, almost paralyzed with horror, the tower collapsed, and the men were buried beneath the ruins.

The university is paralyzed by the catastrophe. It is the most terrible disaster in its history.

## DOMINION PARLIAMENT

### NOTES OF PROCEEDINGS IN THE HOUSE OF COMMONS.

#### EXPORTS OF GRAIN.

Mr. Daniel (St. John) was informed by Hon. Mr. Paterson that the exports of Canadian grain for the fiscal year 1906 were as follows:—From Canadian seaports to countries other than the United States, 21,187,886 bushels, value \$17,519,572; via United States ports in transit to other countries, 19,909,453 bushels, value \$15,651,919; total, 41,097,339 bushels; total value, \$33,171,491.

#### POSTAL ARRANGEMENTS.

Replying to Mr. Cockshutt, Hon. Mr. Brodeur stated that the postal arrangements between the United States and Canada had been canceled or notice given of cancellation, so far as second-class matter was concerned.

#### PORT COLBORNE GRAIN ELEVATOR.

Mr. Bennett learned from Sir Wilfrid Laurier that a contract had been let for a grain elevator at Port Colborne with a capacity of two million bushels, but the size of the bins had been reduced to 800,000 bushels, and these could be enlarged in time if required. The contract for the superstructure had been awarded to E. Lyall and Son, of Montreal for \$637,000. The contract for the substructure has been completed by Larkin and Sangster for \$90,000. Since July 1st, 1896, the Department of Railways and Canals had expended at Port Colborne \$1,403,247, and the Department of Public Works \$823,187.

#### MASTERS AND MATES.

Quite a discussion took place on a bill of Mr. Lancaster's regarding certificates of masters or mates of ships. The object of the measure is to protect Canadians employed in the lake marine. The bill was supported by both sides of the House, although Mr. Brodeur was, if anything, opposed to it. The measure got its second reading and was referred to a special committee.

#### IMPORTATION OF SUGAR.

Mr. Armstrong learned from Mr. Paterson that during the past fiscal year Canada imported the following quantities of raw sugar, not above No. 16 Dutch standard in color, including melads, sugar concrete, etc., from the undermentioned countries:—Great Britain, 297,480 pounds; British Africa, 10,807,896; British Guinea, 96,655,257; British East Indies, 305,535; British West Indies, 220,126,593; Fiji Islands, 13,095,152; Hong Kong, 4,116; Argentina, 153,058; Belgium, 17,675,648; Central American States, 1,395,700; China, 3,323; Dutch East Indies, 24,847,946; Mexico, 3,451,092; United States, 477,249; total, 390,846,220 pounds.

On imported granulated sugar, tested as high as 99.4 degrees by polariscope, the duty per 100 pounds under the present tariff resolution would be \$1.24½ general tariff and 83 cents British preferential.

#### IMPORTS FROM BRITAIN.

Mr. Daniel was informed that the imports from the United Kingdom through United States ports were, during 1904, \$12,685,878; 1905, \$12,399,326; 1906, \$13,283,428. The imports from the United Kingdom direct to Canadian ports were: 1904, \$49,275,031; 1905, \$48,139,455; 1906, \$56,033,722. Total imports from the United Kingdom, direct and indirect, were as follows: 1904, \$61,960,909; 1905, \$60,538,811; 1906, \$69,317,150.

#### TRENT CANAL WATER POWERS.

Col. Hughes (Victoria) asked what water powers are still possessed by the Government of Canada along the route of the Trent Canal, what water powers had been leased or disposed of, and what were the terms. In each case he was informed by Sir Wilfrid Laurier that the information would be too voluminous in the form of a question, but there was no objection to granting it as a return.

### ELEVATOR "D" DAMAGED.

#### The C. P. R. Suffers Heavy Loss at Fort William.

A despatch from Port Arthur, Ont., says: One of the most spectacular fires that has been witnessed on the lake for some time occurred in Fort William on Friday morning, when the working house of elevator "D" of the C. P. R. elevator system, the largest single grain elevator in the world, was burned to the ground. The fire was first discovered a few minutes after eleven by Mr. J. Smith, who has charge of the motors in the building. In a few minutes the whole working house was a mass of flames, and the fire was shooting into the air for a hundred feet.

Both the railway and city fire brigades answered to the alarm turned in at 11, but owing to the fact that there is not a hydrant within several blocks of the elevator the firemen were powerless to cope with the flames, and the building, which was of wood, was reduced to a heap of smouldering debris within one hour after the alarm was sounded. The storage house is entirely of steel, and that saved the main structure. The loss is about \$175,000. The heat was so intense that the roof of four large steel tanks abutting the frame workhouse melted down under its influence. The engine-house, of stone and wood, was gutted, and the machinery badly damaged.

There was no wheat whatever in the portion of the elevator burned; in fact, the house at the present time is almost empty of grain, there being but a few thousand bushels in tanks adjacent, and was used largely for the storage of grain sent down from the West to be held. It was to this elevator that the Winter wheat was consigned, and, while it was used for shipping also, it was not depended upon so much as some of the other houses.

### 30,000 WITHOUT FOOD.

#### Closing Down of Lodz Factories Causes Great Suffering.

A despatch from Lodz says: By the recent closing down of factories here, 30,000 persons are without food. Demonstrations by lawless persons are increasing, and the feud between the Nationalist and Socialist laborers is being renewed. Laborers during the past two days have killed five Nationalists and wounded fifteen.

## STR. MONARCH

### Disaster on Lake in Loss of

Port Arthur, Dec. 10.—One man was lost in the wreck of the steamer Monarch of the Northern Navigation Company, which is sunk off Isle Royale. This was James Jacques of Point Edward, a watchman on the boat. Another man is in the hospital here suffering from exhaustion and exposure. Three or four of the crew suffered slightly from frost-bites, and Captain Robertson is suffering from a frozen hand and foot. The tugs which went out to the wreck this morning returned here about 7 o'clock this evening, bringing in the crew and passengers. Hundreds of people crowded down on the dock as the whistle of the approaching tugs was heard.

The shipwrecked men presented a pretty exhausted and beaten appearance when they landed, and were taken on board the sister ship Saronic, which was lying at the dock. One woman, the stewardess, was in the party, and she had suffered little if any from her exposure.

Eggs—Storage, 15c per dozen, and limited, 21 to 22c; new laid nominal at 30c.

Cheese—Large cheese, 13½¢; and twins at 14c.

#### HOG PRODUCTS.

Dressed hogs in ear lots are unchanged. Bacon, long clear, 11½ to 12c per lb in case lots; mess pork, \$21 to \$21.50; short cut, \$23.

Hams—Light to medium, 15 to 15½¢; do, heavy, 14 to 14½¢; racks, 12c; shoulders, 11 to 11½¢; backs, 16 to 16½¢; breakfast bacon, 15½ to 16c.

Lard—Tierces, 12½¢; tubs, 12½¢; pails, 12½¢.

#### BUSINESS AT MONTREAL.

Montreal, Dec. 11.—The local market for oats continues firm in tone, and prices are unchanged. A fair trade is constantly passing, and prices continue firm at recent quotations; these are 42½¢ for No. 2 in store, 41½ to 42c for No. 3, and 40½ to 41c for No. 3. Flour—Manitoba spring wheat, \$4.60; strong bakers', \$4.10; winter wheat patents, \$4.10 to \$4.25; straight rollers, \$3.65 to \$3.75; do, in bags, \$1.65 to \$1.75; extras, \$1.50 to \$1.60. Feed—Manitoba bran, in bags, \$20; shorts, \$22 per ton; Ontario bran, in bags, \$20 to \$20.50; shorts, \$22.50 to \$25; milled moulage, \$21 to \$25 per ton; and straight grain, \$28 to \$30. Provisions—Barrois short cut mess, \$22 to \$24; half-bbls, \$11.75 to \$12.50; clear fat back, \$23.50; long cut heavy mess, \$20.50; half-bbls do, \$10.75; dry salt long clear bacon, 12½ to 12½¢; bbls plate beef, \$12 to \$13; half-bbls do, \$6.50 to \$7; bbls heavy mess beef, \$11; half-bbls do, \$6; compound lard, 8 to 9½¢; pure lard, 12½ to 13c; kettle rendered, 13½ to 14c; hams, 14 to 15½¢; breakfast bacon, 15 to 16c; Windsor bacon, 15 to 16½¢; fresh killed abattoir dressed hogs, \$9.25; alive, \$6.60 to \$6.80. Eggs—Selects, 65c; No. 1 candled, 21c. Cheese—October made, Ontario, 11½ to 12½¢; November made, 12 to 12½¢. Butter—Choice creamery, 25½ to 25½¢; medium grades, 24 to 24½¢.

#### UNITED STATES MARKETS.

Duluth, Dec. 11.—Wheat—No. 1 northern, 78c; No. 2 northern, 77c; May, 80½¢; July, 80½¢.

Minneapolis, Dec. 11.—Wheat—December, 76½¢; May, 79½¢; July, 80½ to 80½¢; No. 1 hard, 80½¢; No. 1 northern, 79½¢; No. 2 northern, 77½¢; No. 3 northern, 74 to 75c. Flour—First patents, \$4.30 to \$4.40; second patents, \$4.15 to \$4.25; second clears, \$2.50 to \$2.60. Bran—\$17.

Milwaukee, Dec. 11.—Wheat—No. 1 northern, 80 to 81c; No. 2 northern, 76 to 79c; May, 78½¢ asked. Rye—No. 1, 68½¢. Barley—No. 2, 55 to 55½¢; sample, 44 to 50c. Corn—No. 3 old, 43 to 43½¢; May, 43½¢ asked.

#### CATTLE MARKET.

Toronto, Dec. 11.—Trade at the City Cattle Market was generally considered good.

Export Cattle—Choice, \$4.40 to \$4.60;

paralyzed with horror, the lower collapsed, and the men were buried beneath the ruins.

The university is paralyzed by the catastrophe. It is the most terrible disaster in its loss of life that has ever taken place at Cornell.

#### RECIPROCITY IN SCHOOLS.

Disbanded British Soldiers to Join Forces of the Dominion.

A despatch from London says: Imperial reciprocity in soldiers promises to be one of the results of War Secretary Haldane's recent disbandment of some battalions of the British army in the furtherance of the general programme of economy. The new movement will be initiated by 150 men, who were lately disbanded from the Third Battalion of the Manchester Regiment, who in January will proceed to Canada and join the Dominion's forces. The men, their wives and their families will all be taken over at the cost of the Canadian Government, and it is understood that contingencies of the garrison artillery which shortly will be disbanded will follow suit. The War Office authorities are hopeful that the movement will develop, and that later a system of exchange will be arranged by which Canadian troops can be sent to England and British troops sent to Canada, with the object of more closely welding the services into an Imperial force.

#### ODESSA SEAMAN STRIKE.

Shipping Business of Port Completely Tied Up.

A despatch from Odessa says: The suppression of the Seamen's Union by the Russian Government has been followed by a strike of the seamen, with the result that the business of the shipping companies is completely tied up. About 11,000 men are out, and the Governor appealed to Admiral Skrydloff, commander of the Black Sea fleet, to send sailors from Sebastopol to relieve the situation. The Admiral, however, refused to do so, fearing that the sailors would join the strikers. Attempts have been made to despatch steamers manned by novices, but they ended in failure. One of the vessels ran aground and the others returned to port.

#### FIVE MILLION INCREASE.

The Financial Statement for Five Months, Ending Nov. 30.

A despatch from Ottawa says: The financial statement for the five months ending Nov. 29 shows a total of \$36,522,516, an increase of nearly five millions as compared with the same time last year. There was a decrease of about \$690,000 in the expenditure on ordinary account and of over \$100,000 on capital.

had been leased or disposed of, and what were the terms. In each case he was informed by Sir Wilfrid Laurier that the information would be too voluminous in the form of a question, but there was no objection to granting it as a return to the House. Sir Wilfrid also replied to Col. Hughes that there was no disputed jurisdiction or disputed ownership between the Government of Canada and Ontario in relation to any of these.

#### NAVIGATION RETURNS.

Mr. Christie ascertained from Mr. Oliver that from April 25 to Nov. 30, the season of navigation on the St. Lawrence this year, there arrived via ocean ports 104,086 immigrants, and from the United States, 33,420 immigrants, making a total immigration of 137,506. Of this number 22,242 had located in the Province of Quebec and Eastern Provinces, 37,188 in Ontario, 26,394 in Manitoba, 17,581 in Saskatchewan, 17,157 in Alberta, and 12,541 in British Columbia, while 60 went to the Yukon.

#### TO AMEND RAILWAY ACT.

Mr. Maclean, in moving the second reading of the bill to amend the Railway Act, explained its provisions at considerable length. It is designed to bring telegraph and sleeping car companies under the jurisdiction of the Railway Commission; it proposes to make the maximum passenger fare on railways two cents a mile; it seeks to compel interchange of business by telephone companies.

#### THE ROSS RIFLE.

Mr. Bergeron (Beauharnois) was informed by Sir Wilfrid Laurier that 1,000 Ross rifles, marked No. 1, were issued to the Mounted Police for use. When subjected to severe test defects were discovered, and the use of the rifle was discontinued temporarily, the Ross Rifle Company undertaking to supply other rifles with the defects corrected, this being done at the company's own expense. In the meantime the police are using their old Winchester and Lee-Enfield.

#### FOR COMPULSORY VOTING.

Mr. Macdonnell introduced a bill to amend the Dominion Elections Act, 1900. It provides for compulsory voting and also requires that all employers of labor shall allow their employees to have sufficient time within which to record their vote.

#### STRIKE OF GOLD AT COBALT.

Blast in Kinler Shaft Disclosed the Precious Metal.

A despatch from New Liskeard says: The keenest excitement prevailed among Temiskaming and Hudson Bay shareholders here on Saturday as the result of a strike of gold on Friday on the company's Cobalt property in what is known as the Kinler shaft. The assays show \$151 to the ton in gold and \$6 in silver in a vein six feet in thickness. A draft was being carried towards the township property on the 50-foot level, and had progressed about 80 feet, when a blast carried the men into a soft mud-like substance.

Assays had been showing gold for some time, and when the chance information was reached an assay was at once decided on. In the muddy material could be seen fine pieces of quartz and tiny particles of free gold. The vein is within ten feet of the township property, and on Friday the manager of the Township Company was accorded the privilege of an examination in his neighbor's shaft.

#### DRAKE GUNNERS GOOD SHOTS.

89 Per Cent. of the Shots Hit Target at Four Miles.

A despatch from London says: Remarkable results were obtained by the gunners of the cruiser Drake, the flagship of Rear-Admiral Prince Louis of Battenburg, during their recent gun practice in Aradul Bay. Out of a total of 133 shots fired from the 9.2 guns and the six-inchers, at a distance of four miles, 105, or 98 per cent., hit the target. The Drake thus takes top place in the fleet.

pretty exhausted and beaten appearance when they landed, and were taken on board the sister ship Saronic, which was lying at the dock. One woman, the stewardess, was in the party, and she had suffered little if any from her experience.

#### STRUCK HARD WITHOUT WARNING.

According to the story told by Captain Robertson he left here at 5 o'clock Thursday night, and all went well until he was in the neighborhood of Isle Royale, where a snowstorm was blowing. The Passage Island light was not discernible, and apparently the compass froze up, as it did not appear to be working right. The course of the ship was altered a trifle, and the captain feeling his way cautiously, the ship proceeded, when without a moment's warning it struck hard and high up. This occurred about 11 o'clock Thursday night. Realizing that the very worst had happened, the captain made preparations for the landing of the human cargo.

#### HOW JACQUES WAS DROWNED.

A young man named McCallum, tying a rope about his body, descended over the side of the ship and safely reached

#### THREE YOUNG LIVES LOST.

Suffocated by Smoke in a Fire at Kew Beach, Toronto.

Toronto, Dec. 10.—The loss of their three little children in a fire which destroyed their home was the sad affliction that came with startling suddenness to Mr. and Mrs. George Baker of Buller avenue, Kew Beach, yesterday shortly before noon. Left alone in their innocent play for but a few brief moments the three little ones—George, Edith and Marjory, aged six, four and two years, respectively—were suffocated by smoke and their limp bodies were taken from an upstairs bedroom window by the firemen, who vainly attempted to effect a rescue.

Mrs. Baker had been calling on a neighbor when she was horrified to see smoke issuing from her house. Almost at the same time the firemen at Kew Beach were called, but the dwelling was already in flames. Upon learning that the little tots were still in the house Captain Poynton and his men made a hurried search and the captain found them in a bedroom, one lying on the bed and the other two beneath. All three were quite dead when found, and though somewhat burned it was apparent that it was the smoke that caused death.

#### JAPAN TO COMPEL PEACE.

Will Increase Army Almost Fifty Per Cent. by Organizing New Forces.

The London Times' correspondent at Tokio sends the following cable despatch:—It is believed that next year's budget provides for extensive changes in the Japanese army. First, the garrisons in Manchuria and Korea, now comprising four divisions, will be reduced to one division each, drafted from the home divisions. Instead of being special corps. Secondly, the saving thus effected will be employed in furnishing six new divisions for the home establishment, whereby the strength of the army will become nineteen divisions. This signifies an increase of nearly 50 per cent. Thirdly, three special forces will be organized, namely, heavy field artillery, quick-firing field artillery and cavalry, all horsed with the best cattle. Fourthly, the work of rearmament and restoration, which the War Minister desired to complete in a brief period, will extend over several years. Funds for the above purposes will be obtained by means of economies in other departments. There will be no new taxes and no new loans. It is understood that this programme was subject to much discussion in the Cabinet. The Minister of War declared that the safety of the country depended on the execution of his plans, the sole object of which was

## CARS COLLIDE IN MONTREAL

### Several Passengers Were Injured, Two Will Die.

A despatch from Montreal says: Another leg broken. He is at the hospital and in a critical condition.

Several other passengers received serious injuries and a number were injured to a minor extent. A blinding snowstorm was raging at the time, rendering car traffic very difficult.

The seriously injured are:—Joseph Boucher, aged 14, messenger lad, leg cut off at knee and compound fracture of other leg, will die; Joseph Bolvin, conductor of street car, concussion of the brain, serious; Samuel Moren, both legs broken; Mamie O'Donnell, back hurt; Florence O'Donnell, ankle hurt; Ethel Williams, bad scalp wound.

Another leg broken. He is at the hospital and in a critical condition.

Several other passengers received serious injuries and a number were injured to a minor extent. A blinding snowstorm was raging at the time, rendering car traffic very difficult.

The seriously injured are:—Joseph Boucher, aged 14, messenger lad, leg cut off at knee and compound fracture of other leg, will die; Joseph Bolvin, conductor of street car, concussion of the brain, serious; Samuel Moren, both legs broken; Mamie O'Donnell, back hurt; Florence O'Donnell, ankle hurt; Ethel Williams, bad scalp wound.

## WOMAN BURNED TO DEATH.

Found Partly Charred With Wounds on the Head.

A despatch from Ottawa says: Shortly before midnight on Saturday night the fire department was called out for an alarm of fire at 279 Slater Street, a small shack, occupied by a teamster named George Ladouceur, which was found to be on fire. A few minutes sufficed to extinguish the flames. When Chief Provost entered the building he found the partly charred remains of a woman lying in the hallway. They proved to be those of a Mrs. Blanchet, aged 35, who had been living with Ladouceur. There were two marks upon her head and face, made evidently with a sharp instrument, and Coroner Baple felt warranted in ordering Ladouceur's arrest. From the reports of neighbors it would seem that the couple had been drinking during the evening, and it is said Ladouceur, after a quarrel, struck Mrs. Blanchet, who had a lamp in her hand at the time. As she fell the lamp broke to pieces, setting fire to the house. Ladouceur fled, and the woman was burned to death.

## SHOT BY A WORKMAN.

Police Inspector Mortally Wounded at St. Petersburg.

A despatch from St. Petersburg says: Police Inspector Sheremetieff, who, after the anti-Jewish outbreak at Bialystok in June last, for which he was said to be responsible, was transferred to St. Petersburg, was shot and mortally wounded on Wednesday by a workman. While the inspector was passing a house which was searched on Tuesday because it was suspected of harboring terrorists, a man who had been lurking in the courtyard entrance fired at him with a revolver. Though wounded in the head Sheremetieff drew his revolver and joined in the pursuit of his assailant. The house was surrounded and the fugitive, seeing capture inevitable, committed suicide. During the pursuit the terrorist inflicted a second and a mortal wound on Sheremetieff. Sheremetieff had just been appointed Chief of Police of Bialystok and was about to return there.

Twenty million people in Russia will suffer from starvation this winter unless assistance is forthcoming.

## HEALTH

### WATER AS A REMEDIAL AGENT.

Comparatively few persons recognize the value of water as a remedy for many ailments, and particularly to those incident to childhood, writes a correspondent. An ordinary cough will usually succumb to a water treatment, and the modus operandi practiced in our own family is as follows: At night, when the child is prepared for bed, its feet are put into water as hot as can be borne, and the temperature is kept up by adding more hot water as necessary. This foot bath is continued for ten minutes. In the meantime a flannel cloth, folded to four thicknesses and large enough to completely cover the lungs and throat, is lightly wrung from tepid water and put over the chest and throat, with a larger, heavier cloth over it, to prevent any chill and to keep the clothes from becoming damp.

Many a time our own little ones have, along toward bed time, coughed with almost every breath; but within ten minutes after the foot bath and application of the compress the cough would begin to subside, and in twenty minutes they would be perfectly easy and cough no more during the night. If the cough returned the following day, the same treatment was repeated at night, and usually but one or two repetitions were necessary. This, of course, where the trouble was in the bronchial tubes or upper part of the lungs. After a cough becomes deep-seated, some internal remedy is usually necessary, as well as an outside application, and we will treat of such in a subsequent article.

In the first stages of sore throat, a compress is often effective, and many severe cases of such trouble might be averted, and much suffering saved, if mothers only knew of and used the simple remedy in time. But so often we forget about the "stitch in time," and let a cough or simple sore throat go on until it is hard to check, and much suffering is entailed, all of which might have been avoided by a timely application of water.

None of our three children ever had an attack of the croup, although often having symptoms of it, and we are confident that a timely use of the compress has been the preventive.

For a cold in the head it is often beneficial to inhale through the nostrils, steam from boiling water, holding the head and face as near the water as possible, so as to get the steam as hot as can be borne. After a thorough steaming, if the patient lies down with cloths wrung from water as hot as can be borne on the forehead, and kept hot, using the hot applications for half an hour or so, great relief will usually be experienced.

In case of a bruise or similar injury, an application of cloths wrung from very hot water, and changed as soon as they begin to cool, will prevent swelling or discoloration, and remove all soreness from the parts.

### WHOOPIING-COUGH.

It is strange how little is thought of whooping-cough and how little care is taken to prevent it, for it is in truth a dangerous disease. The mortality statistics show that more children die from whooping-cough than from measles. Scarlet fever alone among what are called the diseases of childhood causes a greater number of deaths.

A child with whooping-cough should be as strictly isolated as if he had scarlatina, and it is very wrong for a mother to take her infant with this disease on boats or in cars, where it is likely to carry infection to others. An older child should be kept away from school and not allowed to play with other children, except such as have already had the malady.

It is usually easy to recognize whoop-

## CAPTAIN FROZEN TO DEATH

### Furious Gales and Bad Wrecks in the Bay of Fundy.

A despatch from Halifax says: Two serious wrecks as a result of Tuesday night's furious gale are reported from the Bay of Fundy coast. The American schooner Emma A. Harvey struck at Sloan's Cove, eight miles east of Digby Gut, at 6.30, and immediately went to pieces. Her captain and crew, already frost-bitten, were washed overboard, and, with the exception of one seaman, whose body cannot be found, got ashore safely, and are in the woods. The master, Captain Berry, became exhausted, and froze to death before aid could reach him. The second mate finally found a house occupied by colored people, where the remainder of the crew were cared for.

The American schooner Rebecca W. Huddell, Captain Scott, from Salem,

Mass., for St. John, narrowly escaped a similar fate. On Saturday night she encountered a severe gale, with rough weather, and lost a foresail, a new jib, and split the other sails. At the same time one of the anchors was washed off the bow, carrying everything forward. At 4 o'clock on Tuesday afternoon, when the weather cleared, the captain saw Point Prim and the Nova Scotia coast. To be there longer and drag ashore meant destruction of the vessel and sure death for all the crew. Captain Scott therefore slipped his anchors, and fortunately succeeded in getting to Digby Gut, with a piece of the mainsail gaff topsail used as a foresail, and two headsails. His vessel was now unmanageable, and was soon driven ashore, but the crew are safe.

### TWO BOYS AND A GUN.

Were Too Much for a Mission Justice of the Peace.

A despatch from Vancouver says: A sporting Justice of the Peace of Mission, on the Fraser River, held up at the point of a shotgun a Vancouver boy who had been shooting on his land and who obtained half a dozen ducks; the boy's companion sneaked behind the Magistrate and in turn held him up, made him return the ducks and also give up a few birds the J. P. had shot himself. The whole of this laughable occurrence is probably without precedent in this Province. The Justice has been complaining all season of poachers and decided to take the law into his own hands. But when the boys turned the tables on him he agreed to cry quits with them if they kept the story to themselves. But they didn't.

### SMALLPOX IS RAGING.

Springhill District, N. S., Is Strictly Quarantined.

A despatch from Halifax says: The smallpox situation in Cumberland

## WRECKED

### Superior Results of One Life

the shore, making fast the line to some trees back from the shore. Securing a second rope and then a ladder he made all fast with the assistance of those on board. With some little difficulty the passengers, followed by the crew, made their way over the side of the ship to the shore. It was while thus endeavoring to reach safety that Jacques lost his hold and fell into the water, never to be seen again. Robertson himself did not leave his ship until the following morning. When day broke it was found that the fore shoe of the ship was high and dry while all the vessel, except about fifty feet of the forward part, was under water. All day Friday the shipwrecked people huddled in the bush, sheltering from the wind and snow. On Friday night they set a beacon ablaze, but it was not seen by any but their own eyes. Saturday passed without help, as did Friday. That night two immense fires were set going and the attention of the lightkeeper on Passage Island was attracted. On Sunday morning he crossed

from the wind and snow. On Friday night they set a beacon ablaze, but it was not seen by any but their own eyes. Saturday passed without help, as did Friday. That night two immense fires were set going and the attention of the lightkeeper on Passage Island was attracted. On Sunday morning he crossed the channel and learned of the disaster. On the afternoon of Sunday the Edmon-ton was seen approaching, and the light-keeper rowed out and notified that ship of what had occurred; so the news reached here. Two tugs left here this morning at 7 o'clock and arrived at the island at 11 o'clock. Finding the sea running high, they went to L'Anse-au-Loup, to which place the castaways repaired and were taken aboard. All the food they had to eat was canned salmon, which formed a portion of the Monarch's cargo, and which was washed ashore.

#### VESSEL A TOTAL LOSS.

The vessel is a total wreck, having broken in two shortly after she struck. While the forward part lies on shore, the after part has entirely disappeared. It is said that had the vessel struck one hundred feet in either direction a frightful disaster would have resulted, the shore being steep, bare rock, rising precipitously out of the water.

to secure peace by making Japan too formidable for anyone to attack her. The other Ministers were not disposed to accept that view, but finally yielded. When the new programme is carried out Japan will be able to place an army of three-quarters of a million men in the field.

#### BRIDGE BUILDERS DROWN.

Breaking of a Cable Causes Tragedy Near Ashcroft, B. C.

A despatch from Vancouver, B. C., says: By the breaking of a cable during the construction of a Government bridge across the Thompson River, near Ashcroft on Tuesday, seven workmen were thrown into the river and three drowned. E. A. Eldridge, Hugh McMillan and Arthur McMillan, of Vancouver, were the victims.

#### PANIC FOLLOWED EXPLOSION.

Girls Crushed or Burned in Match Factory.

A despatch from Indianapolis says: Eight girls were perhaps fatally burned and crushed in a panic caused by an explosion in a match factory in West Indianapolis on Wednesday.

#### A WORD OF IMPORTANCE.

I want to tell the children  
In very earnest way,  
About the great importance  
Of the little word, obey.

The soldiers of an army,  
Who train in armor gay,  
Learn first this chiefest lesson:  
Their leaders to obey.

And they who join Christ's army  
Where you should be and stay,  
If they are faithful soldiers,  
All lovingly obey.

Dear children, love your parents,  
And prize them much, we say,  
And deem it sweetest pleasure  
To their commands obey.

Obedience is a jewel,  
Its worth can naught outweigh,  
And all the path to Heaven  
Is hearken and obey.

#### A SARCASTIC APPROVAL.

"No," said the embittered person,  
"when I want financial assistance I go to strangers. I do not ask friends or relatives."

"Well," answered the logical man,  
"maybe that's the best way. Friends and relatives are in a position to keep posted on a man's record."

ther to take infant with this disease on boats or in cars, where it is likely to carry infection to others. An older child should be kept away from school and not allowed to play with other children, except such as have already had the malady.

It is usually easy to recognize whooping-cough after the disease is fully established; for the paroxysmal cough, going on and on and on until the child's breath is all but gone, and then succeeded by the long, noisy inspiration, is unmistakable.

The disease varies so greatly in severity in different cases and in different years that it has been suggested that it would be wise to expose children to the infection in a year when its course was mild. But it is a very serious thing to expose a child deliberately to the dangers of any disease of this nature, for even in a year of the mildest epidemic an individual case here and there will be severe and even fatal.

When it is said that over seventy drugs have been recommended in the treatment of whooping-cough, it may be assumed that none of them has been found very efficacious. This is not to say that much good may not be obtained from certain medicines, such as quinin and belladonna, for example, yet the main reliance in the management of a case of this disease is on hygienic measures.

Although the patient must be kept away from school and other children, it must on no account be kept in the house. Fresh air and sunshine are the best agents in the hygienic treatment. City air is better than none, but it is best, when possible, to send the child to the country, where it can be outdoors all day, and not be forced to inhale dust and smoke. In stormy weather, when one must perforce stay indoors, the play-room windows should be all wide open, and the bed-room windows should also be open.

The food should be plentiful and nourishing, and whenever the stomach rejects a meal the patient should have another at once—at least a glass of milk and some bread and butter.

#### WITCH HAZEL OINTMENT.

A very valuable ointment can be easily made at home by taking one teaspoonful of the fluid extract of witch hazel, and thoroughly mixing it with one ounce of vaseline. It is useful wherever a healing ointment is indicated.

#### THREE THOUSAND LYNCHINGS.

United States' Total for the Twenty Years From 1884 to 1894.

A despatch from Chicago says: During the last twenty years, according to well authenticated statistics, there have been over 3,000 lynchings in this country. From 1884 to 1904 the average was 142 per year. For the five years from 1890 to 1904 it was 107.

The number has varied greatly from year to year, now rising to a very high figure and then slowly receding for several years to a much lower point, suddenly to mount up again. Thus in 1885 the number was 184, diminishing to 122 in 1887, rising again to 176 in 1889. In 1899 it dropped to 107, but in 1901 advanced to 135. For the years 1902-1904 the number remained at about 100. In 1905 it fell to 66, all, except one, negroes, seven of whom were burned at the stake.

#### LINE TO BE COMPLETED.

Government Railway Can be Extended Without Further Loans.

A despatch from Toronto says: It has been decided, it is asserted, to proceed without delay with the projected extension of the Temiskaming and Northern Ontario Railway and to procure the additional rolling stock and equipment necessary for the road. The line will be constructed to the junction of the Grand Trunk Pacific when that is located. The line has made large profits, and Hon. Col. Matheson has stated that the extension can be undertaken without the flotation of any further loans.

constables when the police force is increased next year.

Edmonton is sending out 200 tons of coal each day to points along the C.N.R. Some of the mines are working three shifts a day.

Edgar C. Wakefield, of Augusta, Maine, has been appointed U. S. Consul for Nipissing district with headquarters at North Bay.

For the second time within a year the large plate glass window in Reed's Bazaar, Edmonton, has been demolished by a runaway horse.

John Max Rusling, who told the Toronto police that he had been held up and robbed at the point of a revolver, has admitted that his story is untrue.

The foundry department staff of the Cockshutt Plough Co., Brantford, took up a collection and bought a large eight-day clock for use in their own workshop.

Over 35,000 turkeys will be shipped to the West from London this season, giving that city second place to Montreal as a distributing centre for poultry in the Dominion.

In the vicinity of Batoche, Sask., timber wolves are overrunning the country as they have never done before. Cattle have been killed and persons have been attacked.

The plant of the Canadian Folding Paper Box Company at Brantford was damaged by fire on Saturday, and several of the young women employees had to be taken out on ladders.

The Grand Trunk Railway Company are applying for an amendment to their charter, to eliminate the clause requiring them to carry third-class passengers at two cents a mile.

In Edmonton improvements are proposed costing in the neighborhood of \$4,000,000, and including the erection of the Provincial Government building, high level bridge across the Saskatchewan, extensive municipal improvements and beautification schemes.

#### GREAT BRITAIN.

Lord Desborough has been suggested as British Ambassador to Washington.

The system of promotion by selection is about to be adopted in the British army.

British Columbia fruit won a gold medal at the Exhibition of British and colonial fruit.

Lieut. Collard, whose order caused the stokers at Portsmouth to mutiny, has been reprimanded.

The 450-foot wireless telegraphy tower at Machrihanish Bay, Scotland, has been thrown down in a gale.

#### UNITED STATES.

Two earthquake shocks were felt in California on Friday.

A thousand teachers from United States schools will visit Europe next year.

There is a motion before the United States Congress to exclude negroes from the army.

Buffalo men have organized a secret society for persons of Celtic blood whose names begin with Mac.

Prof. Henry E. Strobel of Harvard has resigned his place on the faculty and

#### SMALLPOX IS RAGING.

Springhill District, N. S., is Strictly Quarantined.

A despatch from Halifax says: The smallpox situation in Cumberland county has assumed so serious a phase that a special danger order has been issued by District Superintendent Jarvis of the Intercolonial Railway at the request of the Board of Health of Cumberland county, that no persons will be allowed to leave Springhill without a permit from the Chairman of the Board of Health stating that the traveller has been successfully vaccinated and has not been exposed to the contagion of smallpox. Each person presenting a ticket at Springhill Junction must be in possession of this permit. Doctors will travel on trains between Springhill Junction and Macan. An accurate estimate of the number of cases of disease in Cumberland is about six hundred, of which one-half are in and near Springhill Mines.

#### HAMILTON STRIKE SETTLED.

New Schedule, But Same Wages—Both Sides Satisfied.

A despatch from Hamilton says: The members of the Ontario Railway and Municipal Board, who were arbitrators in the dispute between the street railway company and its employees, made known their award shortly after noon on Thursday. While both the company and the men say that they are satisfied with the award and have signed an agreement based on the board's findings, it is practically the same as the award of the three men who arbitrated on the points in dispute before the strike was ordered. The men were allowed the same wages that they got under the original award, but there is a difference in the schedule of hours, and the men say that it was a new schedule that they were fighting for and that having got it they are perfectly satisfied.

#### THE COAL FAMINE.

Efforts of Mr. Whyte and the C. P. R. to Relieve Distress.

A despatch from Winnipeg says: Second Vice-President Whyte of the Canadian Pacific Railway returned to the city on Wednesday, after spending several days looking into the coal situation in the west. Mr. Whyte was obviously deeply impressed by the necessities of the situation on the prairies, and spoke in terms of the fullest sympathy with the settlers, who might possibly be in want of the fuel necessary to warm their homes. The coal which was shipped west from Fort William has served to alleviate immediate needs in many places and cars will be rushed to the Lethbridge mines. It will be a month, however, before these mines will be running at full capacity again.

## NEW SILVER FIELD FOUND

### Discovery Made in District Tributary to Montreal.

A despatch from Montreal says: A new silver field, the first discovered in the Laurentian Ranges, in the district tributary to Montreal, has been brought to light as the result of the active prospecting that has been in progress since the important finds of graphite were made near Labelle a few weeks ago. Since the snow and frost came the surface testing has been abandoned for the present, but Mr. L. O. Armstrong, colonization agent of the C.P.R., who was all over the Labelle branch of the

C.P.R. on Wednesday, states that this new discovery was the subject of eager discussions among groups of French-Canadians at various stations along the line.

The find was made by a young English-speaking prospector, who came part of the way down the mountains on the same train as Mr. Armstrong. From what he could make out the deposit consists of silver, galena and lead, the silver, according to the assay that has been made, running as high as 62 per cent.

## For Lung Troubles

Ayer's Cherry Pectoral certainly cures coughs, colds, bronchitis, consumption. And it certainly strengthens weak throats and weak lungs. There can be no mistake about this. You know it is true. And your own doctor will say so.

The best kind of a testimonial—  
"Sold for over sixty years."

Made by J. C. Ayer Co., Lowell, Mass.

### WHAT OTHER PAPERS SAY

Stratford Beacon, (Liberal).

McMaster University, Toronto, is to receive \$50,000 from John D. Rockefeller, and the money is to be used in building a gymnasium, lecture room and dormitories. Doubtless John thought Canada entitled to a portion of the Standard Oil profits, for it has been included for a good many years in the levy.

"Why is it," said A. McNeill, Chief of the Dominion Fruit Division, at the

culture.

Under the new Law it will not be permissible for Horticultural Societies to offer prizes for competition at exhibitions held under the auspices of agricultural societies. These last named organizations, however, may use their own funds for the offering of prizes for horticultural exhibits.

Hereafter no prizes can be offered for grade male stock.

Spring stallion and cattle shows shall receive a special a special grant equal to one half the sum expended, but such sum shall not exceed \$50.

Where seed fairs are held the maximum grant shall be \$25.

Societies investing in horses, cattle, sheep or swine, for the improvement of stock, will receive a grant ranging from \$50 downward, for each registered male animal in these classes.

No society shall be entitled to receive a grant exceeding \$800.

Under the new Act restrictions in regard to the conducting of games of chance have been made more stringent.

The annual meetings to be held in January of District, Township and Horticultural societies, which for the last time will be convened under the old Act, will be the most important ones in the history of these organizations. All who are interested in making of primal importance the educational features of these societies, and in improving the quality and quantity of the products of the farm, factory and garden, should attend these meetings on January 9th and 16th.

Copies of the Act governing Agricultural Societies may be had on application to Mr. J. Lockie Wilson, Superintendent of Agricultural and Horticultural Societies, Parliament Buildings, Toronto.

## Deafness Cannot be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out of this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous surface.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars free.

F. J. CHENEY, & CO Toledo, O  
Sold by Druggists, 75c.  
Take Hall's Family pills for constipation.

## THE WAILING WOMAN.

A Queer Old Legend of the City of Mexico.

As is generally known, senior, many bad things are met with at night in the streets of the city, but this wailing woman, La Llorona, is the very worst of them all. She is worse by far than the Vaca de Lumbre, that at midnight comes forth from the potrero of San Sebastian and goes galloping through the streets like a blazing whirlwind, breathing forth from her nostrils smoke and flames, because the fiery cow, senior, while a dangerous animal to look at, really does nobody any harm, and La Llorona is as harmful as she can be.

Seeing her walking along quietly—at the times when she is not running and shrieking for her lost children—she seems a respectable person, only odd looking because of her white skirt and the white rebozo with which her head is covered, and anybody might speak to her. But whoever does speak to her in that very same moment dies!

No one who has stopped her to talk with her ever has lived to tell what happens at that terrible encounter, but it is generally known that what does happen is this: Slowly she turns toward the one who has spoken, and

**"FRUIT-A-TIVES" dit**  
from any other remedy in the

**They cure, absolutely, Stomach, Liver  
Bowel and Skin Troubles.**

Because none of the usual remedies have given you relief, should not give "Fruit-a-tives" a good, honest trial.

Fresh fruit acts directly on the three great eliminating organs, Stomach, Liver and Skin. But fruit contains only a minute quantity of these, and in order to receive any marked benefit from fruit, to eat more than could be assimilated by the system.

"Fruit-a-tives" contain all the curative virtues of fruit in concentrated form.

In making "Fruit-a-tives," the juices of apples, oranges, figs and lemons, by a wonderful discovery of a famous physician, a chemical action is taken, by which the medicinal action is many times increased. The whole compressed into tablets.

"Fruit-a-tives" contain no Calomel—no Cascara—no violent purgatives—only fruit juices and tonics.

"Fruit-a-tives" act directly on the Bowels, Kidneys and Skin, arousing them to vigorous action.

With the Kidneys healthy—the Bowels moving regularly every day—the pores of the skin doing their full share towards ridding the system of poisons, "Fruit-a-tives" mean health for every member of the family.

50c. a box—6 boxes for \$2.50. Sent to any address on receipt of price if your druggist does not have them.

**FRUIT-A-TIVES LIMITED, OTTAWA**

## Is Disease a Crime?

Not very long ago, a popular magazine published an editorial article in which the writer asserted, in substance, that all disease should be regarded as criminal. Certain it is, that much of the sickness and suffering of mankind is due to the violation of certain of Nature's laws. But to say that all sickness should be regarded as criminal, must appeal to every reasonable individual as radically wrong.

It would be harsh, unsympathetic, cruel, yes criminal, to condemn the poor, weak, over-worked housewife who sinks under the heavy load of household cares and burdens, and suffers from weaknesses, various displacements of pelvic organs and other derangements peculiar to her sex.

Frequent bearing of children, with its exacting demands upon the system, coupled with the care, worry and labor of rearing a large family, is often the cause of weaknesses, derangements and debility which are aggravated by the many household cares, and the hard, and never-ending work which the mother is called upon to perform. Dr. Pierce, the maker of that world-famed remedy for woman's peculiar weaknesses and ills—Dr. Pierce's Favorite Prescription—says that one of the greatest obstacles to the cure of this class of maladies is the fact that the poor, over-worked housewife can not get the needed rest from her many household cares and labor to enable her to secure from the use of his "Prescription" its full benefits. It is a matter of frequent experience, he says, in his extensive practice in these cases, to meet with those in which his treatment fails by reason of the patient's inability to abstain from hard work long enough to be cured. With those suffering from prolapsus, anteversion and retroversion of the uterus or

## RECORDS.

In the number of his titles the Duke of Atholl, with twenty-three, holds the record.

The record bean for costliness is the vanilla, which sells at \$12 a pound retail.

The record for ham sandwich making is a thousand sandwiches in 11 hours 25 minutes.

The record lodging house is one for pilgrims at Mecca, which accommodates 6,000 persons.

The record steam heating apparatus cost \$180,000. It is that which heats the 11,000 rooms of the Vatican.

The record soprano voice was Lucrezia Agujardi's. This lady, who died in 1783, could easily strike C in altissimo.

The record for millionaire honesty was held by the late Charles T. Yerkes, who, on recovering his fortune after his failure, repaid the claims of all his old creditors with 6 per cent compound interest.

**Mr. Howells and the Poet.**

A person called upon a certain editor of the Atlantic Monthly of the name of William Dean Howells and produced

and dormitories. Doubtless John thought Canada entitled to a portion of the Standard Oil profits, for it has been included for a good many years in the levy.

"Why is it," said A. McNeil, Chief of the Dominion Fruit Division, at the Ontario Fruitgrowers' Convention, "that here at the show in Massey Hall I find this kind of Fameuse (show) apple (holding up a large, smooth, red one), while if I go into an hotel, this is what I find (holding up a tiny little thing, with one side shrunken and scabby)? One was grown on a sprayed tree, the other on an unsprayed tree. There is no reason why, at a cost of ten cents a barrel for spraying, all our fameuse could not be as clean as the perfect specimen here in my right hand."

## THE REGULATIONS AFFECTING AGRICULTURAL AND HORTICULTURAL SOCIETIES.

The New Act comes into force, February 1st, 1907.

As the dates for the annual meetings of Agricultural and Horticultural Societies are near at hand, our readers will doubtless be interested in learning something of the laws that will govern the procedure of these organizations.

The new laws come into force on February 1st, 1907, but the next annual meetings of these organizations will be held on the dates fixed under the old Act, viz: Horticultural and Township Societies on January 9th, and District societies on January 16th and the usual two weeks notice must be given in local newspapers together with bills posted in places of common resort.

In future societies will no longer be known as "District" and "Township," but every society in the Province will be placed on the same basis in regard to the receipt of its government grant, and will receive such grant in proportion to its expenditure for agricultural purposes during the past three years, as shown by their sworn annual statement to the Department of Agriculture. A definition of what may be considered "Expenditure for Agricultural Purposes" is given in the Act.

Societies will be known by the name and place where they held their last annual exhibition unless they prefer some other, then the new name must be determined by the members thereof, and approved by the Ministry of Agriculture.

speak to her. But whoever does speak to her in that very same moment dies!

No one who has stopped her to talk with her ever has lived to tell what happens at that terrible encounter, but it is generally known that what does happen is this: Slowly she turns toward the one who has spoken, and slowly she opens the folds of her white reboso, and then is seen a bare grinning skull set fast to a bare skeleton, and from her fleshless jaws comes one single icy cold breath that freezes into instant death whoever feels it. After that, shrieking again for her lost children, she rushes onward, the white gleam of her gashing the darkness, and in the morning the one who spoke to her is found lying dead there with a look of despairing horror frozen fast in his dead eyes.

What is most wonderful is that she is seen in the same hour by different people in places widely apart, one seeing her hurrying across the atrium of the cathedral, another beside the Arcos de San Cosme and a third near the Salto del Augua, over by the prison of Belen, and all in the very same moment of time.

She is so generally known, senior, and so greatly feared that nowadays few people stop her to speak with her, and that is fortunate. But her loud, keen wailings and the sound of her running feet are heard often and especially on nights of storm. I myself have heard them, senior, but I have never seen her. God forbid that I ever shall!—Thomas A. Janvier in Harper's.

### Letters and Pounds.

I believe the stolidity of the English character and its implicit acceptance of authority are due in a large measure to the fact that long before it leaves the spelling class it is ready to believe anything. And this unquestioning attitude of mind is only rendered the more hopeless when it comes to learn that in one case twelve ounces make a pound, in another case it requires sixteen. Indeed, if we had set ourselves deliberately to stamp out rational instincts and the habit of logical and thoughtful inquiry in the child mind, we probably could not have devised two more fiendish instruments than our scheme of spelling on the one hand and of weights and measures on the other.—London Mail.

A first-class line of sleigh bells and horse blankets.

MADOLE & WILSON

of this class of maladies is the fact that the poor, over-worked housewife can not get the needed rest from her many household cares and labor to enable her to secure from the use of his "Favorite Prescription" its full benefits. It is a matter of frequent experience, he says, in his extensive practice in these cases, to meet with those in which his treatment fails by reason of the patient's inability to abstain from hard work long enough to be cured. With those suffering from prolapsus, anteversion and retroversion of the uterus or other displacement of the womanly organs, it is very necessary that, in addition to taking his "Favorite Prescription" they abstain from being very much, or for long periods, on their feet. All heavy lifting or straining of any kind should also be avoided. As much out-door air as possible, with moderate, light exercise is also very important. Let the patient observe these rules and the "Favorite Prescription" will do the rest.

Dr. Pierce's Medical Adviser is sent free on receipt of stamps to pay expense of mailing only. Send to Dr. R. V. Pierce, Buffalo, N. Y., 31 one-cent stamps for paper-covered, or 50 stamps for cloth-bound.

It is best to consult the Doctor, free of charge by letter. All such communications are held sacredly confidential.

Dr. Pierce's Pleasant Pellets invigorate and regulate stomach, liver and bowels.

## THE TRADE RAT.

### Odd Ways of This Peculiar Little California Rodent.

One of the oddest little animals in existence is the California wood rat, better known as the "trade rat." It owes the latter name to the fact that, though it is a great thief, it never steals anything without putting something else in its place. It is said that a paste pot which had been left overnight in the assay office of a silver mine in that state was found in the morning with the oddest collection of rubbish. This was the work of trade rats. They had stolen the paste and left in exchange a piece of stick, a length of rope, some odds and ends of wire and an unbroken glass funnel. The object of the trade rat in so scrupulously paying for what he takes is something of a mystery, but these same rats certainly take the greatest pleasure in the odds and ends which they steal and collect.

In Lindsay's "Mind in Lower Animals" a description is given of a trade rat's nest found in an unoccupied house. The outside was composed entirely of iron spikes laid in perfect symmetry, with the points outward. Interlaced with the spikes were about two dozen forks and spoons and three large butcher knives. There were also a large carving fork, knife and steel, several plugs of tobacco, an old purse, a quantity of small carpenter's tools, including several augers, and a watch, of which the outside casing, the glass and the works were all distributed separately, so as to make the best show possible.

The trade rat has its South American counterpart in the viscacha, a pretty little relative of the chinchilla, which lives in families of twenty or thirty on the pampas. Everything that takes its fancy and is portable is carried by the viscacha and piled in neat little heaps at the mouth of its burrow. If a ranchman drops his watch or any similar article he always searches the viscacha burrows in the neighborhood and generally finds his lost property.—Chicago News.

### All Right.

A man always puts on the left shoe last, and when he puts on the right shoe first—on the right foot—he also puts on the left shoe on the right foot. A man most always puts the right shoe on the left foot and the left shoe on the right foot.—Baltimore American.

### The Early Bird.

Mrs. Homebody (engaging cook)—Very well, then; you may come tomorrow at 10. Cook—O'd sooner come at 8, mum. Thin if OI don't loike th' place OI can lave in toime for th' matinar.—Puck.

## CASTORIA.

Bears the Signature of The Kind You Have Always Bought

Dr. J. C. Williams

after his failure, repaid the claims of all his old creditors with 6 per cent compound interest.

### Mr. Howells and the Poet.

A person called upon a certain editor of the Atlantic Monthly of the name of William Dean Howells and, producing a poem and courteous note of declination, indignantly demanded an explanation.

"Do you mean to intimate that this is not a good poem?" he challenged.

"By no means," hastily remonstrated Mr. Howells; "I think it is very good indeed."

"Then why"—in a somewhat mollified tone—"do you decline it? I consider it the best I have ever written."

"Ah, well," said Mr. Howells, "after all, we have very few differences of opinion. Do you know," he added in his gentlest voice, "I have long regarded it as the best that Tennyson has ever written."—George Harvey in North American Review.

### Anchoring a Lightship.

A very effective method is employed to keep a lightship always in practically the same position. The ship is moored by three anchors, which rest in the sea bed in the form of a triangle. When the tide alters its direction the vessel, of course, swings with it, but only to a limited extent. The ship cannot change right over, as it would if only one anchor were used, for the three anchors each fix it in a different position and do not allow it to move more than a few yards.

### Where Mrs. Brown Had Been.

The Dear Child—Oh, Mrs. Brown, when did you get back? Mrs. Brown—Bless you, dear, I was not away anywhere! What made you think so? The Dear Child—I thought you were. I heard my mamma say that you were at loggerheads with your husband for over a week.—London Answers.

**Amy Robsart.**  
On a Sunday in September, 1500, Lady Robert Dudley, better known under her maiden name of Amy Robsart, being in good health, sent to a fair all the people of Connor Hall, near Oxford, where she was residing, except one friend. On their return she was lying dead at the foot of the stairs. Dudley courted inquiry. The inquest found that she died by accident, and she was splendidly buried in St. Mary's, Oxford. The Spanish ambassador wrote that Elizabeth had told him a few days before that Amy was likely to die soon, but he may well have had a motive for a false statement. It is Sir Walter Scott's greatest crime that he misdates Amy Robsart's death by some fifteen years.—Pall Mall Gazette.

WILL FIND BILEANS A BOON—A  
WARMER ANSWER TO MOTHERS

# BY-LAW NO.

OF THE CORPORATION OF THE  
TOWN OF NAPANEE.

A By-Law to authorize the issue of debentures of the Town of Napanee to the amount of \$2250 00, for the purpose of raising \$2250.00, to provide for cost of extending the Dundas street sewer along West street from Dundas street to Thomas street and connecting with the Canning Factory sewer.

WHEREAS the Corporation of the Town of Napanee has constructed a sewer from the banks of the Napanee River along West street to Dundas street and along Dundas street Westerly to the creek crossing the same.

AND WHEREAS it is desirable to continue said sewer along West street to Thomas street to connect with the Canning Factory sewer at a cost of \$2250.00.

AND WHEREAS it is desirable that the amount necessary to defray the cost of this said extension of said sewer should be raised on the credit of the said Town.

AND WHEREAS in order thereto it will be necessary to issue debentures of the Town of Napanee for the sum of \$2250 00 as hereinafter provided, (which is the amount of the debt intended to be created by this By-Law) the proceeds of said debentures to be applied to said purpose and no other.

AND WHEREAS it is desirable to issue the said debentures at one time and to make the principal of said debt repayable by yearly sums during the period of twenty years being the currency of the said debentures, said yearly sums being of such respective amounts that the aggregate amount payable in each year for principal and interest at the rate of four per centum per annum in respect of the said debt shall be as nearly as possible equal to the amount so payable in each of the other nineteen years of the said period.

AND WHEREAS the total amount required to be raised annually by special rate for paying the said debt and interest as hereinafter provided is \$165.56.

AND WHEREAS, the amount of the whole rateable property of the Town of Napanee, according to the last revised Assessment Roll is \$1,104,883.

And whereas the amount of the existing debenture debt of the said municipality is \$68,739.86, exclusive of local improvement debts secured by special Acts rates or assessments whereof no part of principal or interest is in arrear.

THEREFORE the Municipal Council of the Corporation of the Town of Napanee, enacts as follows:—

1—That for the purpose of raising the sum of \$22,500.00 as afore said debentures of the said Town of Napanee amounting to the sum of \$2250 as afore said, in the sum of \$165.56 each shall be issued on the First day of May, A. D. 1907, each of which debentures shall be dated on the date of the issue thereof and shall be payable one on the First day of May in each of the years from 1908 to 1927 inclusive, at the office of the Treasurer of the Town of Napanee, without interest, the interest on the said loan calculated at the rate of four per centum per annum being already included in the amount of the said debentures.

2—It shall be lawful for the Mayor of the said Municipality and he is hereby authorized and instructed to sign and issue the said debentures hereby authorized to be issued and to cause the same to be signed by the Treasurer of the said Municipality and the Clerk of the said Municipality is hereby authorized and instructed to attach the seal of the said Municipality to the said debentures.

3—THAT during the currency of the said debentures there shall be raised annually by special rate, on all the rateable property of the Town of Napanee the sum of \$165.56 for the purpose of paying the amount due in each of the said years for principal and interest in respect of the said debt.

4—THIS By-law shall take effect on the day of the date of the final passing thereof.

5—THE votes of the electors of the said Town of Napanee, shall be taken on this By-law on Monday the Seventh day of January 1907 commencing at the hour of nine o'clock in the forenoon, and continuing till five o'clock in the afternoon of the same day, by the following Deputy Returning Officers, and at the following places, that is to say:—

**BLOOD DISEASED MEN**

If you ever contracted any blood disease you are never safe unless the virus or poison has been eradicated from the system. Have you any of the following symptoms? Sore throat, ulcers on the tongue or in the mouth, hair falling out, aching pains, itchingness of the skin, sores or blotches on the body eyes red and smart, dyspeptic stomach, sexual weakness—indications of the secondary stage. Don't ruin your system with their foggy treatment—mercury and potash—which only suppress the symptoms for a time only to break out again when happy in domestic life. Don't let quacks experiment on you. Our New Method Treatment is guaranteed to cure you. Our guarantees are backed by bank bonds, that the disease will never return. Thousands of patients have been already cured by our New Method Treatment for over 20 years. No names used without written consent.

Mr. E. A. C. writes: “Your remedies have done me more good than Hot Springs and all the doctors and medicines I had previously tried. I have not felt any of those pains or seen any ulcers or blotches for over seven years and the outward symptoms of the loathsome disease have entirely disappeared. My hair has grown in fully again and I am married and happy.”

**Drs. Kennedy & Kergan,**  
148 SHELBY STREET. DETROIT, MICH.

**The Regular Custom.**  
In a London street a girl of twelve and a boy of ten were playing a family drama of “mother and father,” and Bobby was being instructed in his role. “Now, Bob,” said the girl, “you jest walk up ter ther corner an’ wait there till we tells yer ter come. We’re a-goin’ ter git dinner ready, an’ when we calls yer, yer ter come ‘ome and cluck the fings about.” “Ho!” said Bobby. “Come ‘ome drunk, do I? And why for?” “Why for, stoopid?” retorted the girl, with a glance of mingled scorn and pity. “Ain’t it Saturday?”

**Her Simplicity.**  
A silly little lady had a husband, a lover of gayety, who was inclined to neglect his wife. This lady while spending the winter in Devonshire said one day at the country postoffice: “Dear me, what a silly mistake you postoffice people have made.” “How, madam?” asked the clerk. “Why,” she explained, with a titter, “here I have just got a letter from my husband, who is working hard in London, and the envelope is postmarked Monte Carlo.”—London Queen.

**Tombstones to the Living.**  
“To a stranger the erection of a tombstone to a living person seems rather ghastly, but it's the custom in some New England villages,” said the traveling man. “I was collecting quaint epitaphs for a magazine article, and, after I had put up my motor car on my arrival in a village, I would go straightway to the cemetery on an epitaph hunt. There I would find, set up in lot after lot, tombstones of living people. Each stone would contain the name and the date of birth. Ghastly, wasn't it? I met a pretty girl in a hotel in New Hampshire. She was the landlady's daughter. She showed me her stone in the cemetery. The last name was left blank in her case. ‘I may marry, you know,’ she explained.”—New York Press.

**Generosity.**  
Never be sorry for any generous thing that you ever did, even if it was betrayed. Never be sorry that you were magnanimous if the man was mean afterward. Never be sorry that you gave. It was right for you to give even if you were imposed upon. You cannot afford to keep on the safe side by being mean.

# DR. AGNEW

WITH THE FORESIGHT OF A PROPHET, BY THE AID OF THAT  
KNOWLEDGE OF KNOWN TREATMENTS, DR. AGNEW'S CURE FOR

WILL FIND BILEANS A BOON—A WORD OF ADVICE TO MOTHERS.

The development of a girl at the time when she is just emerging from girlhood and passing into the fuller life of womanhood, should be carefully watched by all mothers.

Very often a girl complains that her clothes weigh her down. She becomes weak, has a feeling of weight at the stomach after meals, suffers from frequent headaches, and is often restless and miserable. All these symptoms mean that her vitality has reached a low ebb, that some natural tonic is required to restore the system and increase her vigor and energy. This can only be done by enriching and purifying the blood; and the surest method of doing this is by undergoing a course of Bileans.

Mrs. F. Burtinfield, of Mexboro, writes:—“My daughter, Jane Hannah, seemed to be losing all her strength and all her good spirits. She became weakly, pale, and despondent, instead of the bright, energetic girl, full of life and vivacity she has always been. I had proved how good Bileans were when I was out of sorts, so I gave her a few doses. The result was wonderful. They seemed to tone her up and give her back her life and energy in a few days! She is now in excellent health, although at a very critical age, and I have Bileans alone to thank.”

Thousands of mothers tell a similar story of praise. Don't forget, too, that Bileans cure indigestion, constipation, piles, headache, debility, biliousness, and all liver and kidney troubles. Purely herbal in composition, they constitute the finest household remedy known to the world of medicine. Of all druggists at 50c a box, or post free from the Bilean Co., Toronto, upon receipt of price. 6 boxes for \$2.50.

WITH THE FORESIGHT OF A PROPHET, BY THE AID OF THAT GREATEST OF KNOWN TREATMENTS—“DR. AGNEW'S CURE FOR THE HEART”—IS LEADING THOUSANDS OUT OF “EGYPTIAN BONDAGE,” OUT OF ILL-HEALTH AND UNTOLD SUFFERING TO THE “PROMISED LAND” OF PERFECT HEALTH

**DOES YOUR HEART ACHE?**  
**DR. AGNEW'S CURE FOR THE HEART WILL STOP THE PAIN**

Is there palpitation—Is there fluttering—Is your breath short—Is it hard to find your pulse sometimes—Do you have smothering spells—Do your feet and ankles swell—Do you have fainting turns—Do you have nightmare—Do you have pain in the left side, shoulder or arm—Ever experience great hunger and exhaustion—Do you have chilly sensations? Dr. Agnew's Cure for the Heart has saved thousands of sufferers, and it can help and cure you; but you cannot afford to toy with heart troubles, so if you have any of the heart symptoms to-day then to-day is the day to put yourself in touch with a remedy—this great heart treatment that never fails.

“I was under treatment,” says Mr. A. Lavers, of Collingwood, Ont., “with some of the best physicians in London (England) for what they diagnosed as incurable heart trouble. I suffered agonies through pain about my heart, fainting spells, palpitation and exhaustion. As a drowning man grasps at a straw I tried Dr. Agnew's Cure for the Heart. The first bottle relieved me greatly; two bottles took away all traces of my heart trouble.”

## 2 BRICK COURT.

Temple Chambers In Which Oliver Goldsmith Amused Himself.

Few buildings link the London of the present day with so many of the literary characters of the London of the past as does the house at 2 Brick court, Middle Temple. The dominant memory which clings around it is that perpetuated by a handsome tablet on its front elevation bearing the words:

In these chambers died  
Oliver Goldsmith  
On the 4th of April, 1774.

and a medallion of the poet.

Goldsmith's, however, was seldom a lonely figure, and he gathered around him at Brick court all the wit of the metropolis of his day. In 1765, on the strength of the success of "The Good Natured Man" and the fact that he was making some £500 a year, "Goldie" expended £400 on chambers "up two pairs right" and fitted them with showy carpets, gilt mirrors and furniture extravagantly upholstered in blue velvet. Thus equipped, he embarked on a course of expenditure in which fine clothes for himself, grand dinners to a literary coterie and pretty trifles for venal beauties all bore costly parts. Johnson, Dr. Arne, Percy Reynolds, Francis and Bickerstaff were among the frequent visitors at 2 Brick court, but their arrival was not the cause of so much concern to Goldsmith's cotenants as that of some other of the poet's guests. It was the little supper parties to Goldsmith's young friends of both sexes that drew from the studious Blackstone, hard at work on his famous "Commentaries" in the rooms below "Goldie's," bitter protests against the racket of his "reveling neighbor."

Both "The Traveler" and "The Vicar of Wakefield" were published soon after Goldsmith moved into Brick court,

but the income they brought him was insufficient to withstand the drain made on his resources by his extravagance, his generosity and his taste for gambling. Owing £2,000, unable to obtain further advances from his booksellers and seeing no way out of his embarrassments, Goldsmith broke down in spirits and health. He had to leave those windows from which he used to watch the rooks in the grove, which once stood where now is Elm court, and, as he wrote, "often amused myself with observing their plan of policy." Goldsmith returned thither, nevertheless, to die, and though he was carried to his last resting place through rows of weeping women the benches of the Temple appear to have valued him so little that the very place of his burial became forgotten. For that neglect the tablet came as tardy but welcome reparation.—London Tribune.

## POINTED PARAGRAPHS.

An ounce of assistance is worth a pound of advice.

Count your joys and you will discount your sorrows.

Hard labor is a plaster that alleviates the pains of the mind.

Part of the art of doing things is to attempt but little at a time.

Some people seem to think that loud talk makes a sound argument.

If you have a cross to bear, bear it like a man and don't place it on exhibition.

When the opposing attorney offers to compromise it means that you have a good case.

Many a man is credited with being patient when in reality he is too lazy to register a kick.

Many a fool has acquired a reputation for wisdom by accidentally doing the right thing at the right time.—

## A BY-LAW.

To prohibit the sale of liquor in the Township of Richmond.

The Municipal Council of the Township of Richmond, hereby enacts as follows :

1.—That the sale by retail of spirituous, fermented, or other manufactured liquors is and shall be prohibited in every tavern, inn or other house or place of public entertainment in the said municipality, and the sale thereof except by wholesale, is and shall be prohibited in every shop or place other than a house of public entertainment in the said municipality.

2.—That the vote of the electors of the said Township of Richmond will be taken on the by-law by the deputy-returning officer hereinafter named on Monday the 7th day of January, One Thousand Nine Hundred and Seven, commencing at nine o'clock in the morning and continuing till five o'clock in the afternoon at the undermentioned places :

For Polling Sub-division No. 1, the poll shall be held at the residence of Wm. Schermehorn, on Lot No. 18, in the 2nd Con. of Richmond and that Ira E. Grooms shall be Deputy-Returning Officer. For Polling Sub-division No. 2, the poll shall be held in the Town Hall, in the village of Selby, and that Geo. S. Sexsmith shall be Deputy-Returning Officer. For Polling Sub-division No. 3, the poll shall be held at the Grist Mill, Forest Mills, and that Wm. Provins shall be Deputy-Returning Officer. For Polling Sub-division No. 4, the poll shall be held at the Orange Hall, in the village of Roblin, and that Geo. S. Richardson shall be Deputy-Returning Officer.

3.—That on the 15th day of December, A. D. 1906, at the Town Hall, in the village of Selby, at the hour of 10 o'clock in the forenoon the reeve shall appoint in writing, signed by himself, two persons to attend at the final summing up of the votes by the clerk, and one person to attend at each polling place on behalf of the persons interested in and desirous of promoting the passing of this by-law, and a like number on behalf of the persons interested in and desirous of opposing the passing of this by-law.

4.—That the Clerk of the said Municipal Council of the Township of Richmond, shall attend at the Town Hall, Selby, at the hour of 12 o'clock on the 9th day of January, A. D. 1907 to sum up the number of votes given for and against this By-Law.

5.—This By-law shall come into operation, and be of full force and effect on and after the first day of May next after the final passing thereof. Council Chamber, December 3rd 1906. , Reeve.

## NOTICE.

Take notice that the above is a true copy of a proposed By-law which has been taken into consideration by the Municipal Council of the township of Richmond, and which will be finally passed by the said Council (in the event of the assent of the electors being obtained thereto, as provided by the Liquor License Act) after one month from the first publication thereof in the "Napanee Express" the date of which first publication was Friday, the Seventh day of December, 1906, and

## HAVING A GOOD CRY

By DONALD ALLEN

Copyright, 1906, by Ruby Douglas

Pretty Viola Craydon had come down to visit her aunt in her country home, and for a week she had been supremely happy. There were chickens and ducks and geese, there were guinea hens and doves and rabbits, there were innocent lambkins and frolicking calves, and she had tried to milk a cow, fallen off a fence and churned two pounds of butter. But for Arthur Tyson this dream of bliss might have continued another week, and pretty Viola might have climbed to the roof of the wagon shed, sold paper bags to a tin peddler and gone blackberrying down in the meadow as a continuance of her romantic adventures.

Arthur Tyson had not only fallen in love with her, but he was intending to ask for her hand. He hadn't published his intentions in any of the journals or told the country postmistress what was in his mind, but Miss Viola had a line on him. You can't fool a girl about such things. The man who is courting her may talk about the joys of bachelor life and pretend to be a cynic on

## Evolution.

Summer resorts go through three stages.

First.—People go there to enjoy themselves.

Second.—People go there to divert themselves.

Third.—People go there to flaunt themselves. Then the place is fashionable.—Life.

## If William Came to the Play.

"Most actors admire Shakespeare." "Some do," answered Mr. Stormington Barnes. "Others are too busy thinking of how Shakespeare would admire them if he could only see them do his plays."—Washington Star.

The second most deadly instrument of destruction is the dynamite gun; the first is the human tongue.—Jordan.

## CRISIS OF GIRLHOOD

### A TIME OF PAIN AND PERIL

Miss Emma Cole Says that Lydia E. Pinkham's Vegetable Compound has Saved Her Life and Made Her Well.

How many lives of beautiful young girls have been sacrificed just as they were ripening into womanhood! How many irregularities or displacements have been developed at this important period, resulting in years of suffering!

A mother should come to her child's aid at this critical time and remember that Lydia E. Pinkham's Vegetable Compound will prepare the system for the coming change and start this trying period in a young girl's life without pain or irregularities.

Miss Emma Cole of Tullahoma, Tenn., writes:

Dear Mrs. Pinkham: "I want to tell you that I am enjoying better health than I have for years, and I owe it all to Lydia E. Pinkham's Vegetable Compound."

"When fourteen years of age I suffered almost constant pain, and for two or three years, I had soreness and pain in my side, headaches and was dizzy and nervous, and doctors all failed to help me."

"Lydia E. Pinkham's Vegetable Compound was recommended, and after taking it my health began to improve rapidly, and I think it saved my life. I sincerely hope my experience will be a help to other girls who are passing from girlhood to womanhood, for I know your Compound will do as much for them."

If you know of any young girl who is sick and needs motherly advice ask her to write Mrs. Pinkham, Lynn, Mass., and she will receive free advice which will put her on the right road to a strong, healthy and happy womanhood. Mrs. Pinkham is daughter-in-law of Lydia E. Pinkham and for twenty-five years has been advising sick women free of charge.

line on him. You can't fool a girl about such things. The man who is courting her may talk about the joys of bachelor life and pretend to be a cynic on affairs of sentiment, but she can read him like a book. When Arthur had said that he would arrive at Viola's aunt's on the 14th—running down in his auto in the forenoon and running back to the city again in the evening—there was a look in his eyes that said there would be something doing.

The 14th came, and then things began to happen. A letter arrived from Arthur to say that his grandmother wanted him to hurry to her dying bedside; a big bumblebee came droning along, even as Viola was reading the letter while seated on the veranda, and stung her on the bare arm; a windmill man called on business and tried to flirt with her; she was chased out of the barnyard by a calf and chased back again by a turkey gobbler; the dog got hold of her cute summer hat and chewed it up, and she fell down cellar while going after preserves and landed on top of the family cat.

Several other vexatious things occurred between the morning of the 14th and noon of the next day, and an hour after dinner Miss Viola made up her mind to have a good cry. If she cried in the house her aunt, who was a sharp eyed old lady, would see her tears and ask questions; if she went to the barn to cry among the cackling hens and new mown hay, the hired man would come stumbling in; if she hid away behind the grape arbor or the currant bushes, there were bugs to crawl down her back as soon as she was off her guard.

Down across the meadow and half a mile from the house there was a small grove, and the disconsolate girl finally made up her mind that her tears of sorrow should be shed around the roots of those trees. Her manner of dodging her aunt and getting out of the house and down to the grove would have been called "making a sneak" by some, but a pretty girl who is looking for a crying place should not be judged too harshly.

She found the grove a capital place for her business. There were shade and quietness and the whispering of the summer breeze through the leaves, and Miss Viola went at it and let the tears fall, her chin quiver and her sobs frighten away the lone chickadee that was taking a daytime nap on a branch above her head.

Mr. Tyson hastened to the bedside of his dying grandmother, thinking that it would be a whole week before she would die and be buried and the will mentioning him as sole heir read. Upon his arrival a glad surprise awaited him. It was a case of bilious colic only, caused by eating too heartily of corned beef and cabbage at the advanced age of eighty-three.

He would have hastened away at once, but the grandmother objected. She had a story to tell—a story of how that colic grasped and gripped her and lasted her ten hours before the doctor could bring relief. It took her all day to finish the story, and then it took her nephew several hours in addition to convince her that if he did not hasten back to town the whole United States would turn turtle.

He made things hum when he got started, but it was midafternoon of the 15th when his auto arrived within cannon shot of the farmhouse which sheltered the girl he meant to make his wife and of the grove wherein a sad eyed maiden sat and wept—that is, she wasn't sitting there just then. She had other business on hand.

At 1 o'clock that afternoon at the railroad station, two miles away, a train bearing 100 lunatics on their way to a newly completed asylum had been shunted on to the side track to let the express pass. They were given re-

freshments, and all of a sudden, while the guards were about their hospitable work and their vigilance relaxed, a dozen of the unfortunate people, men and women, escaped from the cars and scattered over the country.

Of course they were instantly pursued, but three or four of them got a long start. Guards and farmers and farmers' boys and farmers' dogs took up the pursuit with avidity.

As Miss Viola sat in her grove and sobbed and wept and threw sticks at the bugs crawling about she was startled by whoops and yells and shouts. She brushed away her tears and repressed her sobs and stepped out of the shelter of the grove to see what was up.

She had heard of a rabbit being routed out of a wood pile and a whole country joining in the chase, and it flashed across her mind that this was an occurrence of the sort. She was soon undeceived. Three men, four boys and two dogs came running toward her, and as she was seen there were cries of:

"There is one of them! Come on, boys! Head her off and don't let her get away!"

Men and boys and dogs bore down on the helpless maiden, and almost before she could scream she found herself grasped by both arms and being hurried along. She had been boosted over a fence and hustled through a thistle patch before she could gather her wits. Then she began to struggle and protest. It was useless to struggle, and the men and boys laughed at her pro-

**RICHMOND MINUTES**  
The Council met at Selby.  
The members present, Messrs Z. A. Grooms, Fred Sexsmith, Chas. Anderson, E. R. Sills, and Alf McCutcheon. The Reeve presiding.  
The Minutes of the last meeting were read and confirmed.  
A communication was received and read from Herrington, Warner and Grange, Re otter Creek drainage works. Fyled.  
Moved by Chas. Anderson and seconded by Alf McCutcheon, that the account of the Town of Napanee for repairs on the Boundry between the Town of Napanee and the Township of Richmond be referred to the Rieve for settlement. Carried.  
Moved by Chas. Anderson and seconded by E. R. Sills, that the account of the Napanee Express amounting to \$20.00 for publishing the Otter Creek drainage By-law be paid and charge to the Otter creek drainage account also \$5.20 for publishing road notices in the second concession and the Reeve be authorized to collect the same from the parties interested. Carried.  
The By-law prohibiting the sale of spirituous and intoxicated liquors was read a second time.  
Moved by Fred Sexsmith seconded by Chas. Anderson that the following accounts be paid: Dominion Rock Drill Company, repairs for crusher, \$37.74c; Edison Bradshaw repairing culvert in the 9th concession, 76c; Henry Graham for work on the Boundary between Richmond and Camden, \$12.87c; A McNeil for repairing culvert on Boundary between Richmond and Camden, \$1.00; C. H. Spencer for supplies furnished Magdaline Fralick from April 1st to Dec. 1st, \$24.80c; The Township of Tyendinaga to pay for Richmond's half of the work done on the Boundary north of Kingston, \$81.72c; Edward Huffman for repairing 3 culverts in Road Section No 18, \$4.00; Mrs. Airhart, support of David Sedore, \$5.00. Carried.  
Moved and seconded that the Council adjourn to meet on the 15th day of December 1906, at 10 o'clock a m.

fore they were tendered he had to lay his burden down and perform further pugilistic feats, but in due time the guards, the farmers, the farmers' boys and the farmers' dogs admitted that a mistake had been made.

When the auto resumed its journey the girl was a passenger. She had come to and realized that she was not being taken off to an insane asylum.

It was some hours later, when the harvest moon was shining and the whipporwills were singing, that she told her story, and, though her aunt was sitting right beside her and holding her hand and calling her "poor dear," the story had only been finished when Arthur Tyson leaned forward and kissed her and said that he proposed to see from that time on that she had the legal and moral right to weep in any grove she wanted to without being hustled around the country as an escaped lunatic. The proposal hadn't come in just the romantic form expected, but Miss Viola was a girl of sense and realized that when exigencies arise the machinery of romance may be thrown out of gear.

## CUBAN MINISTER TO THE U. S. Recommends Pe-ru-na.

**Senor Quesada, Cuban Minister to the United States.**  
Senor Quesada, Cuban Minister to the United States, is an orator born. In an article in The Outlook for July, 1899, by George Kennan, who heard Quesada speak at the Esteban Theater, Matanzas, Cuba, he said: "I have seen many audiences under the spell of eloquent speech and in the grip of strong emotional excitement, but I have rarely witnessed such a scene as at the close of Quesada's eulogy upon the dead patriot, Marti." In a letter to The Peruna Drug Mfg. Co., written from Washington, D. C., Senor Quesada says:

**"Peruna I can recommend as a very good medicine. It is an excellent strengthening tonic, and it is also an efficacious cure for the almost universal complaint of catarrh."---Gonzalo De Quesada.**

**Mr. Will A. Hoffman, Hagerstown, Ill., writes:**  
"I gladly give my testimonial with the thousands of others who have been cured by the use of Peruna."  
"I had catarrh of the head and throat. I took cold easily and was dizzy-headed."  
"I was all rundown and hardly able to work at all when I began using Peruna."  
"But, now, after using it about six months I am well and strong."

There is no remedy in the world which has proven so popular for catarrh as Peruna. It has been used for more than thirty years and cured thousands of cases as proven by our testimonials. If you do not derive prompt and satisfactory results from the use of Peruna, write at once to Dr. Hartman, giving a full statement of your case and he will be pleased to give you his valuable advice gratis.

Address Dr. Hartman, President of The Hartman Sanitarium, Columbus, O.

**Ask your druggist for Free Peruna Almanac for 1907**

**WEB OF THE SPIDER.**  
The Many Uses to Which Its Singular Spinner Puts It.  
Spiders form good subjects for a day study, and two hours spent in a neglected garret watching these clever little beings will often arouse such interest that we shall be glad to devote many days of sunshine to observing those species which hunt and build and live in the open fields. There is no insect in the world with more than six legs, and as a spider has eight he is therefore thrown out of the company of butterflies, beetles and wasps and finds himself in a strange assemblage. Even to his nearest relatives he bears little resemblance, for when we realize that scorpions and horseshoe crabs must call him cousin we perceive that his is indeed an aberrant bough on the tree of creation.

watchtower. Then, when a trembling of his aerial spans warns him of a capture, how eagerly he seizes his master cable and jerks away on it, thus vibrating the whole structure and making more certain the confusion of his victim.

Those spiders which leap upon their prey instead of setting snares for it have still a use for their threads of life, throwing out a cable as they leap to break their fall if they miss their foothold. What a strange use of the cobweb is that of the little flying spiders! Up they run to the top of a post, elevate their abdomens and run out several threads, which lengthen and lengthen until the breeze catches them, and away goes the wingless aeronaut for yards or for miles, as fortune may dictate! We wonder if he can cut loose or pull in his balloon cables

a fence and hustled through a thistle patch before she could gather her wits. Then she began to struggle and protest. It was useless to struggle, and the men and boys laughed at her protestations. When fright made her weak and she sank down one of the men took her on and kept business moving. Before reaching the station and the train they were met by one of the guards. The girl revived sufficiently to protest anew, but he answered her:

"Of course she's one of 'em, and a cute wench she is! This is the third time in two years she has escaped us. Bring her along."

Miss Viola was in a distressful condition when the station was at length reached. Her captors were met by shouting men and barking dogs and walls and screams from the two carloads of lunatics, and just then an auto came whooping up and had to pause for the crowd to clear the street. It is useless to conceal the fact that it was driven by Arthur Tyson.

"What's the matter?" he asked of an excited farmer as the machine came to a halt.

"More fun than I've seen in twenty years," was the answer. "Those two cars are full of crazy folks. About a dozen got away, and we've been chasing 'em down. They've just got the last one."

Arthur stood up to look over the crowd. A woman had apparently fainted away, and two or three men were about to pick her up and carry her across to the train. As her shoulders were lifted up he caught sight of her face, and next instant things were happening again.

He sprang down into the crowd, elbowed men and kicked dogs right and left, and in a moment was beside the woman. The woman's hair was down and her face covered with dust and grime and her dress torn from neck to shoulder, but love makes no mistakes in such matters.

The young man had knocked down two men and had the girl on his arm before he asked for explanations. Be-

In the service of a certain committee of the senate, the chairman of which is a southern senator, is a certain capable young stenographer and typewriter, in addition to the clerk of the committee. One day the chairman, missing the very capable stenographer, inquired of the clerk where he was.

"He is not here today, sir," responded the clerk. "His father is dead."

Some days later the chairman again asked for the missing employee, only to receive the same reply from the clerk:

"He is not here today, sir. His father is dead."

The chairman said nothing, but looked very interested. A full week thereafter the head of the committee for the third time inquired as to the whereabouts of the stenographer. In reply the clerk began the usual announcement:

"He is not here today, sir. His father is dead."

"Will you kindly advise me," interrupted the chairman, with alarming suavity, "whether that young man intends to stay away from his duties all the time his father is dead?"—Harper's Weekly.

**Pet Dog Customers.**

"Among my steadiest customers are the pet animals of the street and block," remarked the delicatessen man as he sliced down 10 cents' worth of rare roast beef ordered by the woman with a dog in her arms. "They include both dogs and cats belonging to the furnished roomers of the neighborhood. The master and mistress take their meals at neighboring boarding houses, so that there are no table scraps and the piece de resistance for Fido or Tommy is sought at the delicatessen."

"Roast beef is a favorite viand. The canned fish in ten cent tins lasts pussy several days, and I have many calls for condensed cream for the same purpose. One patron always stops in passing to buy a pound of a certain kind of crackers to which, she says, her French poodle is specially devoted. Ox tail and other thick soups are used to pour over bread in lieu of gravy. The owners seem to develop decided ingenuity in varying the pet's diet and altering its menu."—New York Press.

OST.

**An Ingenious Ruse.**

Herodotus tells of an ingenious ruse employed to carry an important message through the lines of the enemy. Histiaeus, being anxious to give Aristagoras orders to revolt, could think of no means to send the message to his ally, as all the roads were carefully guarded. Finally he hit upon a scheme. Calling his trustiest servant to him, he ordered that the man's hair be shaven off. He then pricked the desired message on the scalp of the slave and, waiting until his hair had grown out, dispatched him upon the errand. The messenger passed safely through the lines, and when he reached Aristagoras his head was again shaved and the message read.

**Perfumes.**

Perfumes exercise a peculiar influence over one's nervous system. A faint, subtle odor is nearly always enervating, while a pungent, rich perfume often has a bracing effect. Civet induces drowsiness, a faint breath of musk invigorates and the perfume of the aloe and the citron is positively soothing and comforting. The delicate, spicy odors of pinks, carnations, apple blossoms and sweetbrier are thought to be beneficial.

**CASTORIA.**

Bears the Signature of *The Kind You Have Always Bought*  
*Charles H. Fletcher*

little resemblance, for when we realize that scorpions and horseshoe crabs must call him cousin we perceive that his is indeed an aberrant bough on the tree of creation.

Nature has provided spiders with an organ filled always with liquid, which on being exposed to the air hardens and can be drawn out into the slender threads which we know as cobwebs. The silkworm increases its body with a mile or more of gleaming silk, but there its usefulness is ended, as far as the silkworm is concerned. But spiders have found a hundred uses for their cordage, some of which are startlingly similar to human inventions.

A list of all the uses of cobwebs would take much space, but of these the most familiar is the snare set for unwary flies the wonderfully ingenious webs which sparkle with dew among the grasses or stretch from bush to bush. The framework is of webbing, and upon this is woven the sticky spiral which is so elastic, so ethereal, and yet strong enough to entangle a good sized insect. How knowing seems the little worker as, the web and his den of concealment being completed, he spins a strong cable from the center of the web to the entrance of his

Mittens and gloves lined and unlined.  
**MADOLE & WILSON**

and engulphed with the breeze catches them, and away goes the wingless aeronaut for yards or for miles, as fortune may dictate! We wonder if he can cut loose or pull in his balloon cables at will.

A most fascinating tale would unfold could we discover all the uses of cobweb when the spiders themselves are through with it. Certain it is that our ruby throated humming bird robs many webs to fasten together the plant down and lichens which compose her dainty nest.

Search the pond and you will find another member of the spider family swimming about at ease beneath the surface, thoroughly aquatic in his habits, but breathing a bubble of air which he carries about with him. When his supply is low, he swims to a submarine castle of silk, so air tight that he can keep it filled with a large bubble of air, upon which he draws from time to time.

And so we might go on enumerating almost endless uses for the web, which is nature's gift to these little waifs who ages ago left the sea and have won a place for themselves in the sunshine among the butterflies and flowers.—C. William Beebe in New York

# CHAPPED HANDS.

It is not the annoyance alone which makes chapped hands a source of grave trouble to housewives and outdoor workers; it is the danger of festering and inflammation.

Irritation, swelling, cracks or scaling roughness round about the knuckles and the back of the hand are serious, and the greatest promptitude should be exercised in treating with Zam-Buk.

The affected part should be cleaned of any dirt. Then gently anoint with Zam-Buk, smearing with the fingers or spreading on clean linen.

Zam-Buk will soothe the irritation, and finally completely end the inflammation and pain. Swellings will go down, and over the raw surfaces Zam-Buk will GROW NEW HEALTHY SKIN. Hands soft, strong and white are possessed by those who use Zam-Buk regularly during the winter.

**CONVINCING TESTIMONY**

Mrs. H. H. Rankin, of Appin, Ont., says: "My hands had big cracks on them which caused me such pain I could hardly work. Whenever I tried to put them near water they would smart and burn as if I had scalded them. They did not seem to be benefited by anything I tried until Zam-Buk was introduced. To my great pleasure within a very short time Zam-Buk closed up the cracks and healed the sore places. My hands are now white and smooth. I recommended Zam-Buk to a friend who had a sore finger, and it cured that, too. I think it a splendid household ointment."

**SKIN RASH AND ECZEMA CURED.**

Mr. G. Shaw, 169 Givens St., Toronto, says: "Reading of the wonderful healing qualities of Zam-Buk, I thought I would try it, as I had been greatly annoyed for some time with an itching, irritating skin rash on both arms. I had tried various remedies, but failed to find a permanent cure. I sent for a supply of Zam-Buk and began using it. The results were so satisfactory that I persevered, and in two weeks' time, through daily application of the balm on my arms, the rash was completely removed. I found Zam-Buk, when applied to the skin, to be most soothing and to relieve the itching and irritation almost instantly. I have had no trouble since from skin eruptions, so I am fully convinced Zam-Buk permanently cures."

Mr. M. Jones, of Tavistock, says: "I had eczema for four years and painful scalp sores. Zam-Buk cured me of both, although everything else I had tried completely failed."

# Zam-Buk

Zam-Buk cures cuts, bruises, burns, scalds, eczema, pimples, running sores, poisoned wounds, sore feet, festering sores, piles, bad leg, diseased ankles, abscesses, boils, ringworm, sore backs, scrofula, itch, sore breasts, barber's rash, and all injured or diseased conditions of the skin, rubbed in over the parts affected. It also cures rheumatism, sciatica, neuralgia, etc. From all druggists, 50c. per box, or from Zam-Buk Co., Colborne St., Toronto, upon receipt of price. 6 boxes for \$2.50.

## CAUGHT COLD ON THE C.P.R.

**A. E. Mumford tells how Psychine cured him after the Doctors gave him up**

"It is twelve years since Psychine cured me of galloping consumption." The speaker was Mr. A. E. Mumford, six feet tall, and looking just what he is a husky healthy farmer. He works his own farm near Magnetawan, Ont.

"I caught my cold working as a fireman on the C.P.R.," he continued. "I had night sweats, chills and fever and frequently coughed up pieces of my lungs. I was sinking fast and the doctors said there was no hope for me. Two months treatment of Psychine put me right on my feet and I have had no return of lung trouble since."

If Mr. Mumford had started to take Psychine when he first caught cold he would have saved himself a lot of anxiety and suffering. Psychine cures all lung troubles by killing the germs—the roots of the disease.

# THE COWARD'S COMPROMISE

## There Never Yet Was Such a Thing as a Fearless Faith.

"For God gave us not a spirit of fearfulness, but of power and love and discipline."—II. Tim. 1., 7.

Many a man who prides himself on his diplomacy ought to be ashamed of his cowardice. He is suave where he ought to be stern; he commends because he dare not condemn. He sets the goodwill, the cheaply won approval of others before the endorsement of his own conscience and pays for these passing pleasures with his own power of will and self respect.

Setting convenience before conscience makes moral cowards. From motives of profit, or for popularity or ease, we silence the higher voices and follow the lower; we satisfy ourselves with the mediocre when we might have had the best. We adopt the world spirit which scoffs at the ideal. We set gain before godliness, the incidentals of life before its essentials.

Sometimes this cowardice takes the form of the smooth man's steering the safe course, the seeking for a middle road between right and wrong. The baldest hypocrisy of all is that of him who is guided only by expediency, by time serving, seeking to find at every hour of decision a way of

### VOTING ON BOTH SIDES.

Once begin to make these compromises and it will not be long before moral lines of distinction become blurred and at last invisible, a haze spreads over the map of morality, and the mind adopts a curious set of synonyms, where confascation is rendered competition, theft is but shrewdness, and murder becomes necessity. Cease to stir yourself to the clear decision for the right and you have lost one battle; more, you have lost nerve for every battle.

Moral cowardice is simply unwillingness to pay the price of the better things; it is dull content with the unworthy or the evil because of the cost of the worthy and the good. The brave man is willing to pay the price of

wounds and even life for the cause he loves, the victory he seeks. The coward counts too long the cost.

What are the things we fear? Once look our foes in the face and how they shrivel. They are ridicule, social disfavor, loss of profit, of ease, of fleshly indulgences. They are mighty only in our imagination. They but beset us in order that by overcoming them we might be made men. Alas, that they have become our masters. The giants serve the pigmies when man is ruled by his appetites or by the foibles and fashions of his fellows.

Never till men know themselves will they come to their place. Never till we understand that the worth while things of life are not these gaudy prizes, nor the honors and fame, nor the ease and indulgence; the worth while things are in ourselves. The call is for men who, like our fathers in a bleak land, found glory of the riches of character

### IN AN AGE OF POVERTY.

Men need to honor themselves, to think less of what becomes of them than of what they become, to care less of what men think of them and more of what they are; to cease the effort to trim yourself to others and to be just yourself, without arrogance, in meekness seeking manhood.

Life is the school of courage; only brave souls win here. The coward who seeks to achieve by compromise capitulates in the act. Discipline, duty, denial are hard words. They are for those who seek strength. The life that avoids all loss loses itself. The life that follows the ideal in brave, clear standing for truth, in love that serves and fears not pain or loss, finds life indeed.

He only deceives himself who seeks to seem good because he fears man. Religion puts the right before all else; it reveals the eternal glory and splendor, and for the joy set before him a man learns to despise the cross and shame and be brave for God and truth.

HENRY F. COPE.

# THE S. S. LESSON

## INTERNATIONAL LESSON, DEC. 16.

### Lesson XI. Jesus Risen From the Dead. Golden Text: Matt. 28. 6.

#### THE LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

The Holy Sepulchre.—In point of location the narrative of John makes it plain that the tomb of Jesus must be identified with the place of his crucifixion: "Now in the place where he was crucified there was a garden; and in the garden a new tomb wherein was never man yet laid. There then because of the Jews' Preparation (for the tomb was nigh at hand) they laid Jesus" (John 19. 41, 42). But the site of Calvary, as was pointed out in the Word Studies for last Sunday, cannot be positively identified. Under the rounded knoll of limestone rock just beyond the Damascus Gate—the site known as Gordan's Calvary and favored by some recent authorities—there is a cave called Jeremiah's Grotto which was apparently once used as a place of burial. This may have been the tomb in which the body of Jesus

of the body by friends or disciples of Jesus.

5. Fear not ye.—The original clearly places the emphasis on the pronoun "ye." They had not the same cause for fear as the Roman soldiers.

6. Even as he said.—Two distinct prophecies of Jesus that he would rise again from the dead are recorded by Matthew. (Comp. 12. 40; 16. 21.) In Matt. 26. 32 also Jesus refers to the fact of his resurrection.

7. Tell his disciples.—Mark adds "and Peter."

Into Galilee.—"But after I am raised up, I will go before you into Galilee" (Matt. 26. 32).

9. Jesus met them.—Not, however, until after he had revealed himself separately to Mary Magdalene, as Mark explicitly points out. We must also insert the events recorded in Luke 24. 8-12 and John 20. 2-18 just preceding verse 9 of our text. These passages record the hurried visit of Peter and John to the tomb upon hearing the report of the women.

11. The important testimony relating to the bribing of the Roman guards contained in the remaining verses of our lesson narrative are peculiar to Matthew.

13. While we slept.—The penalty for sleeping at his post, inflicted upon a Roman soldier, was death. The incident reveals the desperate straits to which the Jewish authorities were driven in their attempt to conceal facts plain to all who

# SPIES WHO HELP POLICE

## THEY DO A GREAT DEAL, YET ARE NEVER HEARD OF.

### Countless Spies Who Help the Ends of Justice and Who are Unknown Mysteries.

A dozen years ago London was infested by a gang of foreign "terrorists," who, under the guise of anarchists and socialist reformers, were, in reality, nothing but common thieves. They were very elusive gentry, for they hedged themselves round with all the mystery of a secret society. The police could not discover enough about them to justify an arrest.

Then, all at once, sufficient evidence was furnished to the authorities to lead to the prompt arrest of the entire gang. The information came from a meek and mild little tripe-dealer, who looked like a rabbit. He didn't like the pseudo-anarchists, because they had made the neighborhood so dangerous and unsettled that the people didn't want to buy tripe.

"They hadn't any appetite for a nice, tasty supper when they were so afraid of being murdered or robbed," said the little rabbit-like man plaintively. "So I've just wormed out the secrets of the gang, so that I might tell you all about them, and get the villains smashed up. But don't you tell I told you, or all their friends will come round to kill me!"

Equally unknown was the spy whose secret evidence led to the raiding and suppression of an

### INFAMOUS GAMBLING CLUB.

which was conducted by human vultures. Among those arrested was a business man, who had lost so much money to the leading spirits of the club that he was hopelessly in their clutches. They were ruining him body and soul.

After the arrest, however, and after he had paid the heavy fine imposed on him, he was free. True, he had to leave England, and start again in Australia. But a devoted wife accompanied him, and helped by her, and free from his evil associates, he did well.

As long as he lived he never knew that it was his wife who had given information to the police. She had learned his secret from his broken talk while he was dreaming, and had thought it better to let him bear his punishment, rather than leave him to the tender mercies of the vampires who would have dragged him to destruction. But she never dared to tell him what she had done.

Very much the same motive inspired another case. A young clerk was arrested for embezzling the money of his employers, which he had lost in betting. He could not tell who had set the police on his track, but he never found out. But it was his own father.

### HIS OWN FATHER DID IT.

The old gentleman had found out the truth by careful, secret inquiries, and, convinced that appeals and remonstrances would do no good, and that a sharp pull-up and a sharper lesson might work wonders, had informed the police.

He turned out right. The youth came out of prison sobered, and determined to redeem the past. Every chance was given him, and he worked his way up. He was at the head of a big business of his own, with the past redeemed. But his father had never let him guess what he had done, lest it should cause bad blood between them.

At least one murderer was given up to the police by a spy, who stipulated that he should not be called as a witness, and that his name should not appear in the case at all.

The murder was a peculiarly bad and cold-blooded one. But it was committed so cunningly, and with such diabolical cleverness, that the murderer imagined himself perfectly safe from arrest. He was a man holding

A GOOD SOCIAL POSITION.

# LIFE IN A RUSSIAN JAIL

## EACH PRISONER KEEPS A LITTLE BANKING ACCOUNT.

### Class Distinctions Which are Observed—Tea and Cigarettes in Cells.

Wherever you go in Russia you see a huge writing table; it is a ponderous but very orderly engine. There are scores and scores or neatly arranged documents upon it and stored in its capacious drawers—documents everywhere.

Russia is ruled by documents, writes a St. Petersburg correspondent of the London Daily Mail, not by the Czar or by the Ministers, but by the little official 100 roubles (between £10 and £11) a month down in the country.

"The law is a saint, but the little official is the devil," a peasant says. The little official sets the ball rolling perhaps 2,000 miles away. He fills up a form; this goes on and is added to; afterward it goes on, and afterward on. It is a sacred thing; it comes to St. Petersburg, the answer yes or no is attached, and it goes on its weary course back again. Months before it arrives the peasant has forgotten what it was all about.

Long after Port Arthur had fallen there were scores of officials in St. Petersburg engaged in filling up documents about its stores and guns and troops; it is true they were no more, but the documents had to be filled up. In my callow youth I rather thought the income tax people at home were skilful at this game, but they are mere babes in arms in comparison with the Russian official; he loves his work. Arrayed in a uniform, he spends delightful days

### IN COMPILING DOCUMENTS.

On the occasion of my visit to the cellular prison I was presented with voluminous prison documents. It was bad enough, I thought, to be in prison, but to have to go through the torture chamber of furnishing information for these documents must be a little prelude to Hades.

Once having passed through this documentary chamber of horrors, all was well. I was in the prison and everything was very human. The prisoners were working in the weaving room or the great printing room, or at some small trade in their comfortable cells. They were human beings, treated in a human way. Their hair was not cut short; they shaved or not as they liked. They talked freely together; they were not in the least afraid of the governor; they looked healthy and well fed; they were smoking and chatting at their work.

A bell rang, the dinner bell. I begged to be allowed to have a prisoner's dinner. It was a most excellent repast—much better than I could have got in the abominable and extravagantly dear St. Petersburg restaurants. The worst feature of Russian daily life are these horrible, extortionate restaurants. There was a large bowl of very good bouillon, with plenty of meat and vegetables in it; there was a great plate of a small, round, yellow seed prepared in some appetizing way, and there was a huge bunch of black bread. I was hungry, but I could not get through half the allowance. A cigarette afterward, then again around the great prison

### WITH ITS 1,500 PRISONERS.

And now there was a pleasant surprise in store for me, and an explanation also of much that I had wondered at. On going into a cell where two men were engaged at chair making I noticed just inside the door, attached to the wall by a little clip, what looked like a grocer's bill. I took it down and examined it. It was folded in the middle and one half was an exact duplicate of the other half. It was a puzzling little document with a certain homely air

Under the rounded knoll of limestone rock just beyond the Damascus Gate—the site known as Gordan's Calvary and favored by some recent authorities—there is a cave called Jeremiah's Grotto which was apparently once used as a place of burial. This may have been the tomb in which the body of Jesus rested. The traditional site, however, which for fifteen centuries was not questioned, is within the Church of the Holy Sepulchre, near the very heart of the present city, and in all probability also within the outer wall of the ancient city of Jerusalem. In point of kind, the sepulchre of Jesus was beyond question identical with the more common rock-hewn tombs which the Jews cut in the perpendicular sides of the low, soft limestone ranges in which Palestine abounds. Sometimes advantage was taken of the natural caves and caverns of which there are many in the soft strata of limestone. These early Hebrew tombs were marked by their extreme simplicity of construction and the absence of architectural ornament, and in both these respects stood in marked contrast with Egyptian sepulchral monuments. Frequently individuals chose to have their last resting places in their own vineyards like Joseph of Arimathea, who had his own new garden tomb; but more often regular burying places, or cemeteries, were used. A single tomb, like a modern vault, often contained several separate chambers with notches or shelves in or on which the bodies were placed. A large circular stone which could be rolled to and from its place closed the low opening to the tomb. Sometimes in level places graves were sunk in the surface of the rock and covered with a closely fitting slab.

Verse 1. Late on the Sabbath day—In reality, after the Sabbath day, which closed with sunset on Saturday evening, had ended. Luke is careful to mention the fact that "on the Sabbath day they (the women who had come with him out of Galilee) rested according to the commandment."

Toward the first day of the week—Toward morning of Sunday, "at early dawn" (Luke 24, 1). Matthew here uses the word "day" in the sense of the opposite of "night"; but counting the day of twenty-four hours as beginning either, as the Jewish day did, at sunset, or as we now reckon, at midnight, it was "on the first day of the week." Mark, Luke, John and the two Marys, with salome, came to the sepulchre.

Mary Magdalene—Mentioned in Luke 8, 2 as one of several women who ministered unto Jesus. She was called Magdalene, probably because from Magdala, a place in Galilee. Comp. Matt. 15, 39.

The other Mary—Mary the mother of John 8, and salome Mark 16, 1. These three women, having conscientiously waited until the Sabbath should end, bought spices (Mark 16, 1) and spent the night in preparing ointments with which they intended to anoint the body of Jesus. Perhaps they were not aware of the action of Joseph of Arimathea and Nicodemus, who had taken "the body of Jesus, and bound it in linen clothes with the spices, as the custom of the Jews is to bury" (John 19, 40; or perhaps they were anxious to add their mite also to the more costly and elaborate gifts of these wealthier disciples.

2. A great earthquake—Not mentioned by any of the other evangelists. Matthew alone explains how the great stone, the threshold of which had worried the women on their way from the city, was removed from its place at the opening of the tomb.

An angel of the Lord—Luke and John both mention two angels: "Two men stood by them in shining garments" (Luke); "Two angels in white sitting" (John). Mark (16, 5) speaks of "a young man sitting on the right side" of the place where the body of Jesus had lain "arrayed in a white robe." These discrepancies may be accounted for by the agitation of the witnesses of this momentous scene.

4. The watchers—The Roman guard granted by Pilate to prevent the removal

of the body, as was peculiar to Matthew.

13. While we slept—The penalty for sleeping at his post, inflicted upon a Roman soldier, was death. The incident reveals the desperate straits to which the Jewish authorities were driven in their attempt to conceal facts plain to all who cared to know the truth.

14. We will persuade him—They had been successful in persuading Pilate to pronounce the death sentence upon an innocent prisoner whom they hated, and reasoned that it would be no more difficult in an emergency to persuade him to let men apparently guilty go free.

15. This saying . . . continueth until this day—Matthew is writing for Jews familiar with the fact which he calls to their attention.

#### TOO MUCH FOR HIM.

The man's wife had asked him to go upstairs and look in the pocket of her dress for a key she thought was there, and being a man willing to accommodate he had done so. It was a long time before he returned, and when he did there was a peculiar look in his eyes.

"I can't find any key in the dress of your pocket," he said, with a painful effort.

"Why," she retorted sharply, "I left it there."

"I say I can't find any dress in the pocket of your key," he said, doggedly.

His tone seemed to disturb her. "You didn't half look for it," she insisted.

"I tell you I can't find any pocket in the key of your dress," he replied, in a dazed kind of way.

This time she looked at him.

"What's the matter with you?" she asked, nervously.

"I say," he said, speaking with much effort, "that I can't find any dress in the key of your pocket."

She got up and went over to him.

"Oh, William," she groaned, "have you been drinking?"

He looked at her fixedly.

"I tell you I can't find any pocket in the dress of your key," he whispered.

She began to shake him.

"What's the matter? What's the matter?" she asked in alarm.

The shaking seemed to do him good, and he rubbed his eyes as if he were regaining consciousness.

"Wait a minute," he said, very slowly indeed. "Wait a minute. I can't find any dress in—no. I can't find any key in the dress of—no. That's not it—any—any—any pocket. There, that's it." And a flood of light came into his face. "Confound it, I couldn't find any pocket."

Then he sat down and laughed hysterically, and his wife, wondering why in the name of goodness men raised such a row over finding the pocket in a woman's dress, went upstairs and came back with the key in two minutes.

#### FATAL FORTUNE-TELLERS.

In a law case which was tried recently it was mentioned, incidentally, that one of the parties concerned had become seriously ill through worrying over a prophecy that she would meet with an early death. This shows the foolishness, first of all, of inviting prophecies, and, secondly, of believing them if they come uninvited. The extent to which the mind influences the body cannot be too widely known. The writer recollects an incident which occurred at a certain college. A number of boys approached another one, singly, with the remark that he was looking terribly ill, and advised him to go to bed at once. He did not look ill at all but this was the boys' idea of "a lark." By the time the third boy had commented upon the victim's ghastly look, however, the lad really did begin to feel unwell, and this feeling deepened until, when the sixth conspirator arrived with his share of the sympathy, there was no longer any "joke" about it. A doctor had to be hastily fetched and it was all he could do to save the lad's life. So much for the power of suggestion; and hence the wickedness of prophesying any form of misfortune.

The murder was a peculiarly bad and cold-blooded one. But it was committed so cunningly, and with such diabolical cleverness, that the murderer imagined himself perfectly safe from arrest. He was a man holding

#### A GOOD SOCIAL POSITION.

Relying on his supposed immunity, he led a gay life for some time.

He never guessed that there was on his track a literal angel of vengeance in the shape of a man whom he had robbed and ruined years before. This man had sunk to be an outcast, miserable, degraded, hopeless. But his hate and desire for revenge had never died. Tirelessly he tracked out the murderer's guilt, and finally gave up the murderer to the gallows.

But then, his work done, he slunk further into his obscurity, for he could not bear that the world, which had once honored him, should come to know to what depths of misery and degradation he had sunk.

Strange secret spies of the police are lurking about everywhere if they could only be found.—Pearson's Weekly.

#### STRANGE PERSIAN CUSTOM.

May Demand a Nobleman to Take Up Your Grievance.

In Persia there is the strange custom known as "bast." It simply means that any one having a grievance by taking refuge on the premises of a nobleman may demand that the nobleman take up his cause as though the baste were one of his own household. There seems to be no limit to the custom, for the petty criminal often takes refuge, or bast, in a mosque, where he is safe, if his friends are allowed to feed him. If the police want him they must starve him out. There was a man who sat for eight years in one of the legations patiently awaiting a settlement of a small claim that he had against the Persian Government. Ministers came and went, but he stayed on. At last his claim was paid, and he died celebrating his victory! Few legations would have the courage to put a man out, as it would bring down no small amount of opprobrium upon them.

Recently every shop in the great bazaar in Teheran was closed, and between 5,000 and 6,000 men, merchants, artisans and some priests, went into the English legation and informed the acting Minister that they were there to remain until the English Government took up their case with the Persian Government. Fortunately, the grounds are large, but, at best, great damage must be done to their beauty by the five thousand and more men camping on them. A short time ago these people would have gone to the Russian Legation, but to-day it is passed by and forgotten, while the streets surrounding the British Legation are filled with crowds who do not hesitate to say that England can have the country if she wants it. The whole city seems to be on a strike. Only the mails, butcher and baker have not been interfered with. Half a ton of bread daily is required to feed those within the legation compound. All day long the Koran is read and Allah is appealed to for help.

#### A FISH TALE OF THE MEUSE.

An angler in the River Meuse in Belgium, while fishing recently, felt a light bite as he was pulling in his line. Then there was a second pull, and just as the fish was appearing on the water an enormous pike made a spring at it, and went off with his prey and 100 feet of line. After much trouble it was wound in, and the astonished angler found that he had caught first a perch, of about one pound weight and well on the hook, then a pike of four pounds, which had half swallowed the perch, then a pike of thirteen pounds weight, who had seized on the smaller pike in his endeavor to wrest the perch from him.

engaged at chair making I noticed just inside the door, attached to the wall by a little clip, what looked like a grocer's bill. I took it down and examined it. It was folded in the middle and one half was an exact duplicate of the other half. It was a puzzling little document with a certain homely air about it. I read an order for tea and sugar, tobacco, cigarettes and white bread addressed to the governor of the prison, amounting in all to seven shillings.

I asked the deputy governor what this meant. He explained that all prisoners were paid for their labor; the surplus that remained, after deducting the cost of their maintenance, went to them absolutely. Each prisoner had a little banking account, and each day he was credited with his earnings and debited with his maintenance; the balance is his, part to spend and part to remain till when he goes out. If he is married, two-thirds of it is sent weekly to his wife.

"And what might that balance in his favor be a week?" I asked.

"A good workman can clear for himself 15s. a week. These two men are good workmen; they earn about 30s a week between them. One is married, 10s. a week goes to his wife; the other is not, but he has a stoppage for cash, and for a new suit of clothes when he goes out. He came in here in rags. Thus, they have about ten shillings a week to spend here as they like. This order is, as you see, for tea and tobacco."

#### TEA AND CIGARETTES.

Now the perpetual teapot and cigarette were explained. These two prisoners had in their cell a large pot of hot tea, and they were smoking cigarettes as they worked, and they paid for these things themselves. I asked permission to keep this little order form of the two prisoners. Certainly, I might have the left hand side as soon as it was checked off with the right hand side in the office, but the right hand side must be returned to the prisoners as their voucher. I have this order form before me as I write; it is the most wonderful and kindly little prison document I have ever seen, and I could only wish that a certified copy of it might be printed in England.

And so on upon our rounds. In every cell and in every room there was the teapot and the cigarette and the great hunch of white bread. For myself I preferred the good prison black bread with a pinch of salt and a cucumber; it is a most excellent brand. The hours went by quickly. We came to another part of the prison and I remarked that the prisoners were wearing civilian clothes as they worked.

"Here in Russia," the deputy governor explained, "we make a difference in the social class of prisoners. Thus, a prisoner who has been a gentleman is kept by himself; he is not made to mix with prisoners whose habits differ widely from his own. So here are doctors, barristers, notaries and bank clerks who have committed some fraud or crime. We try not to break their self-respect by mixing them with the more ordinary jail-bird."

In yet another part of the prison were the political prisoners. They were allowed to do practically what they liked. They had a special garden for exercise; they might write and receive letters; they had large, comfortable cells.

Here it was that a curious thing occurred which impressed me very much. It had got around the prison that an Englishman was visiting. A political prisoner, who said he was an American citizen and had been in prison four years untied, sent his card and requested to see me. I was at once allowed to see him and to speak to him in English though no official understood a word of what we said.

Our idea of a modest man is one who can keep his opinions of himself to himself.

## About the House

### SOME DAINTY DISHES.

To improve tomato soup always add a squeeze of orange juice just before serving.

**Broiled Salt Fish.**—Soak the fish overnight in skim milk. When required, wipe it dry and put it on a greased grid-iron. When brown on one side, turn carefully so as not to break. Serve with fried potatoes.

**Steamed Chocolate Pudding.**—One-half cupful of sugar, one egg, two teaspoonfuls of butter, one cupful of flour, one teaspoonful of baking powder, half a cupful of milk, a little salt, one and a half squares of chocolate. Steam for two hours. Eat with cream sauce.

**Boiled Salmon.**—Select a fresh, firm fish; wash and prepare it for dressing. Lay it on a strainer, sprinkle salt over it thickly, then cover it plentifully with cold water. Let it warm slowly and only simmer, allowing for one of eight or nine pounds three-quarters of an hour slow boiling.

**Seed Cakes.**—One-half cup of butter, one of sugar, one-half cup of milk, two eggs, one teaspoonful of cream of tartar, one-half teaspoonful of soda, and flour enough to roll them smooth.

Raw cabbage is very excellent as a salad. The cabbage must be fresh and crisp and sliced very finely. Rub a salad bowl with a clove of garlic, put in the cabbage and stir it about well, then pour a nice dressing over and serve.

**Egg Balls.**—Boil some eggs hard, remove the shells. Have ready a mixture of finely chopped dry ham and bread-crumbs. Cut each egg in half lengthwise, brush over with beaten egg; roll in the breadcrumbs, etc., and fry a golden color. Serve hot, with water-cress arranged as a border.

**Dandelion salad** is most wholesome, and should be eaten more freely than it is. Cut some dandelion roots as low down as possible so as to get white stalks. Wash thoroughly, and mix with an equal quantity of watercress and a suspicion of onion. Dress with oil or cream dressing. Vinegar is not necessary.

**Dried green peas** are very useful in the winter when vegetables are scarce, and as a rule they are not so widely known as they deserve. Soak the peas for twenty-four hours in cold water, with a pinch of soda. Plunge into fast boiling water and cook till tender. Drain, shake in a saucepan with a little butter, and serve.

**Stewed Macaroni.**—Break the macaroni into short lengths, and throw into boiling salted water. Cook for about half an hour and drain in a colander. Put into a stewpan with one pint of milk, one ounce of butter, pepper and salt. Stir over a slow fire till it is all mixed, add the macaroni, simmer for half an hour and serve with grated cheese scattered over.

**Prune Pudding.**—Chop finely two ounces of suet, add to it six ounces of flour, two ounces of mixed-peel, half a pound of scalded prunes, stoned and chopped. Mix with a gill of milk in which is dissolved half a teaspoonful of carbonate of soda. Pour into a greased mould, which should be only two-thirds full. Tie over with greased paper and steam fast for three hours.

**Savory Spanish Onions.**—Put six onions into cold water and remove the skins. Put these in a saucepan, with boiling water to cover, and add a teaspoonful of salt. Cook till tender. Drain thoroughly and put into a pie-dish, cover with thick white sauce, flavored with grated cheese. Scatter bread-crumbs over and place in a steady oven till browned. Serve very hot.

**Washington Pie.**—For the crust use two cups of sugar, one-half cup butter, three cups sifted flour, four eggs, one

when damp, should not touch eatables. For the ironing-stand instead of using the common implement made of iron, which admits the air through the bottom, and consequently cools the iron quickly, try this suggestion:—Take a clean, white brick, set it on the stove for half-an-hour before using as a stand for the iron. This keeps the heat a long time, and retards radiation.

For small gardens soapuds are valuable. Applied to the roots of fruit trees, roses, etc., soapuds are a valuable manure. They impart a vigor and rapidity of growth which is perfectly surprising. No one who is lucky enough to have a garden near the house should waste this valuable form of manure. It is an excellent plan to have a large tub, and put the soapuds and dirty water into it till required for the garden.

**To Clean Furs.**—Put two quarts of fresh bran in a pan over the fire, and stir it frequently to keep it from burning. Lay the fur upon the table, and when the bran is quite hot, apply two or three handfuls of it to the fur, and rub it in well with the hand. Repeat this process several times, always taking fresh hot bran from the pan. When the fur is clean, shake it, and brush it with a clean brush to remove any flour and dust which may remain.

Some hints on cleaning lamp chimneys will no doubt be useful just now, when we are apt to carry our lamps about in the dark house, and the draughts cause the chimney to be smoked. First, when a chimney is new, it should always be washed in a soapy lather, and a small mop passed up the chimney again and again till all specks and spots are removed. If a chimney is not perfectly cleaned before it is used, there is always a risk of the dirty marks burning in, and being very difficult to erase. A smoky lamp chimney may, of course, be always washed clean; but, better than this, take a small sponge and tie it on the top of a stick, slightly moisten it with paraffin, and brush the glass with it, afterwards rub till dry with a clean cloth, and the chimney will be perfectly bright. Another plan is to rub the smoked chimney with methylated spirit and whiting till the glass is clear.

## LONDON'S LORD MAYOR

### WHAT HE HAS DONE FOR THE ARMY, THE CITY AND THE POOR.

Sir William P. Treloar Has Been Known for Years as the Children's Alderman.

A couple of weeks ago one of the leading items of English news was the visit of the retiring Lord Mayor to Paris. This was practically the valedictory function of his year, and it was a most successful one. Now the papers are full of the descriptions of the functions attending the inauguration of the Lord Mayor for the coming year. Sir William P. Treloar, head of the great carpet house of Treloar & Sons. Unfortunately the day of the Lord Mayor's show was dismal and rainy, so that the pageant was somewhat spoiled. However, this untoward event will not detract from the popularity of the incumbent of the office.

**THE CHILDREN'S ALDERMAN.** This year's Lord Mayor is one of the most popular aldermen who have occupied the chair during the present century, and his popularity has been won not alone on account of his services to the city and corporation which have conferred their highest honor upon him, but because of his charity and his great public spirit in a far wider field. For years past he has been known as the Children's Alderman, because of the efforts which he and Lady Treloar have made on behalf of the children of the poor, especially the crippled children; but it must always be remembered that beyond this charitable kindness his

## BISHOP CALLED A LIAR

### A LIVELY SCENE AT ANTI-GAMBLING MEETING.

Curate Squares His Shoulders for an Exhibition of Muscular Christianity.

There was an extraordinary scene at an anti-gambling demonstration held at the Midland Institute, Birmingham, England, on a recent night, after a meeting of the diocesan conference.

The Bishop of Birmingham was in the chair, and when he rose to speak he was greeted with cries of "liar!"

An athletic curate sprang from his seat and cried in tones of menace: "My Lord say the word, and they shall be out in a moment." Bishop Gore restrained his impetuosity with a motion of his hand, and proceeded to affirm that betting was the exact opposite of the spirit of industry.

A man in the audience spluttered out "Liar!" to the Bishop, and cried, "You've never had a bet in your life. I like your cheek and impudence, standing there and talking like that." Later on, when the Bishop called for order, he was assailed with disgusting expletives.

### A DRAMATIC INCIDENT.

Eventually so riotous did one or two of the interruptors become that the police were called in, and two men were ejected. A lady read a paper on the evils of gambling among women and children, and she was greeted with scornful laughter.

This paper was followed by a dramatic incident.

Father Adderley, remarking that it had been claimed for the betting men that they took no money from women and children, told a story of how a little child took £6, to a house in mistake for a bookmaker's house—the house of a man who had most to say at that meeting.

"Nonsense!" cried a voice.

"What do you say?" retorted Father Adderley. "I am going near the place to-night. You had better come with me."

"Can you prove what you've said, sir?" courteously asked a member of the audience.

"I'll take you, too," said Father Adderley, amid cheers, and when the meeting broke up eventually Father Adderley and the two men went off on their quest.

Mr. L. C. Docker, an old Warwickshire cricketer and player of games, deplored the effects of gambling on popular outdoor pastimes. He declared that though county and club cricket had thus far escaped there were signs of degeneration.

### PAPUAN WIRELESS TELEGRAPHY.

Messages Sent Long Distances Quickly by Savages in New Guinea.

Barbarous tribes in various parts of the world employ signal fires at night and other methods for the rapid conveyance of information. In some respects the system employed among the mountains in the interior of British New Guinea is the most effective yet devised.

A. E. Pratt, the naturalist, who recently spent two years among the natives of this great island, gives in his new book rather more detailed information on this subject than earlier writers have done. More than once he found the extraordinary system of intercommunication among the Papuans of the greatest assistance to him in his work. He calls it the wireless telegraphy of the wilds.

One day he needed to send a message to a native named Gaberio, who was collecting butterflies and birds for the expedition. His whereabouts were not exactly known, but he was to the north-

## ON THE FARM

### IMPORTANCE OF PURE AIR.

Regarding the best system of ventilation for stables "Hoard's Dairyman" says:

Over and over again does the dairyman recur to the question of proper ventilation of stables. Why? Because it is to-day the most important of all matters connected with the wintering of cattle. Men do not realize its importance. Not one farmer in a hundred ever thought hard and well an hour at a time on the question.

Look at it from this standpoint: We can live without food thirty days, or more. We can live without water seven days, but we cannot live five minutes without air. Moreover, we can as readily poison ourselves with foul air as with foul food or water. Get these three things into our heads in their true proportion and we will do something at once to supply our stables with pure air. Again, we say the King system is the only one we have ever seen that will properly ventilate a stable. It costs but little, try it.

The King system of ventilation provides for taking in fresh, pure air from the outside, and removing the cold, foul air. For its successful working it requires, first a stable or room comparatively air proof. There must be no direct openings to the outside or through the ceiling to the space above, such as hay-chutes or other openings for putting down hay and bedding, unless provided with doors or covers so that they may be closed.

The fresh air is admitted through several small air ducts, well distributed on all sides of the building, opening to the interior at or near the ceiling and on the outside three or more feet lower down. If the openings are directly through the wall at the ceiling the warm air will escape, and if lower down the fresh air will come in and be drawn out by the large ventilating shaft, and the air above will not be changed.

This ventilating shaft is in effect a large chimney, and should be constructed on precisely the same principles that apply in building a successful chimney—open at the base, air proof, free from obstruction or sharp bends, and extending above the highest part of the building. It may be located where it will be least in the way. It should have a capacity or cross-section of 30 square inches for each 1,000 or live weight of the animals; or say, two foot square (four square feet) for twenty cows of average size.

The aggregate capacity of the intake flues should be about the same. Apply these principles to the specific cases and one may be reasonably sure of good ventilation.

### HOW TO GET EGGS IN WINTER.

Duplicate summer conditions as far as possible.

Green food is necessary, and a lot of it. Clover and alfalfa head the list, with beets and cabbage a close second.

Hen's that do not get exercise will not fill the egg basket in winter. Scatter chopped clover and dry grain in the litter, so they will have to scratch for it, and hang cabbage just out of standing reach, so they will have to jump for it.

Give them warm water—water with the chill taken off it—at least twice a day, and supply enough animal food to take the place of the worms and insects they catch in the fields in the summer. Cut green bone is also a requisite. They take it greedily.

Oyster shells and grit (hen's teeth) must of course be provided, and a box of pulverized charcoal will help to keep them in good health. Kerosene, carefully used, vermin powder and dust boxes will keep them free of all insect life.

Have roosting closets tight for comfortable sleeping. Even in zero weather

cover with thick white sauce, flavored with grated cheese. Scatter bread-crumbs over and place in a steady oven till browned. Serve very hot.

**Washington Pie.**—For the crust use two cups of sugar, one-half cup butter, three cups sifted flour, four eggs, one-half teaspoonful of cream tartar. For the filling, one tablespoonful of corn-starch, boiled in about one-half pint of milk; beat the yolk of one egg very light and stir into the milk, flavor with vanilla and when cold add the other half of the milk and the white of the egg beaten to a stiff froth and stirred in quickly; spread this between the cakes and ice it with the white of one egg and eight tablespoonfuls of fine sifted sugar; flavor with lemon.

**Velvet Pudding.**—Five eggs, beaten separately, one cup of sugar, four tablespoonfuls of corn starch, dissolved in a little cold milk, and added to the yolks and sugar; boil three pints of milk and add the other ingredients while boiling; remove from the fire when it becomes quite thick; flavor with vanilla and pour into a baking dish; beat whites of the eggs to a stiff froth; add half a cup of sugar, turn over the pudding, and place in the oven and let brown slightly. To be eaten with this sauce.—Yolks of two eggs, one cup of sugar, tablespoonful of butter, beat well, add one cup of boiling milk, set on the stove until it comes to a boiling heat; flavor with vanilla.

**Florentine Pudding.**—Put a quart of milk into your pan, let it come to a boil; mix smoothly three tablespoonfuls of cornstarch and a little cold milk; add the yolks of three eggs, beaten; half a teaspoonful of sugar, flavor with vanilla, lemon, or anything your fancy suggests; stir into scalding milk; continue stirring till the consistency of starch (ready for use), then put into the pan or dish you wish to serve it in; beat the whites of the eggs with a teaspoon of pulverized sugar, spread over the top, place in the oven a few minutes till the frosting is a pretty brown. Can be eaten with cream or is good enough without. For a change you can bake in cups.

#### HINTS FOR THE HOME.

A dirty coffee-pot will spoil the strongest infusion, so wash and dry the coffee-pot each day after use.

Save chicken bones, for they form a valuable addition to the stockpot when soup is in preparation.

Salt is an exterminator for moths, especially in carpets. Sweep the carpet, scatter dried salt over, and roll up tightly. Store in a very dry place.

To polish kitchen knives, mix a little bicarbonate of soda with the brick-dust, and scour them thoroughly.

Fill pincushions with well-dried coffee grounds, for mice or moths will never touch them, and the needles and pins will not rust.

Before using copper vessels for cooking rub the inside with a piece of cut lemon, then rinse in hot water, and dry with a cloth. This will destroy any verdigris which may have been on the copper.

Tea stains are very difficult to get out if neglected; they should be soaked in either milk or warm water as soon as possible, and then soaped and rubbed out. The next washing will efface them wholly.

Sufferers from weak eyes should avoid wearing veils of a coarse mesh or with a pattern of any sort, for the eyes tire in endeavoring to adjust themselves to their foreign covering.

In cases of illness where the patients suffer from burning thirst, which even ice does not quench, it is well to try a teaspoonful of glycerine, for in many instances it gives prompt and long relief.

To carve a ham so as to serve fat and lean evenly, cut a slice at the centre of the thickest part, and cut from this thin circular slices. In this way the moisture and flavor of the ham is preserved to the last.

Never leave meat wrapped in paper longer than necessary. Paper is merely a compound of rags, lime, fibre and other substances, with acids and various chemicals intermixed, and consequently,

years past he has been known as the Children's Alderman, because of the efforts which he and Lady Treloar have made on behalf of the children of the poor, especially the crippled children; but it must always be remembered that beyond this charitable kindness his knighthood was won when, in the year 1900, he threw himself with his accustomed ardor and energy into the patriotic task of aiding the Lord Mayor in raising and equipping the City of London Volunteers—the C. I. V.'s. In that year he was sheriff; and he had been elected alderman of his ward eight years before.

#### WIDENED LUDGATE HILL.

It is interesting to know that this veritable merchant prince was born at the foot of Ludgate Hill, in the heart of the city, and near where his warehouse now stands, as in those days it was the custom for merchants to live above their shops. Sir William took over the business left by his father and built it up to large proportions. His motto for business success, phrased in the language of the mill operatives, is, "It's dogged as does it." Though he has been a very busy man all his life, he has found time to enjoy literature and art and to write a book, "Ludgate Hill," giving a history of that historic thoroughfare. His interest in the street is more than historic because he was the person chiefly responsible for widening that street from 47 feet to 60 feet throughout its length against very strong opposition.

#### NO SINECURE.

By no means a sinecure is this position. The Lord Mayor receives a salary of \$50,000 a year, and is given, rent free, the palatial Mansion House for a residence, but his enormous expenses are not nearly met by his salary, and he is obliged to draw heavily upon his private resources. A poor man cannot be Lord Mayor and uphold the traditions and requirements.

There are numerous banquets and other entertainments to be given, and innumerable calls upon the official purse. His public duties demand every hour of the Lord Mayor's time, and a retiring official is usually in need of a long rest.

During the day he must preside over meetings for public or benevolent objects, and take part in many important ceremonies. He must open schools and hospitals, distribute prizes, inaugurate measures for the relief of distress.

#### ATTENDS PRIVY COUNCIL.

At night he is constantly called upon to entertain distinguished personages at the Mansion House, preside at charity entertainments or attend social or public functions of various kinds. Several times during his term he must give a splendid ball at his official residence.

Upon the death of a Sovereign the Lord Mayor must attend the Privy Council; at a coronation he is chief butler, and for his services is presented with a gold cup and cover.

A justice ex-officio, the Lord Mayor holds court; he presides over the aldermen, and has a number of other duties to occupy his time.

'Tis no easy year to which Sir William Treloar is looking, but it is believed he will acquit himself with dignity and credit.

#### MONKEY KNOWS COLOR.

In order to prove its power of discriminating between colors the scientist, Dahl, made some interesting tests upon a monkey. He colored some sweets with a certain colored dye and some bitter substances with that of another color. After a few attempts the monkey learned to leave without even tasting those articles of food colored with the dye which indicated bitter-tasting substances and seized at once upon those which indicated sweets. Varying the experiments sufficiently he found that the monkey distinguished all the different colors readily, save only dark blue. Many savage tribes cannot distinguish dark blue from black, and even children distinguish this color later than all others.

calls it the wireless telegraphy of the wilds.

One day he needed to send a message to a native named Gaberio, who was collecting butterflies and birds for the expedition. His whereabouts were not exactly known, but he was to the north-east somewhere, about twenty miles away.

From the naturalist's camp could be seen hill after hill rising to the north, each of them crowned by native villages. Men with specially good voices are assigned to the service of passing these wireless messages from hilltop to hilltop until they reach their destination.

Mr. Pratt set the service in motion to find Gaberio and deliver the message to him. He says that after he had given the order at his station he heard in a few minutes the natives calling from hill to hill. In the pure air of those altitudes their voices carried magnificently for long distances and village answered village with perfect ease from ridge to ridge.

A little later the natives who were attending to this telegraphy at Pratt's camp came to him with the tidings that Gaberio had been found in a village only about ten miles away. The message was delivered to him, and he returned word that he was coming back by the same route he had followed on the outward journey and would reach camp next day.

A few months later Pratt, who was making preparations to remove to other collecting grounds, found that he could not secure carriers from the natives around him to transfer his baggage to the other field. One day some big, strong men of the Ivala tribe, with their chief, called on him and he arranged with them that, when they were summoned by wireless telegraphy, they would start from their homes, twenty miles away among the mountains, and carry his baggage to the new camp. He felt sure that they would respond to his call because he promised them tobacco in payment, and they are very fond of the weed.

Several weeks elapsed before he was ready to move. Then he set the telegraph in motion; one village called up another, and so, stage by stage, the message was communicated to the distant home of the picturesque mountaineers.

It seems astonishing, but Pratt says that this message was delivered to the chief to whom it was sent in less than ten minutes after it left his tent. The journey on foot between these two places among the steep mountains requires five days, though the distance is only twenty miles.

In the afternoon the answer came that the natives would be on their way the next morning. So in due time they appeared on the scene eager to earn their tobacco.

#### FIRE LOW AND GET RESULTS.

**Remarkable Instructions Issued to San Francisco Citizens by Police.**

So serious has the condition of San Francisco become in the matter of armed robberies and murderous assaults, that the police are issuing revolvers to numbers of the citizens. Arrest for carrying concealed weapons is no longer valid except in the case of suspected criminals.

The following, says the San Francisco Chronicle, are the instructions issued by the police to those citizens who carry arms:

Keep your gun well concealed until you leave your car and direct yourself toward your home.

As soon as you start upon your walk see that your revolver is primed and ready, and carry it in your hand.

Walk in the centre of the street.

If anyone breaks from the sidewalk toward you retreat to the other side of the street.

If, in spite of the fact that you have plainly shown you have endeavored to avoid the person or persons approaching you, he or they continue to advance toward you, take aim and fire.

Fire low, and fire to get results.

most of course be provided, and a box of pulverized charcoal will help to keep them in good health. Kerosene, carefully used, vermin powder and dust boxes will keep them free of all insect life.

Have roosting closets tight for comfortable sleeping. Even in zero weather fowl will keep warm scratching for food scattered in the litter during the day.

Pullets for winter layers should be hatched about the latter part of April. When hatched, keep them growing. Give them plenty of room to run about during the summer and early autumn, and they will be laying during cold weather.

Watch their work as closely as possible, weed out the drones and fill their places with fresh stock each year.

Do not overfeed. Gluttony produces beefy, non-laying hens.

All known cereals are perfect food for fowl. Corn, when properly used, is supposed to be one of the best. Mixed grain foods should be cooked in order to get best results.

Corn meal, wheat middlings, fine ground oats, fine animal meal, all mixed in skimmed milk, has been found to be a quick fattening food for chickens intended for the market.

Beginners in the business should start moderately, with good stock, study their birds and learn thoroughly all about breeding, feeding, housing and the characteristics of their fowls before laying out too much money in stock.

Failures result from lack of experience. Much depends upon the man or the woman behind the hen.

#### AGE LIMITS OF DAIRY COWS.

A bulletin from the Wisconsin station states that a cow is at her best during her fifth and sixth years, up to which time the production of milk and butter fat by cows in normal condition increases each year. The length of time the cow will maintain her maximum production depends on her constitution, strength and the care with which she is fed and managed. A good dairy cow should not show any marked falling off until after ten years of age. Many excellent records have been made by cows older than this. The quantity of the milk produced by heifers is somewhat better than that of older cows, for a decrease has been noted by one to two tenths of one per cent. in the average fat content for each year until the cows have reached the full age. This is caused by the increase in the weight of the cows with advancing age. At any rate, there seems to be a parallelism between the two sets of figures for the same cows. Young animals use a portion of their food for the formation of body tissue, and it is to be expected, therefore, that heifers will require a larger portion of nutrients for the production of milk or butter fat than do other cows. After a certain age has been reached, on the average seven years of age, the food required for the production of a unit of milk or butter fat again increases, both as regards dry matter and the digestible components of the food. A good milk cow of exceptional strength, kept under favorable conditions, whose digestive system has not been impaired by overfeeding or crowding for high results, should continue to be a profitable producer till her twelfth year, although the economy of her production is apt to be somewhat reduced before this age is reached.

#### PROFESSIONAL "ASKER."

Sir R. Harrington, at the Discarded Prisoner's Aid Society conference at Cardiff, Wales, told a story of a friend whose servant left to get married. He lost sight of her for a long time, but at last she called at his house, very well dressed and looking very prosperous. He asked her what her husband's occupation was. She was reticent on the subject, but at last after a deal of pressing, said he was an "asker," which meant a wandering beggar. She added that her husband could go down about 120 streets in the course of a day, and that it was a very bad street that did not produce a halfpenny, so that he earned about 5 shillings a day.

## JAPANESE ARE LEARNING

### 10,000 GIRLS IN CHEAP TOKIO BOARDING HOUSES.

Have Wild Ideas Which Lead to Scandals — All Classes Eager for an Education.

There are 10,000 girls in Tokio who have come from the provinces to complete their education, writes Mary Crawford Fraser in *The World's Work*. These girls are living in cheap boarding houses, where no one takes any interest in them, and the results can only be called deplorable.

Suddenly emancipated from home supervision, their heads filled with wild dreams of independence and of equality with men, their leisure hours are occupied with a low class of romantic literature, what wonder that scandal follows scandal and that the reputation of the Japanese girl for modesty and purity is being destroyed? The girls are really as yet quite unfitted to take care of themselves and are thrown into situations where Western mothers would not allow their well taught, self-reliant daughters to remain for a single day.

The Japanese school system was founded on the American model by Dr. David Murray. He was adviser to the Minister of Education from 1875 to 1897. From the age of 6 to 14 every child is compelled to attend school. The percentage of attendance is certainly over 95 at present. This is in the primary schools. There is so great a rush to the secondary schools that thousands of candidates are

#### TURNED BACK EVERY YEAR.

With a certain number of shining exceptions the teachers are inferior persons, for the very good reason that the wretched salaries paid offer no attraction to men and women of ability.

The Japanese of the lower classes are flocking to the schools. They want to rise socially, to have more ease and comfort. Education seems to promise it to them, and finally they persuade themselves that they are consumed with a passion for learning.

They give their troubled elders no peace until they gain their point and go to one of the great towns to attend a secondary school of some kind. In several cases young girls, unable to persuade their parents to comply with their desires, have fled secretly from their homes, trusting to the kindness of strangers to support them in the further stages of their rebellion.

Not long ago there were 900 applications for entrance to a school which contained only seventy vacancies. Eight hundred and thirty thoroughly qualified candidates had to be sent away.

Overcome by disappointment, enraged at the apparent injustice of their lot, the boy students in many cases join Socialist societies, take to bad ways and become a serious menace to good order. Unfortunately this last cannot be said of rejected candidates only, but applies to a certain section of students proper, who are so numerous that they have come to be classed as

#### "THE BAD STUDENTS."

The Japanese, as we know, have a very tragic strain in them, and a disappointment, a setback in their career, such as the failure to pass an examination at the right time, is apt to induce in the boys a mood of Byronic despair which would be laughable, if one were ever hard hearted enough to laugh at young people's troubles, and unimportant did not the terrible thoroughness of the Japanese character at once translate it into defiant and disastrous action.

There is one great evil influence abroad here which intensifies the trouble. The towns are flooded with cheap romances of the most sensational and debasing kind. The bookshops always have groups of students standing before the counter and turning over the

pages by Japanese teachers resigned to starvation wages. There is barely a living to be made for a foreigner by teaching in Japan.

But for such as have some private means and who are inspired with the real desire to do lasting good, the field is wide, the opportunities numberless. Only let no one rush into educational work without some study of the institutions of the country.

#### SHAVING ON TRAINS.

The Operation Not Nearly so Dangerous as Most People Imagine.

"There was a hurrah when some of the railroads started barber shops on their fast trains," said a traveling man. "The newspapers said that at last travelers could have the luxury of a shave whenever necessary and that no longer would we see unkempt men leaving the trains at the end of a long run."

"Now, the barber shops on the fast trains are undoubtedly a blessing to men who are not able to shave themselves, but for my part I consider them far more dangerous than the simple operation of shaving yourself, even when going at the rate of sixty miles an hour."

"I always shave myself, and I do not use a safety razor, yet I would sooner scrape my chin with an unprotected blade while the train is going sixty or seventy miles an hour than let a barber on the same train lean over me with a sharp razor and perform the operation."

"The reason for this is that when one holds the razor in one's own hand the razor moves with you if there should be a sudden jar or jolt. If you fall toward the razor the razor falls away from you, as your arm is naturally outstretched to prevent you from striking a wall."

"But suppose the barber is leaning over you as you sit in a chair and a sudden lurching of the train throws him against the chair. What chance have you in the chair to get away from the sharp blade coming in your direction?"

"I have shaved myself dozens of times on fast trains and slow trains and I have never cut myself once. Yet a number of my acquaintances who have patronized the train barber shops have been compelled to wear court plaster during the remainder of the trip."

"Up to a year ago I never shaved myself on a train, and I never saw any one else doing it. Then, perhaps, because of the advent of the safety razors, it became a comparatively familiar sight to see a man shaving himself in the smoking room of the Pullman."

"I have had traveling men, seeing me shave for the first time, express their surprise that I did not cut myself, owing to the lurching of the train, and when I have explained to them how easily one can shave on a train they have become instant converts to the practice. Like all simple things, one does not realize how simple it is until one has tried it."

"Another thing—it is infinitely smoother shaving when the train is going fast than when making only twenty-five or thirty miles an hour. The curves and the jolts seem more severe on a slow train. The steady motion of a swiftly moving train is more conducive to security and comfort than any slow train."

#### DAUGHTER KILLED FATHER.

Terrible Crime Perpetrated by a French Woman.

A crime has been committed near Rambouillet, France, which in its tragic horror and simplicity of evil motives needs the pen of a Zola to describe.

An old man of 76, named Bellanger, was murdered on Tuesday by his own daughter because she was tired of keeping him.

Bellanger was a wheelwright. His mistress was the youngest and was the favorite of his seven children, all of whom are earning their own living in

## CANADA'S RACE PROBLEM

### FULL-BLOODED INDIAN WITH A DUTCH WIFE.

"American Horse" Has Made a Dutch Widow Queen of His Household.

In the desolate semi-wilderness of the Indian reservation at Caughnawaga Canada is watching the development of a new race problem.

A full-blooded Iroquois chief, American Horse, is living there with his wife, a Dutch widow, and the twain are happy.

American Horse was one of the main attractions in the Indian village at Earl's Court last year, and when the exhibition closed he traveled on the Continent. He met the widow who is now his wife while taking his part in a show at The Hague. They were married by special license at the Fulham Registry Office two weeks after the company disbanded.

#### SHE ADORES HIM.

Two letters from the chief's Dutch wife have been received by a friend in London, in both of which she makes it clear that the glamor of the honeymoon has not yet faded. The following is translated from her letter:—

"Of course, we are very poor. There is seldom any money, and there is little to do within the house, but I am a good housekeeper, else I should be a shame to my native land, and I enjoy keeping our house in good order. And as for my husband—I adore him! He is goodness itself, and we three are very happy."

The third member of this happy family is the Dutch woman's fifteen-year-old son. American Horse has a son of twenty-two, Big Thunder, who was also a member of the Indian show in Europe. He has set up a home of his own. Mrs. American Horse writes:—

"Big Thunder has followed his father's good example, and married. His wife is a sister of Deepsky."

Deepsky was also a member of the show company.

#### SIGNS DID IT.

Mrs. American Horse's correspondent ventured to ask how she and her husband managed the linguistic difficulty, for at the time of their marriage she spoke neither English nor Iroquois, and the chief spoke neither French nor Dutch. Their courtship was carried on through an interpreter. The chief's wife answers this inquiry as follows:—

"In the beginning we used few words and many signs. Then my husband began to learn French. Although he cannot read or write, he learns very fast. And as for me, I shall do my share by adopting his religion. I am to be received into the Roman Catholic church next month."

#### ADVENTURE OF NECKLACE.

Girl Bought for \$50 Necklace Left by Duchess Worth King's Ransom.

A Duchess' pearl necklace, worth \$125,000, has had a curious adventure in London. The pearls were deposited at a jeweller's by the Duchess just before her Grace left London. Being in a hurry she did not wait for a receipt.

Presently a young woman came to the shop to buy imitation pearls; she finally selected a necklace for which she paid \$50.

That evening the girl wore the necklace at a dinner party, where she met a financier, who commented on the magnificent pearls she wore. The girl confessed that they were imitation, but her friend asked that he might examine them. In handing them back, he said with a smile, "Your imitation pearls are worth \$125,000."

Realizing that some serious mistake

## NO GOOD AT WORRYING

### MR. BILLTOPS VENTURES ON A FEW REMARKS.

Never Borrows Trouble, and Never Worries Over Anything That Can't be Helped.

"You're no good at worryin,' Mrs. Billtops says to me, and," Mr. Billtops admitted, "that is true. I never was much of a hand to worry."

"Just now we've had about half the house torn up while the men were kalsomining some of the ceilings, and that sort of a job does make an awful mess. If I had my way about it I never would have a thing done to a house while I lived in it."

"I'd let the ceilings show patches from water leaked through from overhead till they looked like the first efforts in fresco work of a 'prentice artist who used diluted mud for paint, but I never would have them touched. If the ceilings didn't fall down I'd let 'em stay just that way as long as I lived in the house, for I don't like to be disturbed."

"But those ceilings certainly were bad, and Mrs. Billtops said they ought to be done, and of course I agreed, and so for some days now we've been all torn up, with kalsomine scattered everywhere and tracked all over the house. It was this state of affairs that prompted Mrs. Billtops' remark about me."

"Just think," she says as she surveyed the furniture piled up in other rooms after the men had gone for the day, "just think! We're going through all this now and we're going to move a year from now, and then we'll have to go through it all again."

"Yes," says I, "and just as likely as not two or three years from that we'll move again, and then there'll be more trouble." It's then that Mrs. Billtops says to me:

"Ezra, you're no good at worryin'." And that's a fact. I never borrowed trouble, the one thing that you can always borrow, however tight the money market. I never worry over anything that can't be helped.

"Of course, there's a danger here; we can get this anti-worry habit in too pronounced a form, we can persuade ourselves that everything belongs in the can't be helped category and so degenerate into listless don't care folks. If we amount to anything and are entitled to get along without worry we've got to keep our end up, but, as I said, if I don't do anything mean and am not neglectful I don't permit myself to worry. I take a cheerful view."

"But I'd hate to have you think because I say that of myself that Mrs. Billtops is a worrier, because she isn't. If I'm not taking up too much of your time I would say right here that I have never yet met anybody that didn't worry some, and, as a matter of fact, I suppose a little worrying is a healthful irritant for us, but there's different ways of worrying."

"Some folks carry their worries about with them all the time and worry and distress everybody about them; and then there are some people that keep their worries to themselves, if they have any, and put on a good front and go about with smiling faces; these last thereby gaining strength to conquer their troubles and by the same effort conferring a blessing on all the rest of mankind."

"It is to this last named class that Mrs. Billtops belongs, a woman of indomitable courage, and if she has anything to worry over she never brings it out in public. At home or a broad she sweeps around undaunted, ever smiling, cheerful, helpful and sympathetic, ever bearing the troubles and worries of others who lay them upon her as though she had none of her own."

"But the fact is that we all have our troubles and—if I am not detaining you too long—it is a relief to us to tell them to somebody; we all like to have someone to talk to. And what is

It into defiant and disastrous action. There is one great evil influence abroad here which intensifies the trouble. The towns are flooded with cheap romances of the most sensational and debasing kind. The bookshops always have groups of students standing before the counter and turning over the masses of magazines and cheap novels, which are unhealthily often adorned with the most unedifying illustrations.

The censorship seems too lenient, although the other day it proved its good will by sending nearly forty persons to prison in a batch for the offence of offering improper pictures for sale.

This year has seen students arrested for robbery and assault. No wonder that the old people shake their heads and say that the country is going to the dogs.

The police have to keep a very sharp eye on these gangs of "Bad Students," and in return for this the black sheep snatch at every opportunity of annoying and

#### DEFYING THE POLICE.

They settled many old sores when they formed the largest and worst element of the mob which rioted joyously among burning police stations last September.

There had been for some time previous an epidemic of the most atrocious form of blackmailing, invented and carried out by bands of "Bad Students," and feeling ran very high on the subject, for the victims were young girls of good social standing and irreproachable character. These girls may be seen every morning flocking in great bands to the schools (education at home is practically unknown here), talking and laughing together. Their pretty, innocent faces a pleasure to all who meet them.

Some of the "Bad Students" watched the girls attending high class schools, ascertained all particulars about those who belonged to wealthy families, and then wrote them passionate love letters, entreating an answer. In a very few instances girls have been imprudent enough to reply, saying indeed, that they wished to hear no more such addresses, but the fact remained that a bit of their writing was in some young man's possession.

Armed with this he would go to the poor child's parents and demand a large sum of money down. Threatening, were it refused, to make public a damning story of intrigue and degradation. In some cases the student did not even take the trouble to get up his case. He would go to the girl's father and make the same atrocious threat when he knew no more of her than her name. Terrified at the prospect of a scandal the unhappy parents generally paid the sum demanded—thereby putting their daughters' reputation in the power of

#### A CRUEL SCOUNDREL FOREVER.

But finally the evil reached such proportions that more courageous measures had to be adopted; the blackmailers were denounced to the police, who dealt sharply with such as they could lay their hands upon. Hence, last autumn when the police interfered with what were at first intended as legitimate demonstrations of discontent with the peace terms, great numbers of "Bad Students" seized the opportunity of attacking the two zealous guardians of public safety, and it was proved that many of the excesses of the second and third days of the riots were their work.

There is splendid work in the girls' schools for Western women to do; there is room for many more than those now employed in such work. Almost every educated foreign woman in Japan (except such as come here with their husbands to occupy merely official positions) is asked to help in teaching. I have been besieged with applications from schools and private pupils during this last year.

The Japanese are not, as has been averred, anxious to get rid of foreign instructors; the cramped condition of finances has made it impossible in many instances for the institutions to pay the high salaries which foreigners expect, and these have consequently been re-

duced. A man, who commented on the magnificent pearls she wore. The girl confessed that they were imitation, but her friend asked that he might examine them. In handing them back, he said with a smile, "Your imitation pearls are worth \$125,000."

Realizing that some serious mistake had been made, the purchaser of the "imitation" pearls hurried next day to the jeweller's.

The staff there was relieved to see her, and was prepared to hand her over to the police. But she disarmed the firm by the anxious and innocent inquiry, "I have come to ask about my imitation pearls. They tell me they are real; but that's nonsense, isn't it?"

The shopman's extraordinary mistake in selling \$125,000 worth of pearls for \$50 was then explained.

#### NEW PAIN DEADENER.

Patients Remain Quite Conscious While Operated Upon.

Within recent months a new drug, called stovaine, has come into use in England and abroad, and is likely to be more used in the future. Stovaine does not produce unconsciousness, though it produces insensibility to pain. A patient under its influence, who is not of a nervous disposition, can watch a surgeon removing his appendix. He can, and sometimes does, chat with the surgeon.

Stovaine is used in London—at the University College Hospital, for instance. But it is said to be in greater use in Paris and Germany.

It is injected into the gumbar region of the spinal canal, and acts on the roots of the nerves entering the spinal cord. The injection produces a certain amount of shock, as well as occasional sickness and headache.

The Adelaide Advertiser prints an interview with a surgeon who, not long ago, operated on a boy, who followed the whole operation with a series of pertinent and intelligent questions.

In another case the question arose whether the effect of the stovaine would continue till the operation was finished. The surgeon put on the greatest speed which safety permitted, and the patient, who knew the problem which was being confronted, was probably more interested than anyone else in the effort of the knife to outstrip the recovering nerves.

#### WRONGED WIFE'S REVENGE.

Sympathetic Jury Acquits Woman After Shooting Her Husband.

Vienna has just furnished a couple of striking examples of the crimes passionnels linked with the subsequent sympathetic action of juries which have long been a special characteristic of Parisian life.

One of these remarkable stories was unfolded at a woman's trial in Vienna for murder. The woman, who kept a prosperous suburban inn, had married an artisan several years younger than herself. That his motive was entirely mercenary the sequel proved. He began to treat his wife with cynical cruelty, and openly paid attentions to other women. As her business prospered and brought increasing means, so his neglect and profligacy grew.

At length, driven to desperation, the wronged wife shot him dead. At her trial, when the evidence had closed and the court-room was being cleared for the jury to deliberate, a number of sympathetic women waved their handkerchiefs and called upon the jurors to acquit the accused.

They found the prisoner guilty of manslaughter, but added that her act was committed in a moment of mental aberration. The judge thereupon pronounced the woman's acquittal.

Another instance may be cited. A boy of fourteen, whose father neglected the family for the company of a woman of loose character threw vitriol in the woman's face, disfiguring her permanently. The plea that the boy was defending the honor of his family so touched the jury that they exonerated him, and he also was acquitted.

ever bearing the troubles and worries of others who lay them upon her as though she had none of her own.

"But the fact is that we all have our troubles—and if I am not detaining you too long—it is a relief to us to tell them to somebody; we all like to have somebody that we can talk to. And what is more natural than that Mrs. Billtops should come to me, proud to listen, with her troubles, though chronically cheerful as I am—really, I don't know but what I'll have to take on a little worry about something. I don't know but what I'm getting too cheerful, too easy—though, chronically cheerful as I am. I say I am apt to make light of them."

"Which perhaps I ought not to do, even about such prospective troubles as those of the moving one year or two or three years hence. For as I look back I realize—as, indeed, I have always known—that in whatever measure of success we may have attained she has been always the mainspring, to her belongs the credit."

"Still I should say, if I might do so without betraying undue vanity, that to the partnership capital I have contributed, I think, something at least in my persistently optimistic cheerfulness."

#### POSED AS A MAN FOR TEN YEARS.

Arrested for Burglary Her Sex is Revealed.

The amazing romance of a woman who successfully masqueraded as a man for ten years has been revealed by the arrest in Brisbane, Australia of "William" Edwards on a charge of burglary.

The prisoner's real name is Marion Edwards, but since 1896 she has played the part of a horse trainer, rough rider, painter and decorator, laborer and barman without anyone having the slightest suspicion that she was a woman.

Edwards was wanted in Melbourne for a burglary committed in May of last year. She was at one time in partnership with a horse trainer named Pollock, who never suspected her sex. She rode, drank and talked like a man.

About six years ago she made love to a Melbourne widow, and eventually "married" her in St. Francis' Church in that city. She had a number of other love affairs, and on one occasion two Brisbane girls had a furious quarrel regarding her affections.

At the Brisbane Exhibition last year Edwards acted as a barman. Afterward she worked as a laborer, removing lumber from the exhibition grounds, and her extraordinary strength excited the comment of the other workmen. For some time also Edwards was in business as house painter and decorator.

#### TALL CHIMNEYS.

Two in Scotland More Than 400 Feet High, and a Leaning Stack.

The highest chimney in England is that at Barlow & Dobson's mill at Bolton. It is 368 feet in height and the material used in its construction was 800,000 bricks and 122 tons of stone.

This big smokestack is excelled by at least two in Scotland—the St. Rollox chimney in Glasgow is 445 feet and the Townsend chimney in the same city is 468 feet high. But the steepcleaks made no more of climbing such shafts than one a third of the height, though the vibration is much greater and more serious at times.

All chimneys vibrate, especially in a gale; it is a condition of their safety, but the oscillation at the top is a serious matter for any one at work there during a high wind, and the job is postponed to a calmer day.

Lancashire also boasts one of the crookedest chimneys in the world—a shaft at Brook Mill, Heywood—which is nearly 200 feet high and more than six feet out of plumb. It has been belted with iron bands and is considered safe.

Customer—"When was this chicken killed?" Waiter—"We don't furnish dates with chicken, sir. Only bread."

# G BUILDING OF WARSHIPS

## BRITAIN'S CAPABILITY STILL UNRIVALLED AMONG NATIONS.

### Her Power Lies in Organized Co-operation of Many Allied Industries.

Sir William H. White, formerly director of naval construction, in an article in *The London Times* asks the pertinent question, "Does Great Britain continue to possess a superior productive capability in warship building which will assure supremacy at sea?" A feat such as the completion of the Dreadnought in a year from the laying of her keel is a remarkable illustration of what can be accomplished by organization and command of labor at Portsmouth dockyard, associated with the utilization of the resources of private firms and the determination to give precedence to the work on, and for the particular vessel. It does not represent the conditions of practice on a large scale. The German naval authorities could probably make a similar display on a single ship, and "organize victory" on similar lines if they cared to do so. Germany, Sir William concludes, is the only rival worth considering. She assigns three years as the period of construction for battleships, and has hitherto conformed closely to the programme, which provides for laying down

### TWO BATTLESHIPS ANNUALLY.

The whole crux of the problem of rapid production lies not in dockyard space and facilities, nor in the ability to throw together the hull of a vessel in a few weeks or months, but rather in the organized co-operation of the many and varied industries essential to the completion and equipment of modern warships. The scale and rapidity of warship construction will be determined by the number, magnitude and possible output of these allied manufacturing industries; not by the shipbuilding and marine engineering capabilities of a country.

And therein lies one of the greatest sources of superiority in warship building of Great Britain. The country has long held a supreme position in shipbuilding production, but its relative capacity for producing warships at the present time is determined by its manufacturing capability in armor, gun-mountings, guns and special forms of auxiliary machinery. For the past twenty years the country has been engaged, without a break, in the execution of great programmes of shipbuilding for the royal navy. She has constructed simultaneously a large number of warships for foreign fleets. Consequently the demands made on private enterprise to create and extend the special and allied industries to which reference has been made have been exceptionally great. Under this stimulus, aided by encouragement from the Admiralty remarkable extensions have been made in the

### GREAT INDUSTRIAL WORKS

devoted to the manufactures of armor, armaments, gun-mountings and special mechanical appliances. In addition, Britain's resources in mechanical engineering, devoted to the production of special forms of auxiliary engines and machinery required in warships, are unrivalled and adequate to meet much greater demands than are likely to arise. No other country has passed through a corresponding succession of great programmes extending over twenty years, and no other country can compare with the United Kingdom in its capability for shipbuilding and marine engineering, or for the manufacture of armor, guns, gun-mountings and auxiliary machinery.

### A SNAKE STORY.

# RATEPAYERS MAKE RAID

## GLENTIES UNION TERRORIZE THEIR GUARDIANS.

### West Donegal Peasants March Down Upon Them With Sticks and Bludgeons.

More than 1,000 peasant ratepayers of Glenties, on the West Donegal coast, Ireland, gathered in the town recently, marched to the board room of the Guardians, and compelled them by threats of violence to rescind two resolutions by which the pay of two workhouse officials was increased. The poor-rate of the Glenties Union is over eight shillings in the pound, and the district is one of the poorest in Ireland. The men who assembled in the town on Saturday represented every district of the widely scattered union.

### ARMED WITH BLUDGEONS.

They were armed with sticks and bludgeons. A posse of police under a district inspector was present, but made no impression on the crowd of angry ratepayers.

The Guardians were so terrified that, with one exception, they disclaimed any connection with the resolutions. The exception was the chairman, who pointed out that one resolution granting an increase of pay to Canon McFadden, the chaplain of the union, had been passed unanimously by a full board of 42 members, and that the other resolution increasing the pay of Michael McNelis, clerk to the union, had been passed by a majority of 33 votes.

The crowd threatened to throw him out of the window, and he had to resume his seat.

### OUT WITH THEM!

"The ratepayers are already overburdened," cried one of the invaders. "What do the Guardians expect us to pay in the future? Out with such Guardians! They know the poor of God in the workhouse, but they do not know the poor of God outside. We'll all of us be in the workhouse soon."

The crowd did not leave until the Guardians had rescinded the objectionable resolutions.

The furniture of the board room was badly damaged by the heavy, nailed boots of the visitors. When they finally went away they told the Guardians they would throw them all out of the window if they had occasion to return.

The rescinding resolution was passed in spite of a letter from the Local Government Board stating that it had approved the increases in pay, and that, therefore, a rescinding resolution would have no legal effect.

### UNLUCKY CUBA.

### It Has Recently Been the Scene of Horrible Barbarities.

If there is an unlucky spot in this old globe of ours, it is surely Cuba. In most other places war is a more or less spasmodic evil; there it is perennial.

Discovered in 1492 by Columbus, who thought it "the most beautiful country it had ever been his lot to look upon," it quickly became the scene of merciless raids by armed adventurers, by whom the original population was practically destroyed.

Later on, the buccaners made war upon the Spanish settlers, and very nearly wiped them out of existence in their turn, even the City of Havana itself being stormed and taken by the arch-pirate Morgan, whose savage followers committed atrocities unmentionable upon the unfortunate inhabitants.

Next came rebellions of the slaves imported from Africa, and these were put down with fire and sword; or, rather, in the case of the prisoners, with sword and fire, for these wretched beings were invariably lopped and mutilated in the most horrible manner, before being

# WARSHIPS THAT WILL FLY

## WILL FUTURE BATTLE BE FOUGHT IN THE SKY?

### The Poetic Prophecy of Tennyson Outlined as an Actual Possibility.

"There is now no good reason why serviceable flying machines travelling at the rate of thirty to forty miles an hour should not be constructed, and there is no doubt that in the next great war flying machines will be regularly employed."

This was one of various interesting peeps into the future made at the Royal United Service Institution, London, recently, by Colonel Fullerton, R. E., in an interesting address on the recent progress in aerial navigation. He also predicted a postal and passenger aerial service.

In fact, he outlined as an actual possibility the poetic prophecy of Tennyson, who, in "Locksley Hall"—

Saw the heavens fill with commerce,  
Argosies of magic sails,  
Pilots of the purple twilight,  
Dropping down with costly bales;

Heard the heavens fill with shouting,  
And there rained a ghastly dew  
From the nations' airy navies grappling  
In the central blue.

### COMMAND OF THE AIR.

"As regards purely aerial warfare, the first object of each side will be by means of their air forces to obtain command of the air. For this purpose both sides will maintain high-speed flying machines armed with light guns."

"The aerial battles will practically settle the first period of the campaign, the victor gaining command of the air and all the advantages which will ensue therefrom."

"Against an enemy's sea forces the flying machines will be used chiefly for reconnoitring purposes, but it is probable that efforts will be made, by firing specially designed projectiles more or less vertically downwards on the decks of ships, seriously to damage the engines, boilers, etc., of the floating vessels."

"No doubt the flying machines will have considerable difficulty in carrying out this duty, but light, high-speed machines, painted so as to resemble the sky as much as possible, will be able to do a great deal of damage."

"The location and destruction of submarines will possibly also be an important function of the aerial ships, as their position high up in the air will enable them to trace the course of vessels some thirty or forty feet below the water."

"Against land forces reconnoitring will be the principal duty, but setting fire to store depots and attacking mounted troops and stampeding or destroying their horses will also be practised."

### A NATIONAL ARMY.

### What Great Britain Needs is an Armed People.

Speaking a short time ago in London, England, before the City Liberal Club, Major Seely, M. P., laid down the proposition that reductions in the regular infantry of the line, whether popular or unpopular, are absolutely essential. The progress of civilization and the specialization of industry have made it more and more difficult for any man to find employment who has not learnt a trade, with the result that an appalling proportion of the vagrants and inmates of workhouses are ex-army men. About half of the vagrants in Ireland, on the authority of a Royal Commission, are ex-soldiers, more than a thousand, exclusive of militiamen, having been admitted to the workhouses last January. When one reflects on the nature of

# WHEN CHILDREN SEE JOKE

## THE SENSE OF HUMOR IS VARIED BY AGE.

### Professor Relates Experiences Before Association for Study of Childhood.

"The funniest thing I ever saw was a black negro eating a water melon."  
"The funniest thing I ever heard was about a man running. Some one asked him why he was running, and he said 'he was going to get home before he got tired.'"

These are two of many instances of child humor that Prof. Earle Barnes related recently to the British Association for the Study of Childhood. He was talking about the various phases of humor in children, and gave an explanation of humor.

"We are all in the world to grow, develop and advance. That necessitates regular, organized work," he said. "But the continuity of work makes us tired, and that has to be corrected by bringing new centres of activity into play."

### FUNNIEST THING.

"If in the middle of organized work our minds are switched off to something that is not organized activity, we feel refreshed, and nature rewards the flushing out of our activities into new areas of feeling, with a sense of mirth, which we call humor."

"For instance, if we watch a man driving a calf down a lane, that is organized work, and if we continue watching it we feel tired. But if the calf suddenly upsets the man in a puddle, that is not work; it is disorganized activity. It causes a flush of new activity in the mind, and nature says, 'Well done; glad to have those new activities.' That's humor."

The professor gave many samples of child humor selected from 2,700 answers written by children to the question, "What is the most laughable thing you have ever seen or heard?"

"I read a story where a man mixed sawdust with the food he gave his chickens, for an experiment," wrote a boy. "After a while the hen hatched four eggs. Three turned out chickens with wooden legs, and the fourth was a woodpecker."

### BRINGS DOWN HOUSE.

Another told a story of a man who bet another £2 he could not drink a gallon of beer. "Wait a bit and I'll tell you whether I'll take the bet," said the man. He went away and on returning took the bet and drank the gallon. "I didn't think you could do it," said the man who offered the bet. "Nor did I," said the other, "until I had been down to Bill's saloon and tried it."

"The humor first enjoyed by the child is purely physical," he said. "You take up a year-old infant, shake him gently, rub your nose in his pinafore and cry 'boo.' That's the joke that always brings down the house."

### VAUDEVILLE HUMOR.

The next stage of development was the appreciation of curious combinations of words. One child wrote that the funniest thing it ever heard was "Peter, Peter, punket Peter." It meant nothing, but the jingle of the words tickled the child's mind. A little girl wrote that the funniest thing she ever saw was a drunken man who could hardly stand up.

"Displaced things form the staple of the humor of children from eight to twelve years of age, and they are the ordinary standard of the London music hall joke," the professor said, amid laughter. A man played a solo on a saucer, wore a bonnet for a hat, or dressed as a tramp when he should be dressed as a gentleman, and the music hall audience declared it to be a terrific joke.

"The ordinary humor of the music hall is that of eight or twelve years of age," said the professor, at which his

capability for shipbuilding and marine engineering, or for the manufacture of armor, guns, gun-mountings and auxiliary machinery.

## A SNAKE STORY.

### Indian Tale of Epidemic and Superstitious Cure.

A remarkable story of native superstition is told by the Friend of Burma.

Near Moulmein, where there is a large lake, the villagers have been greatly alarmed at an outbreak of fever. One morning in August, as some of them were going to their work, they saw the trail of an unusually large snake. They followed the trail, and eventually found themselves in front of a certain house, on the roof of which the reptile lay coiled.

They attacked the snake and broke his back. It was an unusually large snake, its body being at least a foot in circumference.

Then, it is said, something wonderful happened. The calm waters of the lake began, without any apparent reason, to bubble up and turn green, blue, red and yellow. The whole village witnessed the occurrence in fear and trembling.

At length one of the onlookers became possessed by a spirit, and told the villagers that they had beaten and offended the snake which was sent to destroy the cause of the fever.

The good people were promptly convinced that the snake was of supernatural origin, and that by killing it they had alienated the good will of the spirits. Tenderly and lovingly they took up the reptile and placed it in the jungle. Every house performed a proprietary ceremony, and the snake moved away.

Then the agitated waters became calm, and assumed their usual color, the patients suffering from fever became well, and the outbreak was stayed. Fever, it is finally added, has not visited the village again.

## FRANCE TO ENGLAND BY RAILWAY.

### Company Intends to Build a Tunnel Across English Channel.

The London Daily Chronicle says that the bill to be submitted to Parliament next session by the Channel Tunnel Company seeks power for the construction of a submarine railway, which at Dover is to be connected with the systems of the South-Eastern and Chatham Companies' system, and on the French side of the Channel with the Northern of France and other lines.

It is provided that works may be executed in conjunction with any Government or any authority. The tunnels will be lighted and the trains worked by electricity, and land is to be acquired near the Kent shore for the erection of a generating station, space being likewise reserved in the same neighborhood for the deposit of the excavated chalk.

Power is taken to extend the existing shafts and boring, and to afford protection to the tunnel. The creation is contemplated of a new company vested with authority to raise the necessary share of capital to which the South-Eastern and Chatham Railway Companies are to be entitled to contribute.

Provision is also made for the due observance of all conventions, agreements, and arrangements concluded between his Majesty's Government and the Government of France.

Plans and sections of the works are ready for deposit, and copies of the intended Act will be at the Private Bill Office next month.

Mrs. Stronge—"We often hear of men who perform deeds of heroism for the sake of their country, but one rarely hears of a man performing a daring act for love of a woman." Her husband (meekly)—"I'm sure I did, my dear." "You! Why, what brave thing did you ever do, I'd like to know?" "I—er—let you marry me, didn't I?"

upon the unfortunate inhabitants.

Next came rebellions of the slaves imported from Africa, and these were put down with fire and sword; or, rather, in the case of the prisoners, with sword and fire, for these wretched beings were invariably lopped and mutilated in the most horrible manner, before being burned at the stake in the principal square of Havana.

Cruelly begot cruelty, however, and the memory of such unmentionable horrors does not readily die, as the Spaniards found to their cost later. The Creole insurrection, which began in 1850, was marked by almost as much savagery as anything that had gone before; and as late as 1891, not only was no quarter given on either side, but torture of prisoners preparatory to execution was regarded as quite a matter of course.

The Americans, when they intervened, stopped, or were supposed to have stopped, such savagery, as this; but in 1897, when Giusa was captured by the insurgents—mostly escaped convicts—under Calixto Garcia, scores of wounded prisoners were deliberately roasted to death over slow fires.

And this is the land they have christened "The Pearl of the Antilles!"

## MANCHURIA AFTER THE WAR.

### Many Important Problems Yet Require Solution.

With the exception of the railway guards, all the Russian forces in north Manchuria have been withdrawn. Chita, in Transbaikalia, will be the most important military depot of the Siberian railway west of Manchuria.

Many problems yet require solution in Manchuria, says the Pekin correspondent of the Times of London. The most important are the opening of Mukden and other cities to foreign trade, which the Chinese oppose; the railway question, especially the redemption of the railway from Hsin-min-tun to Mukden, joining the Chinese and Japanese systems; the question of jurisdiction over the Chinese within the Japanese railway area; the question of the Yalu timber, and the question of the customs at Dalny.

The rights of the Russian railway having passed to the Japanese railway, it is now proposed that the Japanese South Manchurian Railway Company shall act as agents of the Board of Revenue, levy and collect customs duties at Dalny, and remit them to Pekin. This will be strongly opposed by the other Powers, because the railway is owned by Japanese merchants and manufacturers, whose goods would thus be handed by customs under their own control.

The question of the withdrawal of the Japanese military administration at Newchwang has been settled in principle, but the details are still incomplete. China agrees to recognize the Japanese statement of accounts showing that all native customs revenues collected during the Japanese occupation have been expended in local public improvements, and Japan will restore the maritime customs revenues. China undertakes to continue various public works, such as road making, sanitation, etc., and agrees, pending the establishment of a branch of the Board of Revenue Bank, that all customs moneys shall continue to be paid to the Yokohama Specie Bank. The military administration will end about December 1, when the port is closed by ice.

## CAGED UNTIL MARRIED.

On a certain island in the Pacific, it is stated that the natives are still in the habit of confining their girl children in cages until they are of an age to marry. These cages are constructed of palm branches, and the girls are imprisoned in them when they are two or three years old. They are not allowed to leave their cage under any pretext whatever, and they are only taken out once a day to be washed. The children are said to grow up strong and healthy in spite of their incarceration.

with the result that an appalling proportion of the vagrants and inmates of workhouses are ex-army men. About half of the vagrants in Ireland, on the authority of a Royal Commission, are ex-soldiers, more than a thousand, exclusive of millitiamen, having been admitted to the workhouses last January.

When one reflects on the nature of the special danger to health, apart from the difficulty of learning a trade, which must beset the foreign service soldier, it is neither more nor less than a scandal that provision should not be made for him. To set things right will cost money, and as in the near future more money must be spent on each man, it is necessary no less for the welfare of the soldier than for the well-being of the empire that there should be a reduction of the line. Still another reason for this is that attention must be centred more upon those parts of the army which it takes longest to make, notably artillery and cavalry, and these are far more costly than the infantry arm.

The Major had no hesitation in saying that the true path to pursue was to aim at creating gradually by building up out of existing materials a national army, complete in all arms, on the voluntary principle, and on a home defence basis—an army of men who remained civilians and engaged in civilian pursuits, while still finding time to learn and organize to defend their country's liberties. There should be two armies, but only two, a small foreign service army and the armed people.

## SENTENCE SERMONS.

He who cannot dream cannot do. Faith is ever prophetic of fact. Pain is the price of all deep pleasure. The church service that drags will not draw men.

Joy is gold picked up in the path of helpfulness.

Where might seems to make right it is but making ruin.

Our borrowed trappings account for half of our trippings.

The heart that sees goes always before the hand that obtains.

Too many think of religion as sowing wind and reaping wings.

People of many deficiencies always talk about their difficulties.

The bars that bind men most effectively are within and not without.

It is not a religious use of the imagination to have an imaginary religion.

A lie is the acute form and hypocrisy the chronic form of the same disease.

The strength of the strong depends on their respect for the rights of the weak.

The man who is too lazy to wiggle always thinks he is only waiting for wings.

Something great has died in him whose heart cannot be fired by heroic sacrifice.

Some preachers make the scripture read: "Make your calling and collection sure."

It is easy to appreciate the points of a sermon when they are sticking the other fellow.

The worst thing about the sowing of wild oats is that they take root in other people's fields.

Many would speedily reach the heavenly haven if progress could be secured by blowing their own sails.

A man's religion cannot be worth much when he has to consult his lawyer to know whether he is doing right.

Much religious work seems to be on the principle that the soil that will not grow even weeds will yet grow the best of the wheat.

## BAVARIAN LOCOMOTIVE.

In the new type of four-cylinder compound express locomotive adopted by the Bavarian State Railways—one of which is now being exhibited at Nuremberg—the smoke-box end of the boiler resembles the nose of a torpedo, and all square and flat surfaces facing the front, as well as the chimney and the dome covering, are sloped backwards. Exhaustive experiments prove that this greatly minimizes the wind resistance and adds to the speed.

laughter. A man played a solo on a saucer, wore a bonnet for a hat, or dressed as a tramp when he should be dressed as a gentleman, and the music hall audience declared it to be a terrific joke.

"The ordinary humor of the music hall is that of eight or twelve years' age," said the professor, at which his audience laughed and said, "Hear hear."

## REMEMBERS SIR WALTER SCOTT.

### John Haig Anderson's Recollection of the Man He Met Riding on a Pony.

John Haig Anderson, according to the Caledonian, still preserves a vivid recollection of the great minstrel of the Borders. His first meeting with Sir Walter Scott was when walking by the Tweed.

There had been a big flood, and in order to cross the river he and several companions were compelled to go around by Melrose Brig. When the lively youth were opposite Abbotsford a gentleman who came along, riding on a Highland pony, turned out to be none other than Sir Walter. Addressing the lads in broad Scots, he said:

"Boys, are ye no feared ye'll be drowned? See, the water has been a rooned the haugh. Ye maun tak' care o' yersel's an' no fa' into the water."

Sir Walter then asked the lad Anderson his name, and on hearing it he followed it up with a further question:

"An' what's yer mither's name, my man?"

"Mary Sommers," was the ready response.

"Oh, adds the great man, 'then George Sommers'll be your uncle'—a fact which was readily corroborated by the youth.

"Then," added Sir Walter, "tell yer uncle Geordie that I was speerin' for him. An' now, see there's a saxpence an' when ye get back, get yersel' a tap' (a breakfast roll) 'at Melrose' Melrose Brig Toll. 'Ye'll be hungry my little man."

## FATE OF OLD BOOTS.

### Discarded Footwear Made Into Combs, Buttons and Dye.

What becomes of old boots and shoes has hitherto been almost as puzzling a problem as where all the pins go. The solution, however, is given in the Boot and Shoe Trades Journal.

"Old boots and shoes of leather," the journal says, "are cut up into small pieces, and then are put for two days into chloride of sulphur, the effect of which is to make the leather very hard and brittle.

"When this is fully effected, the material is withdrawn from the action of the chloride of sulphur, washed with water, dried and ground to powder. It is then mixed with some substance that will cause it to adhere together, such as shellac or other resinous material, or even good glue, and a thick solution of strong gum.

It is afterwards pressed into moulds to form combs, buttons and a variety of other useful objects.

"Prussiate of potash is also made out of old leather. It is heated with pearl ash and old iron hoops in a large pot. The nitrogen and carbon form cyanogen and then unite with the iron and potassium. The soluble portions are dissolved out, and the resulting salt, added to one of iron, produces the well-known Prussian blue, either for dyeing purposes or as a pigment."

## IN OPPOSITE DIRECTION.

Old Scotch Woman (bustling in station)—"Where is my train?" Porter—"Where for, madam?" Old Woman—"Maybe I'm going to Dumfries."

She was placed in the Dumfries train end, just as the train was starting, she put her head out of the window and said to the porter:

"Noo, for yer impertinence, I'll tell ye, I'm no goin' to Dumfries at all, but I'm goin' to Perth!"

# Xmas Gifts.

Shop early next week and avoid the rush. We have many useful gifts to choose from.

**For Father** A pair of good warm Felt Boots, a pair of Overshoes or a nice house slipper.

**For Mother** A pair of good warm Cozy House Slippers, a pair of Leggings, or a nice fine dress Boot.

**For Sister** A pair of nice Evening Slippers, or a pair of Skating Boots.

**For Brother** Moccasins, Hockey Boots or Overshoes.

**Travelling Goods** We have a large stock of Trunks, Suit Cases, and Club Bags to choose from. This is something which will be useful and appreciated.

THE **J. J. HAINES** SHOE HOUSES, Napanee, Belleville, and Trenton.

## THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

**CHOICE CORN MEAL** and **BUCK WHEAT FLOUR** always on hand.

**FEED GRINDING** a specialty, with the best feed mills known to the trade.

A full stock of the best **ANTHRACITE COAL**. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,  
16th January, 1906.

## COAL! OUR CELEBRATED PLYMOUTH COAL!

All sizes for prompt delivery.

We also carry in stock Steam Coal, Blacksmithing Coal

—and—  
Blue Grass Cannel Coal  
for a bright grate fire.

All at close prices FOR CASH.

## For Xmas!

- New Raisins
- New Currants
- New Peels
- New Shelled Nuts
- New Table Figs
- New Dates
- New Spices

Admission, School Children, free; general admission, 10 cents.

To Please  
You

### LETTER TO THE EDITOR

To the Editor of the Napanee Express.

Dear Sir,—

On Monday the Thirty-first day of December the ratepayers of Napanee will have the opportunity of nominating the Town Council and Electric Light Commissioners, including a Reeve to represent the Town in the County Council for the year 1907.

As it has been the custom in the past to call no public meeting until nomination night and at the last moment select the candidates for the several offices in the gift of the electors of the Town, a number of the ratepayers have interested themselves in trying to get the consent of suitable candidates to offer themselves for the different positions. The following gentlemen have kindly consented to stand for election: Mr. W. T. Waller, Mayor, Mr. J. Frank Chalmers, Reeve, Mr. J. R. Dafoe, Electric Light Commissioner, Mr. F. F. Miller, Electric Light Commissioner, Mr. S. Casey Denison, Councillor, Mr. C. A. Graham Councillor, Dr. Simpson, Councillor, Mr. Patrick Gleeson, Councillor, Dr. Stratton, Councillor, and when you consider the representative nature of the above ticket prepared by the citizens and ratepayers, you, I think, will agree with me that they would make a very strong and satisfactory Council and Commission for the coming year.

Mr. W. T. Waller has had four years experience in the Town Council and has done excellent work as chairman of some of the most important committees.

Mr. J. Frank Chalmers will be an invaluable man to look after the interests of the Town in the new County Council, when every municipality is sending its best and most experienced man to represent it for the year 1907. Mr. Chalmers has had several years experience as County Councillor and as Reeve of the Township of Adolphus-town before coming to Napanee and also has acted as Township Clerk for that Township. He is a man of good business experience and integrity and would make an estimable Reeve for the Town.

Mr. J. R. Dafoe is well known to the electors as one of the most enterprising business men and is an experienced mill-wright and holds papers as a first-class stationary engineer and therefore has the knowledge and ability to protect our valuable electric light plant.

Mr. F. F. Miller, the other Commissioner is one of our most prominent citizens, a Civil Engineer with his qualifications from McGill University and is, to-day, the best posted man on electricity in the town. Both these gentlemen are so valuable to the interests of the Town in connection with the Electric Light that they should be elected by acclamation; and it is a considerable sacrifice that such men take office and nonenumeration therewith and involving, as it does, a large amount of time and trouble.

For the Council, Mr. S. Casey Denison who has lived in the Town ever since his boyhood and who has gained the confidence, year by year, of the general public. He is one of our most enterprising merchants and very much interested in common with every other rate payer in keeping down expense and seeing that the town business is done in the most economical manner. With the energy and ability, which he has displayed in his own business being applied to the business affairs of our beautiful town, his presence in the Council would be a great additional strength.

Mr. C. A. Graham with his two years' experience in the Council and who, although passing through some business difficulties this year, is still fully qualified to sit on the board, has a record behind him, which shows his business ability and which justifies his re-election to office.

Dr. Simpson has done good work as Chairman of the Finance Committee and has been a man not afraid of his opinion and one of the few who consistently advocated what he considered to be the best interests of the Town and

### Curlers Meeting.

The following are the officers of the Curling Club for the ensuing year:

President—W. F. Hall.  
Vice-President—J. S. Ham.  
Treasurer—J. W. Robinson.  
Secretary—J. Frank Chalmers.  
Executive Committee—W. C. Smith, Wm. Templeton, J. L. Boyes, C. I. Maybee, W. A. Bellhouse.  
Ice Committee—Dr. Leonard, W. C. Smith, C. I. Maybee.  
Delegates to Central Ontario League—Dr. Leonard, J. S. Ham.  
Auditors—R. A. Crockery, R. H. G. Travers.  
Chaplains—Reyds. A. Macdonald, F. T. Dobb and T. P. O'Connor.

Messrs. Crockery, F. Boyes, Travers, Hill and Dr. Leonard were appointed a committee to consider the advisability of forming senior and junior rinks and junior league, and report.

The prospects are most encouraging for a large and enthusiastic membership this year. The new waiting-room now in course of completion, will also add greatly to the comfort of the members this year.

### Quietly Married.

A quiet wedding was solemnized at the residence of Mr. and Mrs. Will H. Boyle, on Wednesday morning at eleven, when Miss Minnie Embury, youngest daughter of Mr. Geo. H. Embury and Mrs. Boyle's sister, one of Napanee's popular young ladies, was united in marriage to Mr. J. Harvey Elgar, of Souris, Manitoba. The ceremony was performed by Rev. J. H. Strike, of Deseronto, cousin of the groom. The maid of honor was Miss Blanche Elgar, of Souris, sister of the groom, whilst the groom was assisted by Master Harry Boyle, nephew of the bride. After the ceremony the happy couple left for Los Angeles, California, where they will spend the winter. None but the immediate relatives of the contracting parties were present. A goodly number of handsome presents were bestowed on the bride by her many friends.

The bride was attired in her traveling suit of navy blue cloth, trimmed with leather and wore a becoming hat of Amethyst velvet, with tan feathers navy blue crown and Dresden ribbon. She carried white carnations, and the bridesmaid pink carnations. Miss Hypathia Fox played the wedding march. The groom's favors to the bride were a pearl sunburst and a magnificent set of sable furs, and to the bridesmaid a sable muff, and to the groomsmen a gold locket.

**January 9, 10, 11, 12.**

**CASTORIA.**

Bears the  
Signature  
of *Castoria*  
The Kind You Have Always Bought

a record behind him, which shows his business ability and which justifies his re-election to office.

Dr. Simpson has done good work as Chairman of the Finance Committee and has been a man not afraid of his opinion and one of the few who consistently advocated what he considered to be the best interests of the Town and owing to his efforts mainly during the last year the Hay Bay Ferry has been completed and put in commission. In fact the Doctor has always been one of our most enterprising and public spirited men.

Mr. Patrick Gleeson should be a very valuable addition to the Council. He has had several years' experience in the routine work of the Council acting as Town Auditor and is a good business man of first class attainments and one the Town would have the greatest confidence in, in the highly important position of Town Councillor.

Dr. C. Stratton has kindly consented to stand for councillor. He has had the confidence of the public through the Town Council, as he acted for some on the Board of Health and is one of our new additions to the Town being a man of high attainments and as he is willing to give his valuable services for our benefit, we should, I think, not miss the opportunity of securing them.

I am submitting these names as the nomination of a very large number of the rate payers but, of course, if any rate payer has any other good men, who are better qualified to take the position than those I have mentioned, their names will be welcome by even the nomination of this ticket but from looking over the field of available men the rate payers interested have concluded that the abovelist would be the most satisfactory and therefore, in confidence, the rate payers are asked to do what they can for the gentlemen we have nominated.

Yours truly  
**A RATEPAYER.**

### Everybody Come to Order

while we announce that now is the time to purchase your Christmas gifts at The Medical Hall. Our stock is complete and we are confident that we shall be able to please you. It is a pleasure for us to show goods. Fred L. Hooper.

The condenser at the Electric Light plant does not come up to the specifications, and Mr. Kelsch, the town's engineer, refuses to accept the plant, so that the present council will be unable to hand over a completed plant to the commissioners who will be elected in January. Messrs. McLean and Morrison, of the Robb Engineering Co., have been for weeks trying to bring the condenser up to contract but could not do so, and on Monday left for Montreal.

## ALREADY FOR THE CHRISTMAS TRADE.

Having on hand a very large and choice assortment of dinner sets, fruit sets, salad bowls, water sets, marmalade jars and covered cheese dishes in all shapes and sizes, plain open steak dishes and fancy covered steak dishes, jardiniere in endless variety, also fancy Cress dishes, cabarets and fruit plates from 6 to 10 inches, bread and butter plates from 90c to \$3.00 a dozen, cups and saucers from 15c to \$1.50 each, also a very fine variety of souvenir plates and cups and saucers, other pieces of China too numerous to mention. All of the above named articles are of the finest quality of English, French and Austrian China, imported from each factory, also, a large and fresh assortment of groceries and fruit in fact, everything suitable for the Christmas trade of the finest quality. It's not always the cheapest article that's the best value, but more apt the reverse.

**THE COXALL CO.**

Merchant Tailor, Napanee.

## To Cure a Cough.

We sell over 80 cough remedies, but there is none that gives so much satisfaction as Quick Relief Cough Balsam, it seldom fails, 25c a bottle at Wallace's Red Cross Drug Store.

## WHEN NOT TO KICK.

When you get a bad shave or hair cut. Neither lasts long.

When you find you're going to die poor. They haven't begun making pockets in shrouds yet.

When your health goes back on you. Life isn't very long, anyway, and a healthy man dies just as dead as a sick one.

When you discover a mean streak in your neighbor. He has to stay with that mean streak day and night, and you don't.

When you can't pay all your debts at once. Your creditors would a great deal rather get the money in dribbles than not at all.

When you have had a bad meal set before you. You may get over it before the next meal even if you eat it, and you don't have to eat it.

When your wife isn't in good humor. She is partially balancing the books against some of your numerous disagreeable spells that you never make note of.—Chicago News.

A Ratepayer sends us a communication which appears on this page, which represents the views of a number of the ratepayers of the town, while we agree with him that the gentlemen named are all good men we cannot altogether fall in with his "ticket". There are a number of good men in the present Council who have done good service and should they seek re-election should receive the hearty support of the ratepayers.

Gas Burners, the Lindsay, the Welsback, these new Burners reduce your gas bill, and give you more light than any other, have one put on by

#### New Books At The Library.

Trade Unionism and Labor Problems.—By John R. Commons.—The primary motive of this author is to further the interests of sound economic teaching with special reference to the study of concrete problems of great public and private interest.

Pelham and his friend Tim.—By Allen French.—A good story, well told and not a bit tedious.

Canadian Literature.—By Archibald McMurtry.—A hand-book of Canadian Literature, a convenient volume, condensed and yet as copious as the subject demands.

Blindfolded.—After you have read a chapter of this book you cannot stop till you have finished the book. It contains mystery, adventure and romance.

The Undertow.—By Rev. Robert Knowles, a Canadian.—It is a powerful story of a young Presbyterian minister, the temptations and pitfalls which surround him and from which he emerges triumphant.

The Doctor.—By Ralph Connor.—Those who have read "Glenarry School Days", "Black Rock" and "The Prospector" will welcome Connor's latest book.

Benita.—By Rider Haggard.—A story of a search for buried treasure, romantic and adventurous.

Heidi.—A classic for children, translated from the German which achieved great popularity in the fatherland and passed through fourteen editions.

The Adventures of Billy Topsail.—This is the book the boys are looking for. There is something doing every minute, and every boy will say he is "all right".

The Silver Maple.—By Marian Keith—the author of "Duncan Polite". This is another splendid book from the pen of a Canadian.

In the Van.—A story describing the experiences of a body of troops which sailed for Canada in 1813, landed at Halifax and marched overland to Georgian Bay where it did garrison duty during the war. It is a tale of interest and incident.

The Fighting Chance.—A society novel whose motive is the fighting chance which every man and woman has against domination by an hedonistic trend of tastes and desires. The struggle and the final saving grace.

Spring Skates, Hockey Skates, Pucks, and Hockey Sticks.

The public library has been making many new additions lately to the valuable collection of books already upon the shelves. The care with which they are selected insures to the subscribers the choicest reading matter that is published. It is true light fiction will be found there, but a greater prominence has for the past few years been given to substantial and wholesome literature. A membership to the library is a Christmas present that may gladden the heart of the recipient every day of the year. How many servant girls of the town enjoy the privileges of the library? Mistresses complain of the restlessness of their servants. Is it any wonder they are restless and want to go out when as effort is made to entertain them at home? Suitable presentation cards do good for one year's subscription to the library have been prepared and may be had upon application to the librarian. This affords an opportunity to increase the usefulness of the library and render a valuable service to one's less fortunate friends and indirectly to benefit ourselves.

In these you will find perfect and natural skins, soft, pliable and well lined Coats, to clear Saturday and

### PEOPLE OF THE STAGE.

**Theatrical Life He's got joys and much suffering.**

Booth, to whom Henry R. Abbey would cheerfully have paid \$1,000 a night for 150 consecutive nights, was one of the most unhappy men on the face of God's earth. He had buried two wives, been through the mortification of bankruptcy and so far as worldly wealth is concerned, so far as the comforts of a settled home go, had yet to make the one and secure the other. This being the case, what do you suppose is the fate of minor people? The fact is that they work hard, are underpaid, never play the parts they prefer, pay much, by far the greater portion of their salaries, for stage costumes, invariably have a gang of hangers on who eat the bread they earn, are out of engagements most of the time and ninety times out of a hundred die so poor that they are buried at the expense of their fellows. In the first place, it is extremely difficult for them to obtain a position, and, having a position, how few its advantages. They have to rehearse at inconvenient times; they go out in all kinds of weather regardless of their health or comforts or home desires; they dress in outlandish places, either wet, damp and chilly or overheated. They are at the capricious mercy of speculative managers, and, having found by experience that there is very little sympathy for them, either before or behind the footlights, they wrap themselves in a garment of mental indifference to appearances, which is utterly misunderstood by a cynical and suspicious world.

I know of a girl who was called to a Sunday night rehearsal. Her father was very ill, but the rental of their rooms, the fees for the doctor and money for the drugs depended upon her attending to her business. It was imperative that she should be in the theater at 7:30 o'clock. Having arranged the room as women only can, having placed upon the table by the bedside of her father his medicine, she kissed him goodby and, with a loving touch, promised to be back as early as possible. You know what Sunday night rehearsals mean. They mean 1, 2, 3, 4 o'clock the next day. That is what this one meant. The girl hastened home. The candle light had gone, the cold gray of the early morning was in the room, the father was dead upon the bed.

### POINTED PARAGRAPHS.

Nine-tenths of the failures intend to do well.

If air castles were real, some people wouldn't be satisfied.

We are always meeting people who recall incidents that we had hoped they had forgotten.

When people do not enjoy doing the things we do, we are apt to think they do not have a good time.

Your neighbor is "funny." If you throw his dog a bone, he suspects you of trying either to poison it or to win its affection from him.

much as the reputation this store holds for reliable furs.

## PRICES THAT TALK ON COON COATS FOR MEN.

things we do, we are apt to think they do not have a good time.

Your neighbor is "funny." If you throw his dog a bone, he suspects you of trying either to poison it or to win its affection from him.

It is interesting for a man to look through his old effects if for no other reason than he will see that he is not as big a fool as he used to be.

You may have such a fierce admiration for the under dog as to be unfair to the upper dog. The upper dog is often compelled to fight to get his rights.

### Froude's "Inaccuracy."

What competent critic today doubts the general trustworthiness of Froude's "History of England," in writing which he was obliged to transcribe from Spanish masses of papers which even a Spaniard would have read with difficulty? Yet what sweeping charges of inaccuracy were long made against him! Writing in 1870 to a friend, the historian says: "I acknowledge to five real mistakes in the whole book—twelve volumes—about twenty trifling slips, equivalent to 't's' not dotted and 't's' not crossed, and that is all that the utmost malignity has discovered. Every one of these rascals has made a dozen blunders of his own while detecting one of mine."—Success Magazine.

### Old Times in New York.

In 1789 New York city maintained an official who would whip a servant, either free or slave, for the master, charging a shilling for the job. Petty thieves were branded for life with a "T" on the cheek. Mrs. Johanna Young and another woman convicted of grand larceny were driven all over the city in an open cart, then stripped to the waist and given thirty-nine lashes apiece in public and then banished. "Whereupon," says the record, "they went to Philadelphia."

### The Tender Hearted Butcher.

"It must have been a very tender hearted butcher who killed this lamb," said the cheerful boarder, pausing in the sawing of his chop.

"Why?" kindly asked the inquisitive man.

"He must have hesitated three or four years before striking the fatal blow."—London Tit-Bits.

### His Choice.

"Are you fond of music?" asked a stranger of the young man at the concert, who was applauding vigorously after a pretty girl had sung in a very painful way.

"Not particularly," said the young man frankly, "but I'm exceedingly fond of the musician."

### Full Benefit.

Watts—Let's walk along until a car overtakes us. Potts—No. Let's walk the other way until a car meets us. We will catch it sooner, we will go down town just as quick, and we get more ride for our money.

## LETTER TO THE EDITOR.

MR. EDITOR,—

"A Ratepayer" in your last issue singles out councillors Simpson and Graham as the only members of the present council worthy of re-election. What about Lowry, Kimmerly, Meng, Williams and Normile? It is well known that the other five members of the council have each devoted their time and talents to the interests of the town and have successfully carried out the undertakings assigned to them. What part did Simpson and Graham play in obtaining the electric light or securing the canning factory for the town? Upon whom has the burden of carrying out the business of the town fallen during the last two years? Certainly not upon Councillors Graham and Simpson. In what respect do these two councillors so excel all others? For one I dispute the right of the author of that letter to speak for the citizens of Napanee, and if he does want to speak, let him be fair and consistent. If any members of the old council are to be re-elected by all means select the hard working members and not the drones.

## FAIR PLAY.

Coughs, colds, hoarseness, and other throat ailments are quickly relieved by Cresolent tablets, ten cents per box. All druggists.

## Good Perfumes for Xmas.

You will find at WALLACE'S Red Cross Drug Store, a line of good perfumes (the very best) put up in handsome packages suitable for Xmas gifts, ranging in price from 25 cents to \$7.50, the 25 cent size containing exactly the same quality of perfume as the more expensive packages—(this is a fact we wish to emphasize) as many stores offer Xmas Perfumes (and very Christmasy too) the value of which is all in the box, not the perfume.

## LETTER TO THE EDITOR

Dec, 18th 1906,

To the Editor of the Express.

Dear Sir:—

Will you kindly grant me a little space to refer to the letter of "Ratepayers" in your issue of last Friday.

My name was placed in the so called "Citizens Ticket" absolutely without my consent or knowledge. I was not even approached by any one in reference to allowing my name to be placed with said list, nor had I stated to any one that I should be a candidate for any office.

As to the merits or otherwise of this or any other ticket, I express no opinion; but I wish to state distinctly that I am not, nor shall I be a member of any ticket. If I accept nomination for any office I shall ask the electors to judge my candidature on its own merits and pronounce accordingly.

Yours truly,

T. W. SIMPSON.

Carvers, we have a special line of Carving Sets in Cases and in pairs from \$1.00 to \$12.00, nice goods and prices right. BOYLE & SON.

## You're Somewhat Puzzled

In choosing a gift for your friend. If you will inspect the large assortment of new Christmas goods at The Medical Hall, we feel satisfied that the difficulty will be overcome. Avoid further anxiety and act on our sugges-

## IN THE SURROGATE COURT OF THE COUNTY OF LENNOX AND ADDINGTON.

IN THE MATTER OF the Estate of Sarah Scantlin, late of the Township of Camden in the County of Lennox and Addington, Married woman. Deceased.

NOTICE IS HEREBY GIVEN pursuant to the Revised Statutes of Ontario 1897 Chap. "129" Sec. "38" and Amending Acts, that all persons having any claims against the Estate of the said Sarah Scantlin, deceased, who died on or about the 15th day of November, A. D. 1906, are required on or before the Seventh Day of January, A. D. 1907, to send by post prepaid or to deliver to the undersigned Solicitors for James Scantlin, Administrator of the Estate of the said Sarah Scantlin, deceased, their names, addresses and descriptions and full particulars of their claim or claims and the nature of the security (if any) held by them duly verified. AND NOTICE IS HEREBY FURTHER GIVEN that after the said Seventh Day of January, A. D. 1907 the said Administrator will proceed to distribute the assets of the said estate among the persons entitled thereto, having regard only to those claims of which he shall have had notice, and the Administrator will not be liable for the assets or any part thereof to any person or persons of whose claims he shall not then have had notice.

DATED at Napanee this 3rd day of December, A. D. 1906.

DE ROCH & DE ROCH :

Sol'rs for the Administrator,  
James Scantlin.

## NOMINATION.

Notice is hereby given that a meeting of the Electors of the Township of Richmond will be held in the Town Hall, in the village of Selby, on Monday, the thirty-first day of December, 1906, commencing at the hour of 12 o'clock noon, and lasting one hour, for the purpose of nominating Candidates for the offices of Reeve and Councillors, to represent the said Township of Richmond for the year 1907. And further notice is given that all nominations shall be in writing.

ABRAM WINTERS.

Tp. J. Clerk.

Dated at Selby, this 17th day of Dec., 1906.

## Electors of Napanee

LADIES AND GENTLEMEN.—

I have been requested by a large number of ratepayers, to offer myself as a candidate for the office of Mayor for the year 1907. During the past four years I have endeavoured to serve the town to the best of my ability and with a desire to economize wherever it was expedient. Should I fail to see you I wish you to accept this as a personal canvas. Wishing you all the compliments of the season I am

Your Obedient Servant,

HERMAN MENG

Mr. E. W. Sickeny, Merrickville spent a week at his home here.

A baby boy has come to brighten the home of Mr. William Ramsay. It arrived on Saturday Dec 15th, 1906.

Miss Lizzie Foster leaves Saturday for Toronto where she has secured a situation.

Miss Limbert spent Saturday at Napanee.

A great offer—The Napanee Express from now until January 1907 for \$1 00. Send your order early.

#### ENTERPRISE.

The weather has turned much finer the last week, the extreme cold snap reminding us forcibly of two and three years. We hope the winter may not be as inclement as those two years.

We are glad to say that Mrs. Jas Fenwick who has been on the sick list is recovering. We hope to see her smart as usual in a few days.

Our merchants have got in a full supply of groceries and toys for Xmas. Mr. E. J. Wagar has moved into the building owned by W. Mellow, and has a fine display of groceries, Xmas toys, dry goods &c.

The farmers are busy hauling wood, hay, &c., taking advantage of the excellent sleighing which promises to be the best this winter.

Miss Addie Armstrong is on the sick list. We hope for a speedy recovery.

Mr. Chas. Keech has his new shop fitted up and has moved his harness-making into it.

Mr. M. E. O'Dea intends holding an auction sale of his farm stock and implements on Saturday 22 inst, and to retire from farming.

Mr. Scantlin has a number of teams hauling tan bark for the Rathbun Company Deseronto.

Mr. Rockwell Lockwood has returned from Uncle Sam's domain.

Mr. Jno Drumm clerk for the Rathbun Company, left for his home to spend the Xmas holidays under the parental roof.

Mr. Chas. Trames is at present laid up with la grippe, and we hope for a speedy recovery.

Mrs. Jno Carl was the guest of her mother, Mrs. P. Kennedy one day last week.

Wishing all our readers a merry merry Xmas.

A great offer—The Napanee Express from now until January 1907 for \$1 00. Send your order early.

#### TRY THIS FOR YOUR COUGH

To relieve a cough or break up a cold in twenty-four hours, the following simple formula, the ingredients of which can be obtained of any good prescription druggists at small cost, is all that will be required: Virgin Oil of Pine (Pure), one-half ounce; Glycerine, two ounces; good Whisky, a half pint. Shake well and take in teaspoonful doses every four hours. The desired results can not be obtained unless the ingredients are pure. It is therefore better to purchase the ingredients separately and prepare the mixture yourself. Virgin Oil of Pine (Pure) should be purchased in the original half-ounce vials, which druggists buy for dispensing. Each vial is securely sealed in a round wooden case which protects the Oil from exposure to light. Around the wooden case is an engraved wrapper with the name—"Virgin Oil of Pine (Pure)"—plainly printed thereon. There are many imitations and cheap productions of Pine, but these only create nausea, and never effect the desired results. 1-13.

## Business College and School of Finance

### TELEGRAPHY

Winter term opens Jan. 2nd, 1907, in "Picton School of Telegraphy" in connection with Picton Business College.

JNO. R. SAYERS, Picton, Ont.,  
Principal and Proprietor.

## FURS

Furs made and remodelled in First-Class Style. Prices Reasonable and Work Guaranteed

### Ladies' and Gents' Coats MADE TO ORDER.

All kinds of Furs, Pelts, Heads, Tails and Trimmings for sale.

# INDIVIDUALISM IN RELIGION

## Impossible to Test a Man's Religion by a Mechanical Standard.

This do ye and live.—Gen. xiii. 18.  
What is life? The longer we live the more sorrow we taste. For more of our loved ones pass away; more of our friends are afflicted, and because of our friendship for them we grieve with them. More and more we are brought face to face with problems, anxieties and responsibilities, and more and more we realize that the threads, tangles, knots, ravelings and unravelings in the warp and woof of the web of life as we weave it daily can be harmonized only by the shuttle of the "divine will" as it flies to and fro, weaving what we call eternity.

What is life? For many it is drudgery. For more it is a disappointment; for all it is sorrow.

Nevertheless we refuse to believe that life is meant to be sad, sorrowful or full of suffering. There must be, there are compensations in life as we can live it, which, if grasped, understood, developed and strengthened, will transform drudgery, disappointment and sorrow into what will mean the joy of living, the sweetness of success and the softening of sorrow.

We will know this the moment we understand that life is love and living is giving.

### LIFE IS DRUDGERY.

Life's daily duties become monotonous, only when our heart is not in our work; but if we will give the best of ourselves to our tasks we presently will take an interest in our work and ultimately we will love it. Therefore, "do your best and make the best of everything."

There is much sunshine in the world, but if we remain indoors and draw down the blinds we are not justified in denying it is all bright and warm and cheery except where we ourselves make it the reverse. We ourselves are largely to blame for the constant darkness and dreariness of our lives.

Whenever God sends clouds across the sky they are only passing clouds. They never stay. It is only we who persistently "dwell in darkness" and shut out the sunshine of life—the joy of living. Open the windows of the soul, tear away the blinds that screen or altogether shut out God's sunshine.

When anxieties come, "cast thy burden upon the Lord." When perplexities arise, "commit thyself unto the Lord." When soul storms toss you, "seek ye the Lord." When you are weary of life's trials, "rest in the Lord and wait patiently for Him." "This do ye and live."

This is living. When we do otherwise we merely exist.

To live thus in close contact with God, to live with Him, by Him and by means of Him, this, I say, is living. Then life vibrates with happiness, and we feel the joy of living. Tasks become tests and drudgery becomes nobility.

### THE JOY OF LIVING

is also ours in the degree that we understand that living is giving. To give others happiness, to brighten up some corner of the little world we live in, this adds to the joy of life. We can always give more generously than we do those little things which cost nothing but which are of priceless value—a word of encouragement, a word of praise in due season, a gentle tone, a sympathetic look, a nod of approval. These things mean the joy of life. To give them gives joy. "This do ye and live."

Some people love to be miserable. Many love to make others miserable. Most people cause their own miseries. And all people are more miserable than they need be.

To all we would merely say, what good are you in the world, what good do you do in the world? Do some good. Get out among the workers. Help those who are trying, uplift those who need to be uplifted. Get up and do something useful and you will soon see some pleasure in life and taste some of the joy of living. Live and give. Give some of your thoughts, your energies, your time, your means to help others;

### AND GIVE GENEROUSLY.

If you go to a theatre or buy a raiment or own an automobile there is no harm in doing so, provided you can afford it. But spend a like amount for the education of the poor, to pay a widow's rent or to do some good. You will derive therefrom a lasting joy, while self-indulgence is but a passing joy.

"Life on this earth is like the vestibule of a palace. Prepare thyself in the vestibule that thou mayest enter the palace," teach the Hebrew sages.

Not without deep meaning do the Hebrews call the cemetery "the house of life," for it opens into life eternal. If for us life has meant love and living has been giving, our sorrows will be softened and our hearts will be consoled by the thought of life eternal, when He who is the righteous judge will cause us to know the path of life, the fullness of joys in His presence, the beauties of happiness at His right hand.

# THE S. S. LESSON

## INTERNATIONAL LESSON.

DEC. 23.

### Lesson XII. Jesus Ascends Into Heaven.

Golden Text: Luke 24. 51.

### THE LESSON WORD STUDIES.

Note.—The text of the Revised Version is used as a basis for these Word Studies.

Appearances of Jesus after His Resurrection.—On resurrection morning Jesus appeared first to Mary Magdalene at the tomb in the garden (Mark 16. 8-11; John 20. 14-18), and a little later to the group of women on their way from the tomb to the city to bring the disciples word (Matt. 28. 9, 10). These two appearances

to solve for his disciples a speculative problem really beyond the power of human comprehension.

40. Showed them his hands and his feet.—The nail-prints in hands and feet formed a means of identification which could not be doubted.

41. They still disbelieved.—A persistent yet honest doubt which Jesus always respected.

44. The events narrated in verses 44 to 49 cannot be located with absolute accuracy chronologically. Luke omits entirely the appearances of Jesus in Galilee, and connects the final events of His post-resurrection life and the ascension immediately with the events which occurred on the day of resurrection. Verses 48 and 49 necessarily belong with what follows and seem to connect the events of the entire passage with those of the final departure of Jesus from this world.

These are my words which I spoke unto you.—See Matt. 16. 21.

All things . . . written . . . concerning me.—All the Messianic prophecies of the

# KAISER AND HIS PEOPLE

## ANOTHER REMARKABLE BOOK ON THE GERMAN EMPEROR.

Portrays in Racy Language the Conditions Prevailing at the Imperial Court.

Another remarkable book, which portrays in racy language the conditions prevailing at the imperial court, has just made its appearance in Germany under the title, "Our Emperor and His People: German Sorrows," by "Pessimist." The author is a prominent German politician, belonging to one of the Conservative groups. His identity I must not reveal; but he is a public man, whose judgment of affairs commands respect, writes a Berlin correspondent.

In "Our Emperor and His People," the reader is given interesting details of the interviews which take place between the Emperor and the members of the cabinet. Those Ministers and high state officials who cannot think so quickly as their versatile monarch lose the imperial favor. Moreover, the Minister who sticks too closely to the subject on which he is reporting to the emperor finds it difficult to command his imperial master's attention. The emperor loves to dart off into a discussion of other matters with a mental agility which many of his statesmen

### CANNOT KEEP PACE WITH.

"The emperor regards such Ministers," writes the author, "as tedious fellows and slow-going bureaucrats. Such a Minister finds months may pass before he is summoned to report on the affairs of his department. The monarch, when at last he receives him, does so with an air of resignation; nor does the emperor attempt to conceal his indifference and boredom. On such occasions his majesty remains standing against the wall, playing with his favorite dachshunds. He makes the dogs rush round the room until they run round the legs of the statesman, and make the latter nervous and confused, so that the unfortunate man loses the thread of his discourse. The emperor then consoles him with some jovial remark, and dismisses him."

The author refers in similar words to the visits which his majesty pays Prince Bulow when at Potsdam or in Berlin to confer on state matters. Prince Bulow, he says, understands how to restrain the monarch's imagination in order to discuss the practical details of administrative business with him, but the imperial chancellor is obliged carefully to select his material and not to bore the emperor with

### TOO MANY DRY DETAILS.

Such details as affairs of government cannot long chain the emperor's interest, for the monarch delights to abandon concrete matters in order to discuss abstract problems. This allows his majesty's wonderful imagination free play.

There are several other interesting passages throwing light on the many-sided character of that most fascinating personality the kaiser, which are too long to quote, or even to mention in a telegraphic message. The volume, following as it does the Hohenlohe memoirs and Count Reventlow's "Byzantinismus," will certainly excite keen interest.

The author devotes a chapter to the comparison of the emperor's personal attitude towards his own subjects and towards foreigners. His majesty does not tolerate the least familiarity from his own subjects, but he associates with Americans on terms of free and easy equality.

# THE "EYES" OF THE FLEET

## HOW THE CRUISER HAS BECOME THE BATTLESHIP.

Marvelous Development of Shipbuilding for the British Navy.

The details which have become public in connection with the new warships of the "Invincible" class render it perfectly clear that the word cruiser will be an anachronism to apply to the vessels, says the London Express.

They are, indeed, "capital ships," designed to lie in the first fighting line and smash an enemy by sheer preponderance of gun-power. Their advent will be the last word in the doctrine of homogeneity.

Meanwhile, the pace of warship development is so rapid that one almost shrinks from contemplating the "what is to be," even though it be actually materializing upon the ships.

Without trying to speculatively penetrate the veil of official secrecy which remains closely drawn around the "Invincibles," it is interesting to review briefly the momentary stage reached in warship design as exemplified by the latest example put afloat. This is the armored cruiser "Shannon," launched at Chatham not long ago.

The "Shannon" is one of a group of three cruisers built under the estimates of 1904-1905. She is a vessel of 14,600 tons' displacement, and of twenty-three knots' speed.

In this latter detail she is not superior to any type of cruiser designed since the advent of the county class five years ago. In point of size she is only 150 tons bigger than the "Powerful," which vessel is now ten years old.

But as a fighting-machine the "Shannon" marks such a prodigious degree of development upon either of the types named that it seems altogether a misnomer for her to be classed with them.

In truth, the war cruiser has virtually disappeared, and in her place stands a most formidable species of

### MOBILE BATTLESHIP.

The "Shannon" could sink the "Majestic," the prototype of the world's battleship a decade ago. The "Majestic" could now, under equal conditions, sink the "Shannon."

This is due to two factors—superiority of speed and potentially of gun-power. The "Majestic" carries four forty-six-ton guns, throwing twelve-inch projectiles of 850 pounds in weight. The "Shannon" will carry six twenty-nine-ton guns, throwing 9.2-inch shells of 350 pounds in weight; but the high-velocity, flat trajectory, and long range of the latter weapon renders it more effective in piercing armor than the former.

Moreover, the "Shannon" will be able to exercise this advantage of long-distance fire delivery and intensity of collective broadside discharge upon her own terms. A superiority of six knots speed would enable her to fight when she liked, where she liked, and how she liked.

Her broadside is belted with six inches of Krupp steel. The "Majestic" is armored with nine inches of Harveyized steel. So remarkable has been the advance in the powers of resistance of the metal that the "Shannon" could withstand a substantially heavier impact of gun-fire than the ten-year-old battleship.

To the average layman these may appear as dry and comparatively uninteresting details, but they are given merely to illustrate a point. One frequently hears it asked, "What is the distinction between a battleship and a cruiser—where does the one leave off and the other begin?"

Such a question cannot now-a-days really be answered at all. The development of the cruiser has rendered her so distinctly superior in her aggregate combatant value to all but the very latest type of battleship that the new one

# RENOVATING THE ABBEY

rection.—On resurrection morning Jesus appeared first to Mary Magdalene at the tomb in the garden (Mark 16, 8-11; John 20, 14-18), and a little later to the group of women on their way from the tomb to the city to bring the disciples word (Matt. 28, 9, 10). These two appearances were mentioned in our last lesson. "And after these things" (Mark 16, 12) on "that very day" (Luke 24, 13) "he was manifested in another form unto two of them." Cleopas and another unnamed disciple, "as they walked on their way into the country to a village named Emmaus" (Mark, John). Like the women to whom Jesus had revealed himself earlier in the day these two men no sooner become aware of the identity of their evening Guest, who strangely disappears from their sight in the same moment in which their "eyes were opened" to a recognition of him, than they hasten back to Jerusalem to inform the large company of disciples there assembled of the strange and wonderful revelation of their risen Lord which has come to them (Luke 24, 13-33). But even before they could communicate their joyful message they heard from the lips of the assembled eleven the very tidings they had travelled threescore furlongs in great haste to bring, namely, "The Lord is risen." It was Peter who of the eleven had been the first to behold the Master on that glorious resurrection day, and his testimony seems to have had more weight with his fellow disciples than that of the women whose story he with the rest had at first disbelieved. The apostolic group of eleven, minus one (Thomas), were still conversing with Cleopas and his friend and with each other about these strange tidings of great joy, and the company had just been seated to partake of a simple meal together in the seclusion of that inner room and behind bolted doors "for fear of the Jews" when Jesus "himself stood in the midst of them, and saith unto them, Peace be unto you." He turned just long enough to allay their fears and prove to them that it was really he, and to remind them of their great privilege and mission as his apostles to a sinful world, and then left them to think and talk over the significance of it all among themselves. Mark 16, 14; Luke 24, 36-43; John 20, 19-23; 1 Cor. 15, 5-8. John alone mentions the absence of Thomas on this occasion together with the second appearance of Jesus to the eleven after eight days. Thomas this time being present, and the appearance to the seven disciples by the Sea of Galilee John 20, 24-29, 24, 27, while Matthew and Mark record an appearance to the eleven on a mountain in Galilee Matt. 28, 16-20; Mark 16, 15-18. Here may be inserted the appearances of Jesus to the five hundred and to James mentioned by Paul in 1 Cor. 15, 6, 7. Christ's final appearance to the Twelve, his commission to them and his ascension are mentioned by Mark and Luke (Mark 16, 19, 20; Luke 24, 44-53; Acts, 1, 6-11). To this final appearance of Jesus to his disciples we must add the appearance to Paul (Saul) on the way to Damascus (Acts 9, 1-9; 22, 6-11; 26, 12-18; 1 Cor. 15, 8).

Verse 33. And as they spake these things.—The eleven with Cleopas and another unnamed disciple; also some others present in Jerusalem on the evening of the day of resurrection.

Peace be unto you.—The usual Hebrew salutation.

37. Supposed that they beheld a spirit.—A disembodied spirit, or, as we would say, a ghost.

39. It is I myself.—This assertion points to the one essential truth which the narrative, like the event itself is intended to teach, namely, the reality of the Jesus who rose from the dead and appeared unto the disciples. The question as to the nature of the resurrection body, which is raised by verses 39 and 43 on the one hand, and on the other, by the statements which refer to his sudden appearance among them in spite of closed doors, and his vanishing again from their sight (Comp. vs. 31, 36) is beyond our power to answer. The data are insufficient to lead to any definite conclusion, nor does it seem to have been any part of the intention of Jesus

events of the entire passage with those of the final departure of Jesus from this world.

These are my words which I spake unto you—See Matt. 16, 21.

All things . . . written . . . concerning me—All the Messianic prophecies of the Old Testament.

47. In his name—"On the basis of all that his name implies." It is his life and death and resurrection which makes repentance effectual.

Unto all the nations—"All families of the earth" (Gen. 12, 3). "All the kindreds of the nations" (Psa. 22, 27). "A light to the Gentiles" (Isa. 49, 6).

49. The promise of my Father—As given in the prophecies of the Old Testament (Isa. 44, 3; Ezek. 36, 26; Joel 2, 28) and also by Jesus himself during his public ministry (compare also especially John 14, 15 and 16).

50. He led them out—This event occurred forty days after the events mentioned in verses 36 to 43 of our lesson. Luke evidently is not concerned about the chronology of the events he is narrating; with him the importance of the events themselves far outweighs the mere setting they may have in time—or it may be that he assumes a knowledge of the chronology on the part of his readers and therefore is not careful to indicate each gap or omission in his narrative.

Over against Bethany—The traditional scene of the Ascension is the central summit of the Mount of Olives; but it seems more probable that it occurred "in one of the secluded uplands which lie about the village" of Bethany.

51. He parted from them—Greek, He stood apart from them.

Carried up into heaven—That is, gradually. "A cloud received him out of their sight" (Acts 1, 9).

53. Continually in the temple, blessing God—"And all these continued with one accord in prayer and supplication" (Acts 1, 14). The last clause of Luke's Gospel narrative thus connects that narrative with Acts in which the same author continues his account.

## WHEN THE KAISER TRAVELS.

Works Hard and is Accompanied by Staff of Government Officials.

Even when travelling the Kaiser is at work, for being the chief of the greatest nation he must keep the Government machine in motion.

A large staff of Government officials accompanies him. A high official from the Foreign Office attends to the duties of foreign politics, makes reports on the affairs of the state, receives the orders of the sovereign and keeps up the communications between the Kaiser and the Chancellor. Then there is a privy councillor who takes dictations, deciphers telegrams and transmits the same. Besides, two adjutants accompany the suite.

For the very lively exchange of messages between the Kaiser and the Chancellor special arrangement is made by the imperial postal department. Telegraphic messages must be presented at once to the Kaiser. When necessary to be deciphered a postal official is in the nearest telegraph office to attend to this duty.

When the Kaiser is out hunting a special messenger goes after him in case urgent messages must be delivered. Even at a late hour in the night the Kaiser has ordered that regardless of his own convenience he shall be awakened if important communications arrive. In addition to these telegraphic reports, mail matter, which arrives daily by courier, must be answered; then, also, attention must be given to the reports of Ministers from other departments, conferences must be held at all times of the day, and long dictations given in the study where the Kaiser is stopping, be it on board of the Hohenzollern or in his sleeper.

Added to this must be reckoned the hours when he is working alone, consisting of the reading of newspaper clippings, the active correspondence with his wife, from whom he receives a daily letter, and the correspondence with royalties or friends.

Americans on terms of free and easy equality.

## RENOVATING THE ABBEY

THE WORK OF REPAIR WILL COVER MANY YEARS.

Westminster Abbey Begins to Show the Effects of the Hand of Time.

Like others of England's historic cathedrals—Westminster and Exeter, for instance—Westminster Abbey has begun to show the effects of the hand of time, and the ravages of London's atmosphere.

Repairs upon the Abbey have now been begun, under the direction of the architects of the Ecclesiastical Commissioners, and for several years there will be work going on behind unsightly palisades and scaffolding, much to the disappointment of French and American visitors to London.

Motor omnibuses are held to be partly responsible for making repairs necessary, and residents in Dean's Yard, adjoining the Abbey, are outspoken in their complaints against the vibration which accompanies the motor omnibus traffic to Victoria. A new line has recently greatly augmented the number now passing the north front of the Abbey.

### NORTH FRONT DAMAGED.

It is to the north front that the greatest amount of damage has been done. Sealing of the stone has become general and spread along the entire front, seriously affecting the effigies of several bishops and martyrs. A few days ago a large section of stone fell just after the passing of a motor omnibus.

A policeman on point duty near the Abbey front said that the jarring is plainly felt inside the Abbey. The Victoria bound motors are worst, he said, and the amount of vibration appears to depend upon the manner in which they take the curve into Victoria Street.

The architects admit that in every case where appreciable portions of stone have fallen flaws have been discovered, due to the encroachments of time and weather.

### \$100,000 FOR REPAIRS.

Lack of means has delayed the work of renovation during recent years, but as there is now available some £20,000 a year, the north front is to be re-faced, practically in entirety.

The vibration is distinctly perceptible to worshippers.

How advisable it is to look to the repairs of our historic abbeys and cathedrals is well illustrated in the case of Exeter Cathedral, where the dean has just made the disquieting discovery that the south tower is resting on falling foundations. In the thirteenth century Bishop Quivil removed the fourth wall in order to throw the chapels at the base of the tower into the transepts—a fact which may have helped considerably to bring about the present condition of things. It is all the more serious in the case of Exeter, as the tower contains one of the heaviest peals of bells in the country.

The head of a matrimonial combine glanced at a bill from his wife's dressmaker. "When I proposed to you, less than two years ago," he said, "I was rather wild, and you said you considered it your duty to marry me, for the purpose of making something of me, did you not?" "Yes, John," answered his wife. "Well," he continued, "your efforts have not been vain. You have succeeded." "I'm so glad," she said. "What have I made of you, dear?" Once more he glanced at the bill. "A pauper," he replied, with a deep sigh.

where does the one leave on and the other begin?"

Such a question cannot now-a-days really be answered at all. The development of the cruiser has rendered her so distinctly superior in her aggregate combatant value to all but the very latest type of battleship that the new one overlaps the other.

### THE CLASSES HAVE MERGED.

In short, the classes are merged. And as it is the cruiser that has come up to the standard of the battleship, and not the battleship that has come down to the calibre of the cruiser, it must be held that the last-named type is the one that has grown out of existence.

We have abandoned the cruiser, in the proper significance of her denomination, and are now building types of war vessels which, differentiate them as we may, are all ships of the line. In justification of this policy it may be urged that a sea war can only be fought to finality by battleships. All the experience of the Far Eastern struggle went to confirm what was already held to be an established principle in this direction.

Fought to finality, yes! The vanquishing of the battle fleet of either of two conflicting powers means conclusive victory to the other. But this is the last stage in a campaign, and before it is reached there is inevitably much desultory and indecisive fighting to be done.

However much we may develop the various war units out of existence, so far as their original role is concerned, we must always come back to the elementary principles of sea fighting. Naval progress, after all, travels largely in cycles.

Thus, when the cruiser grew into a young battleship and was destined to lie in the line, a new type was evolved to supplant her in the necessary work of reconnaissance, and was classed as a "scout." This species of warship has not proved very successful, being scarcely adequate to the work they were designed to undertake, and so no more of them have been built since the completion of the original batch.

But now we find a new class of ocean destroyer being laid down, manifestly out of recognition of the necessity for units to keep touch with various squadrons and glean intelligence about the enemy. These mosquito craft are to have a displacement of 1,000 tons and a speed of thirty-three knots, and since they can scarcely be destined to carry torpedo aggression on to the blue ocean, seeing that all battleships and cruisers are themselves capable of indulging in this sort of fighting, we can only conclude that these new destroyers are intended as the latest experimental expression of the scout cruising units.

### FOES TO PILGRIMS.

Sacred Crocodiles of Indian Lake to be Deported.

The Pushkar Lake, near Ajmer, one of the most famous places of Hindoo pilgrimage in India, is gradually being silted up.

It is also infested with crocodiles, which have become a source of great danger to the ceremonial bathers, who have to be guarded with sticks while in the water.

As the shooting or killing of animals in Pushkar is against religious principles, it is proposed to remove the crocodiles, of which there are said to be about 200, to the sea or to the Ganges.

The lake became silted up in the twelfth century, and was restored at the cost of many thousands of dollars by Rajah Nahar, Rao of Marwar. It is now proposed that the work of restoration should be carried out by the State of Rajputana, or by a local committee of Hindoos, in co-operation with the authorities. It will cost about \$75,000.

### FEMININE.

She—"Is there any difference between a fort and a fortress?"

He—"Why, I should imagine that a fortress would be—er—harder to silence!"

# HOME.

For an invalid.—Wash some pearl barley thoroughly, simmer it in water till quite tender. Serve hot with some fresh cream. Flavor the barley with lemon peel, a bay leaf, or any whole spice liked.

Rice water is a very useful invalid drink if made thus: Put two tablespoonfuls of rice in one quart of cold water. Cook for an hour or until the shape of the rice is lost. Add sugar and lemon juice to taste.

Minced Beefsteak on Toast.—The best way to use cold beefsteak is to mince it finely and put it to stew for fifteen minutes with a little water. If the beef has been dried up by over cooking the first day, add to the gravy a good sized lump of butter, a small onion, and a teaspoonful of vinegar. Serve this smoking hot on nicely browned toast.

For a simple frying batter take four ounces of flour and work it smooth while quite dry, then add gradually a tablespoonful of best salad oil and quarter of a pint of tepid water; this must be mixed very smoothly with a wooden spoon. Let the batter stand for at least an hour, then beat together lightly, add the beaten white of one or two eggs and use.

Baked Milk.—Take one pint or quart of fresh milk at night, place in an earthenware jar and tie over carefully with thick white paper, place it in the oven at night directly you have done your cooking and let it stay till next morning. Then the milk will be thickened and can be used instead of cream.

Brandy Snaps.—Rub a quarter of a pound of butter into half a pound of flour, add half a pound of moist sugar and half an ounce of ground ginger, make all into a paste with a little treacle. Spread the paste thinly on tins and bake. When cooked, cut into strips and rolled round the fingers. When quite cold, put the snaps into tins to preserve their crispness.

To Utilize Scraps of Cheese.—Cut some nice short or puff pastry into rounds with a tumbler. On one half lay some finely grated cheese, seasoned with a little made mustard, cayenne and salt. Put some little bits of butter on it, and do not let the cheese be within half an inch of the edges. Turn the other half of pastry over, turnover style, having previously dampened the edges, press together, brush over with milk, and bake in a quick oven. Serve hot.

Potato Surprise.—To 1 pint chopped meat, any kind, add 1 teaspoon melted butter, slice of onion, salt and pepper. Heat the meat, put in pudding dish. Take 2 cups mashed potatoes and 1 egg put on top of meat. Brown in oven. This is nice for supper. Another way is to take cold boiled potatoes, cut in cubes, make white sauce, mix with the potatoes, season with salt and pepper, pour over the meat and bake in the oven.

A Tough Cake Made Tender.—If a sponge or angel cake is slightly tough, place it in a deep stone crock, carefully covering the jar, and let it stand in the cellar or cool pantry for one or two days, at the end of which time the cake will have become moist and tender. If a tough angel cake is left over night in this way it will generally be sufficient, but sometimes two or even three days will be required.

To Use up Cold Potatoes.—Mash the potatoes finely with a little butter and put a layer in the bottom of a pudding dish. Season with some chopped boiled onion, chopped parsley, pepper and salt. Dredge all with flour, then have another layer of potatoes, then seasoning, adding little bits of butter if the potato seems dry. When the dish is full pour over it two tablespoonfuls of milk, scatter breadcrumbs on the top, dot little bits of butter or dripping over, and bake to a pale brown. Serve this with cold meat.

## ANARCHY IN THEIR JAILS

SUCH IS THE CONDITION IN RUSSIA AT THE PRESENT TIME.

Prisoners Mutiny, Kill Their Warders and Escape to Ravage Neighboring Towns.

Not only does anarchy with mob-law rule Russian towns, but it has spread into well-known prisons. Accounts come in continually from different parts of the empire of warders killed, governors wounded and inhuman prisoners escaping to pillage the neighborhoods they pass through and sow bloodshed and horror wherever they go.

From a prison in Eastern Russia, just under the Ural Mountains, comes a story which seems almost incredible until it is remembered that as bad and worse things are happening in other districts.

According to the report of the governor, two men, sentenced to a long term of hard labor, were placed together in a cell, awaiting their turn to be taken to the other side of the Urals. They were friends, and soon made up their minds to escape. There was a third man in the cell and to him they confided their plans.

### HE PROMISED TO HELP THEM.

They worked hard all night long and for many nights, digging a tunnel under their cell. All the prisoners in the place knew of it; for in these prisons, where the supervision is inefficient, news travels from cell to cell like wildfire. Every morning, these three men filled their pockets with the earth dug up during the night and also put it behind their shirts. They turned it out in the prison yard when they went for their daily exercise. But one morning, when they were nearly at the end of their task, they discovered that they were being closely watched, and left off digging for a day or two. They had, however, no sooner begun again than they were searched, the earth in their pockets discovered and their tunnel as well. All the prisoners heard of it, and began to look for the spy who had given notice to the authorities.

All declared that only one could be guilty, and that was the man who shared the two men's cell. The prisoners swore to have the man's life. Delegates from every cell conferred at exercise time and were unanimous in declaring that their victim must be hanged. The only one who suspected nothing was the victim himself, who helped the friends from good-naturedness and had never the least intention of spying upon them. At last a fitting moment arrived when there was no guard about. At 2 o'clock one afternoon, six delegates entered the cell. The hook and the rope were in readiness.

### THEY BEGAN THEIR TRIAL.

"What shall we do with this traitor?" asked one man, pointing to the unhappy victim.

"Hang him!" they all cried. The man tried to escape; he rushed to the door, shouting for help. But he was one against eight, and after an awful struggle they pulled him back, slipped the noose round his neck and hanged him on the hook.

At this moment the guards appeared at the door of the cell. They were met with a volley of plates, benches, tables,—anything, in fact, to keep them out till their victim was dead.

The inmates of the other cells, hearing the row, ran to their comrades' assistance. The soldiers fired. Four men fell. The trial was over. A few wounded, a few killed, and the hanged man cut down—still breathing. This is one of the pictures, out of hundreds, which disgrace Russia daily.

## THE MYSTERY OF DREAMS

SOME EERIE EXPERIENCES OF DEATH AND DISASTER.

Story of a Lady Who Dreamed of the Winning Horse — The Story of a Shipwreck.

The individual who dreams of winners of horse races is well known to every racing man, and there is no doubt that many an unfortunate man can date his ruin from the time he dreamed that a certain horse would win a forthcoming event. But there is a ludicrous story told of a lady who kept on dreaming of different horses in a race in which her husband was interested. Every time she dreamt of a different horse she backed it. Her husband was the owner of the favorite, and as she backed the horses in his name—to small amounts, it is true—the news, of course, soon leaked out, and the sporting Press and the public began to wonder what was the game of the favorite's owner.

### UNPLEASANT HINTS.

At last the unfortunate man was obliged to make a public statement that his wife's bets only amounted to a few pounds, and that he himself had known nothing whatever of the matter. By this time, however, his market was spoilt, and when his horse won there were, of course, people who hinted all sorts of unpleasant things, and the wretched man has never heard the last of his wife's dreams from his intimate friends.

A curious case of a prophetic dream occurred in 1884, when a London visitor was staying with a clergyman's family in Carnarvonshire. During the course of his visit the family album was produced, and he looked at the portraits with perfunctory interest until he became suddenly interested in the portrait of a young man in naval uniform. He asked the clergyman who the young fellow was, and learnt that he was a first cousin of the family, serving in the mercantile marine. The visitor hesitated for a moment, and then spoke earnestly to the clergyman in private.

"I've never seen that young fellow, as you know," he said, "but I saw him in a dream three weeks ago, and I feel that I must tell you what I saw. I dreamt that I was standing on the sea-shore, and in a blurred sort of way I saw a shipwreck. A flash of lightning showed me the name of the ship, which was the *Mirabelle*."

### WAS IT MERE COINCIDENCE?

"That's the boy's ship!" ejaculated the clergyman.

"Then there seemed to be a blank, and the next thing I saw was a body washed ashore at my very feet. The features and uniform were those of the young fellow whose portrait I have just seen. I stooped over him, and a large '5' seemed to glow on his chest for a moment, and then I awoke."

The clergyman was interested, but attached no importance to the dream, though he thought the appearance of the figure "5" was rather strange.

In due course the visitor left, with his strange dream still haunting him. A few days later, on the 6th of the month, to be exact, he took up the paper, and there saw his dream had come true. A ship had been wrecked, and a number of the crew had been saved, but the young Welshman had been washed ashore, fully dressed, and, of course, dead; so that in every particular his extraordinary dream had been realized.

The wreck had occurred on the 5th of the month, and the dreamer came to the conclusion that the figure "5" on the poor boy's chest indicated the date on which the catastrophe would take place. So, in some awful and mysterious way, he had been sent a prophetic dream concerning a man he had never seen in his life.

The boy who was drowned was the

# ON THE FARM

WATER DISTRIBUTION ON FARMS.

It is easily possible under present conditions for the farmer to have as satisfactory water supply as the man who lives in the city or village. True, a farm water supply requires individual attention, but with wind pump, gasoline engine and water distributing devices, there is no reason why there should not be a bath room in every farm home, running water in every room, water easily available for washing buggies, carriages, etc., and plenty of water in case of fire.

There are several good ways of installing a water supply, the cheapest being to dam up a spring or brook that is higher than the house, and then let the water come down by gravity. The cost of this, outside of the labor, is merely a matter of piping. The opportunities for using this plan, however, are very rare, as water can seldom be obtained from a higher level.

Another very simple means is to have a pump in the kitchen, at the cellar, or a well by which water may be forced into an attic tank. From this tank the water is delivered by gravity pressure to the kitchen. The weak points in this are the danger of freezing in the winter and the fact that the water becomes very warm in the summer. Further than that, the weight of the tank in the winter frequently does much damage to the light frames of an ordinary farm building. The water is conducted from this tank to all parts of the house and is thoroughly satisfactory.

During recent years the pneumatic water systems have been placed on the market and are rapidly becoming very popular. The main features of the pneumatic or air pressure system is a pressure tank which is located in the cellar, or buried in the ground, so that freezing will not be possible. The water is pumped into the tank in the usual way. Pumping the water compresses it and it is forced out wherever wanted. The pressure can be regulated by pumping, so that if a heavy stream is wanted, a little additional pumping will provide it.

This method is entirely practical and has several features which commend it for special consideration. It is protected against frost in the winter and the water does not become warm in the summer. There is no danger of cracking the ceilings and the several objections to the overhead tanks are avoided. Then, too, a greater pressure of water can be obtained, insuring

### VERY GOOD FIRE PROTECTION.

Where a small amount of water is required and where the water is taken from a shallow well or cistern, the hand pump is satisfactory. Where the source of supply is a deep well, and where a large amount of water is desired, some power should be used for pumping. The most common form of pumping power is the windmill. They have been so generally used on farms that reference to them is almost unnecessary. Possessing, as they do, both advantages and disadvantages, the net result is satisfaction.

Where there is a flowing spring, with a good head of water, a hydraulic ram is a good form of pumping power to install. It is entirely automatic and the cost of the ram is nominal. The force of the water operates it. A great excess of water is necessary, as about six to ten gallons of water is used to every gallon pumped.

Another and very generally used method which obviates hand labor is the pump, run by some kind of an engine such as gasoline or hot air. The hot air engine is very widely used and its great recommendation is its simplicity. As its name implies, it is operated by the expansion of heated air. Anyone who can build a fire, can operate a hot air engine; and the fuel may be either

their layer of potatoes, then seasoning, adding little bits of butter if the potato seems dry. When the dish is full pour over it two tablespoonfuls of milk, scatter breadcrumbs on the top, dot little bits of butter or dripping over, and bake to a pale brown. Serve this with cold meat.

Boiled salt beef is such a useful dish in a household where sandwiches are constantly needed, and may be pickled in twenty-four hours as follows. Nearly fill a tub with fresh rain or river water, lay across it three laths, on which rest the meat at about one inch distance, above the water. Heap on the meat as much common salt as it will lie on it, and let it remain till next day, when you will find it quite ready for cooking. Cook very slowly in just enough water to cover, adding onions, carrots and whole spices to taste. Serve hot at first with the vegetables round it.

#### HINTS FOR THE HOME.

For a strong china cement use powdered flint glass mixed with the white of an egg.

When roasting meat remember the old country rule. "While meats well-done, look at red spots underneath." This also is a game.

When a jug has been burned pour it out and stand it in a basin of water until it is cool, when it will be quite free from the smell and taste.

A desirable way to clean bamboo furniture is to wash it well in warm water containing a gill of salt to each quart. This will preserve the color.

In cleaning the brass around a keyhole it is almost impossible not to soil the surrounding wood. Get a piece of cardboard about four inches square, cut a hole in it the shape of the brass, and put it over the keyhole when cleaning, and the wood will not be touched.

A perfectly boiled egg is never broken in the boiling. Bring the water to the boil, put the egg in a spoon, and place it carefully in the water, let this boil gently for three and a half minutes. By following these directions my readers will find that they do not break the shells in cooking.

To Keep Sponges Soft and White.—Wash occasionally in half a gallon of warm water in which a teaspoonful of tartaric acid has been dissolved. Then rinse in plenty of cold water and set in the air. In many houses bath sponges do not receive sufficient cleansing, and so this hint will be acceptable.

For breaking out on the lips and patches of eczema, apply glycerine and sulphur mixed to the consistency of ointment. At the same time it is well to take barn and treacle for three mornings following. Mix the barn in the proportions of one part to two of treacle. Leave it off for three mornings and then take another course.

To Blanch Walnuts.—Crack the shells so that the nuts are not split, pull out the soft part of the shell, put the walnuts into a basin, pour boiling water over them, and let soak for two minutes, and then the skins can be quite easily removed with a silver pocket-knife or walnut-peeler. Throw the walnuts into cold water as they are peeled, and wipe dry with a cloth.

Keeping apples during the winter is quite easy, provided you have the proper kinds. There are many varieties which will not keep after October. Spread the apples on shelves or on the floor of an empty room, so that they do not touch each other. Whenever a bad apple is seen it should be removed and the space where it stood wiped dry.

For polishing floors and furniture shred one ounce of yellow soap and two ounces of beeswax into a jar; pour over sufficient turpentine to cover. Stand at the side of the stove and stir occasionally till the mixture is of the consistency of cream. Rub a little of this on and then polish with clean cloths. Oilcloth polished with this will look well and last for years.

He—My views on bringing up a family are to— She—Never mind your views; I'll bring up the family; you go and bring up the coal."

wounded, a few killed, and the nipped man cut down—still breathing. This is one of the pictures, out of hundreds, which disgrace Russia daily.

#### BRITAIN'S POPULAR ADMIRAL.

##### Lord Charles Beresford Is Commander-in-Chief of the Channel Fleet.

No more popular man was ever made admiral than Lord Charles Beresford, and following from the facile pen of Mr. T. P. O'Connor hits off exactly this lifelong friend of the King:

Lord Charles Beresford's appointment, he writes, to Commander-in-Chief of the Channel fleet has given genuine pleasure to the millions of admirers of this typical sea dog. There is a general feeling that at last a round peg has been found to fit a round hole. He is so deservedly popular amongst officers and men that his promotion is certain to leave the Channel fleet all the better for its relations with "Charley," as he is universally called. He looks an ideal sailor, broad and burly, with well-tanned face, out of which shines a pair of searching blue eyes, which could only belong to a man of truthfulness and fearlessness. He is clean-shaven and rejoices in a bull-dog jaw, which suggests that he is a tough customer to run up against.

He is particularly keen on night attacks and those mysterious manoeuvres which necessitate lights out and complete darkness. For this reason he has been christened by the jesters of the Mediterranean fleet "Deadlight Charlie." Lord Charles has all the spontaneous wit of his Waterford ancestors. Once Sir William Harcourt, just after his change of front on the subject of Home Rule, was telling Lord Charles that he thought he might in time become a statesman. "though," he added, laughing, "I must admit that you don't look a bit like one." Lord Charles instantly replied: "For that matter, you don't look like a weathercock."

As a Parliamentarian, Lord Charles Beresford was one of the most popular men in the House. His speeches were as whiffs of the briny sea let loose amidst the hot and overcharged atmosphere of party debate. They were always to the point, and generally witty. "Charlie's up" was a cry that sped through the House like a fiery cross, emptying smoking and reading rooms, and even proving a greater attraction than the terrace. He is supposed to still hanker after a seat on the green benches.

Lord Charles Beresford never goes on a cruise without being accompanied by a small zoological garden of pets. There is his old bulldog, who has figured with no little effect in many of his master's photographs; and there are likewise a seven-hands high Shetland pony, and a raven, presented to Lord Charles by Major Moffat. The raven, which has one wing clipped for obvious reasons, is named "Sammy," and was the friend of every "man Jack" on board Lord Charles' flagship. During the "stand easy" "Sammy" was allowed to parade the deck, and a marine was told off to return him to his cage at regular intervals. It was a common spectacle to see "Sammy's" owner and his staff upon the quarter-deck, helpless with laughter, watching the marine pirouetting about after the nimble raven.

#### GOOD SERVANTS IN HEAVEN.

Mrs. Pilettion (to her coachman)—"James, I trust that you are an attendant at religious exercises?"

"Oh, yes, mem, I goes as often as I has the chance, mem."

"And I trust that you feel it your duty to lead such a life here as will assure you a place among the good in the next world."

"Oh, yes, mem, I tries to. Thank you kindly, men."

"I am glad of it, James. I have been so much pleased with your services that it is a real comfort to me to know that if we are permitted to have coachmen in heaven, I may still employ you there."

the conclusion that the figure "5" on the poor boy's chest indicated the date on which the catastrophe would take place. So, in some awful and mysterious way, he had been sent a prophetic dream concerning a man he had never seen in his life.

The boy who was drowned was the present writer's cousin; while the dreamer was a hard-headed engineer, until recently connected with one of the properties of the late Mr. Alfred Beit.

Second sight, or the power of foretelling disaster, perhaps hardly comes under the heading of dreams, but many uncanny tales are told of this strange gift which is possessed to a great extent by the Scotch, and to a less degree by the Irish.

#### PROPHETS ABOUND IN VILLAGES.

You need only penetrate to some of the smaller Scotch villages, and you will often find an accredited prophet, whose powers are never called in doubt. Question him, and he will shut up like a knife, but those who know say that he dreams with his eyes open, and that his prophecies never fail. Strangely enough, they are always to do with death or disaster, which adds another element of mystery to the "inexplicable stuff" of which dreams and visions are made.

Mr. T. P. O'Connor, M.P., the well-known journalist, is, in a modified degree, the possessor of similar powers. It is, he thinks, an unhappy gift to be able to look into a fellow-creature's face and know by intuition that he is doomed. Analyzed in cold blood, however, Mr. O'Connor's power is, perhaps, the observation of the trained journalist, which enables him to note approaching disease and decay; but the fact remains that his predictions have proved startlingly true.

Dreams and visions are inexplicable, and it is perhaps intended for our benefit that we should never discover what that power is.

#### MR. MYER'S WEIRD PROMISE.

The late Mr. F. W. H. Myers, who was perhaps the greatest authority in psychical research—which includes inquiry into ghost-stories and dreams—always declared that after his death he would endeavor to solve the mystery of apparitions and dreams. So before he died he wrote on a piece of paper a sentence, known only to himself, and placed it in a sealed envelope, which, in its turn, was locked in the safe of a well-known Harley Street physician.

Mr. Myers promised, if he were able, to revisit his friend after death and impart to him the sentence enclosed in the envelope. But Mr. Myers is dead, and has never reappeared even in a dream, and that sentence still lies in the Harley Street safe unread.—London Answers.

#### YAWNING FORBIDDEN.

##### Audience Must Not Show Ennui in French Theatre.

The Mayor of Toulon, France, has issued an order prohibiting hissing and other signs of disapproval at the local theatre.

"No one will be allowed," says the order, "to hiss, make audible remarks, applaud ironically, yawn noisily, use bad language or otherwise disturb the dignified calm necessary to the proper enjoyment of the drama."

Any branch of the order is to be punished by immediate expulsion, and spectators who have complaints to make are directed to write them in a book provided for the purpose.

#### A GRAVE CHARGE.

"Doctor," said the shrewd looking man, "how many feet of gas does it take to kill a man?"

"That's a queer question," replied the doctor, "why do you wish to know?"

"One of the guests at my hotel used enough of it to kill himself, and I want to send in a proper bill to his executors."

pump, run by some kind of an engine, such as gasoline or hot air. The hot air engine is very widely used and its great recommendation is its simplicity. As its name implies, it is operated by the expansion of heated air. Anyone who can build a fire, can operate a hot air engine; and the fuel may be either wood, kerosene, oil, gas, gasoline, or, in fact, anything that will burn.

Within recent years, the gasoline engine has become immensely popular. A small gasoline engine on the farm will not only furnish power to run a pump, but it will also enable the farmer to have power to operate churns, feed cutters, wood-saws, or for any purpose where power is desirable. The gasoline engine is generally given preference to the hot air engine, because of the lower cost. The operation of a gasoline engine is a comparatively simple matter and can be readily learned by anyone at all familiar with machinery.

The summary of the farm water supply is this: If a well, cistern, spring or brook is nearby, a farm house can be completely equipped with a water supply by means of a storage tank, pump and power for pumping. The storage tank to be used will depend upon what is preferred after carefully considering the objections of each kind. The pump will depend upon the amount of water to be used, the nature of the source of supply and whether the power is desired for any other purpose or not. The plumbing system will be about the same in each case and similar to plumbing systems in the city.

#### TESTS WITH FORAGE CROPS.

Besides cowpeas, we grow soy beans, velvet beans, kafir corn, dhourra, sorghum and teosinte, says Prof. J. W. Pincus. Soy beans and velvet beans belong to the same family as cowpeas, namely, legumes, while all the others belong to the same class as corn-grass family. Soy beans resemble the cowpeas, but the seed is more round, usually somewhat like the field pea. The plant grows more erect, and for this reason many farmers prefer it to cowpeas. The stem of the soy bean, however, is much more woody, and, in general, our cattle do not eat it as readily as cowpeas. It is planted the same as cowpeas, but it is a little more hardy and is therefore recommended for northern latitude.

The velvet bean is an excellent climber. When planted with corn, it completely envelopes the corn plant. The seed of the velvet bean is very large and expensive. During the last two or three years, it germinated very poorly on our place. I would be cautious in planting it on large areas. It never produces seeds in this latitude, but I have seen a few blossoms. Besides producing kafir corn broadcast with cowpeas, we have grown it, as well as dhurra, sorghum and teosinte in drills 3½ feet apart. The seeds of kafir corn and dhourra are very much alike. In fact, the plants of kafir corn, dhourra and sorghum resemble each other so much, that unless carefully examined, a person will not notice any difference. There are two varieties of kafir corn, the whole and the red.

These forage crops were grown in one-twentieth-acre plots. The yield was as follows: Red kafir corn, 875 pounds, or at the rate of 8½ tons per acre; white kafir corn, 945 pounds, or 9 tons per acre; sorghum, 785 pounds, or about 8 tons per acre; dhourra, 1,100 pounds, or 11 tons per acre; teosinte, 2,050 pounds, or 20½ tons per acre. The latter gave the heaviest yield. It resembles corn, but it suckers profusely. We planted it by hand in drills 3½ feet apart and about 2½ feet apart in the drills. The seeds are very small and very hard and slow in coming up. The plant grows slowly at first, but afterward produces an abundance of succulent leaves. As there are no heavy stalks, cows relish it. There is not much waste in feeding teosinte. It has never blossomed with us.

He does not help much who always gets in the wagon before he puts his shoulder to the wheel.

Herod, on this, ordered that St. Stephen should be stoned to death outside the walls of Jerusalem, so that to this day St. Stephen the Martyr is the patron saint of stone-cutters.

the church, turns at the portals toward the great throng, he pronounces a blessing, and all are on their knees in an instant. Then the Christmas ceremonies begin. Toward dusk a procession of cowed monks carrying lighted tapers descends into the Grotto of the Nativity, where they chant the first vespers of the feast. On the eve of the great day the Bethlehemites assemble in the parish church, where the Franciscans chant matins. Outside bonfires blaze and the quaint square is warm and bright as in the daytime. At 10 o'clock a procession is formed, headed by the guardian of the holy crib, who is always a man high in the ascetic life. He carries a wax image of the Christ child in his arms.

Music and the murmuring of voices in prayer issue from the subterranean sanctuaries with a soft cadence. When the procession arrives at the niche containing the holy crib a deacon receives the Christ child. The gospel is then sung, and when the deacon reaches the words, "Here she brought forth her first-born Son and wrapped Him in swaddling clothes and here laid Him in a manger," the act of an assistant suits the words and the wax infant is wrapped in swaddling clothes and laid in the recess of the manger. By midnight the Church of the Nativity is crowded to its extreme capacity by Syrians, Russians, Germans, and representatives of nearly every other nation. When the bells of the parish church sound through the still night air, announcing the commencement of the midnight mass, a great sound, as that of rejoicing, issues from the throng assembled in the deep cave. The ceremony is conducted with royal pomp. Vestments fashioned by queens and empresses of long ago are worn by the patriarch and officiating priests. About daybreak the ceremonies are over and the natives go back to their homes to celebrate the day in general merrymaking.

From Bethlehem one's thoughts naturally turn to Rome, the city of the head of Christendom, and the representative of the little Child who was born so many, many years ago in a poor cave. The domestic side of Christmas in Rome is not so much in evidence as it is in the United States. One misses the streams of shoppers that make the few weeks before so full of activity and life, as well as the myriad of beautiful articles so temptingly displayed in the splendid shops, the equal of which no country in the world but ours can show.

But the special feature of the Roman Catholic celebration are the services at the Church of St. Mary of the Capitol, where rests Il Santo Bambino, or holy child. This is a large doll or image about the size of a baby of six months old and was carved by a friar of the Franciscan order in Jerusalem from a block of olive wood found near there. A legend has it that when the work was nearly completed the friar was very much worried over the fact that he had no point with which to ornament it, and, after praying over it in his cell, he fell asleep and on awakening found the image or child, smiling upon him with bright, blue eyes, rosy cheeks and golden-brown hair, hands and feet glowing with lifelike flesh tints. The happy friar recognizing the miracle, bowed his head in admiration and kissed the ground before which it lay. This miraculous image was brought to Rome several hundred years ago and many miracles have been attributed to its influences, and so great has been the veneration in which it has been held for many centuries that it has been made the recipient of gifts that amount to many millions of francs. It is covered with diamonds, rubies, emeralds, sapphires, and pearls of great value, while the crown it wears is fine enough for a queen. It has its own servants, who accompany it wherever it goes; its own carriage for horses and liveries. On Christmas Day, after mass, the bambino is carried in a procession by the priests from its tabernacle, accompanied by monks and prelates, oftentimes a cardinal and a great concourse of influential Roman citizens, clad in grey cloth robes, everyone carrying lighted candles; and, after traversing all the aisles and the nave of the church, it

paying of customary compliments and the exchange of visits—all these take place on the first of the new year. "Happy New Year," they will say to you, but never "Merry Christmas."

Outside of the metropolis, in many of the larger cities and in nearly all the villages, children will gather and with lighted candles in hand line up in a procession, carrying about the place the symbolic creature, singing carols as they go, some of which are very beautiful.

But it is in Provence, Brittany, and Franche Comte that these festivals assume the quaintest form. They recall singularly heathen customs. On that day in every house the celebrations commence with a big supper. All fasting and mortification is laid aside. The table is set before the fireplace, where sparkles, bright and cheerful, the carigule, the old trunk of an olive tree, crowned with laurels, dried up and carefully prepared for the occasion.

Supper over, the whole family circle around the fire and sing Christmas carols till midnight, the time of the first mass, which everybody scrupulously attends. The night of the 24th of December is the real fete. The poor are permitted to beg publicly the whole night, singing hymns to touch the hearts of the people. From the windows children throw them alms in paper purses, which they have previously set on fire for guiding purposes.

Among the peasantry, still deeply rooted in superstition, it is customary also to leave upon the table Christmas Eve "la part des morts" (the share of the dead), a touching custom which seems to associate the spirit of the dead with the pleasure of the living. The Christmas festivals in France last three days.

A true account of the "creche" celebration in the neighborhood of Marseilles will hardly be accredited. If anyone should take upon himself to say that theatrical performances known in literary history under the term of mysteries still take place in some part of the so-called civilized world to-day; if he added that in those same places religious spectacles almost as ridiculous as that of the "la fele de l'Ane" (donkey's day) are likewise still given, many would certainly receive the statements with incredulity. Yet these facts can be affirmed.

Probably nowhere in the world are old customs followed so religiously in the celebration of Christmas as they are in the country houses in England. Preparations for the festivities occupy weeks. Every room in the house is decorated with holly and mistletoe, the latter hung over doorways, suspended from chandeliers and placed in any position, under which the young girls of the family are likely to be caught in an unsuspecting moment and forced to pay the penalty of a kiss for their lack of that eternal vigilance which, it is said, is the price of safety. The celebra-

tion and the highest church dignitaries took part and the entire city suspended all business.

The celebration in Germany and Austria opens on Christmas Eve with the spreading of tables and the lighting of candles that the Virgin Mary may find something to eat as she passes along. The Christmas tree is brought into the house and walls and doors are decked with evergreen. The eve is the especial time for the children. They care for the tree themselves; after they have mounted the presents and lighted the candles the elders are invited and the presents are distributed to them. The parents distribute their presents to the children on the next afternoon. On Christmas Eve Knecht Rupert, the servant man, in high buskins, white robe, mask and wig, goes from house to house as the servant of the master. He inquires for the children. Those less than seven or eight years are ignorant of the meaning of the great Rupert and quake with fear when he asks whether they have been good. If they have he notes the name and the children know that a present will be made to them. Stockings are also hung at the foot of the bed or at the fireplace, for Kris Kringle—a corruption of Christ kindlein, the infant Christ—is supposed to descend the chimney with gifts for the little ones. If the children have been naughty the sweetmeats give place to a birch rod, which which the child must be whipped. This is supposed to be given by Pelsnichol, or Nicholas of the Fur.

There is a peculiar connection between the names used for the good saint of the children at the Christmas time in all lands. Santa Claus, or Klaus, is a corrupt contraction of Saint Nicholas, sank-ni kolaus; that is, Saint Nicholas.

In Austria they have July weather at Christmas time, but the festivities are the same as in the northern hemisphere, with the addition of open-air picnics and quantities of flowers.

## FUN WITH A CHRISTMAS TREE.

Every Gift Must be Wrapped up and Made Mysterious.

The ordinary Christmas tree hung with presents and heaped at the base with more in brown paper wrappers is a sufficient delight for many children, but since there is always great fascination in novelties, the tree of this Yuletide should be converted into a mystery one.

The task of metamorphosis is not difficult, though it takes some little time to carry out, and when it is completed it is a capital aid to merriment. We all know what bran pies are, those delightful repositories of presents into which the hands of the eager are thrust, to be withdrawn after a certain space of time, with the parcel that promises to have the greatest prize; well, the mystery tree partakes of that species of fun,

no sooner had he said these words than the cock, stretching out his neck, crowed aloud, though he was dead and cooked: "Christ is born!"

Herod, on this, ordered that St. Stephen should be stoned to death outside the walls of Jerusalem, so that to this day St. Stephen the Martyr is the patron saint of stone-cutters.

## CHILDREN'S CHRISTMAS PRESENTS.

On the day when Christ was born, a little maid of Bethlehem was tending her flock of sheep in the fields.

When she heard the glad news and how the three wise men came from the East with their presents of gold, frankincense, and myrrh, she herself longed to see the new-born Babe.

"But, alas!" she cried, "I have no gift to bring Him."

And she began to weep. But presently when she looked up through her tears, a glorious angel stood before her.

"Do not weep, little maid," said the angel, "but seek, when I have gone, on the ground and you shall find a gift."

The angel then vanished, and where the angel's feet had rested on the ground flowers blossomed, white among green leaves, and the little maiden bore them in her arms to the stable as her gift to the Babe—the flowers that we call Christmas roses.

Another story about children's Christmas presents is told of little Hermann Joseph, the clockmaker of Germany.

It was the custom of the people in the town where he lived to take presents every Christmas Eve to the Cathedral, and to lay them at the foot of an image of the Holy Mother and her Babe.

Little Hermann Joseph was very poor, and one Christmas Eve he did not know how he was to find a present for the Babe. But at last he decided to take the one thing in the world that was his—an apple. So, with his apple in his hand, he ran off to the Cathedral.

When he came to the image of the Holy Mother and the Child, he held out his apple, and the story goes that the Child, though only in image, smiled upon him, and grasped the apple in his baby hands.

## A STORY OF SANTA CLAUS.

Some children may not understand that Santa Claus was not always the jolly old Father Christmas that they picture him, who, on Christmas Eve, drives over the roofs of all the houses in a sleigh drawn by reindeer, his pockets full of presents with which he clambers down the chimneys and pops in the stockings hanging over the beds. For Santa Claus is only a child's name for the good Saint Nicholas, who was once a great Bishop in Asia.

To all the children round about that part of Asia where St. Nicholas lived, he was her best friend, and wherever he went he gave them presents, if not chocolates and toy guns as he does to-day, perhaps figs and dates and such other good things as he could find. And many children were sent by their parents to visit the good saint.

Once there were two boys who lived in Asia who were sent by their father to school in Athens, and they were told that they must stop at Myra, where the saint lived, and stay the night with him.

But instead of obeying their father, the boys stopped the night at the inn, and for this disobedience they were soon punished, for the landlord killed them, and robbed their purses, and threw them into a pickling tub.

Fortunately, the good saint saw all that had happened in a vision. He went to the inn, and there he accused the wicked landlord of the theft and the murder; and then he prayed earnestly that the boys might come to life again.

No sooner was his prayer ended, than the boys leapt from the pickling tub and fell at his feet.

The good saint refused to take their thanks, and went off home as though nothing had happened; and this is why in pictures of Saint Nicholas one sometimes sees a tub drawn beside the saint, with two bad boys popping out their heads.

History doesn't say so, but no doubt they were better boys ever after.

CURIOSITY AND THE RAT.

Rat.—What's this? Guess I'll take a nibble.

Gracious, this must be a new kind of a trap.

# Christmas Dinner

## Oysters.

Chestnut soup.

Roast turkey.

Browned potatoes. Mashed squash.

Cranberry sauce. Mixed nuts salted.

Devised macaroni.

Salad.

Little plum pudding.

Ginger glaze

Cheese.

Coffee.

Oyster a la Dumas—Serve the oysters either as cocktails or on plates with a teaspoonful of the following sauce over each:

Chop a shallot, a teaspoonful of chives, a teaspoonful of parsley together and mix in a bowl with a tablespoonful of olive oil, two drops of tabasco, a teaspoonful of Worcestershire, a tablespoonful of tarragon vinegar, four tablespoonfuls of tomato catsup, and the juice of half a lemon. Add a teaspoonful of salt and a saltspoonful of white pepper.

Or the shallots may be cut up excessively fine and mixed simply with a little ground pepper a tablespoonful of vinegar, and the juice of three lemons. Chestnut Soup—Peel and skin a half a pound of large, sound chestnuts, cook them in broth until soft, and then press through a sieve. Add to this puree the yolks of two eggs beaten and a pint and a half of cold broth.

Creamed Squash—Peel and divide a large squash into small pieces. Cook in well salted water and press through a sieve. Return the pulp to the saucepan, work in two or three ounces of butter and a little warm cream, beating like mashed potato.

Devised Macaroni—Boil, blanch, drain and chop a half package of spaghetti or macaroni. Thicken one pint of cream or milk with a roux of flour and butter in the proportion of two tablespoons of each, and add to it one saltspoonful of Cayenne pepper and half teaspoonful of mustard. Add a tablespoonful of onion juice, a half tablespoon of salt, pour over the macaroni in ramekins, sprinkle the top with crumbs and brown lightly in the oven. This is served as an entree and is made more attractive by substituting a chopped sweet pepper for the Cayenne. Using cream instead of milk also makes it enough better to pay.

Salad—Mix apples and celery in proportion of one-fourth celery to three-fourths apples and add one chopped red sweet pepper. Dress and serve as usual.

Individual Plum Puddings—If the pudding is to be steamed use the small jars which have held extract of beef and steam for four hours. An easier way is to boil them in small baking powder caps or in molds procured for the purpose. Use a shallow iron kettle and let the water come within two-thirds of the top of the cans, keeping the kettle closed tightly. They will only need to boil an hour and a quarter when made as small as this, and should be raised on a trivet or a few nails laid in the bottom of the kettle.

Plum pudding to be at its best should be cooked in a cloth pudding bag and hung from a nail for three or four weeks in a dark place. An old English recipe is this: Soak six ounces of stale breadcrumbs in a cup of hot milk, and allow it to stand and cool. When cold, add one-half pound of brown sugar, the yolks of three eggs beaten to a cream, one-half pound of raisins seeded just before using, one-half pound of currants, two ounces of citron chopped, one-half pound of suet chopped fine and salted. The fruit should be well dredged in flour before adding to the bread. Now mix in two ounces of lemon peel, one-half a grated nutmeg, juice of one lemon, and two ounces of sweet almonds chopped fine. Beat well together, and, the last thing, add the whites of the eggs whipped to a stiff froth. Pour into

SANTA CLAUS' ARRIVAL.

## OUR CHRISTMAS WORD

Cheerfulness, the keynote of Christmas, is the persuasive influence that affects the religious, social and domestic relations of all sorts and conditions of men. For whatever may be the limitations of personality or environment, however indifferent individuals here and there may be, or seem to be to the religious associations of the season, all are in some way influenced by the prevalent feeling of good fellowship.

Though interested in the sentiments and observances that cluster about this season, we are likely to overlook the fact that these are not peculiar to our own age, or even to the Christian generations. Thousands of years before the advent of the Redeemer, we find a general appreciation of the winter solstice as a religious and social festival, and indeed, as announcing the approaching nativity of the God-man, whether known as the Roman Saturn, the Persian Mithra or the Egyptian Osiris.

In the early Christian centuries differences of opinion prevailed as to the precise date of the birth of Jesus Christ. Clement of Alexandria tells us it was kept by some in April, by others in May. Others again placed it at the time of the Feast of Tabernacles, or at the season of the Passover. These variations in the commemoration of the Nativity naturally gave rise to controversies, reminiscences of which at least have descended to modern times. They were finally set at rest by adoption of the 25th day of December, and thus the birthday of the Sun of Righteousness, and the festivals of the Christian year, arranged in accordance therewith, were coincident with the movements of the material sun, the life-giving power of nature.

If this concurrence of Christian and heathen customs caused the debasement of Christianity, as it certainly did to some extent, this was obviously unavoidable; as the superstition of the popular mind could only be eradicated by the overpowering growth of divine truth. This gradual elimination of error brought out more clearly the wisdom that decided the question. The concurrent testimony of the intervening centuries has accepted the day as the

or our usefulness be any the less if we admit with Rossetti: "All mankind is thus at heart not anything but what thou art," and better still say with St. Peter: "God hath made of one blood all nations of men for to dwell on the face of the earth and hath determined the times before appointed and the bounds of their habitation, that they should seek the Lord, if haply they may seek after and find him, though he be not far from any one of us." The cheerfulness that Christmas emphasizes, like everything else worth gaining, comes through effort and concentration. A flabby kindness of manner, which is good natured because it lacks force of character, can never be allowed to usurp its place. Genuine

cheerfulness is robust and healthy, for the reason that its possessor knows the value of bodily and spiritual health as a means of satisfaction and a power of service. He who has it learns to discard worry, to avoid disturbing others with his personal trouble, to get the better of adverse circumstances, to gain possession of himself, and in so doing encourage a wise optimism which leads to the belief that there is more good than evil in the world, notwithstanding the frequent knavery manifested in practical affairs, the corruption of politics, and the vices of society.

Christmas has a lesson for every one of us, as well as duties that fall to us according to our personal abilities. It shows that while a cheerful demeanor is socially beneficial, true cheerfulness has a much greater spiritual significance. For the outward manner, so attractive and helpful, can only be permanently maintained by a mind that is at peace with itself and its Maker. Both the outward and visible sign and the inward and spiritual grace, are to be gained by communion with him whose nativity the day commemorates.

## WHAT A ONE LIKES.

A fan.  
A muff.  
A good picture.  
A handsome belt.  
A pair of gloves.  
One of those lovely antique necklaces.  
Opera glasses, if she hasn't any.  
Hats; she can't have too many.  
One of those long bar pins to fasten her veil.  
One of those curious little oriental charms for her chain.  
A clock for her desk, or, maybe, the desk itself, if she hasn't one.  
A book rack, a bookshelf, or a bookcase, according to the extent of her bookishness.  
A little dog of blue blood pedigree or an Angora cat, if she likes animals.  
A handsome parasol, the sun will shine next summer.  
A jewel box of any degree, from burnt wood up to cut glass and gold.  
Books, according to her taste, or jewels if she is gay, or pretty dress frivolities if she must economize.

## The Vision of the Shepherds.

Dark on the hill. The slow and halting hours,  
Reluctant, come and go. That velvet tent  
Which hides the land celestial from ours

Cold on the hill. The uncomplaining sheep  
Are huddled in a rock-protected dell.  
Anon we hear as still they closer creep,  
The lonely tinkle of the wether-bell.  
The night-wind from the north goes sobbing past,  
Sad herald of the dawns' cruel blast.

Lone on the hill. The humble shepherds sigh  
And shiver in the marrow-chilling air;  
They see across the plain, with longing eye,  
The winking lights of Bethlehem the Fair.  
Thus through the leaden night their watch they keep  
Lest flame-eyed wolves should come and rend the sheep.

Light on the hill. There in the distant skies  
Appears the glory of a new-born star.  
The shepherds to the heavens turn their eyes,  
And see its growing beauty from afar.  
But list! Enchanting music fills the night,  
And clearer, ever clearer grows the light.

Day on the hill. How radiant its shine!  
The shepherds tremble in the holy ray.  
'Tis not a star—a messenger Divine,  
Before whose face the darkness speeds away.  
"Fear not," he says, "Let Earth rejoice and sing.  
This day is born your Sovereign Lord and King."

Heav'n on the hill. Harmonious is the hymn  
Which bursts in rapture from the angel throng,  
The shepherds' eyes with happy tears are dim,  
As lustrous legions come to swell the song,  
"Let glory be to God enthroned on High,  
On Earth be peace, good will to men," they cry.

Dark on the hill. The shepherds, fearful, rise,  
Across the plain they take their rapid way,  
Celestial light irradiates their eyes;  
"The Christ is come," they jubilantly say.

pound of suet chopped fine and salted. The fruit should be well dredged in flour before adding to the bread. Now mix in two ounces of lemon peel, one-half a grated nutmeg, juice of one lemon, and two ounces of sweet almonds chopped fine. Beat well together, and, the last thing, add the whites of the eggs whipped to a stiff froth. Pour into a pudding bag which has been previously scalded and dredged with flour. In tying the bag allow for the pudding swelling. Boil seven hours.

#### A CHRISTMAS PRAYER.

The candles on the Christmas tree  
Flickered out, one by one,  
As a little child at her mother's knee  
Kneelt when the day was done.  
And, oh, her prayer was earnest!  
With curly head bent low,  
She prayed for all poor children  
Outside in the falling snow.

"And give my love to Donald,  
Our baby you took away;  
I wonder if he's happy  
With you this Christmas day?  
Bless dad and darling mother;  
Please tell her not to grieve  
Because there was no tiny sock  
To hang on Christmas Eve."

And the prayer was swiftly answered.  
From mother's tear-dimmed eyes  
The mist swept by and she saw her boy  
Mid the flowers of paradise,  
With loving care a radiant form  
Guided the toddling feet,  
As with crowing laugh and eager hand  
He pulled the blossoms sweet.

And the vision brought her comfort.  
O Saviour! in thy grace,  
Solace the many hearts to-day  
That mourn a missing face.  
The bells of Yule have a minor ring,  
The light of home burns low,  
While voices in the Christmas hymn  
With thoughts of a year ago.

Lay thine all-healing touch on wounds  
Too deep for human skill;  
Show how the love which erstwhile wept  
Is with thy children still.  
Let echoes of the far-off joy  
This word of comfort bring:  
"Thrice blessed they who Christmas  
keep  
In heaven, with Christ, their King!"

#### ABOUT BUYING PRESENTS.

There is only one way to go about Christmas shopping. Sit down, and make a list of those to whom you intend to give presents, and write opposite to each roughly the value of the gift you intend to bestow. Then consider carefully what present will be most suitable to each individual. There is Amy Smith; her dress allowance is small. Of course, you can't give her a new jacket; but how about a bit of lace, a pair of fur-lined gloves? Or, again, it occurs to you that Mrs. Watson's new drawing-room is still rather bare. You might find a chair or a picture which would suit its yellow tones. Or if that would cost too much, how about a cushion? Everyone, unless very wealthy, is always wanting something which he or she considers themselves unable to afford. If you can find out such a need, and fill it—and it is not so difficult a task as one might imagine—you will merit and receive a gratitude very different from the conventional. "Thanks so much! It's very pretty!"

#### THE COMPLAINT AND THE REMEDY.

"I'm going to give the neighbors' little boy a drum and a trumpet for Christmas," said Mr. Nicholas.

"What!" exclaimed his wife. "Why, you are always complaining about the noise they make since the daughter began taking music-lessons!"

"I know. But perhaps the boy will drown the noise from the piano."

On Christmas morning, in Norway, every gateway, gable, or barn door is decorated with a sheaf of corn fixed on a tall pole. In order that the birds may eat from it their Christmas dinner.

to some extent, this was obviously unavoidable; as the superstition of the popular mind could only be eradicated by the overpowering growth of divine truth. This gradual elimination of error brought out more clearly the wisdom that decided the question. The concurrent testimony of the intervening centuries has accepted the day as the best that could have been selected.

We may thus learn from the past, if we scan the annals of history without prejudice, the solidarity of human interests, and can participate with cheerfulness in the festivities of the season with an expanded consciousness that millions of children of men have shared our feelings and participated in similar activities, even if they were without the blessings of Christianity, and so deprived of our wider intellectual and spiritual outlook. Nor will our pleasure

The shepherds' eyes with happy tears are dim,  
As lustrous legions come to swell the song,  
"Let glory be to God enthroned on High,  
On Earth be peace, good will to men," they cry.

Dark on the hill The shepherds, fearful, rise,  
Across the plain they take their rapid way,  
Celestial light irradiates their eyes;  
"The Christ is come," they jubilantly say.  
Thus do they fare within the city wall,  
And find an infant cradled in a stall.

How beautiful the time-old tale!  
How sweet the angel's song!  
To-day its holy message comes  
Through centuries of wrong.  
So let us help our brother-man,  
Drive Greed and Self away,  
And live the anthem of the skies  
On this glad Christmas Day.

## Quality in Farm Machinery.

Are you interested in Farm Machinery? If so, the above illustration must appeal to you. It shows the fine new plant of The Frost & Wood Company, Limited, at Smith's Falls, Ontario, in which the famous

### Quality Line

of Agricultural Implements is built.

About a year ago, fire destroyed our Manufacturing Plant and these are the buildings we have erected to replace it. The demand from all parts of the Dominion for our machinery was so urgent that we have erected a plant of

### Double the Capacity

of our former one. That means that you are assured of the highest grade of Machinery and

### Prompt Delivery.

Everything about our plant is new and right up to date. A better and more complete experience in the construction of Agricultural Implements, will enable us to put into your hands Machines of the highest grade.

Drop us a card asking for catalogue "R"—we will also send you one of our handsome 1907 calendars.

**THE**  
*Frost & Wood Company*  
LIMITED

Head Office and Works.

Smith's Falls, Ontario.

## FROST & WOOD

machinery is used by Canada's best and most prosperous farmers—you cannot do better than follow their example.

### They Are Getting Satisfaction

### And So Can You.

We have the goods, and if you will give us an opportunity, we will prove that they cannot be surpassed by any on the market. Every machine that leaves our factory

### Is Guaranteed

—we never ask a man to keep anything that is not satisfactory.

Our agents are in every section of the country and the information they and our travellers can give you, will prove useful, whether you want machinery now or not. We are always glad to answer questions about any of our goods. Get in touch with us—our experience may prove valuable to you.

# For that Dandruff

There is one thing that will cure it—Ayer's Hair Vigor. It is a regular scalp-medicine. It quickly destroys the germs which cause this disease. The unhealthy scalp becomes healthy. The dandruff disappears, had to disappear. A healthy scalp means a great deal to you—healthy hair, no dandruff, no pimples, no eruptions.

The best kind of a testimonial—  
"Sold for over sixty years."

Made by J. C. Ayer Co., Lowell, Mass.  
Also manufacturers of  
**Ayer's**  
SARSAPARILLA.  
PILLS.  
CHERRY PECTORAL.

## The Napanee Express

E. J. POLLARD.

EDITOR AND PROPRIETOR.

PUBLISHED EVERY FRIDAY.

All local reading notices or notices announcing entertainments at which a fee is charged for admission, will be charged 50 per line for each insertion, if in ordinary type, in black type the rate will be 100 per line each insertion.

Fine, bright, crisp weather. But if it stays like this till spring what will some of the poorer people do? Their stock of coal and wood may not stand the strain.

A careful calculation as to the effect of the new tariff justifies the belief that the burden on farmers due to customs taxation will be nearly half a million dollars less under the new scale of duties than it was under the old.

## A RAZOR'S EDGE.

Results That Come From Stropping and Long Use.

Very thin is the edge of a razor blade. Its thickness has been estimated at about one half millionth of an inch. A writer says of this wonderfully thin bit of steel, when seen under a powerful microscope: "The extreme edge of the section is distinctly bent to one side. This is nearly always seen in razor edges. The actual bend represents the effect of the last stroke on the strop which this blade has received. Now, this bending of the metal quite near the edge, minute as it is, has some very important practical consequences. If the razor be used in such a way that the bend is toward the skin there will be a tendency for the edge itself to burrow downward into the skin, instead of sliding easily over the surface and merely cutting away the projecting hairs. If, on the other hand, the blade be applied to the face in such a way that the bend of the edge is away from the skin the edge will slide much more smoothly, with less tendency to cut or scratch the skin, while it will act upon the hairs in a slightly upward direction and thus tend to pull them tight while cutting. The direction of the bend of the edge can be regulated by the last few strokes on the strop.

"This minute amount of bending undergone by the metal near the edge of a razor blade has another practical result. We all know that a piece of wire which will quite easily stand being bent double will be broken if it be bent backward and forward many times. What really takes place is that the metal, which was strong and ductile to begin with, is gradually made hard and brittle and then finally breaks off. Now, the metal near the edge of a razor is being subjected to very similar treatment. Every turn on the strop reverses the direction of the bend near the edge, and, although the amount of bending is too slight ever to bring about actual breakage of such an elastic metal as hardened steel, it is yet sufficient to bring about a change in the metal which renders it less elastic and able to stand the strain. This is why a razor which has been used long ceases to cut well or to hold a good edge.

"Now it has been discovered that steel which has lost its proper elastic qualities by such a process of 'fatigue,' as it is called, is capable of recovering its good qualities under favorable circumstances. It will recover in this way if left at rest, though this is a comparatively slow process, which explains the fact that a tool which has become useless through continued use will be as good as ever after a prolonged rest. But recovery will take place much more rapidly if the steel be warmed, so that a few minutes' exposure to the temperature of boiling water will bring about recovery to an extent that would have required several days' rest at the ordinary temperatures. This fact explains the advantage to be derived from the familiar practice of 'steaming' a razor before use."

### Don't Starve Your Bird.

It is a common mistake to think that pets can only be taught when hungry and to commence a bird's training by depriving it of breakfast, dinner or supper is a most unhappy beginning. In reality the feathered folk are just as apt and full of fun after a comfortable meal as before it, and to starve, scold or otherwise ill treat the little creature will usually render it too unhappy to learn quickly if at all. Birds are extremely nervous beings. They love a low, quiet voice and gentle movements—love to be talked to, coaxed and made much of. If the pet is a new one and seems specially available

# CASTORIA

The Kind You Have Always Bought, and which has been in use for over 30 years, has borne the signature of

*Chas. H. Fletcher*

and has been made under his personal supervision since its infancy.

Allow no one to deceive you in this. All Counterfeits, Imitations and "Just-as-good" are but Experiments that trifle with and endanger the health of Infants and Children—Experience against Experiment.

## What is CASTORIA

Castoria is a harmless substitute for Castor Oil, Paregoric, Drops and Soothing Syrups. It is Pleasant. It contains neither Opium, Morphine nor other Narcotic substance. Its age is its guarantee. It destroys Worms and allays Feverishness. It cures Diarrhoea and Wind Colic. It relieves Teething Troubles, cures Constipation and Flatulency. It assimilates the Food, regulates the Stomach and Bowels, giving healthy and natural sleep. The Children's Panacea—The Mother's Friend.

Bears the Signature of

*Chas. H. Fletcher*

The Kind You Have Always Bought

In Use For Over 30 Years.

THE CENTAUR COMPANY, 77 MURRAY STREET, NEW YORK CITY

## A Square Deal

Is assured you when you buy Dr. Pierce's family medicines—for all the ingredients entering into them are printed on the bottle-wrappers and their formulas are attested under oath as being complete and correct. You know just what you are paying for and that the ingredients are gathered from Nature's laboratory, being selected from the most valuable native medicinal roots found growing in our American forests and while potent to cure are perfectly harmless even to the most delicate women and children. Not a drop of alcohol enters into their composition. A much better agent is used both for extracting and preserving the medicinal principles used in them, viz., pure triple-refined glycerine. This agent possesses intrinsic medicinal properties of its own, being a most valuable antiseptic and antiferment, nutritive and soothing demulcent.

Glycerine plays an important part in Dr. Pierce's Golden Medical Discovery in the cure of indigestion, dyspepsia and weak stomach, attended by sour risings, heart-burn, foul breath, coated tongue, poor appetite, gnawing feeling in stomach, biliousness and kindred derangements of the stomach, liver and bowels.

Besides curing all the above distressing ailments, the "Golden Medical Discovery" is a specific for all diseases of the mucous membranes, as catarrh, whether of the nasal passages or of the stomach, bowels or pelvic organs. Even in its ulcerative stages it will yield to this sovereign remedy if its use be persevered in. In Chronic Catarrh of the Nasal passages, it is well, while taking the "Golden Medical Discovery" for the necessary constitutional treatment, to cleanse the passages freely two or three times a day with Dr. Sage's Catarrh Remedy. This thorough course of treatment generally cures the worst cases.

In coughs and hoarseness caused by bronchial, throat and lung affections, except consumption in its advanced stages, the "Golden Medical Discovery" is a most efficient remedy, especially in those obstinate, hang-on

## Fads and Philanthropy

By INA WRIGHT HANSON

Copyright, 1906, by E. C. Parcells

Honor Wilding, looking steadily out a window of the city library, was seeing visions, all of which concerned a yellow haired young man. Each vision was rose color at the beginning and somber gray at the ending. That she herself was reasonable for the tinting did not alter the fact that Honor's eyes were wistful and her lips very near to trembling. She turned from the window to the readers, wondering aimlessly if any of them had had ideals and were sorry.

Finally her eyes traveled to the farther corner, where were the newspaper files. There stood a man, his back to her. He was very shabby, but he had yellow hair, and he was about the height. Just then he turned a little and began tightening his belt. Honor heard the noon bells ringing. She had heard that it one were very, very hungry it helped a little to gird one's waist very tightly. Poor fellow! Then he turned entirely around and took up his ragged hat. Honor dropped her magazine, her gloves, her purse, her handkerchief and her parasol and sprang toward him.

that the burden on farmers due to customs taxation will be nearly half a million dollars less under the new scale of duties than it was under the old.

Premier Whitney "paid a tribute," says a Toronto paper, to Mr. Ross at the Mackenzie & Mann banquet. It followed one of the most eloquent speeches Mr. Ross has ever made. But the average story will still consider Mr. Ross a very bad man.

Nine new Cobalt mining companies were announced last Saturday with a total capitalization soaring up into the dizzy millions. The total capitalization already placed upon that little spot in the wilderness must now amount to something more than the national debt, and the promoters have but got nicely started.

#### WHAT OTHER PAPERS SAY

Exchange.

They do say that George E. Foster is so lonesome down at Ottawa that he can't even drum up the usual partner for a game of solitaire.

Toronto Globe

The meritorious feature of the bounty system is that of least we know what we are paying for our whistle, and that it can be abandoned in due time without disarranging the whole of our fiscal system.

Toronto Star.

Goldwin Smith declares that all the real opposition to the government is under Mr. Bourassa's hat. And such a compliment from such a source means that hereafter Mr. Bourassa will put his hat on with a shoe-horn.

Stratford Beacon, (Liberal).

The Whitney Government is said to be preparing a gerrymander of the Province, giving Toronto eight more members, and perhaps Ottawa, Hamilton and London one more each. This, taken in connection with the fact that nearly all the Ministers live in Toronto, Hamilton and London, will give the cities a preponderating influence in the Legislature, something which Liberal Governments sought to avoid. The farmer does not count for much with Tory Governments.

creature will usually render it too unhappy to learn quickly if at all. Birds are extremely nervous beings. They love a low, quiet voice and gentle movements—love to be talked to, coaxed and made much of. If the pet is a new one and seems specially excitable or timid, you will have to teach it first of all not to fear you. Any little games he is to learn must be acquired afterward.—Mary Dawson in St. Nicholas.

#### A Singer's Lungs.

The singer at the end of the practice aria panted heavily.

"I sang 196 notes that time," he said, "without once taking breath."

"Indeed. That must be a record."

"No. The record is held by Courtice Pounds. Pounds sang 316 notes without respiration in 1898. The record previous to that was held by Farinelli, with 300 notes. Norman Salmond has sung 287 notes in this way.

"It is wonderful what lungs trained singers have. The average man could hardly sing fifty notes without breathing, whereas to the singer 200 would be nothing."

#### Nome Means Home.

It is said that the name of Nome was the result of an error made by some Englishman in writing a letter. He evidently intended to write the word "home," but the makers of the maps read it Nome, and thus the name Nome belongs to history and the great district of Alaska. Some authorities claim that the word Nome is a corruption of the Indian phrase or word *Knoma*, meaning something like "I know it."

#### Deafness Cannot be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed, you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous surface.

We will give One Hundred Dollars for any case of Deafness (caused by catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars free.

F. J. CHENEY, & CO Toledo, O Sold by Druggists, 75c. Take Hall's Family pills for constipation.

A first-class line of sleigh bells and horse blankets.

MADOLE & WILSON

two or three times a day with Dr. Sage's Catarrh Remedy. This thorough course of treatment generally cures the worst cases.

In coughs and hoarseness caused by bronchial, throat and lung affections, except consumption in its advanced stages, the "Golden Medical Discovery" is a most efficient remedy, especially in those obstinate, hang-on coughs caused by irritation and congestion of the bronchial mucous membranes. The "Discovery" is not so good for acute coughs arising from sudden colds, nor must it be expected to cure consumption in its advanced stages—no medicine will do that—but for all the obstinate, chronic coughs, which, if neglected, or badly treated, lead up to consumption, it is the best medicine that can be taken.

#### ABORIGINES OF AFRICA.

*Vaalpens* Seem to Be the Lowest Order of Cannibals.

An obscure race may possibly be the true aborigines of Africa south of the Zambezi.

These are the *Kattea*, or *Vaalpens*, as they are nicknamed by the Boers on account of the dusty color their abdomen acquires from the habit of creeping into holes in the ground, who live in the steppes region of the north Transvaal as far as the Limpopo.

As their complexion is almost a pitch black and their stature only about four feet, they are quite distinct from their tall Bantu neighbors and from the yellowish Bushmen.

The "dogs" or "vultures," as the Zulus call them, are the "lowest of the low," being undoubtedly cannibals and often making a meal of their own aged and infirm, which the Bushmen never do.

Their habitations are holes in the ground, rock shelters and lately a few hovels. They have no arts or industries or even any weapons except those obtained in exchange for ostrich feathers, skins or ivory.

Whether they have any religious ideas it is impossible to say, all intercourse being restricted to barter carried on in a gesture language, for nobody has ever yet mastered their tongue, all that is known of their language being that it is absolutely distinct from that of both the Bushman and the Bantu.

There are no tribes, merely little family groups of from thirty to fifty individuals, each of which is presided over by a headman, whose functions are acquired not by heredity, but by personal qualities.

So little information is available concerning the *Kattea* that it is impossible to say anything about their racial affinities.—Scientific American.

#### A Queer Marriage Custom.

Members of the *Mijji* tribe, who live on the Limpopo river, wear an extraordinary "marriage dress." This weird and uncomfortable looking costume is made entirely of split reeds, fastened together with grass, and the unhappy bachelor who contemplates matrimony is compelled to wear it for three solid months before the happy event comes off, meanwhile leading a life of strict seclusion. What effect this extraordinary custom has on the popularity of marriage among the *Mijjis* is not known, but it was only with the utmost difficulty that some members of the mounted police, who encountered some would be Benedicts, induced them to allow their photographs to be taken.—Wide World Magazine.

#### All Pleased.

"I hear your club is going to give an entertainment. Do you think it will be a success?"

"Sure to be. We've arranged it so that every member is chairman of some committee or other."—Philadelphia Ledger.

#### CASTORIA.

Bears the Signature of *Chas. H. Fletcher*

Why I hoped a little to give one's self very tightly. Poor fellow! Then he turned entirely around and took up his ragged hat. Honor dropped her magazine, her gloves, her purse, her handkerchief and her parasol and sprang toward him.

"Why, Mervin Fairbanks, how glad I am to see you?"

"Well, well, how my fame as a prophet soars! I said that you should not see me again till you would be glad of the sight. And how goes the gay world with you, Miss Honor Wilding?"

Honor expected him to shrink from her, ashamed of his apparent poverty, but she remembered he usually had done the unexpected. He picked up her belongings, and they went out. Standing in the shadow of the gray-stone building, she lifted hesitating eyes to his.

"Will you come home with me, Mervin? I want so much to know of your wanderings these past two years."

She was surprised again at his quick consent. She remembered Mervin Fair-

"WHY, MERVIN FAIRBANKS, HOW GLAD I AM TO SEE YOU!"

banks as furiously proud of his pedigree, his good name and his appearance. What could have happened to reduce him to poverty and to change his nature?

"You expect to hear of Paris and London and maybe Egypt and India?" he asked after luncheon was over. To Honor's third surprise he had eaten very little. "I haven't been outside San Francisco until yesterday."

Honor regarded him with reproach. "You never let me hear from you," she said.

"What was the use? You said it was all off between us. I couldn't be as philanthropic as you desired, and I didn't like to pretend that I might grow to it, because I knew I shouldn't. How are your proteges?"

"Honor colored. 'I don't know.' Mervin smiled at her quizzically.

"Did Bacagalupe rob your house, or Moriarity take to the black bottle again?"

"Not exactly, but what I did for them didn't seem to last. They were constantly expecting more. I simply got tired of it all and stopped. Then I realized that it was only a fad anyway, like my cat farm and other things. I woke up one day to the realization that Honor Wilding was deceiving herself; that she was only egotistical when she thought she was charitable. I haven't had any fads since."

Is your baby thin, weak, fretful?

Make him a *Scott's Emulsion* baby.

*Scott's Emulsion* is Cod Liver Oil and Hypophosphites prepared so that it is easily digested by little folks.

Consequently the baby that is fed on *Scott's Emulsion* is a sturdy, rosy-cheeked little fellow full of health and vigor.

ALL DRUGGISTS; 50c. AND \$1.00.

I have been humble and miserable," she added under her breath.

He smiled tenderly at her. "You were only trying your wings, little girl."

She looked at him gratefully. "But, Mervin, tell me of yourself, your—your—the past two years." She wanted to ask him why he came to be reduced to so dismal an appearance, but she hesitated.

"Let me see," he mused. "I asked you to marry me when you were eighteen. That was five years ago, wasn't it?"

"Yes," acknowledged Honor, her heart beating furiously.

"And you refused because you were anticipating a career. It was to be woman's rights, I believe."

Honor, her eyes downcast, was twisting her bracelet nervously.

"Then when you forgot your speeches and had several unpleasant encounters with unpleasant people you decided that you were mistaken in your calling."

"Yes," said Honor again.

"When you were twenty-one I asked you to marry me. Then it was the cat farm. I think possibly you might have let me be a partner that time, only I objected to the cats. I didn't mind one feline pet, but I believe I used some emphatic language in regard to the farm."

"You certainly did," answered Honor, smiling faintly.

"The third and last time was two years ago, when the farm had lost its glory and its cats. You were Honor Wilding, philanthropist, then. You told me if I would join forces and fortunes with you in your life's work that you would be pleased to walk mit me," as your friend, the scrublady, said. I couldn't see it that way, and you remarked that I loved myself better than you, and so we parted."

"I was unjust," murmured Honor. "I have been sorry many times."

"I resolved to go away and forget you. I did the one, but not the other. I want you this minute more than I ever desired you in my life, and my eyes tell me that you are not indifferent. Honor, my little girl, will you wait for me till I can come to you as a man ought?"

But she was leaning forward eagerly, her eyes suffused with tears, her sweet lips trembling.

"Why must you go away?" she pleaded. "Don't let a wretched matter of money part us now. We have lost five years, Mervin, and I have dollars aplenty for both. Don't let your pride stand between us now, Mervin."

For a moment he looked at her curiously; then he smiled, albeit his eyes were gravely tender, and he put his arms around her.

"Dear," he said fervently, "I'm richer than you are twice over. I've kept on making money these two years, just so I shouldn't think so hard. I was going to ask you to wait till I went to the hotel and arrayed myself in decent clothes before we plighted out troth. I didn't want you to feel as if a beggar were making love to you. I spoke of waiting, for though the tailor said he would have them there by noon I knew by sad experience that there might be a delay."

"But, Mervin, your clothes—I don't understand," she gasped when she had recovered her breath.

"Well, you see," he began hesitatingly and shamefacedly, "Jack Bronson was on my train yesterday. He is really trying to reform, and he wanted a certain position, but thought he was too shabby to make any showing. The man he wanted to meet was to be at the station, so there wasn't anything to do but go to the dressing room and change clothes with him. Fortunately these, though ragged, are quite clean."

## BY-LAW NO.

OF THE CORPORATION OF THE TOWN OF NAPANEE.

A By-Law to authorize the issue of debentures of the Town of Napanee to the amount of \$2250.00, for the purpose of raising \$2250.00, to provide for cost of extending the Dundas street sewer along West street from Dundas street to Thomas street and connecting with the Canning Factory sewer.

WHEREAS the Corporation of the Town of Napanee has constructed a sewer from the banks of the Napanee River along West street to Dundas street and along Dundas street westerly to the creek crossing the same.

AND WHEREAS it is desirable to continue said sewer along West street to Thomas street to connect with the Canning Factory sewer at a cost of \$2250.00.

AND WHEREAS it is desirable that the amount necessary to defray the cost of this said extension of said sewer should be raised on the credit of the said Town.

AND WHEREAS in order thereto it will be necessary to issue debentures of the Town of Napanee for the sum of \$2250.00 as hereinafter provided, (which is the amount of the debt intended to be created by this By-Law) the proceeds of said debentures to be applied to said purpose and no other.

AND WHEREAS it is desirable to issue the said debentures at one time and to make the principal of said debt repayable by yearly sums during the period of twenty years being the currency of the said debentures, said yearly sums being of such respective amounts that the aggregate amount payable in each year for principal and interest at the rate of four per centum per annum in respect of the said debt shall be as nearly as possible equal to the amount so payable in each of the other nineteen years of the said period.

AND WHEREAS the total amount required to be raised annually by special rate for paying the said debt and interest as hereinafter provided is \$165.56.

AND WHEREAS the amount of the whole rateable property of the Town of Napanee, according to the last revised Assessment Roll is \$1,104,883.

And whereas the amount of the existing debenture debt of the said municipality is \$68,739.86, exclusive of local improvement debts secured by special Acts rates or assessments whereof no part of principal or interest is in arrears.

THEREFORE the Municipal Council of the Corporation of the Town of Napanee, enacts as follows:—

1.—That for the purpose of raising the sum of \$22,500.00, as aforesaid debentures of the said Town of Napanee amounting to the sum of \$2250 as aforesaid, in the sums of \$165.56 each shall be issued on the First day of May, A. D. 1907, each of which debentures shall be dated on the date of the issue thereof and shall be payable one on the First day of May in each of the years from 1908 to 1927 inclusive, at the office of the Treasurer of the Town of Napanee, without interest, the interest on the said loan calculated at the rate of four per centum per annum being already included in the amount of the said debentures.

2.—It shall be lawful for the Mayor of the said Municipality and he is hereby authorized and instructed to sign and issue the said debentures hereby authorized to be issued and to cause the same to be signed by the Treasurer of the said Municipality and the Clerk of the said Municipality is hereby authorized and instructed to attach the seal of the said Municipality to the said debentures.

3.—THAT during the currency of the said debentures there shall be raised annually by special rate, on all the rateable property of the Town of Napanee the sum of \$165.56 for the purpose of paying the amount due in each of the said years for principal and interest in respect of the said debt.

4.—THIS By-law shall take effect on the day of the date of the final passing thereof.

5.—THE votes of the electors of the said Town of Napanee, shall be taken on this By-law on Monday the Seventh day of January 1907 commencing at the hour of nine o'clock in the forenoon, and continuing till five o'clock in the afternoon of the same day, by the following Deputy Returning Officers, and at the following places, that is to say:—

WEST WARD NO. 1. at Frank Kinklev's

The average family in Canada uses about 25 pounds of tea per year. If Red Rose Tea were used entirely, not more than 20 pounds would be required. You save real money when you use Red Rose Tea.

### DRS. KENNEDY & KERGAN

The Leading Specialists of America. 25 Years in Detroit. Bank Security.

Nine out of every ten men have been guilty of transgression against nature in their youth. Nature never excuses, no matter how young, thoughtless or ignorant he may be. The punishment and suffering corresponds with the crime. The only escape from its ruinous results is proper scientific treatment to counteract its effects.

The DRAINS, either by nightly losses, or secretly through the urine, must be stopped—the NERVES must be built up and invigorated, the blood must be purified, the SEXUAL ORGANS must be vitalized and developed, the BRAIN must be nourished. Our New Method Treatment provides all these requirements. Under blotches and ulcers disappear; the nerves become strong as steel, so that nervousness, bashfulness and despondency disappear; the eyes become bright, the face full and clear, energy returns to the body, and the moral, physical and sexual systems are invigorated; all drains cease—no more vital waste from the system. The various organs become natural and manly. We invite all the afflicted to call and consult as confidentially and free of charge. Cures Guaranteed or no Pay. We treat and cure: Varicocele, Blood Diseases, Stricture, Gleet, Emissions, Urinary Drains, Spermatorrhoea, Unnatural Discharges, Kidney and Bladder Diseases.

CONSULTATION FREE. BOOKS FREE.

If unable to call, write for a QUESTION BLANK for Home Treatment.

K&K K&K K&K K&K K&K K&K K&K

**Incapacitated.**  
As the "extra hand" rose from his dinner in the farm kitchen the farmer's son informed him that he was to pitch hay in the afternoon.

"I won't do it!" was the curt reply.  
"All right, please yourself. It doesn't make any difference to me," retorted the farmer's son. "My father told me to deliver the message, and if you don't pitch you'll get into trouble with him."

"I won't do it for either you or your father!" rejoined the man. "You should ha' told me sooner. At dinner time I filled myself for raking, and I can't pitch."

**The First Scapegoat.**  
The word "scapegoat" originated in an ancient Hebrew custom practiced at the feast of the Passover. Placing a young goat upon the altar, the priests would pray over it, asking that all the sins of the people be visited upon the goat. Then, after each member of the tribe had transferred his guilt to the victim by laying on his hands, the animal was turned loose in the forests to be devoured by the wild beasts.

**First Printing Press.**  
The first printing press in the eastern settlement of America was set up in 1638. In the summer of that year a ship bearing a printing press, a printer and three pressmen arrived on the shores of New England, the printer being Stephen Daye. In the same year the press was set up at Cambridge. One of the earliest and perhaps the most celebrated of the issues was "The Bay Psalm Book." It is interesting to know that the actual press is still preserved. After various wanderings in Boston, Connecticut, New Hampshire and Vermont it was found in Windsor county and presented to the Vermont Historical society.

**Silenced.**  
"What did you mean by starting the story that I was an unbeliever in the Scriptures?" asked the deacon in great wrath.  
"Well, deekin," said the man who had originated the report, "you know you told me that all you said about that hoss I bought was as true as gos pill. An' you know how true it was."  
"Er—ah," said the deacon.

## NOBODY NEED HAVE INFLAMMATORY RHEUMATISM!

THAT'S FACT THAT MEDICAL SCIENCE CAN PROVE TO YOU EVERY

too snappy to make any snowing. The man he wanted to meet was to be at the station, so there wasn't anything to do but go to the dressing room and change clothes with him. Fortunately these, though ragged, are quite clean. I thought I would wear these a day or two, just to imagine what the fellows felt like when they were down on their luck. When you came to me I was so hungry to see you that I simply had to come, rags and all. May I go now, Honor?"

"You are Mervin Fairbanks, philanthropist, and didn't know it?" laughed Honor gleefully. "No, don't go just yet."

#### Happiness.

If you cannot be happy in one way, be in another, and this facility of disposition wants but little aid from philosophy, for health and good humor are almost the whole affair. Many run about after felicity, like an absent-minded man hunting for his hat while it is in his hand or on his head.

#### Martyrdom.

"Sympathetic people have a hard time in this world."

"In what way?"

"They have to listen to other people's troubles and never get a chance to tell their own."

The most valuable book in the British museum is the "Codex Alexandrinus," said to be worth £300,000.

## STRUCK BY A HOT BOLT.

### PECULIAR ACCIDENT TO AN ENGINEER.

Edward Spencer, chief engineer of the S. S. "Glide," of Montreal, was working around his engine when a hot bolt flew out and burned his arm terribly. It was as if a red-hot spit had been thrust into it! A supply of Zam-Buk balm was speedily obtained and first aid rendered. The famous herbal balm alleviated the pain, and to the surprise of Spencer and all his friends, at the end of a week the wound was completely healed. This is only one of several cases reported recently in which Zam-Buk has been proved a wonderful healer of burns, cuts, bruises, and abrasions. It is equally effective for ulcers, sores, open wounds, scalp sores, and blood poisoning, no matter how long these have persisted. Mrs. W. H. Taylor, of North Bay (Ont.) says: "I had a scaly spot about as big as a ten-cent piece on my face. I had it for four years, and hardly a night during that time went by but what I applied cold cream or some ointment or other, but it would always be there, and the warmer the weather the worse it got. I recently applied Zam-Buk, and in about a week's time the spot had disappeared completely."

One of the world's greatest analysts says the healing power of Zam-Buk is due to the rare herbal essences of which it is entirely composed. For rheumatism and sciatica it is also a speedy cure. Its healing influence on the skin is unequalled, and it is so pure that the delicate skin of babes benefits from its application. It cures rashes and eruptions as well as more serious ailments, such as blood poison, ringworm, abscesses, etc. Indeed, as a household balm it is working wonderful cures all over the Dominion. Druggists and stores sell it at fifty cents a box. A sample will be sent by the Zam-Buk Co., Toronto, to all our readers who mail this article with a one cent stamp to pay return postage. Write the name and date of this paper across the article before mailing.

nine o'clock in the forenoon, and continuing till five o'clock in the afternoon of the same day, by the following Deputy Returning Officers, and at the following places, that is to say:—

## INFLAMMATORY RHEUMATISM!

THAT'S FACT THAT MEDICAL SCIENCE CAN PROVE TO YOU EVERY DAY IN THE YEAR—CARELESSNESS COURTS IT—PRECAUTION PREVENTS—IT'S NOT A CONTAGION THAT STEALS IN UNAWARES!

## South American Rheumatic Cure

is the fortress behind which you may be perfectly secure; and why take chances if, through exposure to heat and wet, you feel those unwelcome chills, then the fever, then the sweating, then the pains in the joints. Do not put off securing the greatest of rheumatic and neuralgia cures. Experience shows that the duration of inflammatory rheumatism, under ordinary treatment, will cover a period of six to eight weeks; and what a wracking it gives to the sufferer, and it seems almost incredible that the great South American Rheumatic Cure has, in thousands of instances, controlled and conquered most stubborn and next to baffling cases in from one to three days.

Lumbago is one of rheumatism's full brothers. It comes and prostrates at times with the suddenness of a thunderclap, and yet, as in the most acute inflammatory cases, the great South American Rheumatic Cure comes as a ministering angel, holds out its healing hand, and bids the bent and bedridden take on the suppleness of youth. Lots of testimony for the asking.

Healthy kidneys are kept so by South American Kidney Cure, and unhealthy kidneys are cured by the same great remedy

Sold by Fred L. Hooper.

## Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIRS,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

Respectfully yours,

NATHANIEL W. REID.

### WINGLESS BIRDS.

#### Some Animal Oddities That Are Found in New Zealand.

An official of the Smithsonian institution was recently speaking of some of the wingless birds of New Zealand. "Those wingless birds have always been of especial interest to me," he said. "Nowhere else than in their native land could they have survived, for that is the only land in which no destructive animals are to be found. Being unable to fly, they could not have escaped from swift hunting animals, if any there had been. And in this connection it is interesting to note that in all probability the kakapo, or great ground parrot, once had the use of its wings, but, being a grass seed feeder and finding no enemies on the ground, it in a process of evolution lost its ability to fly, though able to run very swiftly. These birds are so gentle and so unconscious of having any enemies that if a person sit down near one it will presently tuck its head under its wing and go to sleep. They only breed once in two years, and the mother bird carefully hides the nest from her mate, though why is not known.

"The weka, or wood hen, is another specially interesting species of the wingless birds. These birds mate for life and take turn about in hatching and watching the brood. One of the pair is never absent from the nest, the one on duty being supplied with food by the other. There is something almost human in the sight of a male weka leading his family out for a stroll on the beach when the tide is low.

"Another is the roa, which is distinguished by a remarkable beak, long slender and slightly curved. The roa, like the kakapo, is a night bird, and its chief food is earthworms. Its sight is very poor, and it may often be seen standing in the moonlight with the tip of its beak resting upon the ground, apparently listening or feeling for the vibrations of a worm's movements. The male of the roa does all the hatching, and the young birds come from the shell with all their feathers, miniatures of their parents and with apparently all their intelligence, as they at once start out to search for food and seem to require no instruction as to the best places to find it."—New York Herald.

"Yes, Markley came in for a fortune the other day. He's actually got more money now than he knows what to do with."

"Yes. There are certain people who will be anxious to meet him now, and after that he'll know more."—Philadelphia Press.

They know not their own defects who search for defects in others.—Sanskrit Proverb.

James V. of Scotland was the first to put dates on his coinage.

#### The Plural.

In a Chicago school a class was studying irregular plurals of nouns when it was asked by the teacher to give the plural of "child." Then it was that little Edgar, who knew how it was at home, promptly answered, "Twins."

## A BY-LAW.

To prohibit the sale of liquor in the Township of Richmond.

The Municipal Council of the Township of Richmond, hereby enacts as follows:

1.—That the sale by retail of spirituous, fermented, or other manufactured liquors is and shall be prohibited in every tavern, inn or other house or place of public entertainment in the said municipality, and the sale thereof except by wholesale, is and shall be prohibited in every shop or place other than a house of public entertainment in the said municipality.

2.—That the vote of the electors of the said Township of Richmond will be taken on the by-law by the deputy-returning officer hereinafter named on Monday the 7th day of January, One Thousand Nine Hundred and Seven, commencing at nine o'clock in the morning and continuing till five o'clock in the afternoon at the undermentioned places:

For Polling Sub-division No. 1, the poll shall be held at the residence of Wm. Schermehorn, on Lot No. 18 in the 2nd Con. of Richmond and that Ira E. Grooms shall be Deputy Returning Officer. For Polling Sub-division No. 2, the poll shall be held in the Town Hall, in the village of Selby, and that Geo. S. Sexsmith shall be Deputy Returning Officer. For Polling Sub-division No. 3, the poll shall be held at the Grist Mill, Forest Mills, and that Wm. Provins shall be Deputy Returning Officer. For Polling Sub-division No. 4, the poll shall be held at the Orange Hall, in the village of Roblin, and that Geo. S. Richardson shall be Deputy Returning Officer.

3.—That on the 15th day of December, A. D. 1906, at the Town Hall, in the village of Selby, at the hour of 10 o'clock in the forenoon the reeve shall appoint in writing, signed by himself, two persons to attend at the final summing up of the votes by the clerk, and one person to attend at each polling place on behalf of the persons interested in and desirous of promoting the passing of this by-law, and a like number on behalf of the persons interested in and desirous of opposing the passing of this by-law.

4.—That the Clerk of the said Municipal Council of the Township of Richmond, shall attend at the Town Hall, Selby, at the hour of 12 o'clock on the 9th day of January, A. D. 1907 to sum up the number of votes given for and against this By-Law.

5.—This By-law shall come into operation, and be of full force and effect on and after the first day of May next after the final passing thereof. Council Chamber, December 3rd 1906.

, Reeve.

### NOTICE.

Take notice that the above is a true copy of a proposed By-law which has been taken into consideration by the Municipal Council of the township of Richmond, and which will be finally passed by the said Council (in the event of the assent of the electors being obtained thereto, as provided by the Liquor License Act) after one month from the first publication thereof in the "Napinee Express" the date of which first publication was Friday, the 25th day of December, 1906, and that at the hour, day and places there-

## STUDYING TYPES

By EDITH M. DOANE

Copyright, 1906, by Ruby Douglas

Everybody in Windsor Falls was "hayin' it."

And because the sun is a fickle mistress, first brooding over the hayfields in a glory of caressing splendor, then capriciously hiding herself behind the heavy clouds of a sudden shower, and also because it is well known that "hayin' weather" waits for no man, the farmers toiled in the hayfields early and late, pressing their families into service and laying eager hands on all the outside laborers they could find.

It was at this time that Jim Holden floated into town from no one knew where and hired out by the day. He was tall and lank and "the goldenest worker I ever see," drawled Hiram Sears admiringly as he stopped for a moment's rest in the shade of a spreading oak.

Miss Levering, "the Searses' summer boarder," slowly lifted her eyes from her book and glanced lazily over the hayfield to where a long, lean figure skillfully pitched masses of fragrant hay on to a waiting wagon. She nodded indifferently and went back to her reading. When she looked up again the wagon had disappeared in the direction of the big red barn, and the tall, tireless figure, oblivious of her presence, industriously tossed the remaining hay as he advanced steadily in her direction.

So far the summer had been a disappointment to Miss Levering. She had come to the little New England village fresh from college and with the most ardent intentions of studying nature and the natives—real human people, not mere society manikins—at first hand. Incidentally she proposed to introduce hitherto unknown breadth and beauty into their starved lives. To a moneyed and spoiled young woman defeat comes hard, and Miss Levering did not yet admit that the "types" had proved flatly tiresome and seemed per-

## Indispensable in Winter.

There's a need in every home for

# GRAY'S SYRUP OF RED SPRUCE GUM

There's a need in every home for

# GRAY'S SYRUP OF RED SPRUCE GUM

A few doses, at the first sign of a cold, will allay all throat irritation—take away hoarseness—check the inflammation—strengthen the lungs—ward off the cough.

All the healing, soothing, curative properties of Canadian Spruce Gum—combined with aromatics. Pleasant to take. 25 cts. bottle.

ABRAM WINTERS,

Clerk

### Whipped Cream.

"Look here," shouted the irate neighbor over the fence, "your youngest son has been stealing my cats and pilfering my apple trees! He is a scamp!"

"Don't talk that way about my son," blurted the fond parent. "Why, he is considered the cream of our family."

"The cream, eh? Well, I'd like to see him whipped."—Chicago News.

### Work For Nothing.

First Crook—I'm getting tired of work. Second Crook—What's the matter now? First Crook—I raised a check from \$10 to \$1,000 and tried to get it cashed, and the cuss didn't have that amount of money in the bank.—New York Press.

There is a great secret in knowing what to keep out of the mind as well as what to put in.—Emerson.

## A WOMAN'S ORDEAL

### DREADS DOCTOR'S QUESTIONS

Thousands Write to Mrs. Pinkham, Lynn, Mass., and Receive Valuable Advice Absolutely Confidential and Free.

There can be no more terrible ordeal to a delicate, sensitive, refined woman than to be obliged to answer certain questions in regard to her private life, even when those questions are asked by her family physician, and many

continue to suffer rather than to submit to examinations which so many physicians propose in order to intelligently treat the disease; and this is the reason why so many physicians fail to cure female disease.

This is also the reason why thousands upon thousands of women are corresponding with Mrs. Pinkham, daughter-in-law of Lydia E. Pinkham, at Lynn, Mass. To her they can confide every detail of their illness, and from her great knowledge, obtained from years of experience in treating female ills, Mrs. Pinkham can advise sick women more wisely than the local physician.

Read how Mrs. Pinkham helped Delle, Emerentienne Montreuil, of 114 Latourville St., Quebec, Que.

Dear Mrs. Pinkham:—

"I suffered for eight months with what the doctors called prolapsus, which caused great weakness all over my system, with faint dizzy spells. I kept growing weaker and weaker. I tried several medicines which they claimed would cure my trouble, but nothing was of the least benefit until I tried Lydia E. Pinkham's Vegetable Compound and this helped me so rapidly that I could hardly believe my good fortune. I would gladly have paid \$25.00 for that first bottle, for it started me on the road to health, and five bottles cured me. I am most grateful for my splendid, robust health, and shall certainly recommend the Vegetable Compound in glowing terms to all my friends and acquaintances, for it is deserving of all the praise I can give it."

Mountains of proof establish the fact that no medicine in the world equals Lydia E. Pinkham's Vegetable Compound for restoring women's health.

"THANK YOU, MISS," HE SAID RESPECTFULLY.

fectly satisfied with their lives as they were.

"Ah!" she said softly as the tall figure loomed nearer. What possibilities might lurk under that wiry exterior! She leaned forward.

"I beg your pardon, my good man," she called in clear, penetrating tones, "but it must be very warm in the sun. Wouldn't you like to rest awhile in the shade?" Then, dismayed by her own hardihood, Miss Levering blushed.

The man gasped and dropped his fork. For a second he stared blankly at the vision under the oak tree, a dainty vision in cool muslin, all rose bloom on a creamy ground. Then he hastily pulled his hat from his head and approached her, eying her with an expression between admiration and apprehension as the meaning of her words filtered through his brain.

"Thank you, miss," he said respectfully, dropping in a warm, disjointed heap under the spreading branches. There was a twinkle in his eyes at variance with the gravity of his long, thin face. It was not customary for the young ladies of Windsor Falls to address the help as "my good man."

Miss Levering felt distinctly cheerful. "Haying is hard work," she began sympathetically.

"It is," he admitted. "Hard of itself and hard because it leads to nothing beyond itself," he added, with a gleam of inspiration.

Miss Levering's eyes rewarded him for his discrimination. She wondered vaguely if he were not rather above the average type; not that he was good looking—his face was too long and thin for that—but he seemed receptive, and he certainly wore his coarse clothes with an ease a city bred man might have envied. It was a pity that a man evidently fitted for better things should go to waste in this little village. He needed a wider horizon—a broader outlook. Well, she would see what she could do for him.

So the couple sat together under the oak tree very often or wandered through the shaded country lanes, and he listened, always intent and respectful, while she expounded her hopes and aims for humanity in general and for him in particular.

"I know I've no right," she said earnestly, "but you will forgive me, won't you? Your life seems so petty, so narrow, I want you to feel the stress of life as men in the city feel it. The struggle, the endeavor, the thrill of accomplishment!"

And Holden agreed with her and smiled upon her with a look behind the twinkle in his eyes that made her come near to forgetting her station in life and her altruistic aims generally.

The sun was near the western hills one day before the stage came bearing its quota of daily mail. That she might not miss the glory of the sunset Miss Levering took her letters and magazines and turned up the road to where from her vantage seat on a rock she could see the splendor of the hills outlined against the flaming sky.

Her letters were soon disposed of, and she opened a magazine and idly turned the leaves, then suddenly sat rigid—spellbound—while the letters on the page before her burned themselves into her consciousness.

"The critics," so ran the magazine, "place J. Holden Morse's 'Under New England Skies' among the six greatest books of the year. It is in its fifth large edition. Mr. Morse is at present in New England, where he is said to be collecting material for another

novel," etc., and underneath was the author's photograph—a long, lean face, with a humorous twinkle in the smiling eyes.

This, then, explained the vague resemblance she had always felt, but could never define. And she had tried to broaden his outlook—to teach him.

All oblivious to the yellow splendor of the glowing sunset, Miss Levering dropped her head upon her arms and cried.

She did not hear him till he dropped on the rock beside her and picked up the open book.

"Don't! Please don't!" he pleaded contritely. "Forgive me! I never dreamed you'd care—that way. I had to have types for a new work I'm doing. I could get what I wanted so much better this way. Surely you understand?"

"As for yourself," his voice grew tender, "when I found you had the slightest interest in me I dared do nothing to disturb it until it should take firmer root."

"But you let me try to help you—to teach you," she exclaimed, furious with herself and hating him till she looked up and met his eyes.

"And was I not an apt pupil?" he answered half seriously, half jestingly. Then as he bent and drew her closer:

"At all events I learned one lesson pretty thoroughly," he said.

#### Brahms Was Not Sociable.

Anecdotes about Brahms show the composer to have been a somewhat unamiable companion. His wit was brilliant, but cruel, and its direct object could rarely join in the amusement it created. One story begins with the statement that as a performer Brahms had an extremely hard touch. This once led a musician who was accompanying him on the cello to exclaim, "I don't hear myself." "Ah," replied Brahms, "you are a lucky fellow." When he left the room after a lively evening among friends he used to remark, "If there is any one present whose feelings I have not hurt, I trust he will receive my humble apology."

Brahms never could bring himself to produce an opera. "If I composed one which failed, I should certainly have a second try," he said to pressing friends, "but I cannot make up my mind to the first. To me the undertaking seems much the same as marriage." The latter institution found no favor in his eyes, and he lived an isolated existence, recognizing no kinsfolk.

#### Scott's Monument in Edinburgh.

The finest monument erected to a literary man in Great Britain is the Scott monument in Edinburgh. It is in the form of a graceful gothic spire, with pinnacles, resting on four pointed arches. In this canopy of open arches is a statue of the novelist and poet, accompanied by his dog. The designer was George Kemp, a youthful architect who died before the monument was completed. He is said to have been greatly influenced by the architectural beauties of Melrose abbey. An interior staircase conducts to the top, which is 200 feet from the ground and terminates in a single pinnacle. Above the principal arches and in various parts of the structure are fifty-six niches destined to be filled with statues representing well known characters in the Waverley novels, several of which have been completed. The statue is by John Steell, R. S. A., and is a magnificent work of art. Lord Jeffrey supplied the inscription. The cost was £15,650, which was raised by public subscription.

#### CAMDEN EAST

The Xmas tree and entertainment given under the patronage of the members of the church of England at Camden East will be held (D.V.) at Hinch's Hall Friday December 28th. A splendid programme as usual. Adults 25c children under 12 10c. All are welcome. God save the King, N. B. No dancing after the programme.

Services Xmas Day in the Parish of Camden, as follows:—Newburgh St. John, 6 a. m.—Yarker, St. Anthony 8, 45 a. m.—Camden East, St. Luke's 11 a. m. All interested in these services will kindly take notice and govern themselves accordingly on Xmas Day.

A great offer—The Napawee Express from now until January 1907 for \$1.00 Send your order early.

Silver plated knives forks and spoons, guaranteed 1st quality.

MADOLE & WILSON

#### DESERONTO ROAD.

Mrs. Fred Bowen had the misfortune to slip and sprain her wrist one day last week. At first it was thought that she had broken her arm, which however upon examination proved to be a severe sprain.

The Trustees of S. S. No 1 Richmond have re-engaged the present teacher for 1907, at the up to date salary fixed by the Ontario Government.

The remains of the late Fred Sagar, were removed from the Deseronto cemetery vault, to the family plot in Tamworth one day last week.

Mrs. Robert Sagar is again on the sick list which we hope is only for a short time and that she will be around in a few days.

The hay pressers Kimmerly brothers are at present at Mr. F. M. Bowen's near the boundary having finished at Mr. Rendell's.

Mr. Bradshaw, who for the past two years has been living in Mr. Herchimer Aylsworth's tenant house, has moved to Deseronto.

Mrs. Hannah VanHorn, an aged lady living with Austin Kimmerly, who has been sick for a long time, is steadily improving. Miss Marakle from Toronto is attending her.

A great offer—The Napawee Express from now until January 1907 for \$1.00 Send your order early.

#### THE GUANACO.

A Patagonian Animal That Seeks Its Own Graveyard.

It seems from the accounts given by Darwin and by W. H. Hudson that all the guanacos of the southern part of Patagonia must resort when the hour of death approaches to a certain spot in a certain river bed which has become a perfect mausoleum of their bones.

Mr. Hudson notes that it is only the guanaco of the southern extremity of the South American continent that has this habit, a habit restricted to descendants of forefathers who lived in an extremely rigorous climate. Mr. Hudson conjectures that among these forefathers the instinct grew up when the stress of hunger and cold was very dire of resorting to this sheltered place in the river bed, where they might find warmth in their own closely collected numbers and possibly food. By a continual survival of those which be took themselves to this place of refuge the race instinct would be formed of resorting thither when they felt the tides of life running low. This feeling, Mr. Hudson argues, their descendants are likely to experience now at the approach of the hour of death.

But now it is no longer just a passing spell of extreme cold that leads them thither. The death call has come

## AFFLICTED WITH CATARRH— LIFE HAD BECOME A BURDEN.

Pe-ru-na, Used As a Last Resort, Affords Complete Relief.

MRS. F. CARR.

The Relief Experienced By Mrs. Carr Through the Use of Pe-ru-na, After Having Tried the Best Professional Treatment in Vain, Is a Matter of No Small Wonder Among Her Many Friends.

Mrs. F. Carr, Vineland, Ont., Can., writes:

"For several years I was afflicted with catarrh, which made life a burden.

"The coughing and hacking which accompanied the disease was terrible.

"The complaint finally extended to the stomach and I was in a wretched condition.

"I tried different remedies and the best professional treatment all in vain.

"Finally, as a last resort, I tried Peruna upon the recommendation of my sister in Hamilton.

"I could see steady improvement and after using four bottles of that precious medicine I was feeling well again, my

old trouble being completely a thing of the past.

"To-day I would not take one thousand dollars for what this grand medicine has done for me."

Many women owe their lives to Peruna. A great many more owe their health to Peruna.

A multitude of women throughout Canada are using Peruna as a preventative and a relief from catarrhal coughs and colds.

We have in our files a great number of letters from grateful women who have been benefited by Peruna, with permission to use these letters in public print.

Catarrh would not be such a curse to the human race if people thoroughly understood its nature.

Catarrh is a disease which never improves of its own accord, but becomes deeper seated the longer it is neglected.

It should be treated at once to prevent it from making inroads upon vital organs.

Ask your druggist for Free Peruna Almanac for 1907

## A QUAIN CHARACTER

THE ECCENTRICITIES OF THE ITALIAN MARQUIS DEL GRILLO.

Grim Joke by Which He Attempted to Revolutionize the Administration of Justice in Rome—Giving to Caesar What Belonged to Caesar.

The Marquis del Grillo, husband of the famous actress, Adelaide Ristori, was one of the best known characters of his day. Rich, bearing a title that made him one of the most conspicuous figures in Roman life, and absolutely indifferent to what others thought of him, he indulged in all sorts of pranks. Society called them eccentricities and pronounced him slightly unbalanced, but in reality he was possessed of unusual height and strength. He had a long

when I carried them in. Is it not they that should be rewarded?"

A peculiarity of the marquis was his refusing to have as personal valets any but the most quick witted of young fellows, who could help him in his little escapades without having to be coached too much. Many amusing tales are told of his experiences in engaging them. In one instance he was sitting at the piano trying some church music when a new applicant was ushered in. He didn't stop playing or even glance around, but began to ask questions, the answers to which evidently did not appeal to him, for he suddenly struck a loud chord and, following the tune of the music, chanted in a loud voice, "You will never do for me." Then he rose and without a look at the man started to walk out of the room. Quick as a flash the applicant stepped to the piano and, striking the keys with

was £15,650, which was raised by public subscription.

#### Could Enjoy a Joke.

An engineer from Sunderland was spending a few days in London with a friend, and after a busy morning sightseeing the Londoner chose a large restaurant for luncheon, thinking it would be a novel experience for the man from the north. The visitor appeared to enjoy his luncheon, but kept looking in the direction of the door. "What are you watching?" asked his friend, rather annoyed.

"Well," was the quiet reply, "Ah's keepin' an eye on ma topcoat."

"Oh, don't bother about that," said the other. "You don't see me watchin' mine."

"No," observed the guileless engineer, "there's no call to—it's ten minutes sin' thine went."—Tit-Bits.

#### Baronets.

The order of baronets was established by James I. in 1611. The title is found in no country on the continent existing only in the British dominions.

#### Not an Irishman.

There is a bust of Hugh O'Brien, a former mayor of Boston, in the corridor of the Boston Public library and one of John Boyle O'Reilly in the newspaper room. The other day a man approached one of the clerks in the newspaper room, saying, "Isn't there a bust of anybody except Irishmen in the building?" "Certainly," replied the clerk. "There is a bust of Lucifer in the periodical room, and he wasn't an Irishman."

#### A Delicate Hint.

"They say Miss Sharpe can convey a hint with such tact that it is impossible to take offense."

"Yes, she has quite a gift that way. The last time Mr. Staylate called there she asked him to have some slight refreshment and then brought in a plate of breakfast food."—Baltimore American.

Our existence here requires a precision so great that our minds can but feebly grasp it. Change the temperature of your bodies by but a few degrees and you die.—Boston American.

## CURED HIS WIFE of LA GRIPPE

Quebec Man tells how the Great Consumptive Preventative was an all-round Benefit

"My wife took La Grippe when she was in Ottawa," says Mr. N. D. Lafoe of Northfield Farm, Que., in an interview. "She got a bottle of Psychine and after using it for a few days she was quite well. I took a cold and am using it and am getting all right. I think Psychine is one of the best tonics on the market to-day."

There you have the whole matter in a nutshell. La Grippe and colds are among the forerunners of consumption.

This man had one, his wife had the other. Psychine not only cured both but it built them up so that their bodies are strong enough to resist disease. All seeds of consumption are killed by

# PSYCHINE

DR. T. A. SLOCUM, Limited,

ties of life running low. This feeling, Mr. Hudson argues, their descendants are likely to experience now at the approach of the hour of death.

But now it is no longer just a passing spell of extreme cold that leads them thither. The death call has come, and they must lay their bones in the common mortuary. It is not "in order to die" that the guanaco seeks this place; it would be nearer the truth if we were to say it was "in order to live."

But the most true account of all is that it is in mere obedience to the inherited instinct that the guanaco resorts to this refuge.

Yet another instance of this mysterious guidance is afforded by the habit of the rattlesnakes in the colder countries to assemble together for hibernation in caves. These snakes on emerging from the caves cover long distances in their wanderings, their young are generally born far away, and yet these young succeed in finding their way to the caves with the greatest certainty.—London Spectator.

#### Jouett and the Fighting Cadet.

Admiral Jouett, familiarly known as "Fighting Jimmy," was acting secretary of the navy once when the commandant of the academy at Annapolis came over and reported that he had been compelled to discipline a cadet who had behaved in a most unaccountable manner and had disgraced the academy, the department, the government and all civilization. He then proceeded to relate how this cadet when passing through the lower regions of the town of Annapolis had somehow or another become involved in hostilities with a tough citizen and proceeded to polish him off. The friends of the tough came to his rescue. The cadet backed up against a wall and whipped five of them in succession and then nearly hammered the life out of two policemen who attempted to arrest him. He was in the custody of the civil authorities, and the superintendent of the academy was seeking the aid of the secretary of the navy in having him transferred to the naval authorities in order that he might be court martialed and punished.

"Court martial that fellow!" roared Jouett. "Licked five toughs and two policemen. Not while old Jim Jouett is living! The boy ought to have a medal. What are you doing down there anyhow? Do you suppose the government of the United States hired you to raise a lot of boys to play checkers?"

#### A Very Useful Tree.

The most marvelous tree in the world is the carnaubá palm, which grows in Brazil. Its roots produce the same medicinal effect as sarsaparilla. From parts of the tree wine and vinegar are made. Its fruit is used for feeding cattle. Of the straw, hats, baskets, brooms and mats are made. It is also used for thatching houses. The pulp has an agreeable taste, and the nut, which is oleaginous and emulsive, is sometimes used as a substitute for coffee. Its stems afford strong, light fibers, which acquire a beautiful luster and serve also for joists, rafters and other building materials. It yields also a saccharine substance as well as a starch resembling sago. Of the wood of the stem musical instruments, water tubes and pumps are made. From the stem a white liquid similar to the milk of the coconut and a flour resembling maize may be extracted. Moreover, salt is extracted from the tree, and likewise an alkali used in the manufacture of common soap.—Answers.

CASTORIA.

Bears the Signature of *Chas. H. Fletcher*

figures in Roman life, and absolutely indifferent to what others thought of him, he indulged in all sorts of pranks. Society called them eccentricities and pronounced him slightly unbalanced, but in reality he was possessed of unusually bright faculties. He had a keen sense of humor, loved excitement and was thoroughly awake to the shortcomings of his generation. His eccentricities were so many object lessons, which it pleased him to administer in his own quaint way, and they seldom went wide of the mark.

His first attempt at a practical joke, if such it may be termed, bade fair to revolutionize the administration of justice in Rome.

Punctually at 10 one bright spring morning every church bell in town began to ring "a morto," a long, peculiar toll used to announce a death. Plus IX. was then reigning pontiff and, hearing the general tolling, asked who the great personage was that all Rome was mourning. None of his "sult" knew, but inquiries at St. Peter's elicited the fact that the Marquis del Grillo had sent the order without specifying who was dead. The pontiff was even more mystified, and when word had come from other churches to the same effect he sent for the marquis, who promptly answered the summons.

"I hear," said Plus IX. to the marquis, that it is at your bidding that every bell in Rome is tolling. Who, then, is dead?"

"Justice, your holiness," was the enigmatic reply.

"Justice?"

"Yes, your holiness—justice. The goddess is no more in the pontifical states."

And thereupon he related to the astonished pontiff how, becoming aware of the corruption existing in judiciary circles, he had made an experiment. Claiming that the farm of a poor neighbor of his belonged to him, he brought the poor man to court and by liberal bribing obtained possession of the whole estate, to which he had no right whatsoever.

The pope, after listening attentively, censured the marquis severely for the method used, but history tells us that the lesson bore fruit and that many changes took place in important civic positions.

At another time the marquis, who always dressed very modestly, made his way on foot to the palace of Prince Massimo, where a big reception was being held. As he approached the entrance a pompous lackey looked him over from head to foot and then barred the way.

"No admittance tonight," he said insolently. "A reception is going on."

The nobleman stood amazed, for even over princes he often took precedence, but then he saw the humor of the situation and, smiling to himself, walked away.

Half an hour later a magnificent coach drew up before the palace, and out stepped the marquis, resplendent in a gorgeous court uniform and scintillating with decorations. In a minute the whole house was astir, and the hostess herself met him and led him in. The night was warm, and soon she invited him to have an ice, an offer which he promptly accepted. Imagine her feelings when, instead of eating it, he coolly and deliberately proceeded to spread spoonful after spoonful over the front of his uniform and on his numerous decorations.

"Why, marquis," she exclaimed in alarm, "what are you doing?"

"Giving Caesar what belongs to Caesar," was the quiet reply. "Your servants refused to let me in in the garb of a plain gentleman, but promptly admitted my costume and decorations

struck a loud chord and, following the tune of the music, chanted in a loud voice, "You will never do for me." Then he rose and without a look at the man started to walk out of the room. Quick as a flash the applicant stepped to the piano and, striking the keys with both fists, chanted back solemnly on the same air, "I'm very glad of it, because I don't like you a bit."

Any one else would have had the man thrown out for his impudence, but the marquis paused at the door and smiled with appreciation.

"I guess we shall get on nicely, after all," he said pleasantly. "See my 'maggioromo' and speak to him about terms."—New York Times.

#### His Money's Worth.

Laundryman—I regret to tell you, sir, that one of your shirts is lost. Customer—But here I have just paid you 12 cents for doing it up. Laundryman—Quite right, sir; we laundered it before we lost it.—Harper's Weekly.

Nothing is easy to the unwilling.—From the Gaelic.

#### A Secret Given Those Who Cannot Write Their Names.

The banks give secret passwords to depositors who cannot read or write. When one of these depositors goes to draw out money the cashier leans forward and whispers:

"What's your password?"

The depositor whispers an answer, and if the correct password is given the money is paid out.

In a bank the other day a negro woman sat upon a bench, her face indicating intense application of mind. The cashier nodded toward her and said:

"She's forgotten her password and is trying to think of it. She came to the window awhile ago and wanted to get some money. She only wanted a small amount. But she can't write. She's one of quite a number of our depositors who are given passwords when they open an account. When she came in I asked her to give her name and address. She answered right up. 'What's your password?' I asked her.

"'M-m,' she exclaimed, pursing her lips, 'let me see. Ain't dat peculiar?' Hit done 'scaped mah mind now."

"'Can't you think of it?' I said. 'You know I can't pay the money until you give me the password'."

"'Lord, honey,' she exclaimed, 'Ah's mighty high dat money! But Ah jes' can't 'member hit now."

"'Well, sit down and think it over,' I suggested to her. 'It may come to you.'"

In a few minutes the old woman arose with a happy look upon her face and went up to the cashier's window. She put her face as far inside the narrow window as she could and whispered:

"Abraham Linkin."

"Correct," answered the cashier, and he paid her the money she was after.

"Ah jes' couldn't place dat man's name at first," she said as she went out.—Kansas City Star.

#### Over Eight Feet Tall.

King James I. had a gigantic porter eight feet six inches in height, but he was not perfect, being round shouldered, knock kneed and lame in one foot. Of a similar height was Charles Munster, a yeoman of the Hanoverian guard who died in 1670, and seven years before there was being exhibited in London a Dutchman eight feet nine inches high anent whom in Peppy's diary we find the following entry on Aug. 15, 1669: "Went to Charing Cross to see the great Dutchman. I did walk under his arm with my bat on and could not reach his chin with the tips of my fingers."

Thousands of sufferers have been permanently cured by this wonderful remedy and thankfully write to tell us so. Keep it in the house and use it for Colds, Coughs, Croup, Whooping Cough, Asthma and all Throat and Lung troubles.

Your druggist not only keeps it but recommends it.

Price, 25 cents.

# COLTSFOOTE EXPECTORANT

### LITTLE GIRL HEROINE.

#### Fatally Burned Herself While Trying to Rescue a Baby.

A little girl of 10, named Rose Read, died in West Ham Hospital, London, recently from burns sustained in heroic efforts to save another child.

In a small house in Lucas road, Abbey lane, Stratford, lived two families, named Read and Lake. Mrs. Lake and Mrs. Read went out shopping in the morning, leaving five children in the house—Rose Read and John Lake, each aged ten, the other three being babies, whose ages varied from 18 months to 4 years. A fire broke out upstairs, and all the children got out of the house except Alice Lake, the youngest baby.

Rose Read, hearing of her little comrade's dangerous position, ran upstairs to attempt a rescue. An alarm was raised, and a coal dealer named Hull rushed into the house. He found that Rose's clothes were on fire, and he promptly extinguished the flames and carried the child downstairs.

Reentering the house, Hull found that the baby's clothes were smoldering. He beat out the flames, and hurried with the little one to a place of safety.

The fire, a slight one, was quickly put out by the neighbors before the arrival of the brigade. Rose Read succumbed to her injuries later in the day. The baby was practically uninjured, and was not detained in the hospital.

## EATING CAUSED AGONY

### HEALTH RESTORED BY BILEANS.

Mrs. J. Whitfield, of Swan Lake, says: "Bileans have done me a wonderful amount of good. I can hardly describe how bad I felt before I took them. I could not eat but that it caused pain. There was a constant sensation of tightness in my side, and my liver was entirely out of order. I could not sleep at nights, suffered also from kidney trouble, and was altogether rundown. I had been ailing in this way for years, and it is gratifying to find that Bileans were equal to my case."

Bileans have been called "a woman's medicine" because of their exceptional fitness for the various ailments peculiar to the sex, as well as for liver disorders and stomach ailments generally. Unlike most liver and stomach medicines, Bileans contain no bismuth, mercury or any mineral whatever. They are purely vegetable.

Bileans are absolutely unequalled for female ailments and irregularities, constipation, piles, anaemia, debility, rheumatism, blood impurities, etc. They tone up the system and enable it to throw off colds and chills, strengthen girls just emerging into womanhood, and speedily restore energy and strength to those who are rundown. Of all druggists at 50c. a box, or post free from the Bilean Co., Toronto, on receipt of price, 6 boxes for \$2.50.

## CRIME FASHIONS CHANGE

### PASSION AND BRUTALITY LESS POTENT FACTORS.

#### Report Upon Crime in Great Britain Regrets That It is Not Diminishing.

There are fashions in crime just as in clothes and politics. The character and aspects of criminality vary with the constantly changing conditions of social life.

Such is one of the first conclusions to be drawn from the report for 1906 of the Howard Association, just published from the pen of its secretary, Mr. Thomas Holmes, the well-known Police Court missionary.

The report regrets that crime is not diminishing. For some years the official statistics of indictable offences, the measure of the country's crime, have gone steadily up. In 1899 the number of persons charged with such offences was 50,499, in 1904 the number was 59,960, an increase of 9,461 in five years.

But the variation in the phases of crime shows, according to the report, that passion and brutality are becoming less potent factors in the causation of crime. The great increase has been in crimes that require education and skill.

### IMPROVEMENT IN WOMEN.

Another striking fact is that women are apparently becoming more honest than men.

Says the report:—"It is a noticeable fact that while crimes of dishonesty have considerably increased, there was during the year a reduction of no fewer than 1,044 in the number of women charged with larceny."

According to the report, there is one law-breaker for every 145 of the population.

Here, from the report, is a summary, based on the criminal statistics for England and Wales of the changes in crime:—

Crimes against the person have diminished.

Crimes committed by habitual criminals have not increased at the same rate as in previous years.

Minor offences of dishonesty have increased.

Frauds and breaches of trust have increased.

Drunkennes is stationary.

Offences of vagrancy are growing largely.

### URGES PROBATION LAW.

A supplementary broadsheet which accompanies the report dwells on certain features of the propaganda of the association which since 1866 has studied methods of treatment and prevention of crime. One claim is that the poorer class of "criminals" should be enabled to pay fines by instalments. In the

# DARE HE?

## OR, A SAD LIFE STORY

### CHAPTER XI.

A reconciliation is seldom effected without some price being paid for it. Jim's with Elizabeth, if it can be called such, is bought at the cost of a small sacrifice of principle on his part. No later than this morning he had laid down as a Median rule, that he should avoid opportunities of finding himself in Miss Le Marchant's company; and yet, not only has he spent the major part of the afternoon in her society, but, as he walks away from her door, he finds that he has engaged himself to help Byng, on no distant day, in doing the honors of the Certosa Monastery, to her and her mother. On reflection, he cannot quite explain to himself how the arrangement has come about. The proposal certainly did not originate with him, and still less with the two ladies so strangely shy of all society. The three have somehow been swept into it by Byng, who either with the noblest altruism, or because he feels justly confident that he has no cause for jealousy of his friend (Jim's cynical reflection is that the latter is the much more probable reason), has insisted on drawing him into the project.

Jim Burgoyne is not a man whom, as a rule, it is easy either to wile or cudge into any course that does not recommend itself to his own judgment or taste—a fact of which he himself is perfectly aware, and which makes him remorsefully acknowledge that there must indeed have been a traitor in the citadel of his own heart before he could have so weakly yielded at the first push to what his reason sincerely disapproves. But yet it is not true that remorse is the leading feature of his thoughts, as he walks silently beside his friend down the Via di Servi. It ought to be, perhaps, but it is not. The picture that the foreground of his memory is that of Elizabeth sitting on the floor, and sending him peace-offerings from her pathetic eyes and across her sensitive lips. It was very sweet of her to think it necessary to make him amends at all for her trifling incivility, and nothing could be sweeter than the manner of it. How gladly would he buy some little rudeness from her every day at such a price! But yet, as he thinks it over, the manner of it, the ground on which she rested her excuse, is surely a strange one. That she should attribute her light lapse from courtesy to want of knowledge of the world comes strangely from the mouth of a woman of six-and-twenty. If it be true,—and there was a naive veracity in lip and eye as she spoke—how is it to be accounted for? Has her mind, has her experience of life remained absolutely stationary during the last ten years? Her tell-tale face, over which some pensive story is so plainly written, forbids the inference. It is no business of his, of course. Amelia, thank Heaven, has no story; but, oh! if some one would tell him what that history is! And yet, three days later, he voluntarily puts away from himself the opportunity of hearing it.

During those three days he sees no more of her. He does not again seek her out, and accident does not throw her in his way. He buys his Cantagalli dinner-service in company with Amelia; chooses the soup-tureen out of which he is to ladle mutton broth for the inhabitants of Westbourne Grove; he tastes of the wedding-cake that has cost Cecilia

the Israelites. One is taken to see from one point after another, each point seeming fairer than the last; but the likeness ends there, for no wish to curse the sweet town could ever arise in even the morosest heart. The hills have put on their summer look of dreamy warmth and distance. Before they have reached the hill-top, the boon Italian air has kissed most of the creases out of Jim's temper, and the brick-red from Amelia's cheekbones. He looks remorsefully from the triumphant beauty around into the poor, fond face opposite to him—looks at her with a sort of compassion for being so unlovely, mixed with a compunctious admiration and tenderness for her gentle qualities. He may touch her hand without fear of observation, so wholly is Byng enveloped in the mantle of Cecilia's voluble tenderness.

"Have you forgiven me?" he asks, smiling; "I will make any apologies, eat any dirt, say anything, short of allowing that Sybilla is not bilious."

They have reached the villa, and turned out of the dusty highway into a great cool courtyard, that has a Moorish look, with its high arches, over which the Banksia roses tumble in cascades of yellow and white. It seems wrong that the voices which come from the tea-tables under the Loggia should be chattering English or Yankee, instead of cooing that "sweet bastard Latin" that better suits place and day.

The hostess shakes hands absently with Burgoyne, offers his fair charges iced coffee, and then, having discharged her conscience towards them, draws Byng away for an intimate chat. From her hands he passes into those of several other willing matrons and maids, and it seems likely that the party who brought him will see him no more. Amelia, unused to, and unexpected of attention, is perfectly content to sit silent, sipping her cold coffee; but Cecilia is champing her bit in a way which frightens her future brother-in-law so much that he cowardly takes the opportunity of her looking in another direction to lure his docile fiancé on to the broad terrace, whence all the young green glory of the Arno's plain, and the empurpled slopes and dreamful breast of Morello, are to be seen by the looker's beauty-drunk eye. Upon this terrace many people are walking and sitting in twos and threes, and in one of the little groups Amelia presently discovers a female acquaintance, who at once fastens upon her, and happening to be afflicted with a relative visited by a disorder of something the same nature as Sybilla's, subjects her to a searching and exhaustive catechism as to the nature of her sister's symptoms. Sybilla's symptoms, whether at first or second hand, have invariably the property of driving Jim into desert places; and, in the present instance, seeing no likelihood of an end to the relation of them, he turns impatiently away, and, without much thought of where he is going, follows a steep downward path that ends in a descent of old stone steps, between whose crevices green plants and little hawkweed blow-balls flourish undisturbed, to a large square wall, framed by a low broad parapet, with flower beds set around it, and the whole closed in by rugged stone walls. No one apparently has had the same impulse as he, for, at first, he has the cool solitude to himself. He sits down on the parapet of the still well, and drops

come up the system and enable it to throw off colds and chills, strengthen girls just emerging into womanhood, and speedily restore energy and strength to those who are rundown. Of all druggists at 50c. a box, or post free from the Bilean Co., Toronto, on receipt of price. 6 boxes for \$2.50.

# Bileans for Biliousness

## FROM A CHILD'S DICTIONARY.

"Dust—Mud with the juice squeezed out of it."  
 "Snoring—Letting off sleep."  
 "Backbiter—A mosquito."  
 "Fan—A thing to brush the warm off with."  
 "Ice—Water that went to sleep in the cold."  
 "Apples—The bubbles that apple trees blow."

Her Mother—"You will assume a grave responsibility when you marry my daughter. Remember, she was brought up in the lap of luxury." Her Ador—  
 "Oh, she's pretty well used to my lap now."

**ITCH, Mange, Prairie Scratches and every form of contagious Itch on human or animals cured in 30 minutes by Wolford's Sanitary Lotion. It never fails.**

## WHAT BRAND.

"Well, it's just this way," said the sportsman, "the man who can go out hunting day after day and not cure whether he gets anything or not has the right stuff in him."

The heat of the Tropics fades rosy cheeks. It takes away the energy. "Fer-A-Dia" is the best tonic to brace you up. It stimulates the system. It makes the weak strong. It is pleasant to take. All druggists sell it.

## BLIND WAS DOWN.

The Miss—Mary Ann, please explain to me how it is that I saw you kissing a young man in the garden last night.

The Maid—Sure! I don't know how it is, ma'am, unless you were taken through the keyhole.

The Doctor—Dispensa. In olden times it was a common belief that demons moved invisibly through the ambient air, seeking to enter into men and trouble them. At the present day the demon, dysentery, is at large in the same way, seeking habitation in those who have excess of rawness living in the East. And once he enters a man it is a difficult discharge here. He that finds himself so possessed should know that a valiant and tried battle for him with the unseen foe is Parochee's Vegetable Pills, which are ever ready for the trial.

## TAKES OUT IN TRADE.

Johnny—Isn't father's queer?  
 Annie—Why, what's the matter now?  
 J.—When a boy does anything for his pa he doesn't get anything, but if another man's boy does it he gets a copper.

A supplementary broadsheet which accompanies the report dwells on certain features of the propaganda of the association which since 1866 has studied methods of treatment and prevention of crime. One claim is that the poorer class of "criminals" should be enabled to pay fines by instalments. In the year 1901, 107,625 persons were committed to prison in default of payment, many of them being young persons between the ages of sixteen and twenty-one.

The association urges upon Great Britain the "probation" law, which has been tried with excellent effect in France. According to this law, every first offender, whose sentence does not exceed two years' imprisonment, has his punishment suspended and ultimately remitted if he commits no new offence during the subsequent five years.

## CHAPPED HANDS.

### ZAM-BUK THE HEALER.

At this season chapped hands, chilblains, rough, red skin, and other effects of the cold are very common; and Zam-Buk, the homely healer, is in great demand.

Miss E. Brown, of Markham, says: "I certainly think Zam-Buk the finest balm in the world. I used it for chapped hands, and it made them as smooth and soft as a baby's hand. My uncle has also tried it and found it wonderful."

Mrs. M. A. Doyle, of Wickson Avenue, Toronto, says: "My son used Zam-Buk in the first place for chapped hands and cold-sores. He found it so good that we now always keep a supply in the house, and use it for cuts, bruises, burns, etc. It is wonderful how soon ease comes after Zam-Buk is applied to a sore or injury."

Not only for chapped hands, cold-sores, chilblains, etc., but for cuts, bruises, ulcers, running sores, blood-poisoning, festering wounds, abscesses, rumps and eruptions, etc., Zam-Buk is a cure. It also eases the pain and smarting of piles, and stops the bleeding. It will close old wounds and sores which have defied all other treatment. Rubbed well in over the parts affected it cures rheumatism, neuralgia, sciatica; it eases tightness and aching chest in cases of colds and chills.

The magic healer can be obtained of all druggists at 50c. a box, or post free from the Zam-Buk Co., Toronto, upon receipt of price. 6 boxes for \$2.50.

## ANIMALS THAT WEEP.

Travellers through the Syrian desert have seen horses weep from thirst, a mule has been seen to cry from the pain of an injured foot, and camels, it is said, shed tears in streams. A cow sold by its mistress who had tended it from calf-hood wept pitifully. A young soko ape used to cry from vexation if Livingstone didn't nurse it in his arms when it asked him to. Wounded apes have died crying, and apes have wept over their young ones slain by hunters. A chimpanzee trained to carry water-jugs broke one, and fell a-crying, which proved sorrow, though it wouldn't mend the jug. Rats, discovering their young drowned, have been moved to tears of grief. A giraffe which a huntsman's rifle had injured began to cry when approached. Se lions often weep over the loss of their young. Gordon Cumming observed tears trickling down the face of a dying elephant. And even an orang-outang when deprived of its mango was so vexed that it took to weeping. There is little doubt, therefore, that animals do cry from grief or weep from pain or annoyance.

During those three days he sees no more of her. He does not again seek her out, and accident does not throw her in his way. He buys his Cantagalli dinner-service in company with Amelia; chooses the soup-tureen out of which he is to ladle mutton broth for the inhabitants of Westbourne Grove; he tastes of the wedding-cake that has cost Cecilia so dear, and he avoids Byng. On the third day he can no longer avoid him, since he is to occupy, as on the San Miniato occasion, the fourth seat in the fiacre, which conveys himself and the Misses Wilson to the garden-party at the villa in Bellosguardo inhabited by Mrs. Roche, the mother of the amiable Bertie. The Wilsons' acquaintances in Florence are few, and, as far as Burgoyne has at present had the opportunity of judging, evil. It is, therefore, with a proportionate elation that Cecilia dresses for a party at which she will meet the bulk, or at least the cream, of the English society. It is to Byng's good nature that she and her sister owe the introduction to a hostess whose acquaintance is already too large to make her eager for any causeless addition to it; but whose hand has been forced by Byng, in the mistaken idea that he is doing a service to his friend Jim.

They are late in setting off, as Amelia is delayed by the necessity of soothing Sybilla, who has been reduced to bitter tears by a tele-a-lete with her father, in which that well-intentioned but incautious gentleman has been betrayed into suggesting to her that she may possibly be suffering from biliousness. The administering of bromide, to calm her nerves under such a shock; the reiterated assurances that every member of the family except its head realizes the monstrosity of the suggestion, take up so much time that Amelia herself has to reduce to a minimum the moments allotted to her own toilette. She has cried a little with Sybilla, for company partly, and partly out of weariness of spirit. That and hurry have swollen her eyelids and painted her cheeks with a hard, tired red, so that it is an even more homespun figure, and a homelier face than usual, that seat themselves opposite Burgoyne, when at length they get under weigh.

He, Burgoyne, has been impatient of the delay, impatient to set off and to arrive; yet he would be puzzled to say why. He knows, on no less authority than her own word, that he shall not meet Elizabeth; and yet the mere feeling that the mistress of the house to which he is going is of the same blood as she; that he shall see the rude, spoilt child whose ill-tempered pinch made her utter that low cry of pain, suffice to give a tartness to his tone, as he inquires the cause of her lagging, of the punting, flushed, apologetic Amelia. Byng and Cecilia have been sitting waiting for some time in the salon, from which Sybilla has removed her prostrate figure and tear-stained face; but they have been entertaining each other so well—she in paying him a series of marked attentions, and he in civilly and pleasantly accepting them—that the half-hour has not seemed long to either. But the party, in motion at last, has passed the Roman Gate, and is climbing up and up between the high walls, each step giving it a greater vantage ground over the Flower City, before Burgoyne recovers his equanimity.

The spring comes on apace. In the gardens above their heads laurestinus bushes, with all their flowers out (as they are never seen in England, where always the east wind nips half the little round buds before they can expand into blossom), stand in white and green; rosemary trees, covered with grey bloom, hang down; and against the azure of the high heaven purple irises stand up arrow. It is one of those days on which one can with bodily eyes see the Great Mother at her quickening work; can see her flushing the apple boughs, unfolding the fig-leaves, and driving the lustrous green blood through the sappy vines. And in the slow creeping of the fiacre up the twisting white road, each turn lays the divine Tuscan city before them in some new aspect of arresting loveliness.

At Florence, one is like Balaam with

and little hawkweed blow-balls flourish undisturbed, to a large square wall, framed by a low broad parapet, with flower beds set around it, and the whole closed in by rugged stone walls. No one apparently has had the same impulse as he, for, at first, he has the cool solitude to himself. He sits down on the parapet of the still well, and drops in pebbles to see how deep the water is; and anon lifts his idle look to the empty niches in the crumbling wall—niches where once wood-god, or water-nymph, or rural Pan stood in stone, now empty and forsaken. Out of the wall two flexes grow, and lift themselves against the sapphire arch, which yet is no sapphire, nor of any name that belongs to cold stone; a blue by which all other blues are but feeble colorless ghosts of that divinest tint.

He is roused from the vague reverie into which the cool silence and the brooding beauty around have lulled him by the sound of approaching voices. He is not to have his well any longer to himself. He looks up with that scarcely latent hostility in his eye with which one regards the sudden intruder into a railway carriage, when—counting on keeping it to oneself for a long night journey—one has diffused limbs and parcels over its whole area. The owners of the voices having descended, as he had done, the age-worn steps, come into sight. They are both men, and one of them he recognizes at once as a Mr. Greenock, a well-known stock figure in Florentine society, a mature bachelor diner-out, a not ill-natured retailer of news, collector of bons-mots, and harmless appendage of pretty women. Of the other, at whom he scarcely glances, all he grasps is the fact that he is dressed in clerical attire, and that the first words audible of his speech, as he comes within hearing, is the name of an English county—Devonshire. The answer comes in a tone of keen interest:

"Ah, I thought there must be a screw loose!"

As the new arrivals become aware of the presence of a third person, they pause in their talk; but, presently Mr. Greenock having recognized Jim and greeted him with a friendly nod and a trivial remark upon the splendor of the day, they resume their interrupted theme; standing together a few yards distant from him on the walk, resume it in a rather lower but still perfectly audible key.

"I thought there must be some reason for their shutting themselves up so resolutely," continues Mr. Greenock in the gratified tone of one who has at length solved a long-puzzling riddle. "I thought that there must be a screw loose, in fact; but are you quite sure of it?"

The other gives a sigh and a shrug. "Unfortunately there can be no doubt,

on that head; the whole lamentable occurrence took place under my own eyes; the Moat is in my parish."

"Devonshire!" "A screw loose!" "The Moat!" Burgoyne is still sitting on the well-brim; but he no longer sees the lapis vault above, nor the placid dark water below. A sort of horrible mist is swimming before his eyes; it is of Elizabeth le Marchant that they are speaking. Through that mist he snatches a scared look at the speaker; at him whom but two minutes ago he had glanced at with such cursory carelessness. Does he recognize him? Alas! yes. Though changed by the acquisition of a bald head and a grizzled beard, he sees him at once to be the man who, at the time of his own acquaintance with the Le Marchant family, had filled the office of vicar of their parish; under whom he had sat on several drowsy summer Sunday mornings, trembling at the boys' perilous antics in the great curtained pew, and laughing inwardly at Elizabeth's mirth-struggling efforts to control them.

"And you say that they never held up their heads again afterwards?" pursues Mr. Greenock in a tone of good-natured compassion, that is yet largely tinged with gratified curiosity.

"They left the neighborhood at once," returns the clergyman. "Dear me, how time flies! it must be ten years ago now, and I never saw them again until I met the unhappy girl and her mother yesterday, driving in the Via Tornabuoni; but—lowering his voice a little more—"you will understand that this is strictly entre nous; that it must go no further."

"What do you think I am made of?" cries Mr. Greenock in a burst of generous indignation; "but"—stepping a pace or two nearer to his interlocutor—"I am not quite sure that I have got the details of the story right; would you mind just running it over to me again?"

Jim has been sitting in such a stunned stillness that it is perhaps no wonder that they have forgotten his neighborhood. At all events the clergyman is evidently about to comply with his companion's request and recapitulate the tale. If Jim preserves his motionless attitude but five minutes longer, he will be put into possession of that story whose existence he has already heavily conjectured, and the imagining of which has made him often, within the last week or two, turn with nausea from

## WESTERN AUSTRALIA.

It is Rapidly Growing in Wealth and Population.

A Royal Commission has been investigating the prospects of Western Australia, and has decided that that colony is one of Britain's most promising children. Fifteen years ago the total population of the whole State was only 46,000; now it has that population in one town alone. Fifteen years ago Western Australia had a revenue of under half a million; now it is over £4,000,000.

Fifteen years ago Western Australia's whole railway mileage would not have stretched much more than one hundred miles; to-day its railways are 1,600 miles long.

Fifteen years ago Western Australia produced only £80,000 worth of gold, and paid only £1,250 in dividends on its gold-mines; last year the gold product was valued at £8,000,000, and the mines paid £2,167,539 in dividends.

It possesses some of the finest timber country in the world (its karri and jarrah have a universal reputation); its agricultural capacity is illimitable; sheep and cattle and horses thrive abundantly without the risks of diseases that menace the flocks and herds of other countries; and, as a complement to all these advantages, mineral development is proceeding at a remarkable pace.

## ROYAL ALPINE HOSTESS.

Queen of Italy Shares Hut With a Party of Tourists.

Queen Margherita of Italy is stated to have had a novel experience while making an ascent in the Italian Alps recently, accompanied by two guides.

Her Majesty was overtaken by a heavy snowstorm and sought shelter in a hut already occupied by a large party of British and German Alpinists, who had likewise been caught in the storm.

The Queen was immediately recognized by the tourists, who were on the point of leaving the hut, when her Majesty said:—"Pray, let me be your hostess, gentlemen; we must wait until the storm has passed."

Queen Margherita insisted on looking after the fire, and shared the frugal repast with the other Alpinists and the guides. Her Majesty sat by the fire all night, while the others slept on the floor.

The tourists departed early the next morning, after thanking the Queen for her hospitality, and Queen Margherita descended the Mucugnaga with her guides.

## SOMETHING ENTIRELY NEW.

Plan of the Pacific Coast Securities Company Absolutely Safe.

The old idea of "nothing new under the sun" is completely put to flight by the Pacific Coast Securities Company of Portland, Oregon, in handling the stock of the Sea Island Copper Company. This Company, whose officers are business men of many years' experience have perfected a plan whereby the investor's money is under his own control and he does not take the stock until earnings and accrued dividends are satisfactory. A new booklet, "Something to Set You Thinking," has just been issued for free distribution, and it is valuable to anyone contemplating investment in corporate enterprises.

## EXPRESSIVE.

"Dear me!" exclaimed grandma. "I wonder what makes the baby cry so." "I know, grandma," replied little Tommy. "He cries 'cause he ain't old enough to swear yet."

## THE PROPHET'S BEARD.

Veneration of Ancient Relics of the Sultan of Turkey.

The Sultan proceeded recently to the mosque at Top Kapu Serai, in Stambul, for the veneration of Mahomet's beard and part of his cloak, which are kept there.

There is always some doubt whether the Sultan will proceed by land or sea. The Bosphorus and Golden Horn are patrolled by hundreds of launches and boats, and all traffic is suspended for hours before his departure and return.

On land some five miles of streets are lined on both sides with troops standing shoulder to shoulder, and sand is laid a foot deep throughout the way, so that the Padishah may not be discomforted by the otherwise uneven and bumpy roads.

This year his Majesty went by sea, leaving Yildiz about ten in the morning, his launch, surrounded with innumerable craft, steaming to Seraglio Point, where the Sultan landed and drove to the mosque, returning again late in the evening.

Worms derange the whole system. Mother Graves' Worm Exterminator deranges worms and gives rest to the sufferer. It only costs 25 cents to try it and be convinced.

Tramp (in the country): "Yes, I once

evidently about to comply with his companion's request and recapitulate the tale. If Jim preserves his motionless attitude but five minutes longer, he will be put into possession of that story whose existence he has already heavily conjectured, and the imagining of which has made him often, within the last week or two, turn with nausea from his food, and toss restlessly upon his bed. Without any trouble on his part, without any possible blame attaching to him, he will learn the poor soul's secret. Never! If the devil wish to tempt him with a prospect of success, it must be with a less unhandsome bait. Almost before the two startled scandal-mongers have recalled the fact of his existence by the abrupt noise of his departure, he is half-way back to the terrace, that mist still before his eyes, and a singing in his ears.

(To be continued).

SMART LAWYER.

The young lawyer was consulting in the jail with his unfortunate client, charged with stealing a stove.

"No, no," he said soothingly; "I know, of course, you didn't really steal the stove. If I thought for a minute that you were guilty, I wouldn't defend you. The cynics may say what they like, but there are some conscientious men among us lawyers. Yes, of course, the real difficulty lies in proving that you didn't steal the stove, but I'll manage it now that you have assured me of your innocence. Leave it all to me, and don't say a word. You can hand over a guinea now, and pay me the rest—"

"A guinea, boss?" repeated the accused man, in a hoarse voice. "Why don't you make it ten thousand guineas? I could pay ye jest ez easy. I ain't got no money."

"No money!" The lawyer looked indignant.

"Naw—ner know where I kin git any, either."

The young lawyer seemed plunged in gloom. Suddenly he brightened.

"Well," he said, more cheerfully, "I like to help honest men in trouble. I'll tell you what to do. I'll get you out of this scrape, and we'll call it square if you'll send the stove round to my office. I need one."

WORSE THAN LANGUAGE.

"My husband is a brute," said the excitable woman.

"Have you been scolding him?"

"Of course I have.

"Ah! I suppose he talked back and used harsh language?"

"Worse than that! He yawned!"

Aunt—Tommy! How cruel! Why did you cut that worm in two? Tommy—It seemed so lonely.

Can it truly be said of any other book than Webster's International Dictionary that it is:—The Standard of the Federal and State Courts? The Standard of the Government Printing Office? The Basis of nearly all the Schoolbooks in the country? Indorsed by every State School Superintendent? Universally recommended by College Presidents and Educators? Adhered to as a Standard by over 99 per cent. of the Newspapers? Reliable, Indispensable, Complete, Scientific, Practical, Popular, The Safe Guide for a Professional Man, Business Man, Teacher and Student? Should you not own such a book? Look elsewhere for advertisement in this paper.

HER FAULT.

"Don't cry, little boy. What's the matter?"

"Boo-hoo! My mother's bin an' lost me again."

**A Veteran's Story.**—George Lewis, of Shamokin, Pa., writes: "I am eighty years of age. I have been troubled with Catarrh for fifty years, and in my time have used a great many catarrh cures, but never had any relief until I used Dr. Agnew's Catarrhal Powder. One box cured me completely." 50 cents.—25

Miss Gabbie—"And she accused me of retailing gossip about the neighborhood." Miss Sharpe—"The idea! Miss Gabbie—"Positively insulting, isn't she?" Miss Sharpe—"Yes, for you're really a wholesaler."

A lady writes: "I was enabled to remove the corns, root and branch, by the use of Holloway's Corn Cure." Others who have tried it have the same experience.

John—"Was Mabel offended when you called on her with your face unshaven?" Jim—"Yes; she said she felt it very much."

**Yes, it is humiliating to have a skin covered with foul eruptions. It is painful, too. Why not end the trouble and restore your skin to its natural fairness with Weaver's Cerate?**

"A man always gets on easier by taking his wife's advice." "Yes," answered Mr. Meekton. "When things turn out badly there isn't so much talk about it."

**Helpless as a Baby.**—South American Rheumatic Cure strikes the root of the ailment and strikes it quick. R. W. Wright, 10 Daniel street, Brockville, Ont., for twelve years a great sufferer from rheumatism, couldn't wash himself, feed himself or dress himself. After using six bottles was able to go to work, and says: "I think pain has left me forever."—26

A gentleman bought a new variety of potatoes, and told his gardener to be sure and plant them far enough apart. "Well, Sam, did you plant the potatoes far apart, as I told you?" Sam—"I did sir; I planted some in your garden and some in mine, so they are four miles apart."

**A Magic Pill.**—Dyspepsia is a foe with which men are constantly grappling, but cannot exterminate. Subdued, and to all appearances vanquished in one, it makes its appearance in another direction. In many the digestive apparatus is as delicate as the mechanism of a watch or scientific instrument in which even a breath of air will make a variation. With such persons disorders of the stomach ensue from the most trivial causes and cause much suffering. To these Parneelee's Vegetable Pills are recommended as mild and sure.

late in the evening.

Worms derange the whole system. Mother Graves' Worm Exterminator deranges worms and gives rest to the sufferer. It only costs 25 cents to try it and be convinced.

Tramp (in the country)—"Yes, I once rode or bicycle, but I had ter give it up." Biker—"Why?" Tramp—"Well, yer see, the owner wuz comin' down the road behind me, and the policeman had a rope stretched across in front."

**Imitations Abound.**—But insist upon getting the genuine, "The D & L" Menthol Plaster. It has stood the test of years. It cures aches and pains quicker than any plaster.

"You bad boy, you have made a grease spot on the new sofa with your bread-and-butter," said Mrs. Fizzletop to her son Johnny. "Never mind, ma, you can sit on it when there is company in the parlor."

**Under the Nerve Lash.**—The torture and torment of the victim of nervous prostration and nervous debility no one can rightly estimate who has not been under the ruthless lash of these relentless human foes. M. Williams, of Fordwich, Ont., was for four years a nervous wreck. Six bottles of South American Nervine worked a miracle, and his doctor confirmed it.—28

"One-half of the world doesn't know how the other half lives," quoted his wife. "No," rejoined her husband, "but it keeps about nine-tenths of that half busy trying to find out."

**As the Oil Rubs in the Pain Rubs Out.**—Applied to the seat of a pain in any part of the body the skin absorbs the soothing liniment under brisk friction and the patient obtains almost instant relief. The results of the use of Dr. Thomas' Electric Oil have surprised many who were unacquainted with its qualities, and once known it will not be rejected. Try it.

**Angel Child.**—"Aunt Daisy, what is meant by 'a feticitious character'?" Aunt Daisy—"That means one that is made up, dear." Angel Child—"Oh, yes! Then you're a feticitious character, aren't you, auntie?"

**Her Heart like a Polluted Spring.**—Mrs. James Strigley, Pelee Island, Ont., says: "I was for five years afflicted with dyspepsia, constipation, heart disease and nervous prostration. I cured the heart trouble with Dr. Agnew's Cure for the Heart, and the other ailments vanished like mist. Had relief in half an hour after the first dose."—27

RAILWAY ON MONT BLANC.

**Plans Perfected for Suspension Line, Chamounix to the Alguille du Midi.**

A serious project to build a suspension railway almost to the summit of Mont Blanc is reported from Geneva. A Swiss company has worked out the details of the plan and has secured the approval of the French Government. The same company is at present building a similar line to the summit of the Wetterhorn.

The new line is to run from the vale of Chamounix to the summit of the Alguille du Midi, a pinnacle 12,600 feet high is the centre of the Mont Blanc group and adjoining the principal summit. According to the contract, an ordinary cable road is to continue the existing road from Chamounix as far as the first station, which is to be near Bossons glacier at a height of about 8,000 feet. From that point on a double aerial cable system is to be used.

Estimates of the cost are in the neighborhood of \$800,000, and four years will be required to complete it. The first and easier half, however, can be carried out in one year, so that by the end of next summer, it is expected, tourists can make the entire journey to the glacier.

The route of the new line passes over a series of glaciers and deep crevasses, so that those who patronize it will be able to realize the thrills of Alpine climbing without the slightest danger. In sections where avalanches are frequent tunnels will be constructed so as to obviate this peril. Four-fifths of the way,

**WEBSTER'S INTERNATIONAL DICTIONARY**

A GRAND FAMILY EDUCATOR.

It not only answers your questions in Spelling, Pronunciation, Definition, New Words, Etc., but also answers questions in Geography, Biography, Fiction, Foreign Words and Phrases, the Trades, Arts and Sciences. 5000 Illustrations. 2380 Pages. A necessity in every cultured home. It is the best Christmas gift.

WEBSTER'S COLLEGIATE DICTIONARY. Largest of our abridgments. Regular and Thin Paper editions. 1115 pages and 1150 Illustrations.

Write for "The Story of a Book"—Dept. C. G. & C. MERRIAM CO., Springfield, Mass.

however, will be in the open air.

In several places the road will follow the waving contour of the glaciers and the sensation of riding on it will be not unlike that experienced in a ship in a rolling sea, an illusion which the tints of the ice may enhance.

The motive power will, of course, be electricity. This will be produced at low cost by utilizing the waters of the River Arve. A return ticket to the summit will cost \$15 at first but it is hoped to reduce the tariff soon to \$10 and ultimately to \$5.

There is this difference between a wise man and a fool—the wise man learns something from everyone he meets, while the fool tries to teach something to everyone he meets.

**Loss of Flesh,** cough, and pain on the chest may not mean consumption, but are bad signs. Allen's Lung Balm loosens and heals the cough: Not a grain of opium in it.

Mr. Plant (who is fond of dogs)—"Miss White, don't you think you ought to have an intelligent animal about the house that would protect you and—" Miss White—"Oh, Mr. Plant! This is so sudden!"

Sudden transition from a hot to a cold temperature, exposure to rain, sitting in a draught, unseasonable substitution of light for heavy clothing, are fruitful causes of colds and the resultant cough so perilous to persons of weak lungs. Among the many medicines for bronchial disorders so arising, there is none better than Bickel's Anti-Consumptive Syrup. Try it and become convinced. Price 25 cents.

MEAN ADVANTAGE.

Nellie (aged 7)—In Greenland the nights are sometimes six months long. Johnny (aged 6)—Yes, and I'll bet the old folks sit up three or four weeks after they send the kids to bed.

**Your Doctor**

Can cure your Cough or Cold, no question about that, but—why go to all the trouble and inconvenience of looking him up, and then of having his prescription filled, when you can step into any drug store in Canada and obtain a bottle of **SHILOH'S CURE** for a quarter.

Why pay two to five dollars when a twenty-five cent bottle of **SHILOH** will cure you as quickly?

Why not do as hundreds of thousands of Canadians have done for the past thirty-four years: let **SHILOH** be your doctor whenever a Cough or Cold appears.

**SHILOH** will cure you, and all druggists back up this statement with a positive guarantee.

The next time you have a Cough or Cold cure it with

**SHILOH**

ISSUE NO. 50—66.

# COMMONS DEFY THE LORDS

## Education Bill Amendments Rejected in Parliament

A despatch from London says: The hostility between the House of Lords and the House of Commons has now reached an open stage. The Lower House, after debating the matter all day, on Wednesday night rejected all the amendments of the House of Lords to the Education Bill by a vote of 416 to 107, the Irish members voting with the Government. On a motion by Mr. Birrell, president of the Board of Education, a committee was appointed to draw up the reasons for the rejection of the amendments.

The final scene was one of intense excitement. Lord Lansdowne, the leader of the Opposition in the Upper Chamber, and many other Peers were in the galleries and listened to the concluding speeches. Mr. Birrell, who throughout

the debates, has adopted a conciliatory attitude, repudiated on behalf of the Government the idea of being offensive toward the Peers.

Mr. Balfour, leader of the Opposition, declared that the Government's action was a challenge to the House of Lords. The method the Government had adopted, he declared, left not the smallest hope for a compromise. Mr. Asquith, the Chancellor of the Exchequer, with equal heat retorted that if the bill was lost the responsibility for wrecking it would lie with Mr. Balfour.

Amid the greatest excitement a division was called for and the members of the House surged into the division lobbies. When the vote was announced there was great cheering by the Government members.

## DOMINION PARLIAMENT

### NOTES OF PROCEEDINGS IN THE HOUSE OF COMMONS.

#### OCEAN MAIL CONTRACTS.

Copies of the contracts between the Dominion Government and the trans-Atlantic steamship companies were tabled. For an 18-knot service performed with vessels of the Virginian and Victorian type the Allans receive \$2,500 for a round trip from Liverpool to Rimouski, and \$3,000 for a round trip between Liverpool, St. John, or Halifax. For a 17-knot service between Liverpool and Rimouski the subsidy is \$2,000 and to St. John \$2,500. For a 15-knot service performed by any of the company's vessels the payment is \$1,000 the round trip.

The subsidy to the Allans for a direct steamship service to France is \$100,000 per annum for 18 voyages.

Furness, Withy and Co., for their Liverpool service, receive \$15,000 for nine months, ending March 31st next, and for the London service \$18,750 for the same period. The C.P.R. for its London service receives \$1,500 for each round trip; the Donaldson Line, \$750 for each round trip to Glasgow; the Ulster Steamship Company, the same amount for its service to Dublin and Belfast; the Manchester liners, \$26,250 for nine months' service to Manchester.

#### FOR AN EIGHT-HOUR DAY.

Mr. Verville, Labor member for Malton, in introducing a bill respecting the hours of labor on public works, explained that the purpose of the measure was to establish an eight-hour day on all public works of Canada. It would, he said, not affect the wages paid.

#### MOTOR CARS ON INTERCOLONIAL.

Mr. Lefurgey was advised by Mr. Emmerson that the Government sent Mr. Joughins to investigate into motor cars with a view to their use on branch lines on the Intercolonial Railway and P.E.I. Railway. Mr. Joughins reported favorably on the matter as to their use and economy, and specifications were being prepared with a view to the issue of tenders.

#### TRENT CANAL.

Mr. Christie learned from Mr. Emmerson that the capital total expenditure on the Trent Canal since its inception to the 30th November, 1906, was \$5,050,032, and the income total expenditure \$296,059, a total of \$5,357,092. The estimates not being ready, he could not say what would be the cost of the incomplete work.

ment inspector. This means one or more inspectors to each meat packing-house, and the inspector's duty will be to examine the live cattle in the first place, and keep his eye on all the operations up to the sealing of the cans. The act will apply to all meat, etc., packed for inter-provincial trade or for export.

Fruit and vegetable canneries being many and small and scattered, the Government recoils from the idea of subjecting them to as rigid an inspection as is provided in the case of meats. The inspectors, however, will be clothed with power to shut up canneries if they find them unsanitary. It is also proposed that the cans be marked with the name of the packer and the date, so that they may be traced. It was true, said Mr. Fisher, that people were sensitive about buying old cans, but he didn't know that the prejudice was well-founded.

#### THE DOUKHOBORS.

Mr. Oliver informed Mr. Smith (Nainaimo) that the Government was not aware at whose instance Peter Veregin, Doukhobor leader in Canada, had gone to Russia to engage 10,000 Russians for railway work in this country. The Government had not been requested by any parties to sanction such a scheme.

#### MINING LEASES CANCELLED.

Dr. Roche (Marquette) ascertained from Mr. Oliver that during the present year the Government has cancelled six hydraulic mining leases in the Yukon, owing to the lessees not having complied with the provisions of their leases.

#### COST OF NAVAL STATIONS.

Mr. Monk ascertained from Sir Frederick Borden that the estimated cost of maintenance of the military and naval station at Halifax was \$25,000 per annum and at Esquimaux \$10,000 per annum.

#### STRIKE AND LOCKOUTS.

Mr. Lemieux, Minister of Labor, gives notice of a bill to aid in the prevention and settlement of strikes and lockouts in coal mines. It is based upon the recommendation of Mr. King in his report upon the settlement of the Lethbridge coal strike.

#### RAILWAY CROSSINGS.

Mr. Lancaster's bill to safeguard railway crossings or restrict the speed of trains was accepted by the Minister of Railways, and stands for third reading. This is the bill that was thrown out by the Senate at last session. The bill to legalize scalping of railway tickets, introduced by Mr. Maclean, was referred to committee.

#### MYSTERIOUS DEATH.

Quebec, Dec. 18. — A man named

## THE WORLD'S MARKETS

### REPORTS FROM THE LEADING TRADE CENTRES.

#### Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, Dec. 18. — Flour — Ontario wheat 90 per cent. patents are quoted at \$2.70 in buyers' sacks outside for export, Manitoba first patents, \$4.50; second patents, \$4; and strong bakers', \$3.90, Toronto.

Wheat — No. 1 Manitoba hard is nominal, 82½¢ lake ports; No. 1 northern at 81¢, and No. 2 northern at 78½¢.

Corn — No. 3 American yellow, new, is a difference of opinion between the nominal at 52½¢, to arrive, Toronto. Bran — Market firm at \$16.50 outside in bulk, and shorts at \$16.50.

Wheat — No. 2 white offered at 71¢ outside, with 69¢ bid; No. 2 goose, 65¢ bid east.

Barley — No. 3 extra, 50¢ bid outside, without sellers.

Peas — No. 2 wanted at 79¢ outside, without sellers.

Oats — No. 2 white offered at 36½¢ on a 6c rate to Toronto, with 36¢ bid at 78 per cent. points. No. 2 white offered at 38½¢ on track, Toronto, to arrive. One car of No. 2 mixed sold at 35¢ on a 6c rate to Toronto.

Rye — No. 2 offered at 71¢ outside without bids.

#### COUNTRY PRODUCE.

Beans — Hand-picked selling at \$1.50 to \$1.60, and primes at \$1.35.

Honey — Strained, quoted at 10 to 12c per lb, and combs at \$2 to \$2.50 per dozen.

Hops — New quoted at 18 to 21c.

Hay — No. 1 Timothy scarce, and quoted at \$11.50 to \$12 on track here; No. 2 quoted at \$9.50.

Straw — \$6.50 to \$7 per ton.

Potatoes — Ontario, 65 to 70c per bag, on track, and New Brunswick, 75 to 80c per bag.

Poultry — Turkeys, fresh killed, 12 to 15c; chickens, dressed, 9 to 10c; alive, 6 to 8c per lb; fowl, alive, 4 to 5c; ducks, dressed, 9 to 10c; do, alive, 6 to 8c per lb; geese, 9 to 11c per lb.

#### THE DAIRY MARKETS.

Butter — Pound rolls are quoted at 23 to 24c; tubs, 20 to 22c; large rolls, 20 to 23c; creamery prints sell at 26 to 27c, and solids at 24½ to 25c.

Eggs — Storage, 23 to 24c per dozen, and limed, 21 to 22c; new laid, nominal at 30c.

Cheese — Large cheese, 12½¢, and twins at 14c.

#### HOG PRODUCTS.

Dressed hogs in car lots are unchanged. Bacon, long clear, 11½ to 12c per lb in case lots; mess pork, \$21 to \$21.50; short cut, \$23.

Hams — Light to medium, 15 to 15½¢; do, heavy, 14 to 14½¢; rolls, 12c; shoulders, 11 to 11½¢; backs, 16 to 16½¢; breakfast bacon, 15½ to 16c.

Lard — Tierces, 12½¢; tubs, 12½¢; pails, 12½¢.

#### BUSINESS AT MONTREAL.

Montreal, Dec. 18. — Grain — Oats are still arriving very slowly, prices are still 42½¢ for No. 2 oats in store, 41½ to 42c for No. 3, and 40½ to 41c for No. 4. Flour — Manitoba spring and winter wheat patents, \$4.10 to \$4.25; wheat, \$4.60; strong bakers', \$4.10; straight rollers, \$3.65 to \$3.75; do, in bags, \$1.65 to \$1.85; extras, \$1.50 to \$1.60. Feed — Manitoba bran, in bags, \$21; shorts, \$22 per ton; Ontario bran, in bags, \$21 to \$21.50; shorts, \$22.50 to \$25; milled moullie, \$22 to \$25 per ton, and straight grain, \$28 to \$30. Provisions — Barrels short cut mess, \$22 to \$24; half-bbls, \$11.75 to \$12.50; clear fat backs, \$23.50; long cut heavy mess, \$20.50; half-bbls do, \$10.75; dry salt long clear bacon, 12½ to 12½¢; barrels plate beef, \$12 to

## AGRICULTURAL AND HORTICULTURAL SOCIETIES.

The New Act Comes Into Force February 1st, 1907.

As the dates for the annual meetings of Agricultural and Horticultural Societies are near at hand, our readers will doubtless be interested in learning something of the laws that will govern the procedure of these organizations.

The new laws come into force on February 1st, 1907, but the next annual meetings of these organizations will be held on the dates fixed under the old Act, viz.: Horticultural and Township Societies on January 9th, and District Societies on January 16th, and the usual two weeks' notice must be given in local newspapers together with bills posted in places of common resort.

In future, societies will no longer be known as "District" and "Township," but every society in the Province will be placed on the same basis in regard to the receipt of its government grant, and will receive such grant in proportion to its expenditure for agricultural purposes during the past three years, as shown by their sworn annual statement to the Department of Agriculture. A definition of what may be considered "Expenditure for Agricultural Purposes" is given in the Act.

Societies will be known by the name and place where they held their last annual exhibition unless they prefer some other, then the new name must be determined by the members thereof, and approved by the Minister of Agriculture.

Under the new law it will not be permissible for Horticultural societies to offer prizes for competition at exhibitions held under the auspices of agricultural societies. These last named organizations, however, may use their own funds for the offering of prizes for horticultural exhibits.

Hereafter, no prizes can be offered for grade male stock.

Spring stallion and cattle shows shall receive a special grant equal to one-half the sum expended, but such sum shall not exceed \$50. Where seed fairs are held the maximum grant shall be \$25.

Societies investing in horses, cattle, sheep or swine, for the improvement of stock, will receive a grant ranging from \$50 downward, for each registered male animal in these classes.

No society shall be entitled to receive a grant exceeding \$800.

Under the new Act restrictions in regard to the conducting of games of chance have been made more stringent.

The annual meetings to be held in January of District, Township and Horticultural societies, which for the last time will be convened under the old Act, will be the most important ones in the history of these organizations. All who are interested in making of primal importance the educational features of these societies, and in improving the quality and quantity of the products of the farm, factory and garden, should attend these meetings on January 9th and 16th.

Copies of the new Act governing Agricultural Societies may be had on application to Mr. J. Lockie Wilson, Superintendent of Agricultural and Horticultural Societies, Parliament Buildings, Toronto.

#### BEGINS WITH INFANTS.

### Milk Carries Bacilli of Tuberculosis Into the System.

A despatch from Stuttgart, Germany, says: Professor von Behring read a paper here on Tuesday night before the Society for the Care of Sick in the Colonies, on his method of treating tuberculosis. According to Professor von Behring's view, consumption is the last verse of the song of which the first verse was sung in the infant's cradle. In other words, he believes that the bacilli of tuberculosis find their way into the human system through milk. His theory directly contradicts Dr. Robert Koch's doctrine that tuberculous milk is not dangerous and that consumption in most cases is contracted as a result of breathing. Professor von Behring holds

person that the capital total expenditure on the Trent Canal since its inception to the 30th November, 1906, was \$5,050,032, and the income total expenditure \$296,059, a total of \$5,357,092. The estimates not being ready, he could not say what would be the cost of the incomplete work.

#### IMPORTATION OF KNITTED GOODS.

Mr. Lalor was informed by Mr. Peterson that the amount of knitted goods imported from Germany and Great Britain during the years 1900 to 1906 was as follows:—

|            | From Germany. | From Great Britain. |
|------------|---------------|---------------------|
| 1900 ..... | \$119,116     | \$ 733,042          |
| 1901 ..... | 99,804        | 685,320             |
| 1902 ..... | 121,205       | 671,204             |
| 1903 ..... | 214,727       | 999,469             |
| 1904 ..... | 177,033       | 1,213,451           |
| 1905 ..... | 212,808       | 1,387,115           |
| 1906 ..... | 276,772       | 1,641,312           |

#### IMMIGRATION AGENTS.

Mr. Christie ascertained that the number of immigration agents employed by the Government in Ontario during the year was nine, and their remuneration \$100 per month, and their duties were distributing farm help.

#### YUKON TELEGRAPH SYSTEM.

Mr. Foster (North Toronto) was told that the receipts from the Yukon telegraph system in the fiscal year 1905 were \$115,876, and the expenditure \$229,251.

#### INSPECT PACKING HOUSES.

Hon. Sidney Fisher explained his canned goods measure. Mr. Fisher had sent out W. W. Moore to inspect the Canadian packing houses, and Mr. Moore had reported all well, there being found only a few minor delinquencies in the matter of sanitation, which a system of inspection would remedy. These conditions, in Mr. Fisher's opinion, justified a system of inspection. Moreover, he had received inquiries from abroad as to what Canada was doing in the way of inspection. It was desirable to establish confidence in the foreign markets, otherwise Canadian meat products must be sold at a great disadvantage, especially in competition with the United States. On these grounds Mr. Fisher proposes to provide for the inspection of conditions under which vegetables, fruits and fish are canned, and in the case of meats to have every tin passed and stamped by a Govern-

ment official before the bill to legalize scalping of railway tickets, introduced by Mr. Maclean, was referred to committee.

#### MYSTERIOUS DEATH.

##### Queenston Policeman Taken From River Holding Valise.

A despatch from Niagara Falls, Ont., says: On Thursday evening shortly before 6 o'clock Chas. Wadsworth, of Queenston, was pulled out of the river in front of the dock at Lewiston. His rescuers saw him struggling in the water holding fast to a valise, and this was landed with him. Wadsworth was laid out on the dock, and those about believed him to be dead. They sent for Coroner Walker. Dr. Eames viewed the body about 7 o'clock, and he found even at that hour rigor mortis had not set in. This convinced him that Wadsworth was not dead when pulled out of the river, but that his life might have been saved by prompt medical attendance. Coroner Walker laid the valise aside to drain, and while his back was turned somebody stole it.

As Wadsworth was seen about the hotel Cornell at 5 o'clock, and his watch had stopped at 5.35 o'clock, there is a suspicion that somebody, who was trying to secure the valise, threw him into the river. Wadsworth was 65 years old, and a member of the Victoria Park police force at Queenston. Coroner Walker will make a full investigation.

#### A VALUABLE DISCOVERY.

##### Rich Vein of Silver Located on Gillies Limit.

A despatch from Toronto says: Prof. Miller, Provincial Geologist, received a telegram from Mr. E. T. Corkill, Inspector of Mines, on Friday, to the effect that on the drift on the 70-foot level of one of the workings on the Gillies Limit has been encountered a large body of high-grade silver cobalt ore. It is believed by officials at the Parliament Buildings that the discovery of the ore is one of the most valuable in the Cobalt district. As a result of this find Prof. Miller left for the north on Saturday. On another mine the indications, at a depth of 25 feet, are so promising that contracts will probably be let shortly for a development shaft.

## SAILORS' TALE OF GOLSPIE WRECK

### Claim That Injuries Were Due to Unfair Usage.

A despatch from Ste. Marie, Ont., says: The four members of the crew of the steamer Golspie who lost their feet as a result of exposure after the wreck, and the fifth, who lost both his feet and his hands, are getting along well at the General Hospital, where they were taken after being brought down from Michipicoten Friday afternoon. Sunday is the first time they could be interviewed, and they tell a story so different from that given out by the boat officers that considerable indignation has been stirred up in town. The Sons of England Benevolent Society has interested itself on behalf of the unfortunate men, and will ask that an investigation be held by the department at Ottawa.

The sailors allege that when the boat left Fort William for the Lower Lakes she was short provisioned. The five men who met with misfortune further allege that they were discriminated against. They say that after the crew left the boat and took up camp on the

shore they were told that Michipicoten Harbor was only four miles distant. In reality, it was nearer twenty, but they set out to reach it and lost their way. They returned to the camp and, according to their story, were refused admission. They set out again, and for three days wandered about in the woods. They lost their axe, and their matches got wet, and they had no means of obtaining shelter or warmth. On the third night they were frozen, and the next day they were found by some Indians, who cared for them until they were taken away. They credit the Indians with having saved their lives. Capt. Bault, of the Golspie, refused to give the newspaper man a story of the affair.

The men who lost both feet were Arthur Gree, of London, Eng., a veteran of the South African War; James Thorburn, of Glasgow; J. H. Keebing, of Huddersfield, Yorkshire, and John Donnelly, of Belfast, Ireland. A Glasgow man named Neil, who went by the name of William McDonald, lost both his feet and his hands.

500 lbs., \$22 to \$25 per ton, and straight grain, \$28 to \$30. Provisions—Barrels short cut mess, \$22 to \$24; half-bbls, \$11.75 to \$12.50; clear fat backs, \$23.50; long cut heavy mess, \$20.50; half-bbls do, \$10.75; dry salt long clear bacon, 12½ to 12½c; barrels plate beef, \$12 to

\$13; half-bbls do, \$6.50 to \$7; barrels heavy mess beef, \$11; half-bbls do, \$6; compound lard, 8 to 9½c; pure lard, 12½ to 13c; kettle rendered, 13½ to 14c; hams, 14 to 15½c; breakfast bacon, 15 to 16c; fresh killed abattoir dressed hogs, \$9.25 to \$9.50; alive, \$6.75 to \$6.90. Eggs—Selects, 25c; No. 1 candled, 21c. Cheese—October made Ontario, 12½ to 12½c; November made, 12 to 12½c. Butter—Choicest creamery, 25½ to 25½c; medium grades, 24 to 24½c.

#### UNITED STATES MARKETS.

St. Louis, Dec. 18. — Wheat—Cash, 7½c; Dec., 73½c; May, 77c; July, 75½c.

Milwaukee, Wis., Dec. 18.—Wheat—No. 1 northern, 81 to 82c; No. 2 northern, 78 to 81c; May, 78½ to 78½c bid. Rye—No. 1, 68½ to 69c. Barley—No. 2, 55½ to 56c; sample, 49 to 55c. Corn—No. 3 cash, 41 to 43c; May, 43½c bid.

Minneapolis, Minn., Dec. 18.—Wheat—December, 77½c; May, 80½c; July, 81½c; No. 1 hard, 81½c; No. 1 northern, 80½c; No. 2 northern, 77½ to 78½c; No. 3 spring, 75 to 76c. Flour—First patents, \$4.30 to \$4.40; second patents, \$4.15 to \$4.25; first clears, \$3.25 to \$3.35; second clears, \$2.40 to \$2.60. Bran—\$16.75 to \$17.

#### CATTLE MARKET.

Toronto, Dec. 18. — Business was moderately brisk at the City Cattle Market this morning, and prices had a generally firm tone.

Export Cattle—Quotations are nominal and firm at: Choice, \$4.50 to \$4.90; good, \$4.10 to \$4.50; cows, \$3.25 to \$3.75; bulls, \$3.50 to \$3.75.

Butcher Cattle—Quotations are: Picked cattle, \$4.50 to \$4.90; choice, \$4.40 to \$4.70; medium, \$4 to \$4.25; common, \$3 to \$3.50; bulls, \$3.25 to \$3.50.

Stocks and Feeders—Quotations are firm at: Choice, \$3.25 to \$3.75; common, \$2.75 to \$3; bulls, \$2 to \$2.25; heavy feeders, \$3.65 to \$3.75; short-keeps, \$3.85 to \$4.10.

Milk Cows—Choice, \$40 to \$50; common, \$25 to \$35; springers, \$25 to \$40.

Calves—Quotations are firm at 3c to 6c per pound.

Sheep and Lambs—Quotations: Export ewes, \$4.50 to \$4.85; bucks and ewes, \$3 to \$3.50; lambs, \$5.50 to \$6.25.

Hogs—\$6.40 per cwt for choice and selects and \$6.15 for lights and fats, fed and watered.

#### CLEANED OUT THE BANK.

##### Daring Work of Robbers in Odessa, Russia.

A despatch from Odessa says: One of the most daring robberies of recent times in South Russia was committed at the Petersburg International Bank on Wednesday afternoon, when a number of robbers escaped with \$14,500, the entire cash of the bank. Half a dozen armed men suddenly appeared at the counter, ordered the clerks to throw up their hands and shot the policemen on duty. They then rifled the cash drawers and ran off. A force of Cossacks speedily was mustered, pursued the robbers and captured five of them, but the rest got away with the money.

#### BIGGEST JAP BATTLESHIP.

##### To Outclass Dreadnought — Yokosuka Yard to Build Her.

A despatch from Tokio says: It is reported that the keel plates of a 22,000-ton battleship will be laid at the Yokosuka navy yard shortly. It will exceed the tonnage of the British battleship Dreadnought by 4,000 tons. The Japanese battleship Satsuma, which was launched at Yokosuka Nov. 15, has a tonnage of 19,800.

was sung in the infant's cradle. In other words, he believes that the bacilli of tuberculosis find their way into the human system through milk. His theory directly contradicts Dr. Robert Koch's doctrine that tuberculous milk is not dangerous and that consumption in most cases is contracted as a result of breathing. Professor von Behring holds that the germs reach the lungs through the lymphatics and blood vessels. He contradicted Dr. Koch flatly in the matter of tuberculous milk, which Dr. Koch considers to be most harmless. Professor von Behring, on the other hand, says that germs on a tuberculous cow are no more dangerous than the germs originating from another human being.

The professor intends to recommend his remedy, called "Tulazilkin," as a preventive of tuberculosis in infants. It was expected that during his talk Professor von Behring would communicate the secret of his remedial preparation, but he failed to do so.

#### WOMEN OF THE COUNTRY.

##### Ontario Woman's Institute Meets at Guelph College.

A despatch from Guelph says: That the benefits of the new science of agriculture are not all going to the men was shown on Wednesday morning, when over three hundred delegates from the various branches of the Ontario Women's Institute met in the Agricultural College assembly hall to discuss questions which peculiarly interest the women on the farm. This institute, with a membership of 10,500 wives and daughters of farmers, is a much more vital organization than that of the men folk. The reforms which it has already effected are merely a foretaste of the revolution which its promoters hope to bring about on the domestic side of country life through its agency.

Mr. George A. Putnam, the superintendent of the institute, regretted their lack of an official organ. The periodical through which they used formerly to place themselves before the people ceased publication last year, and he thought their progress would have been greater during the past twelve months if this had not happened. He was not, however, complaining of the growth of the institute; that was perfectly satisfactory. Many of the branches, he noted, were demanding more scientific teaching at their meetings, a fact which, he thought, would eventually lead to the lengthening out of these gatherings to four or five days.

Woman's part in country life was dealt with in an interesting manner by Mr. William Hays, Assistant Secretary of Agriculture for the United States. He considered the home the most important unit in modern civilization, because it was from it that a people drew its strength and vigor. His ideal of education for country women was the consolidated school, with the finishing touches at an institution like the McDonald Institute, nor did he think the day was far distant when there would be such improvement in the country home that the functions of the wives and mothers would be quite changed from what they had been in the past. In a brief reference to religious education, he suggested that as the State paid for the schooling of the people, it should have absolute charge of it. If, however, parents were willing, their children might be sent to church schools for a year or two for the religious side of their training.

The possibility of women co-operating with their husbands in their work would, he declared, be worth working out. He believed, for instance, that the farmer's wife should have charge of his books, if for no other reason than that she understood the home life better than anyone else.

The scarcity of coal in North Dakota is becoming a menace to life.

The Times advises the British Government to show an attitude of sympathy and good-will toward the colonies, lest they turn their attention elsewhere.

### HAPPENINGS FROM ALL OVER THE GLOBE.

**Telegraph: Brief From Our Own and Other Countries of Recent Occurrence.**

#### CANADA.

A new line from Campbellford to Toronto is to be constructed by the Canadian Pacific Railway.

The Toronto Street Railway Company has forbidden employees in uniform to enter any licensed premises.

The Marine and Fisheries Department has under consideration a scheme for the thorough lighting of the St. Lawrence.

The Railway and Municipal Board of Ontario ruled that a steam railway company is not liable for a business tax.

A new pork-packing factory and public abattoir will be established at St. Thomas.

The Government have cancelled the lease of the Chaudiere Falls water power on account of non-fulfilment of conditions.

The Railway and Municipal Board approved of Ottawa's by-law to raise \$50,000 to extend the civic electric light plant.

Ten thousand dollars in notes were stolen from Mr. F. A. Hesley, a Winnipeg traveler, at Fort William, on Friday.

The Canadian Northern, with its Montreal-Ottawa line, proposes to enter Toronto along Ashbridge's Marsh to the Don.

The Grand Trunk will spend a quarter of a million for a new station and extensions to the locomotive works at Stratford.

In a statement of the affairs of the York County Loan & Savings Co., the liquidator places liabilities at \$4,112,632 and assets at \$1,319,064.

A measure consolidating and amending the Ontario companies act will be introduced at the coming session of the Legislature by Hon. Mr. Hanna.

At the Springer Lumber Company's mill, Sturgeon Falls, Ivan Joannis, foreman, was almost instantly killed by a falling smokestack, on Thursday.

The Divisional Court allowed the appeal of Dr. Alexander Crichton from the ruling of the Medical Council striking his name from the roll of physicians.

Knox Presbyterian Church, Peterboro' will receive \$5,000 from the estate of Mrs. Nicholls, of which Messrs. Richard Hall and Charles McGill are trustees.

London's Medical Health Officer reports 600 deaths during the year. The death rate is about 13.3 in every thousand of the population.

Woodstock will vote on by-laws for Niagara power, for raising \$16,500 for surface drainage, and for the adoption of the Public Parks Act.

The surrendered portion of the Michael Calahou Indian reserve totaling 8,200 acres, near Edmonton, realized \$80,000 at an auction sale.

The Farmers' Association is circulating a petition to be presented to the Government asking that payment of iron and steel bounties cease entirely after June next.

At a meeting in Toronto of the North American Cobalt Refining Company it was decided to erect a small smelter for the treatment of Cobalt ores and a subsidiary one at Cobalt.

The Post-office Department has made a contract with the C. P. R. Steamship Co. for an all-year-round Canadian service between Seattle and Victoria at a cost of \$6,000.

A burglar entered James Sellers' grocery store, Hamilton, and at the revolver's point demanded the contents of the till. Mrs. Sellers rushed at him with the broom and the thug fired, the bullet striking six inches from Mr. Sellers.

Petitions are being sent into the Dominion Government asking them to renew the demand upon Washington for the settlement of the claims of the Canadian.

## SELECTION OF GOOD BEEF.

Valuable Hints at the Great Guelph Gathering.

Many useful hints in the selection of good beef were thrown out by Mr. John Gosling, of Kansas City, whose reputation as a judge of cattle extends from the Atlantic to the Pacific and from Manitoba to the Gulf of Mexico, at the Guelph Fair. A blue-blooded Holstein steer, which had just taken first prize in the ring, was dragged on to the platform, an unwilling victim, to enable Mr. Gosling to point his address with suitable illustrations. With all the fervor of an enthusiast the lecturer dwelt on the beautiful points of the frightened beast, the straight lines of back and sides, which were never separated from the good beef animal; the silky hair, which denoted fine and firm flesh underneath. The weight of the steer was 1,350 pounds, which Mr. Gosling declared, was just right. Many a dealer had been ruined in the old days by raising animals weighing a ton. After a certain weight tallow simply meant waste.

Feeling in the neighborhood of the animal's jugular, Mr. Gosling pointed out a lump of fat, which, he said, was evidence that it was just in condition to kill. If left for another year it would be spoiled, so now was the accepted time, and its owner would show himself a bungler if he tried to put on more weight.

Mr. E. C. Drury spoke on the possibility of a dual purpose cow. He did not think he could raise a cow which would give more milk than a dairy cow and at the same time produce better beef calves than special beef cattle, but he did think he had solved the problem of a cow whose milk and calves both paid well. He had tried the thing, and under some conditions, he assured his hearers, his plan was better than that of keeping a regular dairy herd or raising cattle specially for beef.

Prof. Day discussed the relative values of turnips and corn silage in feeding steers. For practical purposes, he said, a mixture of the two was best, putting on more flesh and at a smaller cost.

## CONSTITUTION FOR TRANSVAAL.

Letters Patent Issued on Terms Announced in House.

A despatch from London says: Letters patent were issued on Wednesday granting a constitution to the Transvaal. The terms were fully outlined by Mr. Churchill, Under-Secretary for the Colonies, in the House of Commons July 31. There is no change in the revision as finally approved by King Edward. Members of the Legislature will receive a salary of \$1,500 yearly.

Under the letters patent the recruiting of Chinese for work in the Transvaal will cease immediately, and the entire system of Chinese labor must be stopped a year after the last meeting of the Legislature. The latter is given the right to put an end to the system earlier if it so desires.

The Earl of Elgin, Secretary for the Colonies, announcing the decision to the Earl of Selborne, Governor of the Transvaal and Orange River Colonies, by telegraph, said:—"I am commanded by the King to express through you to the people of the Transvaal his earnest wishes for the peace and prosperity of the country under the new constitution."

## FUEL SUPPLY EXHAUSTED.

Brandon, Manitoba, Residents Have Nothing to Burn.

A despatch from Brandon says: The fuel situation in Brandon is more serious than ever, and on Thursday there was not a pound of coal to be had from any dealer in the city. A few odd cars have been arriving during the last two weeks which the dealers have distributed to those most in need in lots no larger than five hundred pounds. This and what wood has arrived has kept the

# THE CHURCH IGNORES LAW

## Separation Law Put in Force in All Paris Churches

A despatch from Paris says: On Thursday morning the separation law was put in force in all the churches in Paris whose congregations have not yet conformed to the regulation, but in no case was there any public disturbances. At the Madeleine a youth of sixteen tried to force his way to the altar with his hat on, but was arrested by a policeman in plain clothes. Detectives were present at all the churches and drew up official reports to the effect that public meetings had been held in them without the preliminary authorization from the local authorities, and subsequently the officiating priests were summoned to the neighboring police stations to be informed that they would be prosecuted for a breach of the law. The maximum fine for holding a public meeting without authorization for any purpose whatsoever is 500 francs. Priests render themselves liable to this every time they celebrate Mass, but the repetition of the offence does not involve an increase of the punishment. Thus the churches will henceforth be treated in precisely the same way as the bull rings in the south of France, where the law is broken every time a bull is killed, and the fine cheerfully paid. The churches, however, are not

wealthy enough to stand this pecuniary burden for long.

### LAY DECLARATIONS.

Signs are already visible that a compromise will be effected on the basis of a declaration, made without the knowledge of the parish priest and without his permission, by two members of the congregation, to the effect that a religious meeting is to be held in the church, and this is all that the law really demands. It must be remembered that what is causing all the fuss just now is not the separation law, but the law dating from twenty years ago, which forbids all public meetings of more than twenty-five persons which have not been previously authorized by the police. Thursday numerous declarations in conformity with the law were made by influential members of various church congregations in Paris and promptly countersigned by the Police Prefect. In one case, however, a parish priest, suspected of having prompted this measure, was summoned to the Archbishop's Palace to explain his disobedience to Papal instructions. Rain having fallen all day, had there been any inclination on the part of Catholics to demonstrate against the Government it would have been damped by the weather.

## HEALTH

### INTESTINAL INDIGESTION.

It was formerly thought that the stomach was the main organ of digestion, and dyspepsia was supposed always to have its seat there. But this question has been much studied of late, with the result that the stomach has been found to be of little account, comparatively, in the preparation of the food for absorption. The most important part of digestion occurs in the upper part of the intestine, where the food, after leaving the stomach, is churned and mixed thoroughly with the bile and pancreatic secretion.

Since, then, the intestine takes such an important part in digestion, it is natural to suppose that a failure to perform this function properly would give rise to serious disturbances of health, and such, in fact, is the case.

Intestinal indigestion is a not uncommon affection at all periods of life, and is especially prevalent in children. The chief symptoms are flatulence, or wind, more or less colic, diarrhoea, or more often constipation, or an alternation of the two; and practical starvation, as shown in weakness and emaciation.

The treatment is mainly through diet, but this will vary, of course, according to age. In an infant the problem is a difficult one. If the child is fed artificially, all prepared foods containing starch should be taken away, and cow's milk, modified as to the amount of fat, sugar or casein it contains, according to the physician's directions, should be substituted.

If the infant is nursing, the life of the mother should be studied, for the state of her health may affect the milk injuriously.

In older children and adults the amount of fats and of starchy foods must be carefully regulated. Cereals, pastry, rice, potatoes and bread must be cut out of the dietary for a time, or taken in very small quantity. When

a very little hot water and applied frequently.

Cure for Rheumatism. — Dissolve a piece of bicarbonate of potash the size of a pea in a teaspoonful of water. This is for one dose and should be repeated every four hours. Bathe the afflicted parts with a liniment made of the white of two eggs, two tablespoonfuls of spirits of turpentine and two tablespoonfuls of vinegar. Shake this well and bathe the afflicted parts often with it. These remedies are both cheap and good.

To keep the hands from chapping rub them with a salve made as follows: Melt together one ounce of beeswax, two ounces Burgundy pitch, four ounces sweet oil or good, fresh home-made lard. Strain through a tin cloth into a tin box or small jar, and it is ready for use. For cuts or burns, or any other sore, spread a little of this salve on a soft cloth and apply. If used very generously it will draw a boil to a head. It is an old recipe handed down from a Quaker family, who had used it for many years.

### AN OIL-LAMP TRAGEDY.

Mrs. Susan Sutton, an Aged Woman, Was the Victim.

A despatch from Sault Ste. Marie, Ont., says: Mrs. Susan Sutton, aged 65 years, is dead as a result of burns from the flames of an oil-lamp which exploded when she fell with the lamp in her home on Albert Street, on Wednesday. She was suddenly overcome by an epileptic fit, to which she was subject. The lamp exploded and her clothing was ignited. Before assistance could be rendered she was badly burned, and died at the general hospital, to which she was taken shortly afterwards.

### ANOTHER FOR BIG TWO.

Mackenzie & Mann Take Over Prince Albert Line.

A despatch from Regina, Sask., says: Arrangements are being completed for taking over the Prince Albert branch by the Canadian Northern Railway on Friday. Manager James has telegraphed

in two in the St. Clair River by the steamer Cowle, and five of the Erin's crew were drowned.

Considerable amusement was occasioned by a slip of Emperor Nicholas' pen in accepting the offers of several companies of Siberian militia, who volunteered for service at the front. The petition read, "We humbly lay at your Majesty's feet our desire to be permitted to fight and die for the fatherland." The Emperor, in accepting, wrote on the margin of the petition in his own hand, "I thank you sincerely, and hope your wishes may be fully realized."

## THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafeo's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

**CHOICE CORN MEAL** and **BUCK-WHEAT FLOUR** always on hand.

**FEED GRINDING** a specialty, with the best feed mills known to the trade.

A full stock of the best **ANTHRACITE COAL**. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,  
16th January, 1906.

JAS. GORDON is showing his Xmas Literature, at Enterprise Station, on Friday and Saturday, till 3 p. m., of this week; at Harrowsmith, on Monday the 19th; at Sydenham on Tuesday and Wednesday; at Newburgh station on Thursday and Friday the 20th and 21st, and at Napanee in Mr. Alexander's office, opposite the Dominion Bank, on Saturday and the following Monday; all day.

### Etiquette.

"Etiquette" is a French word which originally meant a label indicating the price or quality, the English "ticket," and in old French was usually specialized to mean a soldier's billet. The phrase "that's the ticket" shows the change to the present meaning of manners according to code. Burke solemnly explained that "etiquette had its original application to those ceremonies and formal observances practiced at courts. The term came afterward to signify certain formal methods used in the transactions between sovereign states."

 The Kind You Have Always Bought

operating a boat line between Sandusky and Cedar Point, Ohio, has just purchased the steamer New York of the Folger fleet. The deal was done by Joseph A. Singler, of Sandusky, representing the Bay company. The New York is one of the best known side-wheel passenger boats on the river and until last summer, in active service among the Thousand Islands for twelve years.

The friends of G. H. Allan, of Montreal, provincial manager Mutual Life Assurance company, and president Life Underwriters' Association, will learn with relief that his physicians have stated that the chances are favorable for his recovery from a severe illness, the result of blood poisoning and complications. He has been very ill for weeks, so ill at times that life was despaired of. A number of operations have been performed, the last ten days ago, and a favorable change came. Mr. Allan was indisposed while in St. Louis attending the Life Underwriters' convention. Reaching Montreal, he was removed to the general hospital. The members of his anxious household are remembered in the kindest thoughts.

Fix up your Bath Room. Treat yourself to a Nickle Towel Bar or a Glass one, to a plated soap or sponge dish, all new goods, at

**BOYLE & SON.**

Here's a sample of the descriptive powers of the editors of the breezy west, under the heading "Saskatchewan's Arms," in the Estevan Mercury:

The design has been published of the coat of arms so graciously granted by his majesty the king to the province of Saskatchewan. It is beautiful and so appropriately designed. On the top of the picture is a red lion, so designed as to look at first glance like a prairie fire. The twists in his tail are made to resemble the Souris river, and his right paw reaches out with claws extended like the great railway corporations. Our chief industry, grain growing, is represented on the lower part of the shield by three sheaves of grain tied with baby napkins, to show that grain growing is still in its infancy. The whole picture is spattered over with imitation of typhoid fever germs. What the devil the thing as a whole stands for is hard to tell, but it is intended to adorn the top of government stationery, and members of the legislature will write to their relatives in Ontario on paper bearing the wonderful adornment,

### Everybody Come to Order

while we announce that now is the time to purchase your Christmas gifts at The Medical Hall. Our stock is complete and we are confident that we shall be able to please you. It is a pleasure for us to show goods. Fred L. Hooper.

## ALREADY FOR THE CHRISTMAS TRADE.

Having on hand a very large and choice assortment of dinner sets, fruit sets, salad bowls, water sets, marmalade jars and covered cheese dishes in all shapes and sizes, plain open steak dishes and fancy covered steak dishes, jardiniere in endless variety, also fancy Press dishes, cabarets and fruit plates from 6 to 10 inches, bread and butter plates from 90c to \$3.00 a dozen, cups and saucers from 15c to \$1.50 each, also a very fine variety of souvenir plates and cups and saucers, other pieces of China too numerous to mention. All of the above named articles are of the finest quality of English, French and Austrian China, imported from each factory, also, a large and fresh assortment of groceries and fruit in fact, everything suitable for the Christmas trade of the finest quality. It's not always the cheapest article that's the best value, but more apt the reverse.

## F. CHINNECK, Jeweller

Near Royal Hotel.

Mr. Hugh Fitzpatrick spent a few days this week in Hamilton and Toronto.

Mr. and Mrs. Ed. W. Conger will spend Christmas with relatives in Gananoque.

James Hill, Sandhurst, returned home last week after a six months stay in Lloydminster, Sask., with his son, Dr. J. E. Hill.

### BIRTHS.

CONGER—At Napanee, Dec. 18th, 1906, to Mr. and Mrs. E. J. Conger, a daughter.

### DEATHS.

PERRY—At Violet on Monday Dec. 17th, 1906, Daniel Perry, age 63 years 7 months.

Gas Burners, the Lindsay, the Welsh-back, these new Burners reduce your gas bill, and give you more light than any other, have one put on by

### BOYLE & SON.

Mr. Chas. Stevens has erected a fine illuminated sign at his coal and wood office.

Mrs. John Rennie, widow of the late John Rennie, Hay Bay, passed away, yesterday morning, after a lingering illness, of over a year. One son, Robert, is left to mourn a loving and tender mother. Deceased was about forty-five years of age. The funeral took place Thursday. The remains were placed in the Eastern Cemetery vault, Napanee.

### BELL ROCK.

To all the members of The Express not excluding the Editor, we send good wishes for Christmas and the coming year.

Business is booming here, many are drawing wood and some are drawing stone for the R. C. Church at Carmanville.

An enthusiastic meeting was held here on the 13th, inst., in favor of Local Option. Stirring addresses were given by Dr. Claxton and Rev. J. Ferguson, of Verona, and Rev. Geo. Stafford, of Westport.

Miss Minnie Wheeler was called home on account of her mother's serious illness. Fred Carr is also on the sick list.

Miss Olivia Sanborn is visiting her sister at Mountain Grove. Mr. and Mrs. F. Snider are visiting friends at Violet.

Visitors: Mr. Chas. Lavee, Saginaw Mich., at I. B. Wheeler's; Mrs. J. M. Taylor, Deseronto, at D. L. Amey's.

### A Widow's Double Grief.

A clergyman who recently called upon a young widow to condole with her upon the loss of her husband placed considerable emphasis upon the proposition that the separation was merely temporal and painted in vivid colors the happiness of friends reunited after death. When he stopped for breath the sorrowing one heaved a deep sigh and quietly remarked, "Well, I suppose his first wife has got him again then."

### Proved It.

Bjones—Why the grouch? Psmith—My wife called me a fool. Bjones—Cheer up. It may not be true. Psmith—But it is. She proved it. Went and dug up a bunch of my old love letters and read 'em to me!

### Letters.

Answer a letter the day it is received and you will experience a sense of duty well done. Delay it, and after too long a time has elapsed shame will put a stop to its acknowledgment altogether.

While Europe has 107 people to the square mile, Asia has but fifty-eight, Africa eleven and Australia one-and-a-half.

Saturday 10 p.m.

## "10 DAYS" PRE-INVENTORY SALE.

Dec. 29, 31.--Jan. 1, 2, 3, 4, 5, 7, 8, 9.

Commencing Sat. 29th Dec., Ending Wed. 9th Jan.

Tis our plan at this season of the year to put in force a vigorous and decisive low range of prices in order to accomplish quickly an absolute clearance of all Winter Merchandise, or broken, left over lines from Xmas. We make it an invariable rule never to carry merchandise over from one season to another, but dispose of it before the season is ended—that is, if price inducements will move it. The fact that there are two or three full months of wearing time ahead yet—and lastly prices are such as you have never bought equal qualities at before. These are the circumstances which tend to make this sale by far the most important trade event that has ever taken place in Napanee. This "PROFIT SHARING SALE" is a means of thanking our many customers for a generous years business.

## Ladies' Ready-to-Wear Dept.

- |                                                                                                                                                                                                                             |         |

### What Fishing Develops.

To those who are satisfied with a superficial view of the subject it may seem impossible that the diligence and attention necessary to a fisherman's success can leave him any opportunity while fishing to thoughtfully contemplate any matter not related to his pursuit. Such a conception of the situation cannot be indorsed for a moment by those of us who are conversant with the mysterious and unaccountable mental phenomena which fishing develops. We know that the true fisherman finds no better time for profitable contemplation and mental exercise than when actually engaged with his angling outfit. It will probably never be possible for us to gather statistics showing the moving sermons, the enchanting poems, the learned arguments and eloquent orations that have been composed or constructed between the bites, strikes or rises of fish. But there can be no doubt that of the many intellectual triumphs won in every walk of life a larger proportion has been actually hooked and landed with a rod and reel by those of the fishing fraternity than have been secured in any one given condition of the nonfishing world.—"Fishing and Shooting Sketches," by Grover Cleveland.

### Calling the Chickens.

In England the calls chuck, chuck, or coop, coop, prevail; in Virginia, coo-che, coo-che; in Pennsylvania, pee, pee. This latter call is widely employed, being reported from Germany, Spain (as pi, pi), Bulgaria, Hungary, Bavaria and the Tyrol. In the Austrian province the term is used in combination—thus: Pulla, pi, pi. The call pullele, pul, pul, also occurs there. In some parts of Germany the poultry are called with tick, tick; in Prussia, put, put, and young chickens with tuk, tuk (Grimm), and schip, schip, the latter being an imitation of their own cry. In eastern Prussia hens are called with klucksechen, kluck, kluck; also tippechen, tipp, tipp. Grimm records also pi, pi, and tiet, tiet. Weinholt reports from Bavaria bibi, bibel, bidli; pi, pi, and pul, pul. In Denmark the call is pootle; in Holland, kip, kip; in Bohemia, tyoo; in Bulgaria, tiri, tiri.

### An Old Medicine.

"Ground oyster shells," said the physician, "were used as a medicine by the mediæval doctors—a medicine for the rickets and scrofula."

"How absurd!"

"Absurd? Not at all. Oyster shells contain lime, nitrogen, iron, sulphur, magnesia, bromide, phosphoric acid and iodine. Those are all excellent tonics. You know how hens eat ground oyster shells and thus produce eggs with good, thick, strong shells? Well, as the oyster shell powder acts on eggshells so I have no doubt it acted in the middle ages on the bending, crumbling bones of the rickety, putting strength and firmness into them. Ground oyster shells, I am convinced, would be good food for frail children today. They would strengthen the frame, increase the appetite and have a splendid effect on the teeth."

- 10 ONLY—Ladies' Komonas and Wrappers in good colors and full sizes. Regular \$1.75 to \$2.50 Pre-inventory Sale ..... \$ 1.39
- 18 ONLY—Angola Wool Tams, with and without peak, in all colors, including cream, reg. 50c and 75c. Pre-inventory Sale ..... 19c

Special reduction to ministers on to two or more entering at same time from the same family or from the same place. A specialist in Book-keeping, who is also an expert penman, and a specialist in shorthand in constant attendance. The teachers in the literary department also assist in the work. The high character of the college is a guarantee of thoroughness.  
Catalogue with specimen of penmanship free. Address PRINCIPAL DYER, D. D.  
Belleville, Ontario.

of the rickety, putting strength and firmness into them. Ground oyster shells, I am convinced, would be good for small children today. They would strengthen the frame, increase the appetite and have a splendid effect on the teeth."

### A Curious and Rare Book.

The most curious as well as one of the rarest books known to collectors is the edition of the Vulgate issued by Pope Sixtus V. some time between 1585 and 1590. The book, as Disraeli described it, "fairly swarmed with errata." So numerous were they that a number of printed paper slips containing the proper words were pasted over the errors, and, this device proving inefficient on account of the immense number of mistakes, as many of the copies as could be found were called in and destroyed. Only a few remain, and the book with its paper patches commands an extremely high price.

### Scott's Narrow Escape.

The world had a narrow escape of never having known a Sir Walter Scott. When a tiny babe he was left in charge of a maid, but the girl's heart was in Edinburgh, whither she wanted to go to rejoin her lover. She was, however, compelled to stay and look after the infant at Sandy Knowe. The girl regarded her charge as an obstacle to be removed and afterward confessed that she carried young Scott up to the Craigs (under a strong temptation of the devil, as she expressed it), fully intending to cut his throat with her scissors and bury him under the moss.

### Historic Grapevines.

The celebrated "king's vines" at Fontainebleau, planted under the reign of Henry IV., grow against a wall in the park not far from the castle, and the grapes are highly esteemed by gourmets. Since the republic was established the grapes have always been sold by auction, the proceeds going into the coffers of the minister of finance.

### Her Intense Sorrow.

He—I called to see you last evening and the servant told me you were not in. She—Yes; I was sorry to have missed you. He—I thought you must be; I heard you laughing upstairs in such grief stricken tones that I almost wept myself out of sympathy.

### The Obstinate Cook.

Father—Cooking schools are of some use after all. This cake is delicious. Daughter—Is it? I thought it would be a terrible failure. Father—Why? Daughter—I told the cook exactly how to make it, and she went and made it some other way.

### The Freshman.

"Is Reggy improving by his life in college?"  
"Oh, yes; he's already learned to toe in with one foot!"

After the joy which springs from right doing the purest and sweetest is that which is born of companionship with spirits akin to our own.

## To the Electors of the Town of Napanee.

LADIES AND GENTLEMEN,—

At the solicitation of my friends I am again a candidate for the Council of 1907. During the past few years I have endeavoured to faithfully discharge the duties intrusted to me, and would be grateful for a renewal of your confidence.

Yours very truly,  
A. S. KIMMERLY.

## Electors of Napanee.

LADIES AND GENTLEMEN,—

I have been requested by a large number of ratepayers, to offer myself as a candidate for the office of Mayor for the year 1907. During the past four years I have endeavoured to serve the town to the best of my ability and with a desire to economize wherever it was expedient. Should I fail to see you I wish you to accept this as a personal caveat. Wishing you all the compliments of the season, I am

Your obedient servant,  
HERMAN MENG.

## NOMINATION.

Notice is hereby given that a meeting of the Electors of the Township of Richmond will be held in the Town Hall, in the village of Selby, on Monday, the thirty-first day of December, 1906, commencing at the hour of 12 o'clock noon, and lasting one hour, for the purpose of nominating Candidates for the offices of Reeve and Councillors, to represent the said Township of Richmond for the year 1907. And further notice is given that all nominations shall be in writing.

J. E. HAM,

Sec.-Treas.

Dec. 21st, 1906.

IN THE SURROGATE COURT OF THE COUNTY OF LENNOX AND ADDINGTON.

IN THE MATTER OF THE Estate of Sarah Scantlin, late of the Township of Chamden in the County of Lennox and Addington, Married woman. Deceased.

NOTICE IS HEREBY GIVEN pursuant to the Revised Statutes of Ontario 187 Chap. "129" Sec. "78" and Amending Acts, that all persons having any claims against the Estate of the said Sarah Scantlin, deceased, who died on or about the 15th day of November, A. D. 1906, are required on or before the Seventh day of January, A. D. 1907, to send by post prepaid or to deliver to the undersigned Solicitors for James Scantlin, Administrator of the Estate of the said Sarah Scantlin, deceased, their names, addresses and descriptions and full particulars of their claim or claims and the nature of the security (if any) held by them duly verified. AND NOTICE IS HEREBY FURTHER GIVEN that after the said Seventh day of January, A. D. 1907, the said Administrator will proceed to distribute the assets of the said estate among the persons entitled thereto, having regard only to those claims of which he shall have had notice, and the Administrator will not be liable for the assets or any part thereof to any person or persons of whose claims he shall not then have had notice.

DATED at Napanee this 3rd day of December, A. D. 1906.

DEROCH & DEBOIS

Solrs for the Administrator, James Scantlin.

A bear wandered into the Langevin block at Ottawa and several civil servants a fright.

Coughs, colds, hoarseness, and other throat ailments are quickly relieved by Cresolene tablets, ten cents per box. All druggists.

Disorders have broken out in Serbia threatening the overthrow of the present dynasty.

James Harris, his wife and two children were asphyxiated at Niagara Falls by fumes of natural gas escaping from an open stove.

Carvers, we have a special line of Carving Sets in Cases and in pairs from \$1.00 to \$12.00, nice goods and prices right. BOYLE & SON.

M. Pichon, Foreign Minister of France, has announced that the policy of his Government is to be "peace and dignity."

The annual report of the Nippising mine showed that altogether \$2,500,000 worth of ore had been taken out, at an expenditure of \$255,000.

ITCH, Mange, Prairie Scratches and every form of contagious Itch on human or animals cured in 30 minutes by Welford's Sanitary Lotion. It never fails. Sold by F. L. HOOPER.

Montreal had a tremendous snow-storm on Christmas day, with wind blowing forty miles an hour. To clear it up will require one thousand men at a cost of \$15,000.

## TRY THIS FOR YOUR COUGH

To relieve a cough or break up a cold in twenty-four hours, the following simple formula, the ingredients of which can be obtained of any good prescription druggists at small cost, is all that will be required: Virgin Oil of Pine (Pure), one-half ounce; Glycerine, two ounces; good Whisky, a half pint. Shake well and take in teaspoonful doses every four hours. The desired results can not be obtained unless the ingredients are pure. It is therefore better to purchase the ingredients separately and prepare the mixture yourself. Virgin Oil of Pine (Pure) should be purchased in the original half-ounce vials, which druggists buy for dispensing. Each vial is securely sealed in a round wooden case which protects the Oil from exposure to light. Around the wooden case is an engraved wrapper with the name—"Virgin Oil of Pine (Pure)"—plainly printed thereon. There are many imitations and cheap productions of Pine, but these only create nausea, and never effect the desired results. 1-13.

### PLUCKY SCHOOLMISTRESS.

Courageous Little School Marm Tackles a Bear Single-handed.

The heroine of the little village of Selway, Minnesota, says the Minneapolis Journal, is pretty Miss Mary Mulvaney, a schoolmistress, who, single-handed, tackled a bear which had invaded the classroom.

Miss Mulvaney was standing at the blackboard when a cry of terror from one of her young charges caused her to turn towards the door. There, in open doorway, stood a huge black bear, with head cocked curiously sideways, and nose greedily sniffing towards the closet where the teacher and children kept their lunch baskets. There was instant panic among the pupils, none of whom was more than 10, but the animal paid no attention to the children and headed straight for the lunch closet. One of the boys, bolder than the others, threw a chalk eraser at the bear, which turned around with an angry growl and started towards the terrified children with claws spread out menacingly. Miss Mulvaney thereupon seized a stick, sprang forward, and smote Bruin on his tenderest spot—across the bridge of the nose. This luckily seemed to disconcert the animal, for it turned tail and scampered out of the room. The danger over, Miss Mulvaney fainted, but a liberal application of cold water by some of the elder children soon brought her around again.

# DARE HE?

OR, A SAD LIFE STORY

## CHAPTER XII.

"A merry going out bringeth often a mournful return home; and a joyful evening makes many times a sad morning."

The return drive, as it is quicker, being all down hill, so is it a more silent one than that to the villa had been. Byng indeed is as gaily willing to be fondled by Cecilia as he was on his way up; but there is a mixture of maidenly reserve and sub-tender reproach in her manner which makes their relations somewhat strained. The afternoon's pleasuring has had a jading effect upon Amelia's spirits, as, after having been sucked dry on the subject of Sybilla's maladies, and afterwards at once shaken off by her female acquaintance, she has not been fortunate enough to meet with any one else to exchange talk with, and has sat in disconsolate yet patient loneliness on a stone bench, afraid to stir from the spot where he had left her, lest she might miss her lover, of whom, however, she has unaccountably seen nothing, until when the Angelus is ringing, and the shadows spreading, he has come to give her curt notice, with half-averted face, that the fiacre is at the door. In point of fact he has been too conscious of the disorder of his features to dare to expose them sooner than he can help to her fond scrutiny. He would give anything to be able to sit beside, instead of opposite to her during their drive home, as a profile is a much less tell-tale and more governable thing than a full face, and he is painfully conscious that as often as she imagines she can do it without being detected by him, she is stealing looks of inquiring anxiety at him. He tries to put her off the scent by spasmodic comments upon the entertainment that they have just quitted; and she does her best to keep up the ball of conversation, since she sees that it is his wish. But in vain. Each forced remark falls still-born, leading to nothing. It is Cecilia who at last succeeds in giving a filip to the languid talk.

"I did not know that Mrs. Roche was a cousin of your beauty, Miss Le Marchant," she says, suddenly, growing tired of her pensive attitude, and addressing herself to Jim.

He starts guiltily. "Did not you?" He must look odd; for even Cecilia's large and preoccupied cow eyes rest upon him with an expression of surprise.

"I wonder why she was not there today."

It is not exactly a question, yet her great shallow orbs do not seem to be going to leave his face until he makes some response. He forces himself to do so.

"I understood Miss Le Marchant to say that they are not going out just now." "And why are not they, pray?" inquires Cecilia, in an injured voice, as if the retirement from the world of the two ladies in question were a personal injury to herself; "they are not in mourning, all their gowns are colored ones, and they do not look as if they had had health—perhaps, however" (after a moment's thoughtful attempt to find a solution)—"perhaps, however, they may have something—one never knows—people have such unexpected diseases nowadays—hysteria perhaps or fits."

At this ingenious suggestion Jim is

go on staring for ever at the billets of wood of the unit fire. He has to turn round and face his companions. The only one of them whose pleasure or displeasure in his announcement he at all heeds—Amelia—is stooping over Sybilla, rearranging in a high, picturesque tier behind the invalid's long back three cushions, and her face is almost entirely hidden from him by her attitude.

"Of course if it is in the least inconvenient, if you have made any other plans for me—if, in fact, you want me," he continues in a tone that is at once apologetic and dogged.

"But I do not," cries she at last, and with a distinct laugh in her voice, a laugh into whose quality he is not anxious too curiously to inquire. "You must not be so conceited as to think that I always want you! In point of fact you could not have hit upon a day that suited me better. I am really rather 'throng' to-day, as they say in Yorkshire. I have quite a hundred things to do, and father wants me to help him to correct the proofs of his sermon, the sermon he preached at Mr. Moffat's church on the Holy Innocents' Day. He has been asked to publish it—is not that flattering? Poor father! I believe he will end by being a popular preacher—in fact" (laughing again), "the whole family is going up in the world!"

There is such a forced mirth in her tone that Jim feels much more guiltily uncomfortable than if she had treated him to hysterics or sulks. Nor does his satisfaction with himself increase when, upon his rising to depart, she runs out of the room after him, to say to him, while her homely face twitches against her will, how much she hopes that he will enjoy himself; how perfectly happy she shall be without him; and how eagerly she shall look forward to hearing all about it from him to-morrow. "It will be almost better than going to Certosa herself," she ends.

But against the unnatural altitude of this last flight of abnegation nature revolts, and becoming conscious of a break in her voice, she hastily retreats and gets back into the salon, in time to see Cecilia shaking her elaborate head and to hear her remarking with slow emphasis, "Mark my words! There is something odd about those people, and it is not hysteria!"

With spirits sensibly worsened by his interview, Burgoyne returns to the Minerva, and, mounting to Byng's bedroom, finds that young gentleman stretched upon his bed, gloom in his usually jocund eye, and an open letter lying on the floor beside him. But Jim is far too preoccupied to notice anybody's gloom but his own.

"I came to ask at what hour we are to set off this afternoon?" he says with a sort of flat microseness in his tone.

"We, indeed?" rejoins the other with a groan, and rolling over with a sort of petulance on the bed, disheveling the neatly-smoothed pillow by burrowing his ruffled head in it—"we!"

There is such a heart-rent woe in the accent with which the last monosyllable is pronounced that for a moment Burgoyne has no other idea but that his young friend too has become aware of the "screw loose," has heard, perhaps, in detail, that story from before whose ominous opening he himself had fled. The thought sends his heart into his

knows it was hard enough to persuade them to accept in the first instance. If you go we shall at all events keep our communications open; and you—you will say something to her for me?"

"What kind of something?" inquires the older man, carpfully. "Am I to tell her only what a fine fellow you are in general, or anything more circumstantial?"

"Tell her," begins Byng, in a rapid voice; but apparently the sight of his companion, who has somewhat ostentatiously pulled out a note-book and pencil, and assumed the patient air of one about to write to dictation, dries the stream of his young eloquence; "tell her—nothing."

"Nothing speaks our grief like to speak nothing!"

replies Jim, leaving the room with this quotation on his lips, rather hastily, for fear lest the other should change his mind.

## CHAPTER XIII.

It is five o'clock, the hour fixed for the expedition to Certosa, and in the entrance of 12 Bis, Piazza d'Azeglio, Mrs. and Miss Le Marchant are sitting—hatted, gloved, and en-tout-cas-ed—in expectation of the arrival of their double escort. Elizabeth's afternoon has, so far, not been a lazy one, as her little cousin Bertie and his dog have again been good enough to pay her a lengthy visit, and the former has insisted upon a repetition of their usual performance of the other day, though with truncated rites. Without the powerful aid of Byng, Elizabeth has found it a task considerably beyond her strength to hold a large collier poised on his hind legs, on a music-stool. He has jumped down repeatedly, and now lies on his back—an attitude in which experience has taught him he is less attackable than in any other—sawing the air with his fore-paws, and lifting his lip in a deprecating grin.

"Where is Mr. Byng?" cries Bertie fretfully, baulked in his efforts to make his wily victim resume the perpendicular. "I want Mr. Byng! Why does not Mr. Byng come?"

"Perhaps if you went to the window," suggests Mrs. Le Marchant, in that patiently coaxing voice in which we are wont to address a tiresome child on a visit, instead of the buffet which we should bestow upon it were it a resident—"perhaps if you went to the window and looked out, you would see him coming round the corner of the Piazza."

The suggestion is at once accepted, and the child, balancing his fidgety body on a chair, and craning his neck over the window-ledge, is shouting shrill pieces of information as to the passers-by to his friends within the room. Presently he shrieks out in triumph:

"I see him! He is just coming into sight! He is walking so fast! No!—a moment later, with a changed and disgusted note, as a nearer view corrects the first impression—"it is not he at all! It is only the other one!"

"Only the other one!" It is quite impossible that the sound of the child's voice can reach down to the open portal of No. 12 Bis, at which Jim has now arrived, and it is also certain that neither of the ladies whom he has come to visit are likely to word their surprise at his having arrived alone with the frank brutality which is confined to the utterances of infancy; and yet, Jim, as he presents himself, announced by Annunziata, the hard-featured possessor of a lovely name, is quite as conscious, as if he had overheard the boy's slighting remark, of being "only the other one!"

Before he can begin his apologies, the eager little boy has run up to him.

"Where is Mr. Byng? I want Mr. Byng! Why has not he come? Elizabeth wants Mr. Byng!"

At this last clause Burgoyne is conscious of a dark, hot flush rising to his face, and partly to hide it, partly to avoid seeing what the effect of his communication may be upon her for whom it is meant, he stoops over the child, addressing his answer to him:

"Mr. Byng is very sorry, very sorry indeed, but he cannot come."

down the handle. The agony I suffered you may well imagine. I tried several different kinds of salves but the burns were too severe for these preparations to heal.

"I obtained a supply of Zam-Buk and the very first application gave me ease. This pleased me, you may guess, but as I applied the balm each day I was more and more pleased with the effect. The pain was relieved completely. In a very short time Zam-Buk healed my burns completely, and my hands actually felt better—the muscles more firm and the skin in better condition than before I was burned."

Not only for burns, but for cuts, bruises, sprains, etc., Zam-Buk is the best and surest cure. It also cures eczema, ulcers, abscesses, ringworm, boils, eruptions, poisoned wounds, chapped or cracked hands, cold sores, chilblains, bad leg, piles, etc. All druggists sell at 50c. a box, or post free from the Zam-Buk Co., Toronto, on receipt of price. 6 boxes for \$2.50.

Hicks—"My hair comes out in handfuls. If it keeps on I'll soon be bald." Wicks—"Non-sense, if it keeps on you can never be bald."

ITCH, Minge, Prairie Scratches and every form of contagious Itch on human or animals cured in 30 minutes by Wolfford's Sanitary Lotion. It never fails.

The bee is an artistic upholsterer. It lines its nest with the leaves of flowers, always choosing such as have bright colors. They are invariably cut in circles, so exact that no compass would make them more true.

A Purely Vegetable Pill.—Parnelle's Vegetable Pills are compounded from roots, herbs and fruit extracts of known value in the treatment of liver and kidney complaints and in giving tone to the system whether debilitated by overwork or drenched through excesses in living. They require no testimony. Their excellent qualities are well known to all those who have used them and they commend themselves to dyspeptics and those subject to biliousness who are in quest of a potent medicine.

Pictorial Dealer—"This, madam, is merely a chronicle, and it is not expensive." Mrs. Newich—"Ah! To be had cheap, I suppose. Of course, chronicle is a very obscure artist, and cannot command high prices."

The Backache Stage may be just that transient form of kidney disease which, if neglected, will develop into stubborn and distressing disorder that will take long tedious treatment to cure. Don't neglect the backache stage of the most insidious of diseases. South American Kidney Cure stops the ache in six hours and cures—20

#### BOTH FORGOT.

Mother—Tommy, what did I say? Did you to you if you touched that jam again?

Tommy—Why, it's funny, ma, that you should forget, too. I'm blamed if I can remember!

had bad health—perhaps, however (after a moment's thoughtful attempt to find a solution)—"perhaps, however, they may have something—one never knows—people have such unexpected diseases nowadays—hysteria perhaps or fits."

At this ingenious suggestion Jim is conscious of a writhing motion passing over the stately form of Byng beside him. In his own train, if there is room for anything but the desire to evade Amelia's eyes, is a dim sense of relief at a suggestion so grotesquely wide of the mark as that made by the younger Miss Wilson. In perfect innocence of the effect produced upon her companions by her bright hypothesis, Cecilia goes on to remind her sister of the parallel case of a very handsome girl whom they had once reckoned among their acquaintance, and who was periodically being found by her family with her head under the fender. But Amelia rises but faintly to the reminiscence, and the remainder of the drive is accomplished in a general silence.

The next day is the one which had been fixed upon for the expedition to Certosa. It was only with a very large admixture of wormwood in his prospective pleasure that Jim had ever looked forward to this party, but now he anticipates it with absolute dread. How can he face Elizabeth and her mother with that ominous phrase of the "screw loose" still ringing in his ears? He feels a traitor towards them, in that he has, however unwillingly, overheard it. To add to his mental uneasiness is the fact of his having as yet not broken to Amelia his intentions with regard to the disposal of his afternoon. Amelia's eyes have for years had the habit of covertly watching him to read his wishes almost before they rose, but in their gaze yesterday he had, unless misled by his guilty conscience, detected a new quality, a quality of alarm and enlightenment. He will get over the communication of his piece of news as early in the day as may be; so, having finished breakfast before Byng has put in his, as usual, tardy appearance, he takes his hasty way to the Anglo-American. He finds the family there in a more placid frame of mind than that which they had presented on one or two of his recent visits. Sybilla is expecting her doctor, on which occasion she always likes to have a more lady covert than usual thrown over her languid feet; a greater effluence of pink ribbons about her throat, and a disposition of poise of things about her van head. Amelia, active and long-suffering as usual, is usual, is moving about in patient expectation of her vain and tiresome whimsies. Cecilia sits tranquilly in the window, knitting an elaborate pair of men's woolen gloves, not, indeed,—to do her justice—for any one in particular, but with a wise forethought for the accidents and possibilities of life. Since, on this occasion, his sweetheart shows no inclination to draw him away into the dining-room for a tete-a-tete, Jim has to take the bull by the horns, and rush into his subject in a more public manner than he had intended. But the one desire to get it over outbalances all minor considerations.

"Amelia," he begins suddenly, and even to himself his voice sounds discourteous and abrupt, "shall you want me this afternoon?" The moment that the words are out of his mouth it strikes him that the form into which he has thrown his question is more than necessarily untender. She stops in the patting of Sybilla's smart pillows, and perhaps there is something a little abrupt too in her monosyllabic "Why?"

"Because"—standing before the fireplace, with his back to the three women, and throwing the words over his shoulder, "because if you do not, Byng and I were thinking of going to Certosa."

There is a pause. He hears that Cecilia's needles have stopped clicking; her work has dropped into her lap. In another moment she will have proposed to come too. "With the Le Marchants," he goes on, shooting out the fateful words like bullets; "a partie carree."

Still silence behind him. He cannot

accent with which the last monosyllable is pronounced that for a moment Burgoyne has no other idea but that his young friend too has become aware of the "screw loose," has heard, perhaps, in detail, that story from before whose ominous opening he himself had fled. The thought sends his heart into his throat, so as to render him incapable of asking an explanation of the other's affliction.

"We!" repeats Byng for the third time, and very indistinctly, as he is now lying entirely on his face.

"Why do you go on saying 'we' in that idiotic way?" asks Jim at last, recovering his voice—recovering it only to employ it in imitating the younger man's accents, in a manner which displays more exasperation than natural talent for mimicry. It is not a politely worded inquiry, but it has the desired result of acting as a tonic on him at whom it is aimed, making him not only roll over once again, but actually sit up.

"Why do I say we?" repeats he, his young eyes looking lamentably out from under the fall of his tumbled hair—"because it is not we! it is you! You lucky dog, you will have her all to yourself!"

Jim heaves an inaudible sigh of relief. Whatever may be the cause of his companion's enigmatical conduct, it is evidently not what he had feared. There is, however, no evidence of relief or any other mild quality in his next remark.

"If you would talk less like an ass, I should have a better chance of knowing what you are driving at!"

The query seems only to renew and deepen the other's tribulation. He falls back into his former attitude.

"You will hold the white wonder of dear Juliet's hand!" he groans. "No, do not go" (with a sudden and startling change of tone, springing off the bed, as he becomes aware that his friend is making for the door, unable to bear those rhapsodies, whose full distastefulness to their hearer the utterer little conjectures). "I'll tell you! I'll explain! Why are you in such a deuce of a hurry? I cannot go to Certosa because I have just heard from my mother that she is to arrive to-day. She will be here in another hour."

Jim's fingers are already on the door-handle, but this piece of news arrests him.

"Your mother? I did not know that she was coming abroad."

"No more did I!"

"It must have been a very sudden thought!"

"Very!"

"What a delightful surprise for you!" "Delightful!" There is so ludicrous a discrepancy between the adjective and the accent with which it is rendered that Jim bursts into a bitter laugh.

"She would be flattered if she could see your elation at the prospect of meeting her!"

Byng's blood rushes up under his clear smooth skin at his friend's jeer, but he answers, with some dignity:

"I do not think you have any right to imply that I am not always glad to see my mother; I do not deny that, if it had been equally convenient to her, I had rather she should have come twenty-four hours later."

Jim feels ashamed of himself, though, being an Anglo-Saxon, he has far too much false shame to confess it directly, and what he means for an amende, when it comes, is of an oblique nature.

"I think far the best plan will be to put off the excursion altogether; I am sure that I am not particularly keen about it."

The indignant red has rapidly died out of Byng's face; his placability being only to be surpassed by his slowness to take offence.

"Is it possible?" he asks, in a tone of stupefaction; then, with a sudden tardy recollection of the rosy fletters in which his friend is held by another lady, he adds—"But, of course, you are not—I was forgetting!"

Jim winces.

"As it is your party you had better send up a note at once to the Piazza d'Azeglio."

"No, do not let us both throw them over!" cries Byng, eagerly. "Heaven

scious of a dark, not rushing rising to his face, and partly to hide it, partly to avoid seeing what the effect of his communication may be upon her for whom it is meant, he stoops over the child, addressing his answer to him!

"Mr. Byng is very sorry, very sorry indeed, but he cannot come."

"Cannot come! Why cannot he come?"

"Because he has gone to meet his mammy," replies Jim, trying to speak in a light and playful voice; "she is to arrive unexpectedly in Florence to-day; no good boy would leave his mammy when she had come all the way from England to see him, would he?"

But to this fustian and copy-book generally the young gentleman addressed is too angry to reply.

"It is a great disappointment to Byng; he bid me tell you what a great disappointment it is to him!" says Jim, turning to the two ladies, and looking apologetically from one to the other.

Elizabeth's head is averted, but on her mother's features he sees, or fancies he sees, slight evidences of a feeling not unlike relief.

"It is not of the least consequence," she says, cheerfully, "we can go any other day just as well."

Burgoyne's heart sinks. In these last sentences he too surely traces signs of the evasion and would-be-retrograde nature which has all along characterized Mrs. Le Marchant's relation with him. It has seemed to him that he has been looking forward to the expedition with sensations of almost unmingled dread, and yet now that he seems to be going to be delivered from it, what he experiences certainly does not come under the head of relief.

"You wish to give up the excursion then?" he asks, in a tone which he honestly tries to make as neutral and colorless as he can.

"Well, I thought so—we thought so, did not we, Elizabeth?"

The person thus addressed lifts her head, and all over her features he, eagerly scanning them, sees written a warm acquiescence in her motherly decision, an acquiescence which, as her eyes meet his—his, in which his disappointment is written a good deal more plainly than he is aware—changes slowly and sweetly into indecision.

"I do not know," she answers, her gentle look clouded a little and yet kindly interrogating his. "If Mr. Burgoyne is willing to burden himself with us; and Bertie must play at being a grown-up gentleman, and help to take care of us! Bertie, will you play at being a grown-up gentleman?"

To this proposition Bertie assents warmly, and begins thronically to recount to inattentive ears the high and singular deeds with which he will celebrate his arrival at maturity. But, as

Send particulars by post and we are sure to satisfy.

Address Box 158, Montreal.

Mrs. Le Marchant puts a strenuous veto upon his adoption of escort, and as his nurse appears at the same juncture to fetch him, he and his dog are presently removed, and the other three set off without him.

(To be continued).

P.H.A.R.A.O.H.

## Man Who Buys Cigars by Price Won't Really Appreciate My Pharaoh.

What a cigar costs has less than you'd think to do with its smoking quality. The thing that counts is what it's made of, and how it's made.

My Pharaoh cigar is a revelation to men who were wont to think a cigar had to be imported to be really fine.

It is just as much a surprise to the man who didn't believe a cigar could be fine unless it cost fifteen cents, at least.

The Pharaoh costs ten cents, about everywhere good cigars are sold. I would like you to buy one and judge it in comparison with any fifteen-cent cigar you know.

I feel just about certain you will say the Pharaoh has the full-bodied, mellow flavor, the fragrant aroma, the super-quality richness—without rankness—that you thought only fine imported cigars could have.

With the real Manicueagua Havana filler and the mild Connecticut binder and Sumatra wrapper all put together under my eyes in this model factory of mine, the Pharaoh has a fair right to be classed with fifteen-cent cigars. I don't want you to believe it until you know it's so. You will when you've tried the Pharaoh.

Better buy a box for Xmas. Your dealer should have it—if he is up-to-date and keeps the best brands.

Bennett, General Agent, 2 King St., Toronto, Ont.

Lady (to new servant)—"You quite understand, Bridget, that I shall only be 'at home' every Wednesday from three to five?" Bridget—"Yes, mum." To herself "Bridget, me swate soul, if iver a woman had a hivenly siltivation, sure it's yerself has got it. Wid the mustress only at home fur two hours ivery wake, phwat a roarin' time Oi can have av it!"

To discern and deal immediately with causes and overcome them, rather than to battle with effects after the disease has secured a lodgement is the chief aim of the medical man, and Bickle's Anti-Consumptive Syrup is the result of patient study along this particular line. At the first appearance of a cold the Syrup will be found a most efficient remedy, arresting development, and speedily healing the affected parts, so that the ailment disappears.

Hix—"An acquaintance of mine patented an appliance to enable a girl to play two pianos at one time. Dix—"Did he make anything out of it?" Hix—"Well he made a move out of the town. His neighbors threatened to mob him."

## Dear Mother

Your little ones are a constant care in Fall and Winter weather. They will catch cold. Do you know about Shiloh's Consumption Cure, the Lung Tonic, and what it has done for so many? It is said to be the only reliable remedy for all diseases of the air passages in children. It is absolutely harmless and pleasant to take. It is guaranteed to cure or your money is returned. The price is 25c. per bottle, and all dealers in medicine sell.

## SHILOH

This remedy should be in every household.

### COW'S DRUNKEN FROLIC.

Milkers Sample Apple Pomace and Give Forth "Milk Punch."

An extraordinary fate has befallen an entire herd of cows on the farm of Mr. George Schenck, near Phoenixville, Penn. The herd happened to come across a quantity of apple pomace, the residue from cider-making, and with animal curiosity immediately sampled it. The scene that followed was comic in the utmost degree. So drunk did the cows become that they rolled and frolicked on the ground, unable to "moo" for hiccupping. When they found their feet they staggered about the orchard, lurching after each other like drunken men. Their hilarious state continued for two days, during which time their milk was said by the neighborhood to have acquired a distinct flavor, and was humorously described by the owner as "milk punch." The peculiar flavor, however, disappeared as the cows recovered from their dissipation, much to the sorrow of the inhabitants of the district.

They Never Knew Failure.—Careful observation of the effects of Parmenter's Vegetable Pills has shown that they act immediately on the diseased organs of the system and stimulate them to healthy action. There may be cases in which the disease has been long seated and does not easily yield to medicine, but even in such cases these Pills have been known to bring relief when all other so-called remedies have failed. These assertions can be substantiated by many who have used the Pills, and medical men speak highly of their qualities.

Jabbers—"I tell you, old man, it's a terrible thing when your wife quarrels with her mother and the old lady lives with you. Which side do you take?" Havers—"Neither. I preserve an alarmed neutrality."

Dr. Von Stan's Pineapple Tablets.—Medical science by accident discovered the potency of the pineapple as a panacea for stomach troubles. The immense percentage of vegetable pepsin contained in the fruit makes it an almost indispensable remedy in cases of dyspepsia and indigestion. One tablet after each meal will cure most chronic cases. 60 in a box, 35 cents.—22

### HONEST ADMIRATION.

Tommy Twaddles—"Oah, I don't want to go to school." Pa Twaddles—"But don't you want a good education?" Tommy Twaddles—"No, pa; I'd rather grow up to be just like you."

**Scott's Emulsion**

### REGIMENT ADOPTS BABY.

Was Found Asleep in Sentry Box, With Note From Its Parent.

The soldiers of the Sixty-third Foot Regiment, at Saint Michel, France, have adopted a baby which was found asleep in a sentry-box on a recent morning. It had a wooden horse clasped in its arms and pinned to his jacket was a note saying: "Please look after my little Jacques, whom I am unable to support." Jacques was thereupon taken into barracks, and the men promptly decided that he should remain. He will wear a little suit of regimentals, and the soldiers will take it in turn to look after him.

Allen's Lung Balm. In which there is no opium, cures sore throat and sore lungs as it allays the inflammation and rids you of the mucus that stops up the air passages. 25c., 50c., \$1.00 bottles.

There is one remarkable peculiarity about camels. They are the only animals that cannot swim.

Only those who have had experience can tell the torture corns cause. Pain with your boots on, pain with them off—pain night and day; but relief is sure to those who use Holloway's Corn Cure.

Butcher—"What can I do for you, mum?" Young Wife (trying to give herself the air of a veteran)—"One pound of beef sausage, but without bone, please."

A Great Combination, "Ferrovin" the best tonic. It should be taken by all invalids, by all who are run down or out of sorts. It builds up, gives new life.

"Soldiers must be fearfully dishonest," says Mrs. Countryside, "as it seems to be a nightly occurrence for a sentry to be relieved of his watch."

Deafness of 12 Year's Standing.—Protracted Catarrh produces deafness in many cases. Capt. Ben. Connor, of Toronto, Canada, was deaf for 12 years from Catarrh. All treatments failed to relieve. Dr. Agnew's Catarrhal Powder gave him relief in one day, and in a very short while the deafness left him entirely. It will do as much for you. 50 cents.—33

Tramp—"I looks like a tramp, ma'am, but I ain't. I'm a sailor, ma'am. I was wrecked and washed ashore." Unsympathetic Lady of the House—"Well, you ain't been washed since, I'll wager."

Pains Disappear Before It.—No one need suffer pain when they have available Dr. Thomas' Electric Oil. If not in the house when required it can be procured at the nearest store, as all merchants keep it for sale. Rheumatism and all bodily pains disappear when it is applied, and should they at any time return, experience teaches the user of the Oil how to deal with them.

### IT IS TO SMILE.

To live too fast is also to die too fast. Prospective heirs are usually glad to wear dead men's shoes.

The worker with the most sand usually is the first to raise the dust.

To lose one's head is often the immediate preface to losing one's feet.

If some of your china has been in the family for years, you probably wash your own dishes.

When the poor young man finds a rich "better half," he also is apt to find better quarters.

The song of the nightingales may be so mournful because morning after morning they find their bills all over due.

They say a woman's aim is poor. It is only natural, after all, that she should find herself at a man's feet when she has thrown herself at his head.—Success Magazine.

Salt Rheum, Tetter, Eczema.—These distressing skin diseases relieved by one application. Dr. Agnew's Ointment is a potent cure for all eruptions of the skin. Jas. Gaston, Wilkesbarre, says: "For nine years I was afflicted with Tetter on my hands. Dr. Agnew's Ointment cured it." 35 cents.—31

"Kale, I must warn you, I saw that policeman put his arm round you and kiss you." "I couldn't help that, ma'am." "But you didn't seem to object." "Not me, an' be had up for resistin' the police."

Many Thanks are due from the proprietors of Weaver's Cerate to friends who have written to tell the Cerate's good work in curing scrofulous humors, scald head and other skin diseases.

### WHERE IS DIVINE JUSTICE?

The Cry of a Poor Russian Boy Done to Death.

The London Daily Express has the following pathetic story from Riga, Russia:

Seven youths, whose ages ranged from sixteen to nineteen years, have been executed for eight cases of robbery by threats. The amount of money they extorted was £250.

In a letter they wrote to M. Ratner of Riga they demanded £30 for the unemployed, adding: "We give you two hours to consider the matter." They were identified by their victims.

As they freely admitted their guilt, the court-martial ordered them to be hanged, but afterwards the sentence was altered to military execution.

Beneath a glimmering kerosene lamp to the prison courtyard the youths received religious consolation. Three who were Christians took the sacrament, and the Jews made their customary profession of faith. One of them, with tears streaming down his cheeks, but with a loud, firm voice repeated the words of the Jewish confession:

"Hear, O Israel! God is our Lord! God is One! We have sinned; we have done evil in His sight."

Another sent greetings to his parents. When asked if he repented, he answered: "Where is Divine justice, when such conditions exist as drove me to these crimes?"

Sacks were thrown over the heads of the condemned, who were then led into a field. They were tied to stakes, and the Cossacks formed in line of fire. Dawn was breaking when the three volleys were given. The bodies were buried in the sand.

"Weren't you frightened when your revolver missed fire?" "No; my wife kept the burglar off with a hat pin while I reloaded."

Did you notice that old man limping along a day or so ago? Well, if he will put on his back "The D & L" Menthol Plaster, in a week he will walk as straight as any one.

She—"Women may gossip sometimes, but they have better control of their tongues than men have." He—"You are right. Men have no control whatever of women's tongues."

One of the greatest blessings to parents is Mother Graves' Worm Expeller. It effectually expels worms and gives health in a marvellous manner to the little one.

"What a lovely collection of odd cups!" exclaimed a guest, peering into the china cabinet. "Did it take you long to get so many?" "Oh, no," said the hostess, who suffers by the servant problem, "those are samples of the sets we've had in the last two years."

### ANOTHER WONDERFUL CASE

Here is Something That Will be Welcome News to Many a Discouraged One.

William H. Reed.

"For several years I have been troubled with gas around my heart, shortness of breath, my food did not digest properly. It turned sour in my stomach, causing me great distress; often, too, I had disagreeable attacks of belching gas and heartburn, and severe pains across the small of my back."

"I tried Dr. Leonard's Anti-Pill and from the very first found relief. Anti-Pill has indeed cured me."

This is the voluntary statement of Wm. H. Reed, of 165 Queen St., Kingston, Ont.

All dealers or The Wilson-Fyle Co. Limited, Niagara Falls, Ont.

# FOUR BURNED IN THEIR HOMES

## Terrible Tragedy in Small Apartment House in Buffalo.

A despatch from Buffalo, N. Y., says: Four lives were snuffed out and one person was fatally burned in a small fire in the Zenobia apartment house on Prospect Avenue, at the corner of West Huron Street, on Wednesday night. Other occupants of the place had narrow escapes, half a dozen being rescued by the firemen.

The dead are:—F. M. Lambrecht, 40 Elmwood Avenue; Mrs. Lambrecht; Ruth Crumlish, three years old, daughter of Mrs. C. Crumlish, and Mrs. J. J. Fisher, of New York.

The building was flatiron-shaped, and had narrow, winding hallways, in which the victims, confused by the

flames and smoke, lost their way and were overcome.

Mr. and Mrs. Lambrecht were visiting Mrs. Crumlish, who occupied apartments on the third floor. They, with a nurse, Ida Schambacher, and Mrs. Crumlish's baby, were the only other occupants of the room when the fire started. Mrs. Crumlish had gone to a drug store to get medicine for the baby.

It is supposed that the Lambrechts, thinking that the fire would not be serious, delayed taking the sick baby out into the cold air until it was too late, and all of them were overcome by smoke. The nurse, who had been dismissed for the night, escaped by jumping from her bedroom window to the roof of an adjoining house.

## THE WORLD'S MARKETS

### REPORTS FROM THE LEADING TRADE CENTRES.

#### Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, Dec. 24.—Flour—Ontario wheat, 90 per cent. patents, are quoted at \$2.70 in buyers' sacks outside for export. Manitoba first patents, \$4.50; second patents \$4, and strong bakers', \$5.90, Toronto.

#### UNITED STATES MARKETS.

Minneapolis, Dec. 24.—Wheat—December 76½¢; May, 80 to 80½¢; July, 81c; No. 1 Northern, 79½¢; No. 2 Northern, 77½¢; No. 3 Spring, 75 to 76c. Flour—First patents, \$4.30 to \$4.40; second patents, \$4.15 to \$4.25; first clears, \$3.25 to \$3.35; second clears, \$2.40 to \$2.60. Bran—\$16.75 to \$17.

Milwaukee, Dec. 24.—Wheat—No. 1 Northern, 81 to 81½¢; No. 2 Northern, 78 to 79½¢; May, 78½¢ bid. Rye—No. 1 67 to 67½¢. Barley—No. 2, 55½ to 56c; sample, 45 to 55½¢. Corn—No. 3 cash, 41 to 43½¢; May, 43½¢ bid.

Duluth, Dec. 24.—Wheat—No. 1 hard, 80½¢; No. 1 Northern, 80c; No. 2 Northern, 78½¢; December, 78½¢; May, 80½¢; July, 81½¢.

#### CATTLE MARKET.

Toronto, Dec. 24.—There was very little doing at the City Cattle Market this morning, the run was light for a Thursday market.

Export Cattle—Choice, \$4.50 to \$4.90; good, \$4.10 to \$4.50; cows, \$3.25 to \$3.75; bulls, \$3.50 to \$3.75.

Butcher Cattle—Pickled cattle, \$4.40 to \$4.75; choice, \$4.35 to \$4.65; medium, \$4 to \$4.25; common, \$3 to \$3.50; bulls \$3.25 to \$3.50.

Stockers and Feeders—Choice, \$3 to \$3.40; common, \$2.75 to \$3; bulls, short-keeps, \$3.75 to \$4.

Milk Cows—Choice \$40 to \$50; common, \$25 to \$35; spring s, \$25 to \$40.

Calves—Quotations are firm at 3c to 6c per pound.

Sheep and Lambs—Export ewes, \$4.50 to \$4.85; bucks and culls, \$3 to \$3.50; lambs, \$3.50 to \$6.25.

Hogs—\$6.15 per cwt. for choice selects, and \$5.90 for lights and fats, fed and watered.

#### THE LARGEST REVENUE YET.

##### Receipts of the Province This Year Reach High Point.

A despatch from Toronto says: Hon. Mr. Matheson, the Provincial Treasurer, is a happy man because he foresees that Ontario will weather the storms of the financial year of 1906 with ease. "We shall make both ends meet," he has said. "The revenue will be the largest in the history of the province," he added smilingly, as he spoke of the subject on Wednesday. At the same time the expenditure will be larger, yet the Treasurer appears to expect to have a comfortable balance. Last year the revenue reached \$6,016,000, while the expenditure was \$5,396,000. Asked whether the receipts for 1906 would be as much as \$7,000,000, Mr. Matheson would not be too sanguine, but the indications are

#### BED OF COBALT LAKE SOLD.

For the Sum of One Million and Eighty-five Thousand Dollars.

A despatch from Toronto says: A Canadian syndicate's tender of \$1,085,000 for the purchase of the portion of the bed of Cobalt Lake still vested in the Crown, and comprising 46 acres, has been accepted by the Government. The tender was accompanied by a marked cheque for ten per cent. of the purchase price, viz., \$108,500, and the balance must be paid within fifteen days. The tender was signed on behalf of over 600 subscribers to shares in the syndicate, the vast majority of them Canadians, by Pellatt & Pellatt and Messrs. Britton Osler, Toronto; Thos. Birkett, Geo. F. Henderson and D. B. Rochester, Ottawa, and Raymond Manicha, Detroit.

The money required by the syndicate was oversubscribed by several hundred thousands of dollars. The parties who were late in getting their money in will, it is understood, receive consideration in the formation of the company which is to be formed. The company will be called Cobalt Lake Mining Company, and will have a capital of between \$4,000,000 and \$6,000,000.

The highest tender for Kerr Lake, \$51,500, made by Americans, was considered too low. New tenders may be called for offers for the purchase of the lake.

A tender offering a bonus of \$38,100 for mining leases of three parcels of land on the right of way of the Temiskaming & Northern Ontario Railway, in addition to a royalty of 25 per cent. on the gross value of ore mined, was accepted. This tender was made by Messrs. Millar, Ferguson & Hunter, barristers, Toronto, and Mr. T. A. Beament, Ottawa.

In the case of Cobalt Lake two tenders were received which did not comply with the forms of the tenders as clearly set forth in the advertisements. One was accompanied by an uncertified cheque. In another case the Government was offered a cash payment and a block of stock in the company to be formed if the offer was accepted. The Government held that it would not be justified in deviating from the advertised terms.

#### TRIED FOR THE DIAMONDS.

##### Daring Plan to Accomplish a Big Jewelry Robbery in Toronto.

A despatch from Toronto says: A daring burglary occurred on Saturday night at Mr. David Ward's loan office at 104 Adelaide street east, where two men, after tying up the doors and exits, threw a stone scoria block through the plate glass window and attempted to make off with the thousands of dollars' worth of precious stones on exhibition for Christmas sale. Two large trays of diamonds worth \$5,000, besides watches, etc., were in the window, but the burglars only got a few articles of small value. John Milne, supposed to be one of the thieves, was chased for nearly two miles and captured while hiding in a building at the corner of Charles and Jarvis streets. He was armed and had part of the stolen property on him. Not in fifteen years has there been such a daring robbery or such a sensational chase after burglars, fully a score of police officers and citizens assisting to run the man down. The greatest credit is due the police department for the prompt action that brought about the arrest and the recovery of most of the stolen jewellery. The robbery was carefully planned, the appliances used for making the doors secure exactly fitting into their place.

#### HEROES SAVED PASSENGERS.

##### Magnificent Exhibition of Devotion to Duty on Burning Steamer.

A despatch from Halifax says: The new steamer Strathcona, owned in Halifax and running on the eastern shore of Nova Scotia, took fire on Saturday night as she was entering Port Dufferin, and was totally destroyed, with the

## DOMINION PARLIAMENT

### NOTES OF PROCEEDINGS IN THE HOUSE OF COMMONS.

#### CANADIAN IMMIGRATION.

The Minister of the Interior stated that the total number of immigrants arriving in Canada of recent years was as follows:—In 1904, 130,000; in 1905, 146,000; in 1906, 189,000, to the end of June in each year.

#### DUTY ON HORSES.

Mr. Elson was informed that the minimum valuation for customs purposes on inferior horses imported into this country is \$50.

#### CATTLE EMBARGO.

Communications have been passing, said the Minister of Agriculture, between the Canadian and British Governments, on the subject of the removal of the embargo on Canadian cattle. "Has the government any reason to anticipate the removal of this embargo at an early date?" to which Mr. Fisher replied: "It is not expedient to express an opinion at present."

#### HALIFAX AND ESQUIMALT.

Sir Frederick Borden explained that the amounts expended by the Dominion in connection with the military and naval stations at Halifax and Esquimalt, from June 30, 1904, to December, 1906, was \$952,453, and \$161,209 respectively.

#### REPATRIATION OF CANADIANS.

Dr. Paquet learned that since 1900, 26,547 Canadians had been repatriated. The Canadian immigration agents are under special instructions to encourage the repatriation of our own people.

#### NATURALIZATION LAW.

Sir Wilfrid Laurier, in moving the second reading of the bill to amend the Naturalization Law, said it was designed to dispense with the three years' residence in the case of an alien, who had been naturalized in some other portion of the Empire, settling in the Dominion. At the present time the naturalization laws in different portions of the Empire did not give anything more than civil rights in the country in which the man took out his papers. All that would be necessary after the adoption of this Act would be for a man who had been naturalized in Australia or New Zealand and settling in Canada, to go before a judge, file his papers, and take the oath of allegiance.

#### HOGS AND TUBERCULOSIS.

##### Carcasses Exported to Britain From U.S. Not Examined to Standard.

A despatch from London says: The president of the Local Government Board, Mr. Burns, replying to a question in the House of Commons on Wednesday, said he was aware that the carcasses of pigs intended for export from the United States were not dealt with according to the standard recommended by the Royal Commission in Tuberculosis of 1898, but, pending the report of the Royal Commission, which was now sitting, he did not think that carcasses could be examined in accordance with these requirements.

## FREIGHT TRAFFIC

### Returns at Fort Immense

A despatch from Fort William, Ont., says: During the season of navigation

at \$11.50 to \$12 on track here; No. 2 quoted at \$3.50.  
 Straw—\$6.50 to \$7 per ton.  
 Potatoes—Ontario, 65 to 70c per bag on track; and New Brunswick 70 to 75c per bag.  
 Poultry—Turkeys, fresh killed, 11 to 12½c; chickens, dressed, 8 to 9c; alive, 6 to 7c per lb.; fowl, alive, 4 to 5c; ducks, dressed, 9 to 10c; do., alive, 6 to 8c per lb.; geese, 7 to 9c per lb.

#### THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 22 to 23c; tubs, 19 to 21c; large rolls, 20 to 23c; creamery prints sold at 25 to 26c, and solids at 23½ to 24c.

Eggs—Storage, 23 to 24c per dozen, and limed, 22c; new laid, nominal at 30c.

Cheese—Large cheese, 12½c, and Twins at 14c.

#### HOG PRODUCTS.

Dressed hogs in car lots are unchanged. Bacon, long clear, 11½ to 11¾c per lb. in case lots; mess pork, 21 to \$21.50; short cut, 82c.

Hams—Light to medium, 15 to 15½c; do., heavy, 14 to 14½c; rolls, 12c; shoulders, 11 to 11½c; backs, 16 to 16½c; breakfast bacon, 15½ to 16c.

Lard—Wierces, 12c; tubs, 12½c; pails, 12½c.

#### BUSINESS AT MONTREAL.

Montreal, Dec. 24.—Grain—There is no change in the local market for oats; sales of car lots of No. 2 white were made at 42½c; No. 3 at 41½c, and No. 4 at 40½c per bushel ex store. There are no new developments in the local flour situation. Manitoba Spring and Winter wheat patents, \$1.10 to \$1.25; wheat, \$1.60; strong bakers', \$1.40; straight rollers, \$2.65 to \$3.75; do., in bags, \$1.65 to \$1.75; extra, \$1.50 to \$1.60. Feed—Manitoba bran, in bags, \$21; shorts, \$22 per ton; Ontario bran, in bags, \$21 to \$21.50; shorts, \$22.50 to \$23; milled middling, \$22 to \$25 per ton; and straight grain, \$28 to \$30. Provisions—Barrels short cut mess, \$22.50 to \$24; half bbls., \$11.25 to \$11.75; clear fat backs, \$23.50; long cut heavy mess, \$21.50; half bbls., do., \$10.75; dry salt long clear bacon, 10½ to 11½c; barrels plate beef, \$12 to \$13; half barrels do., \$6.50 to \$7; barrels heavy mess beef, \$11; half bbls., do., \$6; compound lard, 8½ to 9c; pure lard, 12 to 13c; kettle rendered, 13½ to 14c; hams, 13 to 14½c; breakfast bacon, 15 to 16c; Windsor ham, 15 to 16c; fresh killed abattoir dressed hogs, \$9 to \$9.25; alive, \$6.50 to \$6.75. Eggs—Selects, 25 to 26c; No. 1 candled, 21 to 22c. Cheese—October made Ontario, 12½ to 12¾c; November made, 12 to 12½c. Butter—Choicest creamery, 25½ to 25¾c; medium grade, 24 to 24½c.

penditure will be larger, yet the treasurer appears to expect to have a comfortable balance. Last year the revenue reached \$6,016,000, while the expenditure was \$5,396,000. Asked whether the receipts for 1906 would be as much as \$7,000,000, Mr. Matheson would not be too sanguine, but the indications are that they will not fall far short of that sum. The province has received an income of \$1,000,000 from succession duties alone. There will be receipts from the taxation of railways. The income of the Provincial Secretary's Department is larger than ever before owing to the increased commercial activity on the one hand, and to the augmentation of fees for licenses, such as to sell liquor, on the other. Finally the exchequer will be further filled by ten per cent. of the purchase price of Cobalt and Kerr Lakes, which must be paid at once by the purchasers of those valuable mining rights. To counterbalance these there has been considerable expenditure on the important projects inaugurated by the Government during the last session of the Legislature.

#### MUST CAST BALLOT OR LOSE RIGHT.

##### Compulsory Voting Part of the Election Reform Bill.

A despatch from Ottawa says: The bill amending the election law has not yet been finally passed upon by the Cabinet, but it is understood that compulsory voting will be one of the features of the legislation which will be submitted to Parliament shortly after it reassembles.

Any qualified voter who neglects, without good excuse, to exercise the franchise at a Parliamentary election shall be disqualified from voting for six years thereafter.

Legislation in this direction has been recommended by two special committees of the House in recent years. The Government measure will impose several penalties for anyone under this disqualification who attempts to vote. No one will lose his rights, however, who has been prevented from voting through illness or any other good and sufficient reason, and in such cases an application to the local judge will save anyone from the penalty that his non-attendance at the polls would otherwise incur.

#### TOOK CARBOLIC ACID.

##### Death of Patrick Langane, Foreman in Lumber Camp.

A despatch from Magnewan says: Patrick Langane, foreman in Burton Bros' Camp No. 3, north of here a few miles, took a dose of carbolic acid on Wednesday night about 6 o'clock, mistaking it for cough mixture, and died from the effects in less than ten minutes. The unfortunate man was a good foreman and his untimely death is very much regretted.

#### Duty on Burning Steamer.

A despatch from Halifax says: The new steamer Strathcona, owned in Halifax and running on the eastern shore of Nova Scotia, took fire on Saturday night as she was entering Port Dufferin, and was totally destroyed, with the cargo. The passengers, who numbered 30, and the crew, were saved. The Strathcona left Halifax at noon on Saturday for Guysboro and intermediate ports. About 8.30 o'clock, inside of Beaver Light, fire was discovered. It appeared to be under the saloon. The flames spread rapidly through the ship. Forty boxes of dynamite were thrown overboard. Capt. Reid, who was in command, ordered full speed ahead, and had all the boats gotten ready. The engineers remained in the engine-room until the fire drove them out. The man at the wheel stood at his post until the wheel ropes were burned off and he was nearly enveloped in flames. Had it not been for this faithfulness to duty all might have perished. Capt. Reid succeeded in beaching the steamer at Smiley's Point, but there was not a moment to spare. Although the passengers were almost panic-stricken, rendering it more difficult for the captain's orders to be obeyed, all hands were got ashore. The passengers and crew lost everything, many of them reaching shore only half clad. Among the passengers were five ladies. Capt. Reid himself was the last to leave the ship.

#### DEAD AT THE THROTTLE.

##### Canadian Pacific Railway Engineer Killed in His Cab.

A despatch from Toronto says: John Paul, of 97 Mulock Avenue, Toronto Junction, engineer on C.P.R. engine No. 220, was killed in his cab on Saturday afternoon by striking his head against a semaphore arm just west of the Union Station. The train was composed of three coaches bound for Hamilton, and it is supposed that when struck he was looking to the rear to see if the steam was escaping from the exhaust pipe. The unfortunate man's skull was crushed in over the left ear. The accident was unfortified by the fireman, and the train ran through the city yards at a high rate of speed. When, however, Sunnyside crossings were passed without warning, the fireman entered the cab and found the engineer dead, with his hand on the throttle. The train was stopped at Mimico, where telegraph messages had already been received from persons along the line who had noticed Paul's condition. The autopsy held on Saturday showed that death must have been instantaneous.

#### NINE KILLED IN WRECK.

##### Collision on the Soo Railway at Enderlin, North Dakota.

A despatch from Enderlin, North Dakota, says: Nine dead and thirty-seven injured is the result of a wreck on the St. Paul, Minneapolis & Sault Ste. Marie Railway here early on Sunday morning, caused by a head-on collision. Most of the passengers were in the smoking car, and only two escaped injury. The whistle had just sounded as the train approached Enderlin, and the passengers were nearly all standing in the aisles when the baggage car crashed into the smoker. Seven were killed outright and two have since died. Hospitals, hotels and private houses were soon filled with the injured, who were attended by four physicians. A special train from Valley City brought physicians and nurses. The dead: Charles Backus, Berger, N.D.; I. J. Valving, Anamoose, N.D.; John Statterberg, Anamoose, N.D.; Tony Gleen, Velva, N.D.; D. J. Beresford, Medicine Hat, Canada; H. Rosenbaum, Velva, N.D.; W. J. Danielson, Sheldon, N.D.; A. O. Anderson, Starbuck, Minn.; one unidentified man.

The Italian Foreign Minister has stated that a war at the present time would reduce Europe to bankruptcy.

## Immense

A despatch from Fort William, Ont., says: During the season of navigation just closed 836 vessels arrived and 854 departed at the port of Fort William. A trifle more, than 2,000,000 tons of freight of all kinds was received during the season, and about 2,135,000 tons forwarded. Six hundred and seventy-two vessels arrived last year. For the last time, 1,200 truck handlers and checkers, employed since last Fall at the Canadian Pacific freight sheds, drew their cheques, thus marking the close of the season. There are still engaged at the freight docks 300 men, most of whom will be retained during the winter. The volume of freight handled in Fort William during the season exceeds by far that of any previous year in the history of this port, and although the officials' statement has not been given out, it is comparatively estimated.

#### FISET SUCCEEDS PINAULT.

##### A South African Veteran to be Deputy Minister.

A despatch from Ottawa says: Col. E. Fiset, D.S.O., has been appointed Deputy Minister of Militia and Defence to succeed Col. Pinault. The order-in-Council appointing Col. Fiset to his position was passed on Wednesday afternoon. Without doubt the militia of Canada will receive the news that an officer who has shown his sterling worth upon the battlefields of South Africa on more than one occasion is to become Deputy Minister with satisfaction. Especially in Ottawa is the appointment popular. Col. Fiset is a son of Senator Fiset. He went to South Africa in 1899, on the first contingent, being connected with the Army Medical Service. He served in the operations in the Orange Free State, and at the engagement of Paardeberg helped to bear off the field on a stretcher Capt. Arnold, who was wounded. For his distinguished bravery on this occasion he was mentioned by Lord Roberts in despatches.

#### MUTINOUS SAILORS SENTENCED.

##### The Leader of Potemkin Rebels Gets Four Years.

A despatch from Sebastopol says: Fifteen sailors who participated in the mutiny of June, 1905, on board the Russian battleship Kniaz Potemkin (now the Panteleimon) were sentenced on Wednesday. The leader was condemned to four years penal servitude, and the others to serve terms in the disciplinary corps, ranging from six months to two years. The prisoners were those of the crew who sought refuge in Roumania when the Kniaz Potemkin put into Kustenji, where she was eventually surrendered, and who subsequently gave themselves up to the Russian authorities.

#### NO FAITH IN BANKS.

##### Woman Trusted Pocket Alone, But the \$6,000 Vanished.

A despatch from Philadelphia, Pa., says: Mrs. Ella V. Kober was robbed of \$6,000 by a pickpocket in a holiday crowd in the shopping district here on Monday. The money was paid Mrs. Kober by the Pennsylvania Railroad in settlement of a claim on the death of her husband, who was killed in the recent electric railroad wreck near Atlantic City. Mrs. Kober had no faith in banks, and had refused to accept a check from the railroad in payment of the claim, and demanded cash. She received thirty \$100 and six \$500 notes, which she sewed in a secret pocket in an undershirt. While shopping with a friend she discovered that the pocket had been cut from her skirt and the money taken.

# GENERAL LAID HEAD ON RAILS

## A British Officer Commits Suicide While Insane.

A despatch from London says: At the inquest on the decapitated body of Major-Gen. Guise Tucker, formerly commandant of the Royal Marine Artillery at Eastney Barracks, Portsmouth, which was found on the London and South-Western Railway at Cosham, a verdict of "suicide while temporarily insane" was returned.

The evidence showed that the General had recently been depressed by ill-health, though he had not been medically attended. On Tuesday evening he left his home at Purbrook Common, saying he was going to post some letters. He was not seen alive again, and his body was found by a plate-layer's

ganger under one of the bridges crossing the railway near Cosham Station, two miles from his residence.

The medical opinion was that the General had deliberately placed his head on the line before an approaching train.

Gen. Tucker, who was on the retired list, saw service in the Egyptian campaign in 1882, and fought in the engagements at Kassassin and Tel-el-Kebir, and was mentioned in despatches. He also served in the Eastern Soudan campaign in 1884, and was mentioned in despatches for seizing one of the enemy's Krupp guns and turning it upon them. He gained the nickname of "Krupp Tucker" by this exploit.

## PROFIT IN LAKE BOATS.

Never So Much Money Was Paid Out For Freight.

A despatch from Chicago says: Never before was so much money paid for carrying freight in lake vessels as during the season just closed. A rough estimate places it at \$61,000,000 for coal, iron ore, grain and lumber. The profits to the vessels were perhaps the largest in the history of the lakes. Careful computations, based on the earnings of typical steamers, show a net profit on steel ships of 13 per cent. On wooden ships of between 3,000 and 3,500 tons capacity the profits have ranged as high as 30 per cent., with an average of more than 25 per cent. on their insurance valuation. The cause of this great prosperity is the demand of the country for iron and steel. The total movement of iron ore for the season was 27,513,589 tons, an increase of 4,036,683 tons over 1905. Grain from Duluth moved in a larger volume than ever before. There were shipped from the head of Lake Superior 81,608,000 bushels, as compared with 59,678,000 bushels in 1905.

## SWINDLER CAUGHT.

A Bogus Cheque Operator is in the Toils at Galt.

A despatch from Galt says: A Galt woman's timely pointer to the police on Thursday led to the arrest of a man who has confessed to being a passer of bogus cheques, and is believed to be the swindler wanted in a number of Canadian towns and cities. Thursday morning a strange man entered Joseph Hall's store, New Ainslie Street, and asked Mrs. Hall whether she had any blank cheques she could spare, as he wanted to fill some out. Mrs. Hall suspected the man, and on his departure notified the chief of police, who placed the man under arrest. At headquarters the man was taxed with being the party who had worked the bogus cheque game in Guelph. At first he vigorously denied the charge, threatening reprisals, but finally weakened and admitted the whole thing. He said he was the son of a farmer named Horace Brown, living near Cainsville, a short distance from Brantford. He would make no further statement as to how long he had been operating.

## GLANDERS IN WINNIPEG.

First Outbreak in Two Years—Twenty Horses Shot.

A despatch from Winnipeg says: The first outbreak of glanders to occur in Winnipeg in two years was detected two days ago, and on Thursday 20 horses afflicted were shot at the city nuisance ground. Local veterinary surgeons detected the disease, and the horses were slaughtered under their direction. James Lightfoot's board and sale stables, on Bannalyne Avenue, lost nine, while Slatter's stables, on North Main Street, lost ten. The odd horse belonged to a local express company. It is supposed that the disease was first contracted in the bush and brought to the city by animals brought in from the camps.

The French Government has ordered prosecutions for holding religious services discontinued for the present.

## CONDENSED NEWS ITEMS

HAPPENINGS FROM ALL OVER THE GLOBE.

Telegraphic Briefs From Our Own and Other Countries of Recent CANADA.

The Alberta Legislature will meet on Jan. 24.

The Toronto Exhibition surplus was over \$36,000.

Cobalt has applied to the Government for incorporation as a town.

Twenty-five soldiers have been sent to Victoria, B.C., from the Quebec garrison.

Kingston electors will vote on Jan. 7 on the question of license reduction.

Cobalt has been incorporated as a town.

Hon. V. W. Larue, member of the Quebec Legislative Council, is dead.

The Province has spent \$226,550 on roads in northern Ontario this year.

Fifty-one Manitoba municipalities voted for the Government's telephone scheme and seventy-one against it.

Chappel Bros.' grocery and Chamandy Bros.' dry goods store at North Bay were burned. The loss is \$25,000.

Windsor Model School made a record in the recent examination, every one of the forty-seven students obtaining a certificate.

The Canadian Northern Railway has filed plans at Ottawa for several new lines in western Ontario, including one from Toronto to Windsor.

The Grand Trunk ferry will make two trips daily between Cobourg and Charlotte.

Mrs. Alice Carey was acquitted of the charge of child murder at the Assizes at Brampton, on Friday.

Deer carried by the Canadian Express Co. during the present hunting season numbered 3,100.

William A. McDonald, a wealthy farmer, of Calgary district, formerly of Chatham, was found drowned at Vancouver.

Mr. G. M. Murray has been appointed General Secretary of the Canadian Manufacturers' Association, succeeding Mr. J. F. M. Stewart.

The Minister of Railways is about to invite tenders for motor cars for the Intercolonial Railway.

The Government is to extend the Temiskaming Railway to connect with the Grand Trunk Pacific.

Commission Coombs of the Salvation Army says eight steamers have been chartered to bring 25,000 people to Canada.

Custom House employees in Toronto have formed an organization with the object of securing a higher scale of pay.

Hon. G. W. Stephens, Messrs. C. C. Ballantyne and L. E. Geoffroy have been appointed Harbor Commissioners of Montreal.

The John Leslie Block on Main Street, Winnipeg, has been purchased by Joseph Bernhardt for \$125,000 for hotel purposes.

The transcontinental Railway Commission are negotiating for the purchase of a tract of land about two miles long at Winnipeg for shops and yards.

Shortage in weight of Canadian cheese exported to Britain is complained of by Mr. P. B. Macnamara, Canadian agent in Manchester.

Chicago capitalists have purchased the Canada Permanent Block in Winnipeg, corner Portage Avenue and Main Street for a quarter of a million dollars.

Canada's exports to Great Britain for the five months ending August 31 totalled \$55,653,099, as against \$41,153,071 the previous year and \$43,493,420 in 1904.

Minister of Agriculture Talton of British Columbia has arranged for some thousands of Salvation Army immigrants to increase the labor supply next year.

Canada's imports from Great Britain for the five months ending August 31 amounted to \$32,754,296, as against \$27,847,699 for the year previous and \$25,934,295 for 1904.

# 15,000,000 CHINESE SUFFERING

## Great Famine Follows Total Failure of Crops.

A despatch from Washington says: Official advices received here regarding the famine in North Kiangsu, China, confirm the stories of suffering and want in that section. The crops are reported as being almost a total failure to Tao Yuen. In Antong and Fung Township the crops practically are a total failure. The country everywhere is under water and the people are compelled to wade often waist deep and in some cases, up to their necks.

Immediately west of Tsingho what

formerly was a fertile plain is a vast lake extending 20 miles at the narrowest point and stretching for over 40 miles toward the south-west. "Here and there," the prefect says, "are the groups of cottages which rise above this sheet of water and can only be reached by boats. The people are in a state of absolute destitution, not only their crops but also the reeds which constitute their fuel being destroyed by the floods."

An urgent appeal is made for aid for the stricken people, who number 15,000,000.

States should be allowed a delegate to the coming Colonial Conference.

Japan is becoming impatient at Russia's delay in fulfilling the terms of the Portsmouth treaty.

Count Ignatieff, ex-Governor of Kieff, was shot and killed at Tver on Saturday by a revolutionist.

The universal suffrage bill passed in the Austrian upper House on Friday night.

## BRYCE FOR WASHINGTON.

British Government Enquires if He Will be Acceptable.

A despatch from Washington says: The British Government has enquired of the State Department if James Bryce, Chief Secretary for Ireland in the Government at London, would be acceptable to the United States as the King's Ambassador to succeed Sir Mortimer Durand, who is to retire from active service soon. The appointment of Mr. Bryce, it is learned, would be perfectly satisfactory to this Government, although the State Department has made no formal reply to the Foreign Office in London. It is expected he will come to America to take up his new mission late in February or early in March. Sir Mortimer Durand will leave Washington shortly after Christmas.

## STAMP DISTRIBUTING CENTRES.

Have Been Established at Winnipeg, Calgary and Vancouver.

A despatch from Ottawa says: A new department has been made by the Post-office Department which will be welcomed by postmasters in the west. Heretofore these postmasters were compelled to send to Ottawa when they desired to replenish their stocks of stamps, but owing to the rapid growth in the demand for stamps it has been decided to establish distributing centres in the west. These will be at Winnipeg, Calgary and Vancouver. The new system will go into effect on the new year.

## BIG TIMBER DEAL IN QUEBEC.

American Syndicate Purchases Bradley Limits at La Tuque.

A despatch from Quebec says: Thursday afternoon one of the largest deals in industrial pursuits was completed. A syndicate of gentlemen from Portland, Maine, identified with the Berlin N. H. Paper Company, have purchased the Breakey syndicate of timber limits at La Tuque for a quarter of a million dollars, and La Tuque water-power and other properties, involving one million dollars, and will erect the largest pulp and paper mills in Canada at La Tuque. The company is capitalized at three million dollars, and will be known as the Quebec Industrial Company, with Mr. Herbert J. Brown, of Portland, Me., presi-

## Fashion Hints.

### COATS.

The problem of an evening coat for the girl who must dress on next to nothing a year is a comparatively easy one this season.

The loose, flowing, almost the old dolman-shaped lines of the newest wraps require so little fitting that they can easily be fashioned at home with the aid of a good pattern, either with the assistance of a dressmaker or by the girl who makes her own clothes. Taste and clever fingers can work wonders in the way of inexpensive, yet really charming coats.

Few people, for instance, would think of cotton flannel in this connection, yet one young woman, who depends largely on her wits for her good appearance has just made a striking three-quarter length cape out of a rich shade of recantion flannel, lined with an old white china silk skirt, and finished with a rolling collar of black lynx from a worn out fur-lined circular.

One of these circulars, by the way is a godsend, when a new evening wrap is to be evolved. Use the squirrel as a lining for some pretty outer covering—say, one of the bengalines now so popular, or an inexpensive pompadour silk—and finish with the fur collar.

A very inexpensive cape or coat may be made of the soft furniture felt to be found in upholstery shops. It comes in lovely shades of blue, tan, red, gray and pink. This material is so warm and thick no lining is necessary, though, a cheap white silk is used, it is, naturally, much handsomer.

An old Paisley shawl, with a colored border, can be turned into a very stylish cloak, on the order of the dolman shaped wrap shown to-day. Use the border to edge the fronts and the flowing sleeves; or, if there is enough, turn it into a pointed cape collar. Or it can be finished with the chenille fringe seen so much this season. Fasten with passementerie ornaments.

Lucky is the girl who owns one of the big lace shawls, black or white, such as are handed down in many a family; that has seen better, or, at least, richer days. A fascinating wrap was made recently of a black lace shawl lined with white taffeta. One of the points was caught in a jaunty little hood, and the entire cape was edged with a double ruffle of white and black chiffon, the black on the outside.

Then the girl who can afford to pay a little more for her materials—which she can easily manage, if she is her own

thousands of Salvation Army immigrants to increase the labor supply next year.

Canada's imports from Great Britain for the five months ending August 31 amounted to \$32,754,296, as against \$27,847,699 for the year previous and \$25,934,295 for 1904.

Our imports from the United States for the five months ending August 31 totalled \$83,420,899, an increase of \$13,323,606 over the previous year. Our exports to the States for the same period totalled \$47,036,371.

The imports into Canada from the West Indies for the five months ending August 31 amounted to \$3,106,646, a gain of \$336,922 as compared with 1905 and of \$675,143 in 1904. Exports to the West Indies totalled \$1,076,968, showing gains of \$187,274 and \$178,814 when contrasted with the same period of two years immediately preceding.

### GREAT BRITAIN.

The British Admiralty have decided to fit all new battleships with turbine engines.

Negotiations are in progress to have Sir Algernon West succeed Hon. James Bryce as Chief Secretary for Ireland.

The British Parliament has been prorogued until February 2nd.

The marksmanship of British gunners has shown a phenomenal improvement during the present year.

It is rumored at Dublin that Mr. Bryce's retirement from the British Cabinet is due to differences with Sir Anthony Macdonnell.

A clause has been added to the extradition treaty between Great Britain and the United States including bribery among extraditable offences.

Colonel Gerald Kitson, Commandant at Sandhurst, has been specially selected by Lord Kitchener to command a brigade in India.

Dr. Macnamara, a Canadian in the British House of Commons, is mentioned as a possible successor to the Earl of Elgin in the Colonial Secretaryship.

### UNITED STATES.

Lindsay B. Hicks was rescued on Saturday after having been entombed in a mine at Bakersfield, Cal., for over two weeks.

Cashier J. B. F. Rinehart, of the closed Farmers' and Drovers' National Bank of Waynesburg, Pa., surrendered himself on Tuesday, and was admitted to bail in the sum of \$10,000. Discrepancies in his accounts, aggregating \$950,000, are alleged.

At the Inter-State Commerce Commission's inquiry into the car shortage, Minnesota farmers testified wheat prices were abnormally depressed, with elevators full and no market. The coal famine forced farmers to burn fences and outbuildings to keep from freezing.

Viscount Aoki, the Japanese ambassador to the United States, said at the dinner of the American Asiatic Association, in New York, that eastern Asia was large enough for the commerce of all nations, and that the dream of the pessimist, who saw the phantom of a struggle between the United States and Japan for the supremacy of the Pacific was ridiculous.

The Pennsylvania Railroad Company has notified its employees that after January 1 the company, which owns many mines, will not sell coal to them at the rate which regular shippers pay. As a consequence all employees will be compelled to patronize retail dealers. About 60,000 of the 190,000 employees are housekeepers. It is estimated that the annual saving to those who bought their coal from the company was \$675,000.

### GENERAL.

Captain Magniez was degraded at Lille, France, for refusing to aid in taking a church inventory.

Japan is said to be planning to raise sufficient wheat in Manchuria to satisfy the Asiatic demand.

The Czar has decorated Premier Stolypin for his zeal in the cause of the empire.

It is feared the agitation of opium dealers in South China will cause a serious outbreak.

Australia claims that each of her

Tuque for a quarter of a million dollars, and La Tuque water-power and other properties, involving one million dollars, and will erect the largest pulp and paper mills in Canada at La Tuque. The company is capitalized at three million dollars, and will be known as the Quebec Industrial Company, with Mr. Herbert J. Brown, of Portland, Me., president.

### CHAMBERLAIN'S MEMORY.

The Past Has Become a Complete Blank to Him.

A despatch from London says: The long retirement of Joseph Chamberlain, owing to gout and other ailments, has led to constant assertions and contradictions concerning the gravity of his condition. The Chronicle states that he greatly overtaxed his strength at the celebrations in honor of his seventieth birthday at Birmingham, with the result that he lost his memory completely. The past became a blank to him, and he could not remember what had taken place even a few hours before, and although his other faculties were and are unimpaired, his memory is gone.

### ASSASSINS SHOT BADLY.

Desperate Attempt to Kill Chief of Police at Lodz.

A despatch from Lodz, Russia, says: An attempt to assassinate Chief of Police Cheshanowski was made here on Wednesday, but the official escaped with a slight injury to his right foot. The would-be assassins hurled a bomb beneath his carriage and opened fire on him with revolvers, but did not accomplish their object. The terrorists escaped. The carriage was wrecked and the coachman and three dragoons were probably fatally wounded by bomb splinters.

### BIG ORDER FOR RUSSIAN NAVY.

Krupps Will Supply Over Five Million Dollars' Worth.

A despatch from Berlin says: The Krupps, of Essen, have received an order for warship materials worth 22,000,000 marks (\$5,500,000), for the Russian Government. This will be used for building new warships. Under the conditions of the contract the Russian Putiloff works will participate to a certain extent, and the Krupp company will advance the Putiloff company 6,000,000 marks (\$1,500,000) to extend its works.

The Australian anti-gambling bill has passed both Houses of Parliament.

Old bachelors are men who have given marriage a serious thought.

recently of a black lace shawl lined with white taffeta. One of the points was caught in a jaunty little hood, and the entire cape was edged with a double ruffle of white and black chiffon, the black on the outside.

Then the girl who can afford to pay a little more for her materials—which she can easily manage, if she is her own dressmaker—can copy some of the most costly evening coats seen in the stores.

Chiffon velvet and bengaline silk are both more popular for evening coats this winter than broadcloth, and very little more expensive.

A charming combination, modeled on the dainty coat of the central figure, is of red bengaline, lined with white and finished with a facing of black lynx over a deep-pointed collar of the bengaline, with black silk tassels and buckles.

It is wiser for the girl who must use cheap materials to confine herself to capes, as the quality of the material is less noticeable than in a coat. The latter, moreover, requires skillful cutting and pressing to look well. Fortunately for her, the vogue for capes is steadily on the increase.

The cheap Pompadour silks are especially lovely for such a wrap, while many inexpensive Japanese silks can be picked up for the new kimono-shaped cloaks which are frequently seen this winter.

It must be confessed this latter style has more of novelty than becomingness or real attractiveness to recommend it.

In choosing an evening coat this winter be sure to select one of the pale pastel shades—orchid, mauve and a faint tone of violet and pink are especially good. These light shades are more in favor than the all-white coat.

An oyster-white broadcloth, brightened with touches of saffron velvet is, however, really lovely.

### EXPRESS MATTER BURNED.

Third Car Consumed Bound From Toronto to Winnipeg.

A despatch from Winnipeg says: Word was received on Wednesday to the effect that a carload of express packages, which left Toronto for the west on Monday, was destroyed by fire between that city and North Bay. The car contained a considerable quantity of goods for Winnipeg and other points in Manitoba and the west. This is the third carload of express goods destined for the west that has been destroyed by fire during the past month. The origin of the fires is not known.

A Melbourne despatch says several big gold nuggets were discovered recently near Tarnagulla, and two were found weighing respectively 967 and 373 ounces, the largest seen in Australia in forty years.

## GAVE CHIMPANZEE THE FEVER

### Former Montreal Doctor Achieves a Triumph in Science.

A despatch from Montreal says: One of the greatest achievements in modern medical science has just been accomplished by an old Montrealeur and graduate of McGill, at present attached to the Liverpool School of Tropical Medicine, Dr. H. Wolferstan Thomas, son of the late Wolferstan Thomas, a native of Montreal, and a member of the class of medicine '97 of McGill. Dr. Thomas has just succeeded for the first time in inoculating a chimpanzee with yellow fever from the bite of a mosquito, which had previously bitten a human being infected with the disease. This is the first experience that has ever been suc-

cessfully concluded through the medium of an animal, and means a great deal to medical science.

The chimpanzee had all the symptoms of yellow fever after it had been bitten, and now, if it can be successfully established that the disease may be given from the chimpanzee to the human being, doctors can then proceed to the discovery of a cure through the chimpanzee. The disease is of such a serious nature, and those living in countries where it is prevalent are so anxious to find a cure for it, that the Brazilian Government has offered a prize of \$250,000 for the discovery of a remedy.

### LEAVES FORTUNE TO POPE.

Wealthy Prelate's Will Gives \$1,000,000 to Pontiff.

A despatch from Rome says: The death was announced on Tuesday of Mgr. Adami, one of the most wealthy Roman prelates. Mgr. Adami made valuable presents to Pope Leo XIII. and Pius X., his gift to the latter being a gold pectoral cross set with brilliants. By his will he left \$1,000,000 to the Pope.

### WANT A BRITISH PRINCE.

Would Place Prince Arthur of Connaught on Serbian Throne.

A despatch from London says: In connection with the recent rumors of a plot to place Prince Arthur of Connaught on the Serbian throne, M. Mijatovich, ex-Serbian Minister in London, in a published interview, admits that twice within a year delegates from Belgrade have vainly endeavored to interest him in the proposal, asserting that King Peter would be induced to abdicate peacefully in favor of a British Prince. M. Mijatovich said he declined to have anything to do with such a fantastic suggestion, but declares there is a definite political party in Serbia favoring a change in the dynasty.

### SAVED FROM SCAFFOLD.

Woolly Bear's Sentence Commuted—Cannot Live Long.

A despatch from Ottawa says: His Excellency has commuted the sentence of death in the case of Woolly Bear, an Indian who was tried at Brandon and found guilty of killing a fellow tribesman. He was to have been executed on Friday. It was reported that remorse and confinement had so affected him that he could only live a short time. The Government therefore decided that nature and not the law should be allowed to take its course.

### JAPAN'S MERCHANT FLEET.

New Shipping Company With a Capital of \$10,000,000.

The London Times' correspondent at Tokio sends the following cable despatch:—A new shipping company has been formed in Japan. It already possesses a fleet of 150,000 tons. Its capital is \$2,000,000, of which half represents the value of the existing fleet, the remainder to be devoted to the building of new ships. The company intends to establish services to Formosa, Hokkaido, Java, Vladivostok, North China, Hong Kong, Manila, Hawaii, America, the South Seas and India.

It is said that the new election bill now preparing at Ottawa will have a compulsory voting provision.

## Why Refer to Doctors

Because we make medicines for them. We tell them all about Ayer's Cherry Pectoral, and they prescribe it for coughs, colds, bronchitis, consumption. They trust it. Then you can afford to trust it. Ask your own doctor.

The best kind of a testimonial—

### FREE COURSES

For over thirty years the Ontario Agricultural College has provided courses of study and practical field work for farmers' sons, and thousands of young men have taken advantage of it. At first the course was two years. This was found to be too short, and in 1888 a third year was added. Still later it was found impossible to do justice to the work in three sessions, and the regular College Course, leading to the degree of B. S. A., now covers a period of four years.

But there are many farmers, and far-

and artificial incubation and rearing feeding, care and management; the production of eggs in winter; demonstrations and practice in fattening, killing, dressing, and preparing chickens for home and foreign markets.

The demand for trained men in Dairying too, far exceeds the supply and young men thoroughly equipped in the science and practice of Butter and Cheese-making, are in constant demand. The Dairy school is well prepared to give a good course in dairying. (The term is three months.) A herd of about 40 cows, heifers, and calves representing three different breeds of dairy cattle, gives an excellent object lesson in the handling, feeding, and caring for a dairy herd, besides supplying specimens for class-room work. A record is kept of each cow's milk, that students may see the simplicity and importance of a cow record.

These courses are offered as was stated before for those farmers and farmer's sons, who have not the time nor the money to take the regular College Course and it is to be hoped that a large number will avail themselves of the opportunity to attend during the coming January.

### RICHMOND MINUTES.

The Council met at Selby.

The members present were Messrs Z. A. Grooms, Reeve, and Councillors Fred Sexsmith, Charles Anderson, E. R. Sills, and Alf McCutcheon. The R. ere presiding.

The minutes of the last meeting were read and confirmed.

Moved by Chas. Anderson and seconded by Fred Sexsmith, that the collector be granted a voucher for the following sums:—Wm. Brandon \$9.00; Statute labor by order of the Pathmaster, Thomas Fralick \$4.00; Statute labor by order of the Pathmaster Wm. F. Ferguson \$1.00; Statute labor the same being an error. Carried.

The Treasurer's Financial report was laid before the Council which was read and ordered to be printed according to statute.

Moved by Fred Sexsmith seconded by Alf McCutcheon, that Sidney Pringle be paid \$3.00 for repairing three culverts in road section No 23, by order of the Pathmaster. Carried.

Moved and seconded that the collectors' time be extended until the next meeting of the Council. Carried.

Moved by Alf McCutcheon seconded by E. R. Sills that the following accounts be paid: Carleton Woods \$1.75 for furnishing wood to Magdalen-Fralick; Allen Oliver for 87 loads of gravel furnished road sections Nos. 4 and 5 by order of the Pathmasters \$6.09; Z. A. Grooms 35 loads of gravel for road sections Nos 73 and 81 by order of the Postmasters \$24.50; Datus Denison for wood furnished Thomas Sovereign \$10.00; Dan McCauley for work on road in section No 24 \$3.00; Alex. Denison for timber for repairing bridge on road east of Selby \$16.00; Rathbun Co. shingles for Town Hall shed \$29.50; M. S. Madole, account for lumber \$35.71; G. F. Rattan \$50.00 salary as Township Solicitor for 1906, also \$10.00 for postage and stationery; John Gollinger work on road in road section No 59 \$1.50. Carried.

The Council adjourned.

ABRAM WINTERS  
Tp. Clerk.

### Ages in the Animal Kingdom.

A great variance as to length of life appears among different animals. Some insects live for only a few hours, while fish, elephants and turtles are frequently centenarians. The average life of the mosquito is three days. Toads usually live to the age of about fifteen years, while carp have been

## Verdict for Dr. Pierce

AGAINST THE  
Ladies' Home Journal.

Sending truth after a lie. It is an old maxim that "a lie will travel seven leagues while truth is getting its boots on," and no doubt hundreds of thousands of good people read the unwarranted and malicious attack upon Dr. R. V. Pierce and his "Favorite Prescription" published in the May (1904) number of the Ladies' Home Journal, with its great black display headings, who never saw the humble, groveling retraction, with its inconspicuous heading, published two months later. It was boldly charged in the slanderous and libelous article that Dr. Pierce's Favorite Prescription, for the cure of woman's weaknesses and ailments, contained alcohol and other harmful ingredients. Dr. Pierce promptly brought suit against the publishers of the Ladies' Home Journal, for \$300,000.00 damages.

Dr. Pierce alleged that Mr. Bok, the editor, maliciously published the article containing such false and defamatory matter with the intent of injuring his business; furthermore, that no alcohol, or other injurious, or habit-forming, drugs are, or ever were, contained in his "Favorite Prescription"; that said medicine is made from native medicinal roots and contains no harmful ingredients whatever; and that Mr. Bok's malicious statements were wholly and absolutely false.

The retraction printed by said Journal they were forced to acknowledge that they had obtained analyses of "Favorite Prescription" from eminent chemists, all of whom certified that it did not contain alcohol or any of the alleged harmful drugs!

These facts were also proven in the trial of the action in the Supreme Court. But the business of Dr. Pierce was greatly injured by the publication of the libelous article with

## Breaking a Compact

By BELLE MANIATES

Tom Dalton paced the blue gravel road in front of the palatial hotel waiting for Dorothy. Waiting for Dorothy had been his normal condition this summer.

He was a man whose well made shoulders alone marked him as man of action. This new role of his was not consistent with his principles and habits.

He consulted his watch frequently and said things under his breath, but the instant he caught sight of the fair young form in the doorway he forgot his impatience.

When Dorothy's ingenuous, dazzling eyes looked into his he drew a quick breath and told himself she was well worth the waiting, however prolonged.

Time was made for slaves, not for Dorothy. It did not even occur to her to ask him if she were late or if he

1888 a third year was added. Still later it was found impossible to do justice to the work in three sessions, and the regular College Course, leading to the degree of B. S. A., now covers a period of four years.

But there are many farmers and farmer's sons who can not spare the time to take the long College Course, and others who might find the time, but have not the means or education sufficient for matriculation. For the sake of such men we have supplemented our regular work by adding **SHORT COURSES** to meet their special requirements.

A Judging Pavilion, with a fifty foot ring, and with seats all around capable of seating comfortably 550 persons, has been built especially for the convenience of those taking the Short Course in Live Stock. Into this ring all classes of horses, beef cattle, sheep and swine are brought for criticism. The animals are judged by the members of the class themselves, and finally judged by some recognized authority, so that students may have a good opportunity to compare their judgment with that of others. No money will be spared in bringing in some of the best representatives of all these classes from the stables of our leading Ontario breeders. The work will be conducted by G. E. Day, Prof. of animal Husbandry; H. S. Arkell, lecturer in animal husbandry; and Dr. J. H. Reed, Prof. of Veterinary Science, with the assistance of other competent stockmen who are regarded as authorities on the most valuable breeds of farm animals.

One hour each day will be spent in lectures on seed selection and the best methods of cleaning seed, and in the judging of oats, barley, wheat peas, and corn; and the seeds of grasses, clovers, and various fodder crops, and in the identification of weed seeds most commonly found in grass and clover seed. This course will be conducted by C. A. Zivitz, Prof. of Field Husbandry; J. Buchanan, lecturer in Field Husbandry; and J. E. Howitt, lecturer in Botany.

In the Poultry Course which lasts for one month, instruction will be given in the following branches of the poultry business: Preparation of plans, specifications and plans of poultry houses for various purposes; location, construction, ventilation and furnishings; breeds and varieties of fowls; origin and characteristics; principles of breeding and mating; judging; natural

insects live for only a few hours, while fish, elephants and turtles are frequently centenarians. The average life of the mosquito is three days. Toms usually live to the age of about fifteen years, while carp have been known to reach 150. Chickens live from twelve to fifteen years, dogs to the age of ten and occasionally fifteen and parrots to extreme age. These birds have been known to pass the age of 200 years. Turtles are also frequently centenarians, as are storks, and elephants are said to reach the age of 300 years. Whales have been known to live for 400 years.

#### Postage Stamps.

The largest postage stamp ever issued was a five cent stamp of the United States intended for newspaper postage. It was 4 by 2 inches in size. The smallest postage stamp, on the other hand, was a twenty-five pfennig stamp of Mecklenburg-Schwerin, issued in 1856. It was one-fourth the size of an ordinary postage stamp. Incidentally it has been calculated that about 13,000 different kinds of postage stamps have been issued by the various countries of the earth.

#### Fate.

A strange comedy and tragedy was woven into the lives of Ibsen and Bjornson. As young men they were great friends; then politics flung them apart; they quarreled and never met for years and years. Strange fate brought the children of these two great writers together, and Bjornson's daughter married Ibsen's only child. The fathers met after a quarter of a century of separation at the wedding of their children.

#### Deafness Cannot be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed, you have a rumbling sound or imperfect hearing, and when it is entirely closed, Deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous surface.

We will give One Hundred Dollars for any case of Deafness (caused by Catarrh) that cannot be cured by Hall's Catarrh Cure. Send for circulars free.

J. J. CHENEY, & CO Toledo, O. Sold by Druggists, 75c. Take Hall's Family pills for constipation.

A first-class line of sleigh bells and horse blankets.

MADOLE & WILSON

A Boston schoolboy was tall, weak and sickly.

His arms were soft and flabby. He didn't have a strong muscle in his entire body.

The physician who had attended the family for thirty years prescribed **Scott's Emulsion**.

NOW:

To feel that boy's arm you would think he was apprenticed to a blacksmith.

ALL DRUGGISTS; 50c. AND \$1.00.

they were forced to answer to the fact that they had obtained analyses of "Favorite Prescription" from eminent chemists, all of whom certified that it did not contain a grain of opium, and that it was a harmless and useful preparation. These facts were also proven in the trial of the action in the Supreme Court. But the business of Dr. Pierce was greatly injured by the publication of the libelous article with its great display headings, while hundreds of thousands who read the wickedly defamatory article never saw the humble groveling retraction, set in small type and made as inconspicuous as possible. The matter was, however, brought before a jury in the Supreme Court of New York State which promptly rendered a verdict in the Doctor's favor. Thus his traducers came to grief and their base slanders were refuted.

#### England's "Fiery Dragons."

In the year 1532 various parts of Great Britain were visited by a remarkable meteorological phenomenon, which the old authors refer to as "the visitation of the fire drakes or dragons." The author of "Contemplation of Mysteries" says: "In ye letter parte of ye yere (1532) ye fieri dragons appeared flying by flocks or companies in ye ayre, having swines' snowtes, and sometimes were they seene foure hundred flying together." In speaking of the fire dragons in another portion of his work he says, "Common people thinke fire drakes to be spirits which watch over hidden treasure, but the philosophers affirm them to be ye result of poisonous vapors which are spontaneously lighted in ye ayre."

#### Ireland's Coast Cliffs.

The finest cliff scenery in the United Kingdom is on the coast of the county of Donegal, at the northwest of Ireland, facing the Atlantic, where the variety and grandeur of the cliffs are most thrilling and impressive. Slieve League, south of Glen Columbkille, is a superb introduction to Donegal's coast splendors. In less than half a mile from the sea the mountain rears its height of nearly 2,000 feet. In the island of Achill, off the west coast of Ireland, the cliffs of Croghan, at Achill Head, rise sheer from the water's edge to the dizzy height of 3,000 feet.—London Standard.

#### Smoked Glass.

Murphy—Well, this bates the mischief. Dooley told me that if I smoked a piece of glass I'd be able to see the spots on the sun. Sure, ain't I fairly kilt wid thyring to make me pipe draw? 'Tis the way, I'm thinking, that either I haven't the right kind of glass or else Dooley's been fooling me.—London Tit-Bits.

#### Took Wind Out of Their Sails.

Addressing one of his southern audiences, Sam Jones once requested all the husbands present who had not spoken a harsh word to their wives for a month to stand up. He shook hands with those who arose and then introduced them to the rest of the audience as the "twenty-seven biggest liars in Tennessee."

#### Honesty and Ability.

Uncle—You see honesty is absolutely necessary, but ability is equally indispensable. Nephew—That may be, but what end does honesty serve? Uncle—To maintain your obligations. Nephew—And ability? Uncle—To avoid having them.—El Monte Unofficial.

#### Is Man a Harder Proposition?

Mrs. Benham—That snake tempted Eve first. Deham—Yes, I suppose he wanted to begin on something easy.

#### Necessary Limitations.

Physician—I would suggest a diet. Patient—Well, it will have to be some thing that agrees with the cook.—New York Sun.

#### CASTORIA.

Bears the Signature of The Kind You Have Always Bought *Chas. H. Fletcher*

"I HAVE PROMISED TOM TO GET UP TO BREAKFAST."

had been waiting long. She was the only daughter and had been subjected to no rules or regulations.

Her father, William Lloyd, had been perceptibly troubled when approached by Tom on the subject of his love and desire for Dorothy.

"I don't know of a fellow anywhere I think as much of as I do of you, Tom, and there is no one else whom I would like to have for a son-in-law, but you haven't said anything to her yet."

"No. Still, of course, she must know I love her."

Lloyd smiled.

"Very likely. But I don't want you to say anything to her until you have known her longer—until you are entirely sure you care enough."

Tom stared.

"Do you think any one could know her at all and not love her?"

"I must admit," replied Lloyd, "that we have done all we could to spoil Dorothy, and yet she is not spoiled—to us. She has always had her own way, but it has been such a witching, sweet way we were glad to give it to her. It is our dearest wish and hope that she may always continue in her princess role."

"She has many little characteristics that we can laugh at, but to a conventional, practical, systematic nature like yours I fear will prove distracting. Her oblivion to the flight of time, her irresponsibility and utter disregard of anything approaching a system will be wearisome to you, I fear, after the glamour of courtship and honeymoon is over. You must take her as she is, with no thought of alteration."

Tom protested that he loved Dorothy as she was and that in naught would he have her changed, but Lloyd had seen his looks of impatience and their sudden vanishing this morning.

"There'll come a time when his impatience will linger after Dorothy's arrival on the scene," he reflected, with a sigh.

Meanwhile Tom was mildly remarking to Dorothy that he feared they would be late for the starting of the regatta. Dorothy gayly rejoined that she had never seen the starting of anything.

"I am dreadfully unpunctual," she added, with a little sigh. "It's inconvenient for my friends, but I can't help it. I get up late in the morning and everything has begun. I've never seen the first act of a matinee yet."

"Don't you breakfast with your father and mother?" he asked gravely.

"Breakfast," she echoed, with a little shriek. "I've never seen a breakfast table. I was brought up that way. I was a delicate child, and they never awoke me, and now, oh, there's something dead in the early morning sunshine! It seems so lonesome at the starting of day. Do you think it such a crime as your face indicates?"

"I really think you ought to breakfast with your parents, Dorothy," was the seriously spoken rejoinder.

"Do you, Tom?" she asked dejectedly.

"He doesn't know—he can't imagine—what a difficult thing it would be for me," she thought. "It would be as strange to me as it would to him."

An inspiration came to her.

"Tom," she asked, "if I turn over a new leaf and get up to breakfast, will you do something for me?"

His face glowed with enthusiasm and something else.

"There's nothing in the world I wouldn't do for you, Dorothy."

"Well, I'll get up to breakfast and make an effort to be on time if you will part your hair in the middle."

"What?"

"Yes; it's the only flaw I've discovered in you, Tom. I can't bear hair parted on the side. It's so old-fashioned."

"But I'd look perfectly idiotic with my hair parted in the middle," he protested, appalled at the prospect.

"Now you can see," she cried in triumph, with dancing eyes, "how strange it would seem to me to get up in the morning!"

Tom saw that this was his hour, and he met it unflinchingly.

"It's a compact, Dorothy. I'll part my hair in the middle or anywhere if you will get up in the morning and occasionally consult a timepiece."

That same evening Dorothy received the first piece of advice ever bestowed upon her by her adoring father.

"You are quite grown up, Dorothy," he suggested gently, "and don't you think you should be a little more systematic or punctual in your mode of life?"

"Et tu, Brute!" she thought, saying aloud: "Say no more, papa. I have promised Tom to get up to breakfast every morning and that I would try and be on time generally."

"You have?" he exclaimed in surprise and with the thought that she surely must love Tom.

"Yes, for a consideration. He is to part his hair in the middle."

"Tom Dalton part his hair in the middle! I'd as soon think of Abraham Lincoln dressed as Little Lord Fauntleroy."

This comparison amused Dorothy, and she began to wonder how Tom would look.

"I've invited him to breakfast with us tomorrow, so we will have an opportunity to see how his hair becomes him."

Dorothy did not face the next morning in a spirit of buoyancy. She came into the dining room listlessly and with a feeling that life was a desolate waste.

Her father and mother were already at the table, and Tom soon entered, looking sheepish and conscious. An unwilling smile of amusement was forced back by Dorothy as she looked at his hair and expression. It was incongruous, but she was not going to admit it.

Her words were few, her voice sad, her manner martyred throughout the meal. When later Tom came to take her for a drive he was patiently and dejectedly waiting for him. In the evening she was again on schedule time.

Three days of methodical life dragged on, and then Tom felt that he could no longer endure the new life and the

## BY-LAW NO.

OF THE CORPORATION OF THE  
TOWN OF NAPANEE.

A By-Law to authorize the issue of debentures of the Town of Napanee to the amount of \$2250.00, for the purpose of raising \$2250.00, to provide for cost of extending the Dundas street sewer along West street from Dundas street to Thomas street and connecting with the Canning Factory sewer.

WHEREAS the Corporation of the Town of Napanee has constructed a sewer from the banks of the Napanee River along West street to Dundas street and along Dundas street westerly to the creek crossing the same.

AND WHEREAS it is desirable to continue said sewer along West street to Thomas street to connect with the Canning Factory sewer at a cost of \$2250.00.

AND WHEREAS it is desirable that the amount necessary to defray the cost of this said extension of said sewer should be raised on the credit of the said Town.

AND WHEREAS in order thereto it will be necessary to issue debentures of the Town of Napanee for the sum of \$2250.00 as hereinafter provided, (which is the amount of the debt intended to be created by this By-Law) the proceeds of said debentures to be applied to said purpose and no other.

AND WHEREAS it is desirable to issue the said debentures at one time and to make the principal of said debt repayable by yearly sums during the period of twenty years being the currency of the said debentures, said yearly sums being of such respective amounts that the aggregate amount payable in each year for principal and interest at the rate of four per centum per annum in respect of the said debt shall be as nearly as possible equal to the amount so payable in each of the other nineteen years of the said period.

AND WHEREAS the total amount required to be raised annually by special rate for paying the said debt and interest as hereinafter provided is \$165.50.

AND WHEREAS, the amount of the whole rateable property of the Town of Napanee, according to the last revised Assessment Roll is \$1,104,883.

And whereas the amount of the existing debenture debt of the said municipality is \$68,739.86, exclusive of local improvement debts secured by special Acts or as encumbrances whereof no part of principal or interest is in arrears.

THEREFORE the Municipal Council of the Corporation of the Town of Napanee enacts as follows:—

1.—That for the purpose of raising the sum of \$22,500.00 as aforesaid debentures of the said Town of Napanee amounting to the sum of \$2250 as aforesaid, in the sum of \$165.56 each shall be issued on the First day of May, A. D. 1907, each of which debentures shall be dated on the date of the issue thereof and shall be payable one on the First day of May in each of the years from 1908 to 1927 inclusive, at the office of the Treasurer of the Town of Napanee, without interest, the interest on the said loan calculated at the rate of four per centum per annum being already included in the amount of the said debentures.

2.—It shall be lawful for the Mayor of the said Municipality and he is hereby authorized and instructed to sign and issue the said debentures hereby authorized to be issued and to cause the same to be signed by the Treasurer of the said Municipality and the Clerk of the said Municipality is hereby authorized and instructed to attach the seal of the said Municipality to the said debentures.

3.—THAT during the currency of the said debentures there shall be raised annually by special rate, on all the rateable property of the Town of Napanee the sum of \$165.56 for the purpose of paying the amount due in each of the said years for principal and interest in respect of the said debts.

4.—THIS By-Law shall take effect on the day of the date of the final passing thereof.

5.—THE votes of the electors of the said Town of Napanee, shall be taken on this By-law on Monday the Seventh day of January 1907 commencing at the hour of nine o'clock in the forenoon, and continuing till five o'clock in the afternoon of the same day, by the following Deputy Returning Officers, and at the following places, that is to say:—

WEST WARD NO. 1 at Frank Kinkadee's

K&K K&K K&K K&K K&K K&K K&K K&K K&K

# BLOOD POISON

On account of its terrible effects, blood disease is called the king of all diseases. It may be either hereditary or contracted; so while it may not be a crime to have the disease, it is a crime to permit it to remain in the system. It may manifest itself in the form of Scrofula, Eczema, rheumatic pains, skin or swollen joints,itchiness of the skin, eruptions or blotches, sores in the mouth or on the tongue, sore throat, falling out of hair, disordered stomach, and a general depression of the system. If you have any of these symptoms don't neglect yourself. You have no time to lose. Beware of "old fogey" treatment—beware of mineral poisons—beware of Quacks and Fakirs. ONLY NEW METHOD TREATMENT is guaranteed to cure this disease, never to return. Bank Bonds will protect you. Our treatment is not injurious in any way, but reaches the very root of the disease and eliminates all poison from the system. The symptoms of disease gradually disappear. The blood becomes pure and enriched, the whole system is cleansed and purified, and the patient feels prepared anew for the duties and the pleasure of life. CURES GUARANTEED OR NO PAY. 25 Years in Detroit. 250,000 Cured.

### IN THE WHEELHOUSE.

It Is There That All the Forces of a Great Vessel Are Directed.

On entering the wheelhouse of an ocean liner a landsman is likely to be awed by the group of instruments and masses of complicated machinery on every hand. Your eye will first be caught by the wheel or wheels, for often there are two or more of them, one directly in line with the other. The first of these is an insignificant looking affair perhaps a foot or so in diameter, which seems out of all proportion to the work it must accomplish. Directly in front of it stands the ship's compass, while back of it are massed many complicated wheels and levers which transform the slightest motion of the wheel into the great force which guides the ship.

All the great steamers are steered nowadays by the aid of steam or electricity. In the old days half a dozen men at times would struggle with the wheel in high seas, and sailors have been killed by the rapid revolving of the projecting spoke handles. The modern steering gear makes it possible to guide these great ships with the slightest pressure. The rudder, weighing many tons, is perhaps 500 feet astern, yet with a touch of the polished wheel the great 700 foot ship will swing / side to side with almost the delicacy of a compass needle. The wheelman operates the steering engine, which, in turn, is the great rudder.

The most astonishing thing about the bridge is to find the wheelhouse with all its curtains tightly drawn, as often happens, and the man at the helm steering the boat without seeing ahead at all. At night or even by day if the light of the binnacle is confusing the wheelhouse is often completely shut in. The man at the wheel, it is explained, does not need to look ahead. The lookout high up in the "crow's nest" and the officer on watch on the bridge will keep him informed if any object is sighted. The duty of the man at the wheel is to keep the ship on her course. Throughout his watch of four hours he must keep his eyes on the compass and nowhere else.

On one side of the wheelhouse are posted the sailing directions, which give the wheelman explicit orders.

The course to be followed for the day is placed in a neat little rack called the compass control. It suggests the rack in church at the side of the pulpit which announces the number of the hymns and psalms for the day's service. The compass control will announce, for instance, N, 7, 8, W, or some such formula. The wheelman glances at this as he takes his watch at the wheel and holds the great ship exactly on this course until he is relieved.—Francis Arnold Colli in St. Nicholas.

### IDEAS OF HEAVEN.

The Romans believed in the Elysian fields of the Greeks.

The Haitians locate heaven in one of the beautiful valleys of their island.

The Assyrians believe heaven is in the bowels of the earth or far away in the east.

Some natives of the south Pacific think heaven a place where they will be white.

The Greek belief, according to Socrates, was that the pious went to heaven, like prisoners set free, to dwell in unclouded peace.

According to the ancient astronomers, heaven was seven or eight solid spheres, with a planet for the center of each. Some even ran the number up to seventy.

The Egyptians thought heaven to be on many islands at the foot of the Milky way. Those worthy spent the time harvesting beans and in feasting, singing and playing.

### Gentle Things.

"Yes," said the teacher, "the egg represents all that is gentlest in creation—the cooling doves, the tuneful song birds and the stately swan. Johnny, what other gentle things are hatched from eggs?"

"Snakes, ostriches, alligators, sparrow hawks and eagles," said Johnny.

### Endless Expense.

"How about these dukes?" inquired Mr. Struckille. "Are they purty expensive?"

"You bet they are," answered Mr. Nurich, who had bought one. "And you want to remember this, Hiram. The first cost is the smallest item."

# Heart, Throat, Liver and Skin

DR. AGNEW'S FOUR FAMOUS SPECIFICS CURE

COLIC, DYSPEPSIA, INDIGESTION, CONSTIPATION, AND ALL THE OTHERS OF THESE

dejectedly waiting for him. In the evening she was again on schedule time.

Three days of methodical life dragged on, and then Tom felt that he could no longer endure the new life and the surprised glances at his head.

"Dorothy," he said impetuously, "you seem unhappy. Will you tell me why? Is it coming to breakfast?"

"No, Tom," she replied, with a little laugh that was more like a sob. "I think it's your hair. I can't bear to look at you," and she burst into tearful laughter.

"Dorothy, darling," he said, "I am glad you can't. Let me, too, make a confession. I have learned that your most delightful trait was your blissful disregard of time. To come in from the city where man, woman and child were on a mad rush for trains and see your delicious oblivion to the twelve figures on a timepiece was most restful."

"Then shall we go back to our old life?" she cried joyfully.

"Yes—or will you begin a new life with me, Dorothy?"

"Without breakfast?" she asked entreatingly.

"Without breakfast!" he replied solemnly.

#### Horrors of Close Shaves.

A New York barber has on a corner table a fine pocket microscope and a framed announcement that says:

"Do you know what a close shave means? Bring a friend here, if you don't, have him shaved close, and then look at his face through this microscope. The entire skin will resemble a piece of raw beef."

"To shave the face perfectly smooth requires not only the removal of the hair, but also of a portion of the cuticle; so that a close shave means the removal of a layer of skin all round. The blood vessels thus exposed are not visible to the eye, but under the microscope each little quivering mouth, holding a minute blood drop, protests against such treatment. Bring a friend and see!"

"The nerve tips are also uncovered by close shaves, and the pores are left unprotected, which makes the skin tender and unhealthy. This sudden exposure of the inner layer of the skin renders a person liable to colds, hoarseness and sore throat."—New York Press.

#### National Bank Notes.

The government guarantees the circulating notes issued by national banks, but not the deposits. Each national bank is required to deposit with the treasury in Washington government bonds to the amount of the notes issued by it, and if the bank fails the bonds are sold, and out of the proceeds the notes are redeemed as they are presented. In fact, the government redeems these notes at any time, charging the amount so paid to its bond account with the bank. But while the government does not guarantee the deposits in national banks it safeguards them by close inspection of the condition of all of them, so that there is seldom a bad failure of a national bank. —St. Louis Republic.

#### So Different.

"Women all have the same fault. They can't pass a shop that has bonnets in the window without looking in."

"So different from men! They can't pass a shop that has bottles in the window without going in."

Beware of worrying about little things. It is the malady of happy people.

It is more heroic to live on one's grief than to die of it.

pine-o'clock in the forenoon, and continuing till five o'clock in the afternoon of the same day, by the following Deputy Returning Officers, and at the following places, that is to say:—

WEST WARD NO. 1, at Frank Kinkley's residence, C. W. Bowen, D. R. O.

WEST WARD NO. 2, at Mrs. J. H. Clapp's residence, Geo. Vanalstine, D. R. O.

CENTRE WARD NO. 1, at Town Hall, Geo. Walters, D. R. O.

CENTRE WARD NO. 2, at Charles Pollard's residence, Patrick Gleason, D. R. O.

EAST WARD, at Perry's Woolen Mill Office, George Perry, D. R. O.

6—ON Saturday the Fifth day of January 1907 the Mayor of the said Town of Napanee, shall attend at the Council Chamber at twelve o'clock, noon to appoint persons to attend at the various polling places aforesaid, and at the final summing up of the votes by the Clerk on behalf of the persons interested in and promoting or opposing the passing of this By-law respectively.

7—The clerk of the council of the said Town of Napanee, shall attend at his office at ten o'clock in the forenoon of Tuesday the Eight day of January A. D. 1907 to sum up the votes for and against the By-law.

Dated at the Town Hall, in the Town of Napanee, the 5th day of December A. D. 1906.

Mayor.

Clerk.

Take notice that the above is a true copy of a proposed By-law which has been taken into consideration, and which will be finally passed by the Council of the Municipality of the Town of Napanee, in the event of the assent of the electors, being obtained thereto after one month from the first publication in the Napanee "Express", the date of which said first publication was the 7th December A. D. 1906, and that the votes of the electors of the said municipality will be taken thereon on the day at the hours and places therein fixed.

W. A. GRANGE  
Clerk.

#### Measures.

Teacher—Now, you have all studied about liquid measure, and I think you know it. Johnny, you may now tell me what measure treats of inches, feet and yards. Johnny

#### The Lobsters.

"Well," said the first lobster in a bored tone, "what are you going to do now?"

"Get dressed for dinner," the second lobster answered, yawning.

A present joy is worth a thousand past sorrows or future tips.—State Journal.

**Vapo-Cresolene**

Established 1879

Whooping Cough, Croup, Bronchitis  
Cough, Grip, Asthma, Diphtheria

Cresolene is a boon to Asthmatics

Does it not seem more effective to breathe in a remedy to cure disease of the breathing organs than to take the remedy into the stomach?

It cures because the air rendered strongly antiseptic is carried over the diseased surface with every breath, giving prolonged and constant treatment. It is invaluable to mothers with small children.

Those of a consumptive tendency find immediate relief from coughs or inflamed conditions of the throat.

## Heart, I Medical, Liver and Skin

### DR. AGNEW'S FOUR FAMOUS SPECIFICS CURE COMPLETELY THE WORST DISEASES OF THESE PARTS—DREADFUL HEART DISEASE RELIEVED IN THIRTY MINUTES.

Heart disease will affect people differently, but in all cases it must be viewed with great alarm. Dr. Agnew's Cure for the Heart is the one remedy that can be safely depended upon in times of trouble. It will give relief in thirty minutes.

Mr. Thomas Petry, of Agmer, Que., was troubled with severe heart complaint for five years, the pain, at times, being so severe that he could not attend to business. Every other remedy failed until he tried Dr. Agnew's Cure for the Heart, which gave immediate relief, and his words are these: "I have now taken four bottles of the remedy and am entirely free from every symptom of heart disease."

A cold in the head need not be trifled with, for it is catarrh in an incipient condition, and catarrh is not to be trifled with. Dr. Agnew's Catarrhal Powder, as scores of clergymen, members of parliament, and prominent citizens in the Dominion have borne testimony, drives away a cold in the head like magic, and where this has assumed the shape of aggravated catarrh, producing deafness and throat trouble, it effects a permanent cure.

It is not always safe to take pills for liver trouble. They not unfrequently create other troubles that are serious. Dr. Agnew's Liver Pills, whilst thoroughly certain of removing all liver trouble, give no difficulty either at the time or afterwards. They are pleasant to take and cost only 10 cents.

The faculty that Dr. Agnew has displayed in getting at the seat of trouble is manifest in his Ointment, as in the other three remedies. This contains the elements that give speedy and permanent relief in all skin diseases and is peculiarly effective in curing piles. 35 cents.

Sold by Fred L. Hooper.

## Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIR,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

#### An Abrupt Finale.

Joaquin Miller had just won recognition as the poet of the Sierras and was working on a paper in Oregon. He had been contributing verses and short stories and had just begun a tale about the soldiers on the frontier who suffered with scurvy. The editor wanted the scurvy story for the morning publication, but Joaquin Miller could not concentrate upon his work. His mind leaped to the anticipated joy of a great social function occurring that evening, for at this time he was a social lion. However, he had proceeded in his story up to the point of the conditional cure for the disease where all the soldiers suffering with scurvy had been buried, with only their heads exposed to view. The editor was yelling "Copy!" The poet's mind refused to work. He could not finish the tale, leaving his soldiers in such a plight. Suddenly an inspiration came to him. He grabbed his pencil and wrote rapidly the following words:

"And a she wolf came along and ate off all their heads." Then he made a bee line for the door and was not seen again until the next day. His story was not published.

#### A Cause of Divorce.

"What is the most frequent cause of divorce?" the lawyer was asked.  
 "It is nearly incredible," he said, "but a thing that causes divorce often-

er than you'd imagine is married people's quarreling over their right to open one another's letters. The husband will claim that he is entitled to open the wife's mail. The wife will claim that she is entitled to open the husband's. In the letters of neither will there be anything of a private or compromising nature, but nevertheless they both want to get their mail inviolate—it enrages them to have it opened and read. Quarrels over this letter opening question vex, I suppose, 90 per cent of married couples. Of this 90 per cent a distressingly large proportion go on from bad to worse till they wind up in the divorce court. So, young man, when you come to marry, leave your wife's mail alone, no matter how she may pry into yours."

#### Care of the Dog.

Dogs vary greatly in their appetites, and occasionally we find a dainty feeder who will nose over a mixed dish of food, picking out a bit here and there and showing but little relish for what he does eat. This is an evident sign that something is wrong. Changing his teeth, if a puppy, thus disturbing his system, may be the cause, and in this case a little cooling medicine should be given.

## A BY-LAW.

To prohibit the sale of liquor in the Township of Richmond.

The Municipal Council of the Township of Richmond, hereby enacts as follows:

1.—That the sale by retail of spirituous, fermented, or other manufactured liquors is and shall be prohibited in every tavern, inn or other house or place of public entertainment in the said municipality, and the sale thereof except by wholesale, is and shall be prohibited in every shop or place other than a house of public entertainment in the said municipality.

2.—That the vote of the electors of the said Township of Richmond will be taken on the by-law by the deputy-returning officer hereinafter named on Monday the 7th day of January, One Thousand Nine Hundred and Seven, commencing at nine o'clock in the morning and continuing till five o'clock in the afternoon at the undermentioned places:

For Polling Sub-division No. 1, the poll shall be held at the residence of Wm. Schermerhorn, on Lot No. 18, in the 2nd Con. of Richmond and that Ira E. Grooms shall be Deputy-Returning Officer. For Polling Sub-division No. 2, the poll shall be held in the Town Hall, in the village of Selby, and that Geo. S. Saxsmith shall be Deputy-Returning Officer. For Polling Sub-division No. 3, the poll shall be held at the Grist Mill, Forest Mills, and that Wm. Provins shall be Deputy-Returning Officer. For Polling Sub-division No. 4, the poll shall be held at the Orange Hall, in the village of Roblin, and that Geo. S. Richardson shall be Deputy-Returning Officer.

3.—That on the 15th day of December, A. D. 1906, at the Town Hall, in the village of Selby, at the hour of 10 o'clock in the forenoon the electors shall appear in writing, signed by himself, two persons to attend at the final summing up of the votes by the clerk, and one person to attend at each polling place on behalf of the persons interested in and desirous of promoting the passing of this by-law, and a like number on behalf of the persons interested in and desirous of opposing the passing of this by-law.

4.—That the Clerk of the said Municipal Council of the Township of Richmond, shall attend at the Town Hall, Selby, at the hour of 12 o'clock on the 2nd day of January, A. D. 1907 to sum up the number of votes given for and against this By-Law.

5.—This By-law shall come into operation, and be of full force and effect on and after the first day of May next after the final passing thereof. Council Chamber, December 3rd 1906, Reeve.

#### NOTICE.

Take notice that the above is a true copy of a proposed By-law which has been taken into consideration by the Municipal Council of the township of Richmond, and which will be finally passed by the said Council (on the event of the assent of the electors being obtained thereto, as provided by the Liquor License Act) after one month from the first publication thereof in the "Naponee Express" the date of which first publication was Friday, the 26th day of December, 1906, and that at the hour, day and places therein specified, the electors of the

## CRIMINALS IN INDIA

WHOLE TRIBES WHOSE HEREDITARY PROFESSION IS THEFT.

Robbers Born and Kept So by Caste, They Are Polite and Modest Until the "Profession" Requires Them to Become Cruel and Ferocious.

India is usually spoken of as a land where life and property have become safe under British rule. True, the bands of thugs have been broken up, the Pindharree hordes have been suppressed, and the British police system is spread over the whole country, but the criminal tribes or castes, those whose hereditary "profession" is robbery and nothing else, remain, their instincts strong, wanting only opportunity to practice their traditional calling, which the Indian caste system forbids them to abandon.

These tribes are most numerous and most wayward in the united provinces, in which are Cawnpur and Lucknow, the cities associated forever with the Indian mutiny.

Half of the division is Oudh, the native province last annexed by Britain, many of whose old men vividly remember when every "talookdar," or feudal chief, lived in a fortified castle and retained a swarm of armed men, who received no pay, but lived on the country. They were official robbers, and their example gave free scope to the "professional" robbers, or, as they have always been known in India, the criminal tribes.

These tribes are the Samauriahs, the Barwars, the Saniahs, the Doms, the Haburahs, the Aheriahs, the Banriahs, the Bhatas. Each tribe has its own dialect, dress and customs.

A singular feature of Indian life is that persons who would be considered depraved characters in a European country and would bear the stamp of their nature on their faces are not degraded in their own estimation or in that of the people at large. A casual murderer is not ashamed of himself nor abhorred by his neighbors, who welcome him back among them if he escapes the gallows and is released after a term in jail. The universal belief that all things are decreed by fate accounts for this amazing state of feeling. Much more, then, are men regarded with indifference or even respect whose time honored, hereditary and natural profession is robbery with murder.

So the members of these tribes go in and out of the towns and villages without misgivings, and there is not a sign in their faces or manner to indicate that their business is robbery and murder.

When a gang encamps outside of a town the inhabitants feel uncomfortable and take precautions, but cherish no ill will against the strangers. And when robberies and murders occur almost immediately within a radius of twenty miles they take more precautions, but regard the whole affair as a visitation of Providence, like a flood or a fire.

These habitual criminals are not degraded in any sense understood by the people. They simply have the misfortune to belong to a trade which is unpleasant for the neighborhood—like a dyer's or a tanner's.

They are well satisfied with themselves and are as careful as other people of their respectability. They have no unusual vices; they do not get drunk or riotous; they are civil, courteous and unassuming. Cruelty and ferocity are with them neither habits nor pleasures, but simply methods of business.

During the excitement of a sudden

ABRAM WINTERS.

Clerk

**Quick Wit Saved His Life.**  
"The strangest and most thrilling piece of swordsmanship I ever saw," said the fencing master, "was in Vermont. I was spending the autumn in a mountainous part of the state, and there was a military encampment near my hotel. One morning an officer's horse started to bolt with the man during parade and made at breakneck speed toward a precipice. The officer tried to stop the horse, tried to turn his head—no use. On dashed the frantic animal straight for the abyss. We all held our breaths. In another instant we expected to see horse and rider go over the cliff. But the officer when within fifty feet of the edge drew his sword and plunged it twice deep into the horse. The horse staggered, slowed, keeled over, dying. The man had sacrificed the animal's life to save his own."

## A CRITICAL PERIOD

### INTELLIGENT WOMEN PREPARE

Dangers and Pain of This Critical Period Avoided by the Use of Lydia E. Pinkham's Vegetable Compound.

How many women realize that the most critical period in a woman's existence is the change of life, and that the anxiety felt by women as this time draws near is not without reason? If her system is in a deranged condition, or she is predisposed to apoplexy of any organ, it is at this time likely to become active and, with a host of nervous irritations, make life a burden.

At this time, also, cancers and tumors are more liable to begin their destructive work. Such warning symptoms as a sense of suffocation, hot flashes, dizziness, headache, dread of impending evil, sounds in the ears, timidity, palpitation of the heart, sparks before the eyes, irregularities, constipation, variable appetite, weakness and inquietude are promptly heeded by intelligent women who are approaching the period of life when woman's great change may be expected.

Lydia E. Pinkham's Vegetable Compound is the world's greatest remedy for women at this trying period.

Lydia E. Pinkham's Vegetable Compound invigorates and strengthens the female organism, and builds up the weakened nervous system as no other medicine can.

Madame Louis Belleau of 17 Ramsay St., Quebec, Que., writes:

Dear Mrs. Pinkham:

"Lydia E. Pinkham's Vegetable Compound assisted me to pass the change of life with but very little sickness and pain, and I am pleased to give it my endorsement, for I feel that it is the medicine which every woman should take. I am the mother of three children, and when I reached the age of fifty naturally my health was none too good, and I feel sure that if I had not taken your Vegetable Compound I should not have passed the climax safely. I took it off and on for two years and now find that I am in splendid health and strength and feel younger and better than I did ten years ago. Much praise to your medicine, and may all suffering women learn of its value."

For special advice regarding this important period, women are invited to write to Mrs. Pinkham, Lynn, Mass. She is a daughter-in-law of Lydia E. Pinkham and for twenty-five years has been advising sick women free of charge. Her advice is free and always helpful to ailing women.

and unassuming. Cruelty and ferocity are with them neither habits nor pleasures, but simply methods of business.

During the excitement of a sudden attack the people if they do not run away will turn out and aid the police in repelling or capturing the robbers. But if a police inquiry begins two or three days after the robbers have done their work unmolested the people will usually do nothing to help in tracing them and will even deny that they have lost anything.

For many years past the government of India has worked to induce these criminal tribes to settle down to a peaceable and industrious life.

But progress is very slow. Vagabondage is bred in the bone and marrow of the tribes, and marauding is their chosen occupation. From time to time men will suddenly disappear, perpetrate several daring daktaitis in another district and escape over the border into one of the independent native states which cluster round three sides of the united provinces.

The word "daktait," also spelled "dacoity," means robbery by a gang of armed men, and a daktait, or dacoit, is a member of such a gang.

An assault by robbers in India differs from one in Europe or America in that it always takes place at night and is accompanied by a tremendous amount of noise. The Indians are a noisy people at all times, and in a robbery with violence the robbers' object is to terrify their victims into a panic; hence whether travelers be waylaid on a lonely road or a wealthy man's house be attacked in a village the assault is always made suddenly, with loud shouts and yells and in the case of a village with beating of drums and waving of lighted torches.

The persons attacked below for all they are worth, but rarely offer resistance, and the general effect is so terrifying to the cowardly people that the neighbors either fly or else barricade their doors and lie still till the robbers have got at least a mile away with their plunder. Even the shrieking of women under torture does not put heart into one of them, for the men of a house that is attacked try to bolt for their lives if they can and leave the women to the mercy of the robbers, who apply fire to them and torture them in more atrocious ways to make them tell where the valuables are kept.—New York World.

### Wasted Advice.

A beauty adviser says, "For tender eyes make an infusion of"—Oh, bosh! Every girl knows how to make tender eyes without advice from any specialists.

### The Signal.

Tommy—Does your ma hit your foot under the table when you've had enough? Tommy—No; that's when I haven't had enough. When I have she sends for the doctor.

We know accurately when we know little. With knowledge doubt increases.—Goethe.

### The Worst Part.

A professor of Trinity college, Dublin, overhearing an undergraduate making use of profane language, rushed at him, frantically exclaiming, "Are you aware, sir, that you are imperiling your immortal soul and, what is worse, incurring a fine of 5 shillings?"

### Proof.

Edie—Were you taken by surprise when he proposed, dear? Ella—Goodness, yes! Why, I hadn't even looked up his financial standing!—Ally Sloper.

DENBIGH.

We are enjoying fine winter weather and splendid sleighing lately and our farmers are very busy in getting their tanning done. Quite a number have lately been, or are now in Benfr-w, marketing produce and getting their holiday supplies.

Business at our village has also improved some and especially the Roller Mills have lately run at their full capacity day and night. The proprietor Mr. E. Petzold has engaged Mr. H. Glaeser to assist him during the season.

Harvey Lockwood has only been able to make part of his new dwelling house habitable and has moved into it with his family, and Ardie Wright and family have moved into the premises vacated by him.

Mr. Albert Lockwood enjoyed a trip to Ottawa, being a witness in a lawsuit disposed of there.

It is reported that Mr. James Slater had the fore finger of his right hand amputated in Belleville Hospital where he went to get a serious wound in his hand treated.

Edgar Grainger who has suffered for years with Asthma and been unable to work, died of heart failure at the residence of his father-in-law Mr. Henry Crankshaw on the 17th inst at the age of 34 years. The funeral will take place this afternoon at the Methodist church and cemetery. He leaves his widow and one little son in rather straightened circumstances.

The nominations for next year Municipal Council for Denbigh Abinger and A lby passed off as usual, though at one time two members of this year's Council got a little warmed up in a dispute about some municipal and personal affairs. The following gentlemen were nominated for Reeve: Messrs John L. Lare, Wm. Sallans, and Herman Glaeser. For Councillors: Messrs S. Ball, Oscar Chatson, John Irish, Wm. John, Edman Marquardt, Walter Thompson, Melbourne Rose and Enal Warlich. Messrs Glaeser and Thompson tendered their resignation which still leaves nine to select next year's representative.

A great offer—The Napanee Express from now until January 1908 for \$1.00. Send your order early.

DANGER IN HIGH SPEEDS.

The Force Developed by Swiftly Moving Automobiles.

Danger to drivers of automobiles grows rapidly greater with each new burst of speed. A correspondent of the Scientific American develops the theme as follows: "The danger in all cases increases as the square of the speed. Take three machines of the same make, one going five miles an hour, one twenty miles an hour and one forty miles an hour. The second has stored up in it, due to its rapidity of motion, sixteen times as much energy as the first, and if it leaves the road and runs into an obstacle, such as a tree, a stone wall or a ditch, it will strike with sixteen times as great force. In going around a curve or turning a corner it is sixteen times as likely to upset, skid into the ditch or strip a tire. When the power is shut off and the brakes applied it will go sixteen times as far before it can be brought to a stop. If it comes upon a pedestrian suddenly the latter will have to exert sixteen times as much energy to get out of the way in time and if struck will be struck with sixteen times the force. The third machine will be sixty-four times as likely to get into trouble in going around a curve as the first.

"An object going five miles an hour is moving with the same speed as it would have attained in falling ten inches. In moving ten miles an hour it is going as fast as though it had

# THE OLDEST MAN IN AMERICA

## Escaped the Terrors of Many Winters By Using Pe-ru-na.

"I Attribute my Extreme Old Age to the Use of Pe-ru-na."

Mr. Isaac Brock, 117 Years Old Last Birthday.

ISAAC BROCK, a citizen of McLennan county, Texas, has lived for 117 years. For many years he resided at Bosque Falls, eighteen miles west of Waco, but now lives with his son-in-law at Valley Mills, Texas.

Some time ago, by request, Uncle Isaac came to Waco and sat for his picture, holding in his hand a stick out from the grave of General Andrew Jackson. Mr. Brock is a dignified old gentleman, showing few signs of decrepitude. His family Bible is still preserved, and it shows that the date of his birth was written 117 years ago.

Born before the United States were formed.  
Saw 22 Presidents elected.  
Pe-ru-na has protected him from all sudden changes.  
Veteran of four wars.  
Shod a horse when 99 years old.  
Always conquered the grip with Pe-ru-na.  
Witness in a land suit at the age of 110 years.  
Believes Pe-ru-na the greatest remedy of the age for catarrhal troubles.

IN speaking of his good health and extreme old age, Mr. Brock says: "After a man has lived in the world as long as I have, he ought to have found out a great many things by experience. I think I have done so.

"One of the things I have found out to my entire satisfaction is the proper thing for ailments that are due directly to the effects of the climate. For 117 years I have withstood the changeable climate of the United States.

"I have always been a very healthy man, but, of course, subject to the affections which are due to sudden changes in the climate and temperature. During my long life I have known a great many remedies for coughs, colds and diarrhoea.

"As for Dr. Hartman's remedy, Peruna, I have found it to be the best, if not the only, reliable remedy for these affections. It has been my standby for many years, and I attribute my good health and extreme old age to this remedy.

"It exactly meets all my requirements. It protects me from the evil effects of sudden changes; it keeps me in good appetite; it gives me strength, it keeps my blood in good circulation. I have come to rely upon it almost entirely for the many little things for which I need medicine.

"When epidemics of la grippe first began to make their appearance in this country I was a sufferer from this disease.

"I had several long sieges with the grip. At first I did not know that Peruna was a remedy for this disease. When I heard that la grippe was epidemic catarrh, I tried Peruna for la grippe and found it to be just the thing."

In a later letter, Mr. Brock writes: "I am well and feeling as well as I have for years. The only thing that bothers me is my sight. If I could see better I could walk all over the farm, and it would do me good. I would not be without Peruna."

Yours truly,

Isaac Brock.

When old age comes, it brings with it catarrhal diseases. Systemic catarrh is almost universal in old people. This explains why Peruna has become so indispensable to many old people.

The world's most gigantic gamble, pregnant with chance in all variations and shadings, is unquestionably the Ceylon pearl fishery. Compared with it any state lottery pales to insignificance. From the taking of the first oyster to the draining of the last vatful of "matter" every step is attended by fickle fortune, and never is

### FIGHTING BULLS.

They Are Easily Managed When They Are Massed Together.

In Spain accidents to bullfighters are of frequent occurrence, and it is interesting to see the hero of many fights swing into the chapel attached to the bull ring and kneel before the effigy of the Virgin Mary before entering the arena.

Bullfighting is the national pastime. Boys play at it in the gutters, and there are bullfights for amateurs all

and remain indifferent to the red caps extended to them, and then the list of casualties is generally high.

Sometimes a bull which has shown prodigious power and fight is pardoned by the populace. A cow, kept for the purpose, is then sent into the arena and at sight of her the bull forgets man and the fury of the battle and generally trots behind to the paddock as meek as any heifer.

Many are the curiosities about bulls which sometimes refuse to attack a particular horse and when a man is down, motionless, disdain even to paw

"An object going five miles an hour is moving with the same speed as it would have attained in falling ten inches. In moving ten miles an hour it is going as fast as though it had fallen three and a half feet. Twenty miles an hour is generally considered a very conservative speed. Now, twenty miles an hour is the same speed that would be obtained were the machine to fall thirteen feet through the air, thirty miles an hour is equivalent to a fall of thirty feet, forty miles an hour to a fall of fifty-two feet, sixty miles an hour to a fall of 120 feet and 120 miles an hour to a fall of 480 feet.

"A person struck by an automobile going twenty-five miles an hour receives the same jar as though he himself had fallen from a height of twenty-one feet, or, say, from a second story window; by one going forty miles an hour, as though he had fallen fifty-two feet, or, say, from the top of a lofty tree; by one going 120 miles an hour, as though he himself had fallen from the top of the Washington monument."

## BUYING VOTES.

**When British Electors Got Golden News From the Moon.**

Votes have been purchased shamelessly and on a huge scale in British elections. An arrangement was once made in the borough of Wendover by which two candidates were to be elected after a distribution of £6,000 (\$30,000) among the voters. The account reads: "This being settled, a gentleman was employed to go down, when he was met according to previous appointment by the electors about a mile from the town. The electors asked the stranger where he came from. He replied, 'From the moon.' They then asked, 'What news from the moon?' He answered that he had brought from thence £6,000 to be distributed among them. The electors, being thus satisfied with the golden news from the moon, chose the candidates and received their reward."

At Hindon a man dressed fantastically as the dancing Punch called at the houses of the voters and left behind him sums of 5 to 10 guineas (\$25 to \$50). Another device was to collect the citizens at the inns and hand them their reward through a hole in the door. For these offenses the house of commons passed a resolution that Hindon should be disfranchised, but so lax were the morals of the time—the close of the eighteenth century—that the resolution was never acted upon.

Again in 1859 the "man in the moon" turned up in Wakefield. He went about openly distributing money and did not appear to be in the least ashamed of his occupation. At Dublin in 1868 a hole in the wall served the purpose of a distributing center for five pound notes, while at Shaftesbury an alderman paid through a hole in the door of his office a sum of 20 guineas (\$100) to each elector.

## Harlem in New York.

In 1636 there was a settlement at the foot of a little hill on Manhattan Island which the settlers called Slang Berge, or Snake Hill, but which is now called Mount Morris. As the settlement grew each Dutchman who lived there wanted to name it after his native town. But as each one had come from a different place in Holland they could not agree. Governor Stuyvesant made careful inquiries, and, finding that no one had come from Haarlem, he nipped all neighborly jealousies in the bud by naming it Nieuw Haarlem.

pared with any state lottery sales to insignificance. From the taking of the first oyster to the draining of the last vatful of "matter" every step is attended by fickle fortune, and never is the interest of the people of Portugal or of Mexico keener over a drawing of a lottery, the tickets of which may have been sold at the very thresholds of the cathedrals, than is that of the natives of Ceylon and southern India over the daily results of a Manar fishery.

Each bivalve is a lottery ticket. It may contain a gem worthy of place in a monarch's crown or be a seed pearl with a mercantile value of only a few rupees. Perhaps one oyster in a hundred contains a pearl, and not more than one pearl in a hundred, be it known, has a value of importance. Nature furnishes the sea, pearling banks, oysters and all therein contained. The Ceylon administration conducts the undertaking and for its trouble and trifling outlay exacts a "rake-off" of two-thirds of all that may be won from the deep. And mere man, the brown or black diver, receives for his daring and enterprise one oyster in every three that he brings from the ocean's depths, and his earnings must be shared with boat owner, sailors, attendants and assistants almost without number.

For size of "rake-off" there is no gauge of hazard in the world offering a parallel. The Ceylon government used to exact three out of every four oysters brought in, the current tribute of two out of three having become operative only a few years since.—Frederic C. Penfield in Century.

## THE MANTO.

**A Garment That All Chilean Women Wear to Church.**

The Chilean women's most fetching garment, wrap, or what you will, is the manto. It is of some kind of fine black material and is worn thrown over the head. Sometimes a flap of it is drawn tightly across the forehead. After being thrown over the head the manto, by some means which I have as yet been unable to discern, is cinched in close about the neck.

This cinching in at the neck makes a kind of hood around the face, and this hood is very skillfully manipulated by some of the women to cover up moles and other defects and to conceal the fact that their hair has not been carefully combed.

From the shoulders the manto falls down in front to the toes and behind to the heels. It is held together in front partly by pins and partly by the hands of the wearer. It is usually, but not always, worn over the street costume.

The wearing of mantos by all women, no matter of what class, on attending church is obligatory. This providing for a uniform costume is quite reasonable and is designed to eliminate such things as our Easter bonnet competitions and allow the mind to forsake earthly and devote itself to things spiritual.

It also swells the attendance on many occasions, for some of the ladies, when they arise too late to have time to dress for early morning mass, merely throw on their mantos over their robes de nuit and, with the addition of such head and foot trimming as is necessary to give the impression of being fully dressed, trip demurely off to church, to all outward seeming as though they had spent hours instead of minutes before their glasses.

## CASTORIA.

The Kind You Have Always Bought

Mittens and gloves lined and unlined.  
MAYDOLE & WILSON

oulin ring and kneel before the empy of the Virgin Mary before entering the arena.

Bullfighting is the national pastime. Boys play at it in the gutters, and there are bullfights for amateurs all over the country at which only two-year-old bulls are used and young and old descend into the arena. Astounding is the enthusiasm.

Interesting, too, is the psychology of bulls. When herded together they are docile enough, and it is a picturesque sight to see the bulls brought into the paddock prior to the fight through the streets of the city when all are sleeping. A cow trained to the business, with a bell around her neck, is all that is necessary, and the bulls follow quietly behind her.

In the plains where the bulls are reared men on horses manage them quite easily so long as they are massed together. Three bulls in the ring together would be useless for a fight, but each bull separately will fight to the death.

Bulls literally see red. Were it not that a bull will always dash at anything red the men in the ring would have no chance whatever. Occasionally bulls have what is called the evil eye

Axes and X cut saws.  
MAYDOLE & WILSON

generally trots behind to the paddock, as meek as any heifer.

Many are the curiosities about bulls, which sometimes refuse to attack a particular horse and when a man is down, motionless, disdain even to paw him. Some bulls make instinctively for one man and will chase him all around the ring, leaping the barrier if he vaults over it, and if he falls will kneel upon his body and gore him to shreds. There is no mercy in bulls, and none is shown to them.—Nineteenth Century.

## Greek Burial Custom.

It is the custom in certain parts of Greece to carry bodies to the grave in coffins which allow the face to be visible. The fashion is said to have originated when the Turks dominated the land. At that time arms and ammunition were being constantly distributed to the Greek populace in a way which baffled the Turkish officials until a coffin which was being escorted by an apparently mourning procession was found to contain not a body, but weapons. An order was then promulgated that bodies were to be borne to the grave only on open litters or in coffins without lids.

# OVER-EATING

## OF XMAS FARE!

Pardonable at this Season, but the Results are Unpleasant

Eating more than is necessary is like choking a fire by putting on too much fuel. The food is not only undigested and useless, but a menace to health. Depression, drowsiness, headache, nausea, flatulence, and indigestion, are some of the consequences. A Bilean after dinner is the best help to the overburdened stomach. All sufferers from dyspepsia find Bileans indispensable. They enable you to eat what you like, when you like, and how you like. Unequalled as a family medicine.

## INTERESTING CURE BY BILEANS.

Lady who had Dyspepsia for a Year.

Mrs. Charles Merrett, 35 Cornwall Street, Toronto, Ont., says: "I was a sufferer from acute dyspepsia for 12 months before using Bileans. Pains in the chest and in the region of the heart, and a sensation of fullness in the stomach, usually after meals, were some of the symptoms. Such sudden and severe attacks of pain in the region of the heart made me think I had heart disease, but my doctor said there was nothing wrong with that organ, and the whole trouble lay in the food not digesting properly. I tried doctor's medicines and various remedies advised by friends and by druggists, but nothing seemed able to cure me of those terrible pains and the distress after food until I began using Bileans. A very few gave me such relief that I kept on using until I had no more trouble with my heart or stomach. I was recommended to try Bileans by parties who had used them as a family medicine for a long time, and now I would strongly recommend them to any sufferer from indigestion or allied symptoms. There is nothing to equal Bileans as an all-round medicine for young and old."

# BILEANS

Bileans are altogether different and superior to the ordinary stomach and liver medicines. They are purely vegetable in composition and are a certain cure for headache, nausea, and all the effects of indigestion. They also cure constipation, piles, female ailments and irregularities, anemia, rheumatism, debility, blood impurities, and all ailments and disorders arising from defective bile flow and assimilation. Of all druggists at 60c. a box, or post free from the Bilean Co., Toronto, for price. 6 boxes for \$3.00.

# THE LIFE ABUNDANT

## The Master Teaches Men How to Make the Most of Their Lives.

Because I live ye shall live also.—  
John xiv. 19.

Life reaches out after more life. The evidence of vitality is its appetite for greater vitality. The higher the form of life the stronger this passion. The inanimate dust knows no desire, but the lowest form of life comes under this law that it must grow from more to more. Man most of all finds this within him, the root principle of his being, that he must either live a larger life or die.

Religion has often failed to find reception with reasonable men because it neglected this principle. It has too often said that the most religious man was the one who could make the least of himself, the ideal was an answer to the cry, "O, to be nothing!" The preacher cried, "Empty yourself!"—probably meaning in pocket as well as in pride. The churches cried against education, ambition, and pleasure, against all that would enlarge the life.

It was not strange that such an attitude bred narrow characters, men of mean minds, cramped prejudices, capable of littlenesses that looked to their distorted vision like righteousness. Small wonder, too, that the religion that robbed life of its beauty and fought against primal instincts found only

### A SMALL PLACE IN LIFE.

It became the creed of the dead and not of the living; it fixed its eyes on graves and yew trees, or on another world.

This world went on its way, truly a wicked way, for it lacked the saving of the inspiration to larger, nobler living that the church should have given. Our fathers unable to separate sanctity from the odor of the sepulcher, cursed the world for its vitality and knew not that God was more likely to be in a world that was alive than in a church that was dead. Slowly have we come to know that the good news is a call to the fullest, most glorious heritage of free eternal life.

This is the gospel for to-day; the life more abundant is open to all. One who has shown us how to live, the Master of the art of living, opens the door into

the life that alone will satisfy the deep desires of our being. He who so enlarged his life that it broke the bounds of his time and the borders of a Syrian village until it covers all earth and all time teaches men how to make the most of their lives.

Remember how little he said of death, how much of life. Think how he called lives out of their shells, how he broke the limitations which formalism set on the lives of men, how he led into the freedom of the truth, how he led the little group of followers from their narrow selves into great service, how many have found greatness in this way since.

He called to the good that was in men, sleeping, but never dead; and

### IT ANSWERED HIS CALL.

He pointed out to the beauty of nature, the joy of daily living, the glory of commonplaces, the great world of spiritual being as food and atmosphere for the development of life. He pointed to the life itself, the character and soul of man, as the ideal aim, as contrasted with the furniture and fixings of life.

A man is good, a man is worthy according to what he is and not according to what he is not. The life approaches the divine ideal not by its depletion but by its development. Religion is not the setting of a fence about the daily path; it is the obtaining of a new and nobler force in the life, with new strength striking out for more glorious ends.

Whatever leads a man into larger life, whatever widens the circle of his sympathies, his service, his knowledge, or enriches his mind and makes him worth more to the world, is truly religious. Whatever limits the life, narrows the soul, is from below. The lord of life did not set in man the law of growth into larger life with the intention of finding pleasure only in mocking and obstructing it. If man be in his likeness, who shall set the limits of his life? Into the glory from whence he came he must return.

HENRY F. COPE.

## THE S. S. LESSON

INTERNATIONAL LESSON,  
DEC. 30.

Lesson XIII. Fourth Quarterly Review.  
Golden Text: Isa. 9. 6.

### UNDERLYING CONCEPTIONS.

The lessons of the last Quarter are vital to the Christian faith both with respect to the representation which they give of the character of Jesus and also with respect to the ideals the realization of which has become the great expectation of Christian faith. The experiences of the Saviour which are set forth in the lessons help us to understand the perfection of his character, and are suggestive of what may be, and, indeed, what must be, the lot of each individual who follows in his steps. The topic becomes essentially the path of life or character perfected through suffering.

1. Principles of service. In the first three lessons there are laid down certain principles of service which pertain to perfection of character. The two

the earth as it was, and the spirit . . . unto God who gave it."

4. Life. The lesson of the risen Lord is the climax of the Christian story. It is the reason for character and the explanation of life. In the presence of the "glorious resurrection and ascension," "the cross and passion, the precious death and burial" seem to be shadows in the night yielding "to the dayspring from on high."

## DAWSON IS A DEAR CITY

## LAND OF LONG DISTANCES

ACROSS THE GREAT PLATEAU OF SOUTH AFRICA.

Civilization Looks Out of Place as the Train Crosses the Veldt.

It is fashionable to allude to a railway journey in South Africa in tones of thinly-veiled scorn and contempt, to condemn it as tiresome, complain of it as uninteresting, says a writer in the Pall Mall Gazette. There is space—almost undreamed of space. And that is all. Through the East the traveller lives in the past. He feels, if he has any imagination at all, that for the moment he has become part of an ancient civilization which still survives the train and the telegraph; he moves through cities with a story in every stone; each mile brings new pictures of the might and wealth which fill the most enchanting pages in the book of history.

In America you cross a land of the future. The cities are marvels of inventive genius; even away in the country there is an echo of the hum of restless enterprise, the murmur of a people confident they are hurrying on to realize a great destiny.

### ALWAYS IN PRESENT.

But across the great plateau of South Africa you seem to live always in the present. It becomes a dominating idea. You cannot picture a past save like the present, or imagine a future differing from to-day. The veldt is, and it looks as if it will always be as it is. The slender thread of steel which crosses its illimitable space, the little towns set down at such great distances from one another, play no part in the scene. They are there, it is true; but they look fortuitous, out of place. Trains clang across the Karoo, and pant up the hill-sides from Natal; but the veldt ignores them; it does not adapt itself to them. The slow-moving ox-wagon alone fills in the picture; the mail-train, with its searchlight piercing the darkness and peace of the night, is, and always will be, a thing apart. It always seems to me that there is something curious, almost uncanny, about the great spaces of Southern Africa—something you do not find in other great lands. The haste of modern life clashes with the spirit of the veldt. There is a silent protest against the intruder. The country calls disease and drought to its aid to prevent its freedom being shackled by the bonds of civilization and the handcuffs of progress.

### FASCINATING SCENES.

The space destroys speed. As you hurry northward or eastward from London in a mile a minute express the close set villages fly past, increasing the impression of haste; but let the same engine pull the train northward from the Cape into the heart of Africa and its speed will seem to slacken. Steam cannot eat up the distances of such a continent, and there are no contrasts, no near landmarks, by which to measure the onward rush.

Yet such a journey, monotonous as it is, brings scenes which give it a fascination all its own. No one can paint in words or on canvas the beauty of a South African morning just after sunrise. Your carriage stands still at some way side station, with its solitary one-storey house and inevitable dwarfed tree. Away, as far as the eye can see, stretches the thin grassland. The landscape holds nothing to attract save its space; but the sunshine is something England never knows, the air is like a draught of champagne, the marvellous clearness and freshness—which no other land can equal—give new life. No breeze yet swirls the dust across the plain. All the world is still, as though lost in silent worship of the loveliness of the moment.

## HOME.

### SELECTED RECIPES.

Stewed dates should be prepared thus:—Select the cheaper fruit, place it in a jar, add a little water, a few strips of orange and lemon rind, but no sugar. Place the jar, closely covered, in a slow oven and cook for two hours.

Hasty Soup.—Dissolve a packet of concentrated soup in water, season it to taste, and add a few drops of vinegar. Just before serving add some finely chopped parsley, which makes a pretty garnish and improves the flavor.

Apple Dumplings.—One quart of flour, two tablespoonfuls of butter (or half lard and half butter), one and a half teaspoonfuls of baking powder, one-half teaspoonful of salt, two cups of milk. Make a dough, cover apples which have been pared and cored, and pinch together the dough ends. Boil hard for an hour.

Molasses Candy.—One cup of molasses, two cups of sugar, one tablespoon vinegar, a little butter and vanilla; boil ten minutes and allow it to cool enough for pulling.

Kisses.—One cup of sugar, one egg, one-half cup of butter, one-half cup of milk, one teaspoonful cream tartar, one-half teaspoonful of soda, flour enough to make a stiff dough, drop on tins and sprinkle with pulverized sugar. Bake in a quick oven.

Butter Scotch.—Melt together two tablespoonfuls of sugar, three of molasses, one of butter, one of water, pour into a buttered dish, and set away to cool.

Salted Almonds.—Shell the necessary quantity, pour boiling water over them, and remove the skins. For each cup of the almonds add one tablespoonful choice olive oil. Mix well and allow them to soak for an hour. Sprinkle with fine salt, a tablespoonful to each cup. Bake until brown in a slow oven, occasionally shaking the pans.

Macaroons.—Three-quarters cup butter, one pound white sugar, three eggs, two teaspoonfuls bitter almonds, two teaspoonfuls baking powder, two tablespoonfuls milk, two cups flour, make in balls.

Cookies.—Three-quarters pound sugar, one-half pound butter, one and one-quarter pounds flour, three eggs, little salt. Roll out thin and cut into small cakes.

Ginger Bread.—One cup syrup, one-half cup each butter and buttermilk, one egg, two teaspoonfuls baking soda, one teaspoonful ginger, and flour.

Barley Soup.—Boil in water for half an hour a pound of pearl barley. Place this barley in two quarts of chicken, beef, or mutton broth. Add some carrot, turnip, and other vegetables, and boil gently for two hours. Season with salt and pepper, and when you serve add a few green peas or a little celery.

Beef Broth.—Take four pounds of meat not too fat, four whole medium-sized onions, five small carrots, and cover this with cold water. When all comes to a boil, boil slowly and skim. Set back on the stove to simmer all day, add salt and pepper, also strips of green pepper, set in a cool place over night. Next day skim all the grease off. Remove the beef and vegetables, save the carrot. Strain the soup, then simmer until well heated. Add to this boiled rice. It is improved by adding chopped parsley, and allowing it to remain until the flavor is extracted.

Coffee Buns.—One yeast cake dissolved in one-quarter cup of lukewarm water. Add to one cup of scalded milk. Add 1½ cups of flour. Beat well and let rise. When light add one-quarter cup of sugar, one teaspoonful salt, one egg, a little mace, one-quarter cup melted butter and enough more flour to knead. Knead well, let rise and roll in a long strip one-quarter inch thick. Spread with melted butter, sift cinnamon and sugar over it and roll up like a jelly-roll. Cut in one-inch pieces and place close together in pans. Bake one-half

who follows in his steps. The topic becomes essentially the path of life or character perfected through suffering.

1. Principles of service. In the first three lessons there are laid down certain principles of service which pertain to perfection of character. The two great commandments of love to God and love to man indicate the limits of the pathway along which human character must progress towards its ideal, but for the perfection of character it is also necessary that there should be watchfulness and faithfulness. These principles are illustrated in the Parable of the Ten Virgins and in the Parable of the Talents.

2. Personal experience. Three lessons follow which are peculiarly personal with respect to the life of Jesus: the anointing at Bethany, the Lord's Supper and Jesus in Gethsemane. These lessons are illustrative of the intimate personal experiences which each individual has in the realm of his own consciousness, and which pertain to the development of his own character. In the anointing there is offered to the Master the personal consolation of appreciative sympathy. 'This is one of the deepest needs of human nature. Even to be misunderstood and to be despised and rejected of men can be borne when strengthened by such consolation. The alabaster box of ointment stands opposite the cross and the tomb. The separation from friends is, too, a part of life's destiny. The lesson of the Lord's Supper is deeply symbolical of that love which gives its powers to service, permits its blood to be shed and body to be broken in the completeness of its ministration. This, after all, though a memorial, is the symbol of perfection of service. Only the one who is capable of yielding all vital powers to the service of his fellows walks truly in the path of life. The third lesson is peculiarly the deep experience of the individual who at some time must face alone and unaided the problem of existence. In it is represented all the suffering dependent upon the doubt, uncertainty and fear which gathers about the portals of the grave. The path of life and of the perfection of character leads for every person through the valley of submission. Its course is determined by the great vital principles which control existence and at some point it must reach its "Garden of Gethsemane."

3. Great questions. The three lessons with respect to the trial and execution of Jesus are deeply emblematic of the progress of life. Every one is on trial in this world with respect to who he is and what he has done, and the answer to these questions points to the path of destiny. These were the questions raised concerning Jesus. Before Caiaphas was asked the question, Who was he? and before Pilate, What has he done? These also are vital questions with respect to every man. The first is, What is his relation to the divine? Is he an immortal soul, an undying spirit, a son of God? The second question with respect to human action is practical. Human character depends upon doing, and its perfection turns upon the question of right or wrong. It stands related to Jesus who is the supreme example of human conduct. Submission to his spirit is the final test of character, and obedience to his teaching and example is the credential of the soul. Over the way of life which leads to perfection of character he reigns as King.

The lesson of the crucifixion is the lesson of destiny. It is the great symbol of the final experience of humanity. Life ever is to be born, to have angels with heavenly promise hover over its cradle, to be waited upon by kings in infancy, to be subject to the conditions of childhood and youth, to hear the "voice crying in the wilderness," to yield obedience to life's mission, to fast in a wilderness, to fight temptation, to go forth and share the common lot, to endure the common burdens, to achieve transfiguration, and wait in Gethsemane, to find its Calvary and its cross; yet with all this it is to retain unflinching love to man and unshaken trust in God, and submissive to return the dust "to

## FIVE CENTS AND IT WILL BUY A Newspaper.

Mail advices from Dawson City, giving an interesting account of life and the cost of living in that far northern city, say:—"From a summer Indian fishing camp Dawson City has grown into a thriving town with a population of more than eight thousand in hot weather, with warehouses, churches, banks, electric lights, wholesale and retail stores and two up-to-date newspapers, which sell for twenty-five cents a copy. The dwellings are either frame or of logs.

"Many of the log cabins were built in 1887 and 1898, when carpenters were paid \$20 a day. The average size of a log cabin is 16x14, and, while they are comfortable, but little provision is made for light, the windows being exceptionally small.

"There were no shingles in those days, so the roofs were covered with earth, upon which the grass has grown, preventing the water from getting through. The roof poles project and form an overshoot above the door. The pantry, known as the cache, is built on the outside and is propped up by four poles. Cold storage can easily be obtained by digging a hole three or four feet deep and putting in a wooden box.

### THE GROUND IS ALWAYS FROZEN.

"Twenty-five cents is the smallest piece of money in circulation, and there are children who never saw anything smaller. Only last year, when a man from the 'outside' lost at cards, he paid his debt in dimes. The winner was so disgusted that he threw them into the street, where they lay undisturbed.

"Canned goods are universally used. Evaporated apples are used until mid-summer, when the Yukon boats bring in a fresh supply, and even these sell at fifteen cents a pound.

"Crystallized eggs are used for cooking, and fresh ones are cheap in mid-summer at \$1 a dozen. Three eggs to order in a restaurant cost from 75 cents to \$1, and in winter probably \$1.50. Caribou steak is common and may be had for \$1.

"A light lunch, consisting of a piece of pie and a small glass of milk, costs the business man 50 cents. Cans of condensed milk, bearing the highly colored picture of a Jersey cow, are found on all restaurant tables. A small hole is punched in the top and from this milk is poured into the coffee or tea.

"Table d'hôte meals are served at \$1—easily within the reach of all. While almost everything eaten at this meal is of the canned variety, the food is very palatable. The dinner consists of soup, a roast, potatoes, another vegetable, pie or pudding and tea or coffee.

"Beer costs \$1 a bottle, and champagne is \$12 a quart. Clothing is likewise expensive. A tailor-made gown, which sells everywhere else for \$40, brings \$100 in Dawson. The expensive lingerie waist costs its wearer in Dawson from \$1 to \$15, and \$5 hats are eagerly bought for \$1.

### FIVE TIMES THAT AMOUNT.

"Reading matter, is on a par with everything else in price. Ten cent magazines sell for twenty-five cents to fifty cents. The twenty-five cent variety cost the reader double in summer and four times their price in winter. Cost of transportation is the cause of high prices.

"Cooks receive as high as \$100 a month with board and room. A woman who comes in to prepare dinner and sets the house in order receives \$35 or \$40 a month, while the ordinary scrub woman commands \$3 a day.

"Keeping warm in winter is another expensive necessity. Wood is used for fuel, and last winter it cost \$67 to heat a small cottage for six months.

"There is no place in the world which has a wider range of temperature than Dawson. In winter the mercury drops perhaps to 70 degrees below zero. In midsummer the temperature often goes as high as 95, but the nights are always cool."

Even the turkeys are chicken-hearted about this time of year.

draught of champagne, the marvellous clearness and freshness—which no other land can equal—give new life. No breeze yet swirls the dust across the plain. All the world is still, as though lost in silent worship of the loveliness of the moment.

### LAND IS EMPTY.

A few sleepy Kaffirs, wrapped close in blankets which display a rainbow of color, gaze with languid eyes at the panting monster. The white man and his ways are familiar to-day in the heart of the Dark Continent. Yet there are men living who remember the time when the coast tribes believed that white men were a production of the sea, which they traversed in large shells, their food being the tusks of elephants, which they would take from the beach if laid there for them, placing beads in their stead, which they obtained from the bottom of the sea. History has been made quickly in South Africa.

A shrill whistle, and on again into space. All day you clatter forward—a little uncertainly at times. There are mysterious wayside halts in the wilderness, when you seem to have run out of the world and been side-tracked far from the haunts of men; there are waitings at tiny sidings, from which not a habitation is visible, and where the only possible traffic appears to be a wild huck or an occasional stray bullock. The land is empty. The swarms of natives you expected to see are absent; the country looks deserted. Space—only space. Now and then there glides into the picture a town with a name known to history, the site of a siege, the field of a battle. The impression it leaves is simply one of insignificance. No ordinary town could look imposing upon such a plain.

### HIVELIKE KRAAL.

All day the train toils onward, growing weary at times, as though disheartened at the miles which still stretch ahead. A few herds of goats or cattle; a shy figure in the distance, which makes you think of the harried Bushmen or the wild Veal pens; now and then a hivelike kraal away under the shade of some trees. But no incident, no break—never was there such monotony. Yet you cannot conjure up a different picture. Even in imagination you cannot transform the veldt. It was thus when the first white men pushed forward from the shelter of the coast settlements into the unknown. It is thus to-day. It will be thus in a decade—perhaps in a century.

### TO AVOID PREMATURE BURIAL.

#### Precautions at Weimar—English Society Takes Up Matter.

In England there is a society whose object is to awaken public opinion on the subject of premature burial and to work for the passage of laws which will make premature burial impossible.

Statistics have been prepared to show that in Europe out of every 500 supposed deaths one person is resuscitated. Although members of the medical profession refuse to take any interest in the matter it is probably true, says Suggestion, that many persons are buried while in a state of suspended animation.

It is stated that in the cemetery just outside the town of Weimar there is a special provision made against the danger of premature burial from suspended animation. No bodies are placed in the ground until they have spent a considerable time in a receiving vault.

In the fingers of the corpse are placed strings which communicate with an alarm. The least movement will ring a bell in an adjoining chamber, where a guardian is always on the watch.

In several instances by this timely alarm persons prematurely buried have been rescued. It is said that the provision arose from the tradition that one of the princes of Saxo-Weimar, this being their family burying place, was buried alive here.

a little mace, one-quarter cup melted butter and enough more flour to knead. Knead well, let rise and roll in a long strip one-quarter inch thick. Spread with melted butter, sift cinnamon and sugar over it and roll up like a jelly-roll. Cut in one-inch pieces and place close together in pans. Bake one-half hour. When cold pour over them a very thin syrup of confectioner's sugar and water which has been boiled two minutes.

Orange Marmalade Worth Trying.—To each pound of bitter or Seville oranges, sliced very fine, add 3 pints boiling water. Stir and let stand over night, then take out every seed and ends of the oranges and boil well in the above water. Strain, wash the ends of the oranges and all the solid pulp and the seeds, to save the jelly that fails to pass through the strainer, and add to the mixture next day. Considerable jelly clings to all the solid parts, and the water that washes it off, added to the mixture, makes that much more marmalade. Add 1 pound sugar to each pint of the orange, cook moderately slow and stir frequently until the marmalade is thick and done. No flavoring is required. Orange marmalade should be a deep, reddish yellow when done. This is simply delicious.

### HINTS FOR THE HOME.

If anything catches fire while cooking, throw salt upon it at once to prevent a disagreeable smell.

Fruit stains on linen can be taken out if powdered starch be applied at once.

Should be allowed to remain for several hours.

Corks that are Too Large for Bottles.

—Soak them in boiling water, when they will become soft and easy to put into bottles.

When making coffee in a jug, place the ground coffee in a muslin bag, heat the jug, and pour perfectly boiling water on it.

When clearing away dinner, any soups or gravies left over should be put away in clean basins or pans, and in warm weather boil them up before putting away.

On Soup Making.—The object of this form of cookery is to extract by gentle stewing all the goodness of the viands from which it is made, be it meat, poultry, or vegetables.

Pour scalding water over apples and then the skins can easily be removed, and much labor saved. This hint is especially useful for fruit to be used in a tart.

Never consider the dinner prepared till all dishes, plates, and tureens are put on the rack to heat. Never place crockery in the oven to warm, for it is apt to smell nasty, besides being made brittle.

To boil vegetables well, place them in fast-boiling water, bring quickly to the boiling point again, not allowing them to steep in the hot water before boiling, which toughens them and destroys both flavor and color.

Kerosene will remove rust and fruit stains from almost every kind of goods without injuring the fabric. Wash the soiled parts in kerosene as you would in water. This must be done before the spots are wetted with water, to be effectual.

Tie your shoestrings in this way and you will not find that they come unfastened: Proceed exactly as if you were going to tie an ordinary bow; but before drawing it up pass the right-hand loop through the knot, then give a steady pull to both loops and the string will be fastened securely. This can be easily untied by pulling the right-hand string.

Slightly tainted meat and poultry should be washed in vinegar and boiled with a piece of charcoal tied in muslin in the water. This water should be poured off when the water is half cooked and fresh water substituted.

To keep fish fresh for some time—this recipe was sent to me from the West, where I am told it is used by the fishermen.—Well clean and scrape the fish, then salt, particularly the inside, and hang head downwards on a line, exposed to the air, to dry.

Do not put aside dirty bottles, but

wash each clean as it is emptied and turn the neck downwards, that it may be dry and free from dust when required. Small phials and wine bottles should all be treated thus, and the convenience will quickly be appreciated.

Make blacking as follows: Mix together two ounces of ivory black, three ounces of treacle, with one pint of vinegar. When these are satisfactorily amalgamated mix in a separate pot five drachms of sperm oil and six drachms of oil of vitriol. Work all together, and the liquid is fit for use.

## PERSONAL POINTERS.

### Notes About Some of the Prominent People on the World's Stage.

The Queen-Regent of Spain is one of the few Sovereigns who have ever made a balloon ascent. This exciting event occurred some years ago, when she happened to drive near a field where some experiments in aerial navigation were being made. She immediately stopped her carriage and asked to be permitted to make an ascent.

The Duke of Fife is the only man who ever changed his title while he reigned. On July 27th, 1889, he was married as earl simply, but at the subsequent breakfast the late Queen, in raising her glass to the young couple, conferred a dukedom on the bridegroom, who thus at a bound passed through the ranks of the peerage, surely the quickest promotion on record.

King George of Greece is having a new special railway carriage built for himself in France which promises to achieve a record in elaborate decorations. It will contain a drawing-room, a dining-room, two bedrooms, a dressing-room, and a study. The decoration is to be entirely of pale-green enamelled tiles. Over the walls and ceilings will run a pattern of water-lilies and convolvulus, enamelled on the earthenware.

The Hon. C. S. Rolls, of England, who is only twenty-nine, has had many and varied experiences as a motorist. As he once told the members of the Automobile Club, he has run into a tree at seventy miles an hour, has pushed a car three miles in dress clothes, has had to walk nine miles for petrol, has five times been run away with (twice forwards and thrice backwards), has been overturned twice, has had a horse and cart on top of him, has twice had his car burnt, and has been run over by his own car.

The Princess of Wales has never cared for any form of athletics, never gone in, to any extent, for riding, entirely disapproves of bicycling, and is indifferent to the fascinations of bridge. She keeps up her music, but is more genuinely interested in art (visiting picture galleries is really one of her hobbies), and she sews during every spare moment she can snatch from other duties. While on her long sea trips she sewed and knitted endless garments for poor children, and when she visits a country house she invariably provides herself with a piece of embroidery.

President Roosevelt was travelling in Iowa the year before he became Vice-President of the United States. One day, entering a store in a small village to make some trifling purchase, he saw a copy of his own book, "The Winning of the West." He picked it up and glanced at it for a few minutes. Then he turned to the storekeeper. "Who is this Roosevelt?" he said. "They say he's a rancher somewhere, stranger," was the reply; "and what I want to say is that in my opinion he'd better give up writing and stick to ranching if he can't do anything better than that."

Bishop Moule of Mid-China, brother of the Bishop of Durham, has been in charge of this diocese of 100,000,000 souls for over twenty-five years. No fewer than fourteen of this family are active workers in the mission field abroad. The first European missionary to settle in an interior Chinese city away from a treaty port, Bishop Moule made Hanchow his headquarters.

## TONS OF MISSING MONEY

### \$6,000 IN COPPER COINS MYSTEROUSLY DISAPPEAR.

Tramway Company in Halifax, England, Deposits Copper in Town Hall.

A strange mystery of lost money is reported from Halifax, Eng., where tons of copper coins to the value of £1,200 are missing. It ought to be in a great safe at the Town Hall, but it is not there, and the corporation is bestirring itself with great energy to account for the disappearance.

The leakage—if that is what the trouble is—may have begun as long as seven years ago. At that time the local tramways system started its operation. From the beginning it has been the custom of the tramway officials to take copper in quantities of a ton or more to the central office with a statement of its value. No count was made to verify the various statements, and the money was deposited in the Town Hall strong room.

### SELLING MONEY.

The copper accumulated. It assumed such proportions that corporation officials were reminded of their accumulating wealth, and they began to fear that the coin would take complete possession of the municipal buildings.

It was decided that the money should be put in circulation again, and to this end the corporation advertised copper for sale in five-shilling parcels.

Cheques began to arrive by the first post after the advertisement appeared, but the corporation was not satisfied. It wanted cash for its accumulation of money.

One fine day it struck the authorities that these tons of copper ought to be counted, and a special staff was assigned to this task. Shilling after shilling was counted, day after day the work progressed, and yet many days passed before an appreciable difference was made in the bulk to be dealt with.

### THREE TONS MISSING.

But the task was finished at last, and then it was found that a matter of nearly three tons of the coins were missing.

The municipal premises were searched high and low, every nook and cranny was examined, but to no purpose. Not so much as one stray halfpenny was discovered. Of course the tramway officials were notified, but they could give no suggestion of a solution to the mystery.

Some persons are inclined to laugh at the matter, and there are plenty of purchasers for picture postcards representing worried councillors hunting for lost pennies.

The councillors, properly enough, take the situation seriously, and a special accountant has been appointed to investigate the mystery. Meantime the ratepayers are thinking, and waiting developments.

## WOMEN DOG THIEVES.

### Pets Stolen on London Streets and Afterward Disposed Of.

Dog thieves have been very busy recently in the neighborhood of Oxford Street, Regent Street and Piccadilly, says the London Daily Mail.

The police believe that there is an expert and highly organized gang at work. The ordinary dog thief with his sack for small dogs and a stout piece of rope for the larger ones, is always at work; but recent losses point to a more daring method of appropriation. It is believed that many of the thefts of smaller dogs are committed by women. They hang about on the outskirts of crowds of ladies looking into the shop windows, and the small terrier is snatched up and either concealed under the cloak or the thief hails a passing hansom. As the female thieves are invariably

## NEW CITY OF THE PACIFIC

### PRINCE RUPERT, THE G. T. P.'S WESTERN TERMINUS.

Harbor Commodious and Safe and the Surrounding Territory Productive.

The new city which the Grand Trunk Pacific Railway Company proposes establishing at its western terminus on Kaien Island is already taking shape. The city has been named Prince Rupert, after the cousin of King Charles II. of England, who was first Governor of the Hudson's Bay Company.

A trip to Prince Rupert fills the visitor with the enthusiasm and optimism which the head officials of the road are displaying. Imagine a wide channel leading into a land-lock harbor a mile in width, whose waters extend far inland beyond the expansive basin which forms the harbor itself, and some idea can be formed of the great port which, it may be said without exaggeration, will be capable of accommodating all the fleets of the Pacific. The spacious harbor of Vancouver is frequently referred to as one of the finest on the Pacific coast. It might be lost in that of Prince Rupert.

Fringing the shores of this great bay, Kaien Island and the adjacent mainland present a panorama of almost unbroken forest, while Digby Island stretches itself across the entrance to the city to protect it from the swells of the Pacific. Mountains towering two thousand feet above the water perform a similar office in shielding the town from the winds blowing off land. The green mass of fir and cedar is scarred here and there by the location camps, of the survey parties, while a small wharf provides landing accommodation for the coasting steamers. Apart from these all is as yet virgin wilderness.

### THE SITE IS PICTURESQUE.

The land slopes back gently for distances ranging from half a mile to two or three miles. Here and there the ground rises abruptly, providing the necessary fall for drainage and sewerage, while a shore line five or six miles in extent sweeps around the front of the future city. The view from these elevated stations and from the beach is charming. On the opposite shore mountains slope down to the water.

To the northwest, through a channel studded with islands, is to be seen the famous Indian village of Matlakhatia, known on the Coast as "The Holy City." This village was laid out by the missionary Duncan. Here he taught his copper colored disciples to embrace the arts and trades of the white man and founded what was intended to be a model settlement. Later trouble arose between Duncan and his Bishop, and the Indians migrated to a settlement on the Alaskan coast. Opposite Prince Rupert rises Mount Hays, named after the President of the line. It is more than three thousand feet high.

The railway men are proceeding upon somewhat novel lines in founding the city. Before an acre of land is put on the market the best expert advice is to be obtained in planning the city on the most up-to-date lines. When the official party of the railroad were last on the Coast they saw in Seattle houses, hotels and business blocks being torn down in order to permit of lowering the street grades and correcting other defects in the laying out of that city. This is to be obviated in Prince Rupert, which is intended to be the city beautiful of the Coast. Five parties are now engaged in a careful topographical survey of the whole townsite. When this is complete their plans will go before a board of engineers and landscape gardeners, and they will decide upon the best lines to adopt in building the city proper.

### BORN TO THE PURPLE.

The city itself is in a trade sense born to the purple. Not only will it be the Pacific terminus of the shortest trans-

## ON THE FARM

### EXPERIENCES WITH LAMBS.

It has been said that all great men had good mothers, writes J. T. Drake. It can be said with almost equal certainty that all good lambs have good mothers. Whenever you see a good lamb you almost invariably find it following a good mother. To have good mothers you must have good blood, good feed, shelter and wear. It is just as reasonable to expect the cashier of your bank to honor your cheque when you have not a dollar on deposit and no means of placing any there as to expect a ewe to produce two good lambs, she being poor in the fall, with no shelter all winter but the windward side of the fence, fed on corn stalks and with no water except as she melted snow to get it.

I have a small farm of 80 acres, and after keeping horses enough to do our work and driving, cows enough for milk and butter for the family, hogs enough for our meat and a few to sell, six or seven dozen chickens, there is not a great deal left. That little I devote to sheep. I keep from 35 to 50, grade Shropshire breeding ewes. In the last six years, or since I had a good place to keep them, I have raised and marketed annually on an average 140 per cent. as many lambs as we had ewes. I usually arrange to have our lambs put in an appearance about March 1. The ewes must be in good condition. I would rather they were fat, for I do not think a ewe can be too fat if the flesh has been put on accompanied with daily exercise. The good shepherd should provide warm quarters for his sheep so that he can save young lambs when the mercury is below zero.

When expecting lambs, my sheep barn is divided into five apartments. I have always, at this season of the year, felt the need of small pens for my ewes and lambs so that I could give them personal attention. As necessity is the mother of invention, I devised the following plan: About four years ago I made 14 doors, 2½ feet high and 5 feet long. I purchased 3½ dozen hooks such as you buy to put on the inside of a barn door. I stapled a hook at the top and another at the bottom of the door, so that they would come near enough the ends to reach staples driven in the siding of the barn. I began at the corner of the barn and measured each way 5 feet and drove in my staples at the top and at the bottom and hooked on my doors. I then fastened the doors together in the same manner. This made pen No. 1. I fastened one door of pen No. 2 to the barn 5 feet from pen No. 1 and the other door of pen No. 2 to pen No. 1. In this way I made the seven pens all in a row and could place a sheep in any one of them without molesting the others.

As fast as my ewes became mothers I place them in these small pens so that I can give them personal attention until their lambs are known to be all right and doing well. They are then taken out and placed in an apartment for ewes and lambs. The question may arise in your minds, how I get a large Shropshire lamb in a small pen. I simply open the pen; then I go to her, take her lamb or lambs in my arms, hold them about as high as she carries her head, which is pretty high when I have her lambs, walk backward to the pen, place her lambs inside, step back. She goes in, I close the door and all is well.

When the oldest lambs are two weeks old, I place in the centre of the barn what we call a creep, a place where the lambs can get and the ewes cannot. In this creep I place a trough with some corn meal in it. You who have never tried it will be surprised at how young an age lambs will eat grain. They will eat shelled corn by the time they are one month old. I give my ewes about all the grain they will eat during March and April. About May 1 I begin to de-

of the Bishop of Durnham, been in charge of this diocese of 100,000,000 souls for over twenty-five years. No fewer than fourteen of this family are active workers in the mission field abroad. The first European missionary to settle in an interior Chinese city away from a treaty port, Bishop Moule made Hang-Chow his headquarters. Thence year by year he made his wearisome circuit, sometimes on foot, sometimes in Sedan chairs, sometimes in the picturesque but not palatial Chinese boat—3,000 miles every twelve months. He speaks Chinese like a native.

King Edward can speak German and French as fluently as English, and has a fair knowledge of one or two other languages; but as a linguist he is quite eclipsed by the Emperor of Austria. It is told of him that at one of the great military reviews he addressed five different regiments—German, Italian, Hungarian, Bohemian, and Walachian—each in its own tongue; and Hungary will never forget how, fifty-seven years ago, the youthful Archduke Francis Joseph, when installing a certain Governor, electrified his audience by addressing it in purest Magyar, a tongue no other Archduke had ever taken the trouble to learn. They sprang from their seats, waved their swords in a frenzy of enthusiasm, and almost lifted the roof with thunderous shouts of "Eljen!"

The Earl of Ranfurly is now fifty. He was a very popular Governor of New Zealand, and was reluctant to go back to London. He has invested a large sum in Australian land, and has himself worked hard at fruit-growing on his farm out there. He is described as "one of those men who can plough a field one day and act as lord-in-waiting to his Sovereign the next." The Maories worshipped him and dowered him with many ennobling names, and the Colonials generally esteemed him so highly that they petitioned for a renewal of his term of office. His lordship, who is a descendant of William Penn, the founder of Pennsylvania, was nearly drowned by the capsizing of a boat, and a bullet from a rifle-range once whizzed close by his head.

Every day the young Duke of Westminster gets richer. He is the ground landlord of miles and miles of houses—the whole of South Belgravia—and for each he receives a shilling a year pepper-corn rent until the leases fall in. Each month fresh leases fall into his hands, and at the end of thirty years the whole of the property, which is now worth many millions, will be his entirely. The land, which was acquired by his ancestors nearly two centuries ago, was then a worthless marsh. Parts of it were drained and the land let on long leases at low rents. Suddenly, however, it became the fashionable quarter of London, and correspondingly the ducal family became one of the richest in the peerage. The Duke's income to-day is \$500,000 a year. In thirty years it will be increased five-fold.

The German Emperor insists upon good dancing at Court, and the arranging of an evening party is one of his favorite pastimes. He is most anxious that the Court balls shall be distinguished for their elegance, and exacts that the smallest details shall be carefully planned beforehand. Each year, therefore, he chooses either from his bodyguard or from the 1st regiment of Cavalry of the Guard, two brilliant cavaliers, who are excused from all military duties. These officers must dance to perfection, wear their uniforms with distinction, and lead a cotillon with method and dash. They open the ball with a princess of the blood royal, and they and their partners bring the function to a close with a deep obeisance before their Majesties. Upon their success in this exacting role their future career largely depends, and it is said, and may easily be imagined, that their exalted office is no sinecure.

#### YOU CAN'T BEAT 'EM.

"They said that we would never be happy," moaned the young bride.  
"But you are happy."  
"But now they say it won't last."

darting method of appropriation. It is believed that many of the thefts of smaller dogs are committed by women. They hang about on the outskirts of crowds of ladies looking into the shop windows, and the small terrier is snapped up and either concealed under the cloak or the thief hails a passing hansom. As the female thieves are invariably well dressed, the fact that they have a more or less protesting small dog under their arm occasions no comment.

Of the larger types, collies and poodles are the most sought after by the dog thieves because they seem to be more easily handled by strangers and because they always command a good market on the Continent, especially in France. The smaller dogs have various fates. They may be "faked" to some extent and sent down to "Club Row" in Shoreditch, where there is a regular dog market every Sunday morning, and where ten or fifteen shillings can easily be obtained for a good terrier, the purchaser, of course, having to run the risk that the dog is stolen and may be claimed. Another method of disposing of them is through the medium of various papers, and a third resort is to hold them to ransom. This last method is by far the most profitable way of realizing, but it requires to be carefully carried through.

To show the extent to which dog stealing is carried on, it may be mentioned that at Vine Street police office there were recently eight notices offering rewards for "lost" (the polite way of putting "stolen") dogs, and at Marlborough Street and all the other West End offices a correspondingly large number. The rewards offered range from a minimum of £1 up to £20.

#### A SCHEME THAT WORKED.

"Please, sir," piped the tiny customer, whose head scarcely reached the counter, "father wants some oak varnish."

"How much does your father want, my little man?" asked the shopman.

"Father says, will you fill this?" said the little fellow, handing him over a half-gallon can.

It was duly filled and handed over.

"Father will pay you on Saturday," said the recipient casually. And then the face of the shopman grew dark.

"We don't give credit here," he said. "Gimme back the can."

Meekly the little lad handed back the can, which was emptied, and handed back to him with a scowl.

"Thank you, sir," he said. "Father said you'd be sure to leave enough in the can, round the sides, for him to finish the job he wants to do, and I think you 'ave, sir."

#### AN APPROPRIATE EPITAPH.

The following is a copy of the epitaph of a watchmaker, written by himself, in which he is compared to a watch that had run down—

"Here lies, in horizontal position, the outside case of George Ritter, whose abiding-place in that line was an honor to his profession. Integrity was his mainspring, and prudence the regulator of all the actions of his life. Humane, generous, and liberal, his hand never stopped till he had relieved distress. He never went wrong, except when set agoing by people who did not know his key. Even then he was easily set right again. He had the art of dispensing his time so well that his hours glided by in one continual round of pleasure and delight, till an unlucky minute put an end to his existence. His case rests and moulders and decays beneath the turf, but his good works will never die."

#### MUCH TO BE THANKFUL FOR.

Mrs. Jones: "Whatever we got ter be thankful fer, Silas?"

Mr. Jones: "Wa-all, th' mortgage hez bin foreclosed on th' farm, so we hain't got ter pay no more interest an' taxes; th' automobile's bin attached fer debt, so we hain't got ter worry about that no more; Johnny Smith hez thrown over our daughter Sal, so we won't have him ter support. Great Scott, Maria! we've got everything ter be thankful fer."

their plans will go before a board of engineers and landscape gardeners, and they will decide upon the best lines to adopt in building the city proper.

#### BORN TO THE PURPLE.

The city itself is in a trade sense born to the purple. Not only will it be the Pacific terminus of the shortest trans-continental system in America, with the lowest grades of any line traversing North America, but through its gates will pour the vast west-bound trade of that line to the opulent Orient. Immediately behind it lies a virgin territory of immense potentiality, quite equal in coal, gold, timber and agricultural land to the southern portion of the province. Already preparations are being made to open up the great coal deposits of the Teliqua, on the main line of the railway.

Immediately in front of the city a rich harvest lies waiting. The richest halibut banks in the world, those of the Queen Charlotte Islands, lie within five hours steaming of the docks of the new city. It is to those banks that the New England Fish Company of Boston sends its fleet of steamers and loads from their catch the halibut specials which carry the frozen fish to the tables of New York, Philadelphia and the New England States. Salmon, clams, herring and other food fish abound in the neighborhood. The railway company is fostering new organizations to exploit this wealth.

The climate is extremely mild, snow seldom falls and work is carried on in the open year around. Within the past few weeks the work of surveying the actual line of the railway from Prince Rupert east has begun. Several preliminary surveys were made last summer, but the line is now being definitely located.

#### SLANDER ON LONDON REFUTED.

Not Always Foggy There—One Clear Day a Week on an Average.

It is the conviction of many tourists in London that there is fog in that metropolis 365 days in every year with the exception of leap years, when there is fog on 366 days.

This exaggerated notion of London fogs is quite refuted by an official publication of the English Government, which gives a compilation of the weather conditions taken twice a day and which shows, the following result for last year:

|                           | Days. |
|---------------------------|-------|
| Overcast (part fog) ..... | 145   |
| Fog (dense) .....         | 64    |
| Clear sky .....           | 60    |
| Snow .....                | 16    |
| Hail .....                | 5     |
| Thunderstorm .....        | 3     |
| Gale .....                | 2     |
| Variable .....            | 60    |

365

London had last year 1,460 hours of sunshine out of 5,470 hours between the rising and the setting of the sun. In other words, about three-quarters of the time taken by observations was overcast and the balance was clear.

In London foggy days are the rule and clear days are the exception. It is of course not possible to figure many days as absolutely clear or wholly foggy, and as to these the expression is adopted of variable.

London owes its fogs to a triple combination of circumstances—westerly or southwesterly winds 325 out of the 365 days of the year, salt marshes through much of the territory over which the westerly or southwesterly winds blow and an almost universal use of soft coal. Last year there were more days of sunlight in London than there had been on an average for twenty years before.

Fred: "They tell me at your office that you are only one of the clerks, and you said you were a director." Charles: "So I am. I address the envelopes."

rams can get and the ewes cannot. In this creed I place a trough with some corn meal in it. You who have never tried it will be surprised at how young an age lambs will eat grain. They will eat shelled corn by the time they are one month old. I give my ewes about all the grain they will eat during March and April. About May 1 I begin to decrease the grain, lessening the quality gradually until about the middle of the month. I then turn them on good grass and the lambs grow rapidly.

#### GREEN BONE FOR FOWLS.

Animal food in one form or another is necessary for fowls. Practical experiments and observation both prove this to be true, writes Mr. J. B. Lisk. In summer bugs, worms, grasshoppers, etc., are devoured with relish, and it is during this time that the hen in her natural state lays the most of her eggs. Animal food is natural food for her, and if we insist upon her laying out of the natural breeding season, we must provide those elements that go to form eggs; not merely grain, but animal food as well. In other words, if we wish eggs in fall and winter, we must supply what is needed, and that in a palatable form. It is not enough to supply food merely to fill them up, they must get what is necessary to make eggs.

We almost save a great many scraps when we butcher in the fall, and for years this was the only animal food provided. The result from this was always the same: more eggs in January than in February, for, by the middle of January, the animal food had given out.

Green cut bone is the best substitute for insects, and if fed properly is a fair rival. An ounce a day to laying fowls is a fair allowance when fed with a proper grain and vegetable ration. Green cut bone is the cheapest and best poultry food known if fresh from the butcher and full of meat and gristle. Boiled or bleached bones or those from old or diseased animals should not be used. The cost of a mill for grinding the bones is not great if one has use for it, and this is really the only expense, as in some localities green bones can be secured for little or nothing. Get mill large enough for all present and possible future needs, and one that runs by power, if the farm is so supplied. If not, a hand cutter does nicely. Manufacturers are now making bone cutters that run either by hand or power.

The saving in grain by the use of green cut bone soon pays for the machine. Thus there is a saving of grain, and an increase in the number of eggs laid, which means a double profit from the hens instead of an expense during cold weather. Beef scrap, bone meal and all other ground and dried animal food for sale are of great value and easy to feed, but are expensive and may not always be pure goods. They may be compared with fresh cut bone as dried beef is to tender, juicy beefsteak. The owner of a flock of hens would not be long in deciding which he would choose for his winter's supply of meat.

There is no single thing of such an aid to secure a satisfactory egg yield in winter as green cut bone, and it is equally valuable in aiding hens through the moulting season and starting them laying again. It is also a great aid in bringing the pullets to maturity and making them good winter layers.

#### SAILORS IN KILTS.

Official recognition has been given to a couple of sailor pipers at Portsmouth Naval barracks. They are Scotsmen, and on enlisting brought their pipes with them. In the course of time pipe music grew so popular that the skirling tars were deputed to lead out the battalion in place of a file band. Now, having been officially recognized, they have been fitted out in kilts of the Royal Stuart tartan, tunics of the orthodox Scotch cut, and Glengarry caps with cockades, and may be seen at the head of the bluejackets when the latter are out on the march.

Old bachelors are men who have given marriage a serious thought,

## BANK FAILURE RECALLED

### WHAT HAPPENED THE GLASGOW BANK DIRECTORS.

#### Rash Speculations and Large Sums Advanced to Directors Led to False Returns.

The trial of the directors of the City of Glasgow Bank ranks is probably the most important which has ever taken place in Scotland, in modern times. It took place so long ago as January, 1879, but it may not be altogether uninteresting to relate some of its salient features, together with the causes that led up to the trial, at the present time.

#### FINANCIAL RECKLESSNESS.

The magnitude of the financial crisis brought about the collapse of the bank, the social standing of the directors to whose hands the management of it was entrusted, and who so shamefully abused the confidence reposed in them, the unparalleled disclosures of financial turpitude and recklessness revealed in the report of the professional gentlemen who conducted the investigation of its affairs immediately after the stoppage, and the startling nature of the evidence adduced by the prosecution, all combined to invest this trial with an interest rarely, if ever, surpassed in the annals of criminal jurisprudence.

#### UNSCRUPULOUS SPECULATORS.

The evidence showed how a once sound and prosperous banking concern was converted into a mere machine for the abstraction of the hard-won savings of the small and all-too-confiding investor, only to throw them into the lap of wealthy and unscrupulous speculators, who dissipated them in schemes of reckless folly and insensate gambling.

It also revealed the fact that the directors while posing as pillars of commercial integrity, were in reality the rotten props of a worthless and decaying concern.

#### HISTORY OF THE BANK.

The City of Glasgow Bank commenced business in the year 1839, having its head office in Glasgow, and numerous branches throughout the country, continuing business until the end of the year 1854, when it suspended payment.

The bank was, however, immediately reconstituted, and continued its operations until it finally ceased to do business, and closed its doors on 2nd October, 1878.

There were in all 1,249 partners connected with it, and the paid-up capital amounted to \$5,000,000.

At the beginning of 1878, the year of the smash, the reserve fund was stated at \$2,250,000, the dividends and surplus profits in hand at \$742,505, the deposits at \$41,913,560, and the "circulation, acceptances, etc.," at \$10,571,145.

Notwithstanding its apparent prosperity, the bank had, however, begun to experience some difficulty in carrying on its business, and for several weeks before the crash came sinister rumors had been floating around in bank circles of the likelihood of a calamity.

#### GAVE RISKY CREDIT.

It was said that the directors had been lending countenance to unsound speculations, and had been giving risky credit, and that in consequence the influential position of the bank itself had been jeopardized.

Against this suspicion there was the fact that the bank stock was keeping its place well alongside its neighbors.

The stoppage of the bank, therefore, came as a surprise to the general public, but although it was thought that the complications of the bank would prove fatal to the concern itself, no fear existed as to the depositors not being fully provided for.

#### HAD CONFIDENCE IN SYSTEM.

No better testimony of the public confidence in the Scottish banking system

whatever the details, the directors must have known they could not possibly be accurate, then they were guilty of allowing a false representation of affairs to pass.

#### VERDICT OF GUILTY.

At the conclusion of the masterly summing up by the Lord Justice the jury retired, and, after an absence of two hours, returned into court with a verdict of "Guilty" against the manager of the bank, Robert Stronach, and one of the directors, Lewis Potter, of falsifying and fabricating the balance sheets; also the same verdict against the other directors, Robert Salmohd, John I. Wright, William Taylor, Chas. Leresche, John Stewart and Henry Inglis, of publishing them, knowing them to be false.

#### "DID IT FOR BANK." NO EXCUSE.

The judge in passing sentence said that although these acts did not necessarily involve, and probably were not actuated by any design, or desire, of personal advantage, but were committed as they thought for the benefit of the bank, they were not removed from the category of crime by any means.

However, the fact that they had not been actuated by motives of personal gain would weigh with him in the sentence he was about to inflict.

#### 18 MONTHS JAIL.

Potter, and Stronach would be imprisoned for 18 calendar months; and in the case of the remaining directors, between whom and the other prisoners a great distinction might be drawn, in consideration of the fact that they had been in jail for nearly four months, awaiting trial, he would order that they be further imprisoned for eight calendar months.

This brought to a close one of the most sensational bank trials ever recorded.

## MAN'S GREATEST ENEMY

### QUESTION WHETHER IT IS FLOOD, FIRE OR STORM.

#### How Famine Has Reaped Its Human Harvest — Interesting Facts and Figures.

That there are any human beings upon the earth is quite a marvel, when we think of all the ways in which nature has always tried to destroy them. Famine, floods, frosts storms have no terrors now for us in these safe islands. But there was a time when they and many other natural foes worked havoc among our ancestors; and still they work it in less fortunate lands. The number of people killed by nature's destructive forces and the quantity of crops ruined is enormous. Which is the greatest enemy—flood, drought, fire, storm, frost, hail—it is difficult to say.

#### FAMINE TERRORS.

In the early ages famine prevailed in some part of the world every year. Probably, most of the people were always near starvation. As early as 310 A. D., we have record of a famine which killed 40,000 out of the small population of England. The whole world was in a state of starvation in the year 897, and millions must have perished. Half the population of Germany was carried off by famine in 1125. In those times it was the custom, when scarcity of food occurred, to drive all needy people out of the city gates and let them perish.

#### CHINA THE WORST SUFFERER.

The last serious famine in England occurred in 1321, so that this land, which has now to import over half its food was the first to escape from the grip of starvation. In Ireland, however, two famines in the nineteenth century carried off 1,746,000 people between them. Populous India and China, of course, are the great lands of hunger. Here are a few of their famine afflictions:

1769. India. 3,000,000 perished. 1838:

## AN HOTEL FOR BABIES

### A POPULAR INSTITUTION IN LONDON, ENGLAND.

#### What is Being Done to Help Mothers Who Want a Temporary Home.

Situated in one of the healthiest parts of London, England, at 7 Pembridge Square, is a hotel exclusively for babies. It is known as the Norland Nurseries, and besides affording excellent accommodation for its tiny visitors, serves as a final test of ability for the nurses of the Norland Institute before taking up private work.

#### WHO ARE ITS PATRONS.

The hotel is intended for little children from one month old up to seven or eight years of age, and is especially patronized by Indian officers and others on foreign services, widowers, widows, members of the theatrical profession, and other parents desiring a temporary, safe and happy home during their enforced absence. One little visitor lately arrived all the way from America.

#### THE SUITES OF ROOMS.

The nurseries are beautifully arranged in six suites, each having a day and night nursery. The rooms are large, airy and cheerfully decorated, and each has a pretty name, such as Forget-me-not Daisy, Speedwell, Peace and Joy. Each little resident has the individual attention of an efficient nurse, while a fully-trained nurse of long experience superintends the health of all infants and children. In all the rooms the furniture is of diminutive proportions—tables, chairs, washstands, jugs, etc., all exactly

#### FIT THE SMALL VISITORS.

for whose use and convenience they are designed. During the season the hotel presents a most engaging and novel sight. Tiny tots preparing to take a morning ride in their mail car or perambulator, others enjoying a nap, while in the play-rooms others are occupied with their toys. The coach-house is excellently arranged for the reception of visitors' mail carts and carriages, which can be at the door in readiness to convey "his Majesty" to Kensington Gardens, or elsewhere at a minute's notice.

Parents of infants under three months old pay two guineas a week. Older children pay from thirty shillings to two guineas a week, or from £50 to £80 a year. These charges are inclusive, but do not, of course, embrace a doctor's and dentist's fees, which are extra. The very small infants are kept quite apart from the older children. Each wee mite has its own special nurse who studies its nascent needs and desires, finds out all the essential characteristics of its dietary, and, indeed, lives only to bring happiness and joy into its little life. Each suite is arranged for a model family of three children, and is made as nearly as possible like a nursery in a private home. Besides the suites already mentioned, the hotel contains four special rooms set apart for infants under four, five and six months of age; also for a child of exceptional delicacy, or for any small operations which may be necessary.

#### AN UNIQUE FEATURE.

An unique and charming feature of this babies' hotel is that its inmates are privileged as soon as the hot weather sets in to repair to the seaside, exchanging the more modified pleasures of the London squares and parks for the bliss of donkey-rides and goat chaises, and wielding spade and pail for the Norland Nursery has a beautifully situated cottage at Bognor in Sussex, where, for the single extra charge of travelling expenses its little visitors may repair. Consequently, during the summer months the babies' hotel is almost depleted of its small patrons, who revel in

## MILLIONS ARE STARVING

### TARTARS SUFFERING EQUALLY WITH RUSSIANS.

#### Agents Confirm Stories That Girls Are Sold Into Slavery for Food Money.

The newspapers of St. Petersburg are publishing terrible accounts of the famine in the Volga governments, in seven of which millions of people are said to be dying of starvation. The Tartars are said to be suffering equally with the Russians.

Princes G. E. Lvoff and Orbellani, who have just returned to St. Petersburg from the famine-stricken districts, have furnished the following picture of the conditions in the famine provinces:

The crops in seven provinces were practically total failures. In twenty-one provinces the harvests were very poor. About twenty million people will need assistance for from four to ten months to stay off starvation until the new crops are available. In some regions the inhabitants have been suffering from starvation for ten years, passable crops having been gathered in

#### ONLY TWO OF THE TEN YEARS.

Prince Lvoff believes the Government estimate of \$50,000,000 for famine relief is inadequate. The Moscow Zemstvo relief organization calculates that \$75,000,000 and possibly more will be necessary.

Though the conditions in the famine regions are now most distressing, the real horrors will begin in January. The Zemstvo organization funds, \$300,000, will then be exhausted, and the relief committees will be compelled to cease their efforts to save the lives of the starving peasants.

On the strength of his personal knowledge, Prince Lvoff reaffirmed the truth of the report, lately officially denied, that girls in Kazan Province had been sold into slavery and taken to Mohammedan harems in the Caucasus.

At the headquarters of the Free Economical Society, which is also conducting famine relief, official statistics show that the yields of rye, wheat and barley in Samara Province were only 25 per cent.; in Simbursk, 20; in Kazan, 32; in Saratov, 35, and in Penza 40 per cent. of the normal yield.

#### ON THE PEASANT ALLOTMENTS

the crops were much smaller, but the average yield was maintained on a few of the large estates employing improved methods of cultivation. No rye at all has been collected in half of the counties of Samara Province.

Both Prince Lvoff and the Free Economical Society question the reliability of the official figures, on the ground that, according to private information, the local officials are alleged to be endeavoring to conceal the real situation, and are prohibiting the collection of independent statistics. The Prince also questioned the official figures showing that over 25,000,000 bushels of grain had been supplied to famine districts. He said it was possible the grain may have arrived at the provincial railroad centres, but it has not yet been distributed in the famine-stricken localities.

#### MAN IN THE MOON.

#### Versions of the Myth as Held by People of Different Lands.

Of all the myths which have sprung up around the moon, before Galileo's telescope revealed another world with lofty mountains, deep valleys and vast plains, the oldest, and probably the most familiar to us all, is that of its human inhabitant. Every nursery has heard the story of the man who was found by Moses gathering sticks on the Sabbath, and condemned to dwell in

came as a surprise to the general public, but although it was thought that the complications of the bank would prove fatal to the concern itself, no fear existed as to the depositors not being fully provided for.

**HAD CONFIDENCE IN SYSTEM.**

No better testimony of the public confidence in the Scottish banking system could have been given than the calmness with which the announcement of the stoppage was received.

No run on the bank took place, indeed there was a pretty general feeling of relief. A rotten branch had been cut away, and the good tree of Scottish banking it was felt, would be the better for its absence.

**DEFICIENCY WAS \$25,000,000.**

On the day following the stoppage the directors placed the books of the bank in the hands of expert accountants for investigation, who reported that the deficiency amounted to nearly \$25,000,000.

The bank had lost, on a moderate estimate, \$31,000,000, that is the whole of the paid-up capital, and reserve fund, together with fully \$5,500,000 besides.

The story set forth in the report was one of the most disgraceful in the history of banking.

Accounts had been deliberately falsified, securities entered at fictitious values, bad debts taken as good assets, and the very gold which ought to have been held against the note issue by the Banking Act, had been deliberately plundered to the extent of over \$1,500,000.

**MADE FALSE RETURNS.**

The Government had been deceived by false returns, the shareholders by "crooked" balance sheets, and everything done that a perverse ingenuity could think of to conceal the bankrupt condition of the bank.

Recklessness led to difficulties, and difficulties to fraud in order that the true state of matters might be kept from the shareholders, and the public.

It was proved that the directors had had large advances from the bank amounting to millions of dollars, while the total stock held by them only amounted to \$212,335.

The whole of the directors, together with the manager and secretary, were promptly arrested, but being refused, although application was made in the High Court for that purpose.

**DIRECTORS RECEIVED ADVANCES.**

At the trial, which took place before Lord Justice Moncreiff, Muir and Craighill, and lasted a fortnight, the foremost advocates of the day were engaged for the defence.

The evidence showed that for five or six years preceding the crash the manager, directors and secretary had been receiving advances from the bank in rapidly increasing amounts, until in 1878, the year in which the bank stopped payment, out of \$28,196,460 shown in the books as lent to customers, the directors had received \$16,888,181, or three-fifths of the whole.

**DID THE DIRECTORS KNOW?**

In clearing the jury the Lord Justice Clerk said the points to be decided were whether the balance sheets were false, whether the directors and manager, each or any of them, knew them to be false, and whether the published reports were intended to deceive the shareholders.

A director was entitled to trust the officials of the bank as long as he had no reason to suspect their integrity, but nothing could for a moment justify, or excuse, or palliate the deliberate statement of what is known to be false.

**A VERY GREAT CRIME.**

"This is a crime of very great magnitude. The larger the interests committed to their charge, the more they were bound to absolutely honest administration," said his Lordship.

The defence of the directors was that they did not know how the accounts were dealt with in the books; and that they were entitled to assume that the officials were not playing them false, but the judge pointed out that if the position of the accounts was such that,

occurred in 1321, so that this land, which has now to import over half its food, was the first to escape from the grip of starvation. In Ireland, however, two famines in the nineteenth century carried off 1,746,000 people between them.

Populous India and China, of course, are the great lands of hunger. Here are a few of their famine afflictions:

1760, India, 3,000,000 perished; 1866, 1868 and 1878, India, 11,300,000 perished; 1870, Persia, 1,500,000 perished; 1877, 1878, 1879, China, 18,000,000 perished.

Floods do more damage to property than to life; but the number of people drowned is in itself terrible. These originate in many ways—in excessive rains, breaking down of river banks, bursting of reservoirs, sudden melting of ice and snow, and most terrible of

all, eruptions of the sea. Every country has suffered. In 1014 many English seaports were destroyed, and a few years later—1098—East Kent was inundated and the famous Goodwin sands formed.

**FLOOD AND EARTHQUAKE.**

Again and again Holland has been inundated. One flood destroyed seventy-two villages, and the death roll of this and three of its successors amounted to 330,000 persons. During the first quarter of the nineteenth century the North Sea broke over Denmark, submerging one-third of the land and forming the island of Jutland.

From floods in the south of France just half a century ago, the loss was six million pounds, and the Toulouse flood, some years later, caused a loss of fifteen millions sterling.

In quite recent times we have had the Japan flood of 1896, which killed 27,000 people; the Oregon cloudburst of 1903, which drowned 300, as well as more recent disasters.

**TO KEEP CUT FLOWERS.**

**Substances Added to the Water Which Have Proved Useful.**

All flower lovers will be interested to learn that as a result of experiments conducted in France it has been conclusively shown that most varieties of flowers keep as well when cut as when left on the plant, provided they have proper attention. That is, if water is supplied to the stems and putrid fermentation is prevented. In carrying these experiments a step further it was shown that a large number of mineral and inorganic substances when added to the water in which cut flowers are kept add very materially to the length of time flowers may be kept fresh.

Among the substances which have proved useful are chloral, sugar, lime water, potash, ether, nitrate of potash, sulphate of potash, phosphate of ammonia, calcium chloride, glycerine and alcohol. The mineral substances are added in very minute quantities, concentrations of one part to 10,000 being sufficient. It is understood, of course, that only one substance is used at a time.

Another fact that is worth knowing is that other conditions being equal the preservation of flowers is longest when the distance between the surface of the liquid and the base of the flower is smallest.

Here is the latest parrot story: A certain retired general of the Indian Army possessed a parrot, and also a very irascible temperament. The parrot was a valuable bird, but was rather a nuisance by reason of its extreme talkativeness. One day, while the general was writing his business letters, the parrot kept up a continual chatter, very disturbing to the writer. At last the general could stand it no longer, and, jumping up, he seized the cage of the unhappy bird, which he whirled vigorously round and round, at the same time shouting furiously. Then he set the cage down again, and silence for some time ensued. At length, however, a feeble voice came from the interior of the cage. "General," it inquired, in quavering accents, "where were you when that cyclone struck us?"

of donkey-rides and goat chaises, and wielding spade and pail, for the Norland Nursery has a beautifully situated cottage at Bognor, in Sussex, where, for the single extra charge of travelling expenses its little visitors may repair. Consequently, during the summer months the babies' hotel is almost depleted of its small patrons, who revel in all the delights of delving in long stretches of silver sand and bathing and paddling in a quiet sea that creeps up the beach so gently and softly as though fully conscious of its duties in safeguarding the tender lives entrusted to its mercies.

**DANCE OF AFRICAN NATIVES.**

**Gathering of the Dancers—Weird Music and Strange Figures.**

The high cliffs of the valley showed clearly in the bright moonlight, when the strains of a native band were heard coming from an adjacent village. Through the long guinea cornstalks men and women came out like so many shadows from the various clusters of huts, writes Hans Vischer, describing a dance he saw in Northern Nigeria, in the Geographic Journal. The sound of the fiddles and the rattling of a catbush filled with pebbles came ever nearer, till the band with many followers emerged from the dark fields to the open space, where a broad, sandy river bed formed a natural playground.

The merry crowd had now gathered chattering and laughing and thoroughly enjoying itself after the way of the African. The musicians, three stout men and a woman, played in that typical way common to all primitive people, one fiddle leading with a slightly varying wailing tune, when the second fiddle took up the air, repeating it in lower notes, and the woman accompanied with a rhythmic swinging of her catbush. It is a weird, melancholy noise, naturally in a minor key, but full of ever-growing excitement.

All the young people had now formed into two rings, the men inside, and around them an equal number of girls. They started walking around slowly in opposite directions. Then, as the music became faster, they quickened into a kind of two-step, the men dancing in and out around the girls, who kept moving the other way. Each time the boy faced the girl he turned around, gave a little jump, and snatching her outstretched hand, moved off to the next beauty, where the performance began again.

All was done in time to the music, and the movements of the laughing youngsters could not have been better measured. Without reserve all abandoned themselves to the most thorough enjoyment, dancing and yelling as if we had been acquainted for years. A little way off sat the matrons and the old men, watching and talking over what they had done in their younger days.

Behind was the black bush, with here and there a higher palm tree coming out and showing in clear silhouette against the white rocks, while the stars moved slowly over the sky, and the great silver moon made it all look wonderful and uncanny. Quite unconsciously I recalled old familiar scenes, other music, other costumes, and a smaller room; and these naked savages were, after all, not so very different from the wise Westerners.

**FASHIONABLE DOG DOCTORS.**

New York now possesses its fashionable dog doctors, who get \$10 a visit and sleep with a telephone at their bedside for night calls. A lady recently summoned a specialist from New York to Newport, and kept him there for a week at \$100 a day, because her poodle was ailing. Mistresses buy their canine pets collars, set with precious stones, at several hundred dollars each, and one lady has had a house built for her dog, the exact model of a Queen Anne cottage. Every morning, before being taken out for a walk, he is bathed, curled, and perfumed.

up around the moon, before Galileo's telescope revealed another world with lofty mountains, deep valleys and vast plains, the oldest, and probably the most familiar to us all, is that of its human inhabitant. Every nursery has heard the story of the man who was found by Moses gathering sticks on the Sabbath, and condemned to dwell in the moon till the end of time, says the London Globe.

Originating, doubtless, in the superficial resemblance of some of the moon spots to a man with a bundle of sticks on his back, it would be handed down by zealous Sabbatarians as an edifying warning. It has even been referred to Biblical authority. German nurses commonly vary the tale by saying that the offender was given the choice of burning in the sun or freezing in the moon, and that he preferred a lunar frost to a solar furnace. But in the Middle Ages, before Lutherans and Puritans had superimposed the conception of the Jewish Sabbath upon the Christian Sunday, the crime thus punished was theft. It is possible, however, that the "Man in the Moon" myth may claim an even remoter antiquity. Primitive man had a tendency to personify those natural forces whose laws he could not comprehend, his imagination endowed them with human force and human feelings, and with superhuman knowledge and power. Hence the moon acquired a sex and a gender, in Sanscrit and all derivations, except Greek and Latin, and such modern languages as have come under the classical influence, it is masculine. And doubtless, this is the reason why the legendary "Woman in the Moon" is not nearly so prevalent as the legendary "Man."

Be this as it may, it is certain that in Teutonic fable we find the moon inhabited by both sexes. For according to Mr. Baring-Gould, our familiar nursery rhyme about Jack and Jill is derived from the Scandinavian myth of the two children, Hnikk and Bil, who were taken up into the moon with their pole and bucket as they were drawing water. They symbolize the waxing and waning of the moon, while the water they are carrying refers to the influence of the moon's phases upon the rainfall.

There is an ancient belief found in some of the writings of the old Egyptians that the moon is an abode of departed spirits. And some of the South American Indians still regard it as their "happy hunting ground," the paradise of dead chiefs and braves. But in the Middle Ages the moon was generally looked upon as the seat of hell, and it is probably this circumstance that led to the familiar association of the moon with witchcraft.

**LUCRETIA BORGAS.**

**Wholesale Poisoning Carried on Now in Town of Hungary.**

Five men and two women were recently arrested at Kuez, in the Temesvar district of Hungary, for having poisoned their wives and husbands.

Martha Petromany, a woman who is known as the "Poison Mixer," was also placed in custody for having sold them arsenic to commit the murders.

A judge, who has been investigating the cases, now reports that there has been wholesale poisoning in the district, and further arrests have been made. Catherine Biber is accused of poisoning her son-in-law, because he was a drunkard, and also her parents, in order to obtain the family estate.

Vassa Ardalean is charged with poisoning a wealthy widow aunt, whose sole legatee he was; Lenka Bogyok with poisoning her husband, who had willed his property to her; Nicholas Glass with poisoning Anton Braun, to marry his widow, and Julia Wulstich with poisoning her elderly husband to marry a young lover.

The poison in all cases is stated to have been provided by Martha Petromany, who is alleged to have charged \$4.50 in each case. The attention of the police was directed to the murder epidemic by an anonymous letter.

## ABOUT THE AERIAL MAIL

SENDING LETTERS AT A SPEED OF  
250 MILES AN HOUR.

Professor Andersen Has Succeeded in  
Building a Train Which Will  
Make This Speed.

Professor Andersen, a Danish scientist, by a system of magnets, has succeeded in building a train capable of reaching a speed of 250 miles an hour. Dr. Andersen some time ago explained to the present writer the means he employs to gain this tremendous momentum, and a brief explanation of his methods may not be without interest. By employing a series of the most powerful magnets a train can be so lightened that it will slip along the rails quite easily.

If a train weighs 100 tons the magnets employed in Professor Andersen's system might be so constructed as to have a lifting capacity of, say, ninety-eight tons. By this means the weight of motor and cars would be reduced to two tons—a mere nothing when attached to a powerful engine. Or, again, the lifting capacity of the magnets might be made but a few pounds less than the weight of the train, and then cars and motor would fly along with their wheels hardly touching the rails.

Dr. Andersen first intended that his "magnetic train" should be for passenger service, but when he realized that, however safe it might be to travel 250 miles an hour, few people would be willing to undertake the experiment, he decided to perfect his system in the interest of the mail service. He is still busy on his invention, and, as he has had a grant of track made him by a certain railroad company, it is not unlikely that before the year is out he will be able to make public the fact that he has

### PERFECTED HIS SCHEME.

But of all methods invented for the purpose of increasing the speed of our mail service, not one has created so much sensation as that by Signor Piscicelli, a scientist of Rome, which is at present undergoing severe tests by the Italian Government. By means of Signor Piscicelli's invention letters and parcels may be transmitted at a speed of 250 miles an hour with a minimum amount of risk. Moreover the cost of transmission is considerably less, and its adoption would be the means of an annual saving of many hundreds of millions of dollars to the Government.

By Signor Piscicelli's invention—which he calls "An Aerial System for Carrying the Mails"—wires are strung from pole to pole at a height of at least 45 ft., and more if desired. The boxes for holding both letters and parcels are furnished with wheels which run along the wires at any speed desired. These boxes are built of aluminium and are extremely light, though as strong as if built of steel. Each is made to carry a weight of 60 lb., and before being dispatched it is sealed with the Government's seal, the same as in the case of ordinary mail-bags. The posts supporting the wires are placed at a distance of 300 ft., and each post carries two sets of wires, so that the boxes may proceed in either direction.

### WITHOUT FEAR OF COLLIDING.

It has been suggested by the ultra-pessimistic that the sending of mail-boxes through the open country (even though it is an aerial railway) will not be without danger, seeing that we have the covetous always with us. But Signor Piscicelli has amply provided for the burglariously inclined, and promises all those who endeavor to stay his mail-boxes in their postal flight such an energetic shock that the possibility is that they will never again take any interest whatever in his invention.

It is indeed very unlikely that any

## EARTH'S WORST PRISONS

AND THE BEST MANAGED CONVICT  
ISLAND IN THE WORLD.

At the French Penal Settlements the  
Convicts Stroll About  
Unshackled.

Down in the southwestern corner of the Australian continent, near the pretty town of Fremantle, stands grim and solitary an enormous granite prison. Once it held no fewer than 28,000 prisoners, but now it is, we believe, quite empty. It is the last of the great Australian convict establishments, and although transportation was abolished by act of parliament forty years ago, yet the life convicts of Fremantle remain on until they died or were set free. So lately as 1885 there were still some four hundred veterans in the place.

France, Spain, Portugal, Russia and Turkey are to-day the only European countries which transport their criminals, and there are signs that this form of punishment will not be continued very much longer by civilized nations. Russia has already diminished the number of offences for which Siberia is the penalty.

### LEAD PIPE CINCH.

France has two penal settlements, one the island of New Caledonia, which lies northeast of Australia, the other in French Guiana, Caledonia, or Ile Nou, has often been described as a sort of Inferno. As a matter of fact, it is the best managed convict island in the world. The climate is not bad, and the convicts can gain, by good conduct, pleasures and privileges unheard of in British prisons.

Convicts form the working classes of the islands. They stroll about unshackled and unguarded. They can smoke cigarettes and buy a little wine. The better class act as barbers, waiters, engineers and stokers, and can earn about five pence a day.

The birch and the cat-o-nine-tails are unknown in the island, the punishment being the "cachot" or black cell. A few hours or days in this living tomb is usually enough for any of them, however refractory. They come out like lambs. Bad as is the lash, it is nothing compared with a sentence of five years in the cachot, with only one hour of light in each thirty days!

### TERRORS OF CAYENNE.

Cayenne is very different. The climate is about as bad as can be. The work is principally masonry and clearing land. In case of mutiny hoses are ready charged with scalding water. The least infringement of the rigid discipline is visited with cruel punishments. One of the commonest is to reduce a man to one meal a day, and that nothing but bread and water. Death follows any attack on a warder whether injury is inflicted or not. The food, all except the bread, is wretched.

The most horrible of the penal colonies in existence at present are undoubtedly those of Spain at Ceuta and at Fernando Po. The latter place is an island in the Bight of Biafra. The average temperature all the year round is nearly 80 degrees and the heat is a damp kind, most trying to Europeans. The horrors which Cuban patriots underwent in Fernando Po are not to be matched in Siberia itself. Three out of five died before they had been there two years.

Oddly enough Portugal manages these matters much better than does Spain. She sends most of her convicts to Goa, on the coast of India, or to her East African possession. But her system resembles that of New Caledonia, but is less strict. In fact, Portuguese convicts do very little hard labor. They are allowed almost complete liberty so long as they do not leave the limits of the settlement to which they are assigned. At Mozambique you may see Govern-

(Official Statement.)

## SUN LIFE ASSURANCE CO., OF CANADA

### RESULTS OF THE INVESTIGATION

The Severe Probing but Revealed Greater Strength—  
\$3,000,000 Better Off Than it Claimed to Be—  
Investments Absolutely Secure and Highly  
Profitable—Mr. Kent's Remarks.

Now that the chaff of trifling details has blown away, the management of the Sun Life Assurance Co., of Canada desire to draw attention to the really important facts which the investigation by the Royal Commission has brought out.

### LARGE PROFITS ON INVESTMENTS.

The most striking feature of the evidence was unquestionably the immensely profitable character of the investments. During the past few years the Company has realized a net profit after deducting all losses, not only of principal, but of interest, and after liberally writing down any securities at all doubtful, of over \$1,000,000 in hard cash. In addition, the present market value of the securities still owned, is about \$1,500,000 in excess of their ledger value. Still further, the Company has a contingent fund, consisting chiefly of stocks obtained in years gone by as bonuses in connection with bond purchases, which, though held in the Company's books at a nominal value of \$1 for each block, have an approximate value of \$3,050,000, and that value is increasing steadily. The Company's policy is to hold these securities as a contingent fund, and to only include them in the published list as each block becomes interest bearing, or is sold. In the meantime policyholders have the advantage of the immense additional security thus provided, and may also reasonably expect to have their profits much increased from this source in years to come.

### SAFETY THE FIRST CONSIDERATION.

Although the Company has thus made enormous profits, these profits have not been made from speculative securities. The Company carefully avoids such. The profits are the result of a policy of not waiting for investments to come to the Company, but of deliberately looking around and selecting those that are safest and best, and then making use of the company's ability to purchase large blocks (its assets are now \$24,000,000) to obtain inside terms, thus cutting out the middle men. Absolute safety is always the first consideration, and profit is essentially secondary. Actual illustrations are, however, more convincing than general statements, and as some attention was given to our investments in the Illinois Traction Company, these may be taken as examples.

### ILLINOIS TRACTION COMPANY.

The first investment of the Company in Illinois Traction securities was the purchase of two-thirds of the bonds of the Danville, Urbana & Champaign Railway. These were secured by first mortgage on a new interurban line connecting Danville with the twin cities of Urbana and Champaign, and by a further lien on the public utilities of the three cities, comprising the street railways, electric light and gas plants of each. Were these bonds absolutely safe? The audited net earnings for the previous year of the properties by which they were secured, after deducting every charge of every kind that would rank ahead of the interest on the new bonds, was \$136,700. The total interest charge of the new bonds, including amount required to complete the interurban, was \$34,000. The existing net earnings were therefore already more than two and a half times the interest charge upon the new bonds. This was without any ad-

justment for depreciation, and that nine per cent., however, not being paid in cash, but being used for extensions and other capital expenditure, which increase the value of the property. There are over seven hundred shareholders, and the market value of the preferred and common stocks is about \$7,000,000. While the first issue of this preferred stock had some water in it, large amounts have since been issued at 87½ and 95 for cash, so that about \$1,000,000 of actual hard cash has been paid in upon the preferred stock, and about \$1,200,000 more of value has been put into it in the form of surplus earnings used for extensions. The stock, therefore, has a very solid cash basis. The franchises are long and favorable, and are perpetual for more than two-thirds of the mileage.

The question was asked how long it would take to dispose of the Illinois Traction securities. The company's entire holding could easily be disposed of at a handsome profit within two days. Any person, however, who observes the phenomenal growth of the earnings must realize that the common stock at least will not attain its full value for years, and to sell now would merely be to divert into the pockets of brokers immense amounts which would otherwise go to the policyholders.

### BENEFIT TO POLICYHOLDERS.

The large profits have enabled the Company to forestall the requirements of the law and at once place the reserves, upon all its policies upon a 3½ per cent. basis, a step calling for about \$1,200,000. Even by this severe standard it had at 31st December last a surplus over all liabilities and capital stock of \$1,735,698.50. This sum has since been largely increased. This does not include the contingent fund of over \$3,000,000. The Company has also been enabled to increase the rate of profit paid to policyholders year after year, and it expects to still further increase it.

### WRITING DOWN SECURITIES.

The Company has been criticized for writing down its securities before losses, actually happened, simply because it feared that loss might perhaps arise. The management claim, however, that this is the only proper course, and that any other would be highly objectionable. If the manager of a bank or loan company were to refrain from writing down securities, merely because losses had not yet actually materialized, he would be condemned as issuing misleading statements. The management consider that they deserve credit instead of censure for the course they took. As regards the so-called writing up, the facts are merely that when some large blocks of Illinois Traction preferred and other securities were sufficiently ripe to be transferred from the contingent account to the active list, the management had to face the question whether the entire value of these stocks should be added to the surplus, or whether they should be used in part to write down other securities not quite so good. It was decided to substitute these new securities in part for some others, that while not bad, were not entirely satisfactory. Had this not been done, the nominal surplus of the Company would have been increased by about \$300,000. In the opinion of the management this course was conservative and proper.

Incidentally, most of the securities

without danger, seeing that we have been coveous always with us. But Sig- of Piscielli has amply provided for the ungraciously inclined, and promises all those who endeavor to stay his mail-oxes in their postal flight such an en- ergetic shock that the possibility is that they will never again take any interest chivaler in his invention.

It is, indeed, very unlikely that any- hief, however intrepid, would risk his fe by trying to stop a 60lb. box in its ash through space at a speed of 250 miles an hour, no matter whether it was barged with electricity or not. There s, therefore, little to be feared from personal interference on the part of hieves. But it is further argued by hose who only see the failures of new vventions that anyone with a sporting urn might bring down a "mail bird" with a well-directed shot, though this is chance which the inventor is willing to un, for it is no greater than that which threatens a carrier-pigeon—about one in thousand.

Each mail-box is furnished with an lectric motor which provides the power necessary to propel it at any speed re- quired. The rate being determined by etting a clever contrivance prior to the ox being dispatched. The inventor lates that the speed may be so equal- ized that it will be possible to dispatch no fewer than

#### 4,000 BOXES EVERY HOUR.

he distance between each box being 60yds. As each box will carry an ave- rage of 60lb. weight of matter, this would mean that at one time a single wire may e called upon to support a weight of ver 107 tons.

This, of course, seems a tremendous veight for one wire, however strong, but he inventor declares that it will be so distributed that there will be no fear of a breakdown. Moreover, as the distance etween the posts will coincide with hat between the boxes, it follows that o two posts will ever be called upon o support more than 60lb. In this way a carrier cannot possibly exceed in veight the strength of a wire.

In stating that it will be possible to 1spatch boxes only 100yds. apart, Sig- or Piscielli does so merely to prove he strength of his aerial system. But he Italian Government, during its tests f the invention, have declared that in heir country at least there will be no ecessity for dispatching more than one undred boxes an hour, which will give a distance of something like two miles etween each.

The cost of the system is not great. Indeed, it is believed that the Piscielli aerial mail service will prove the cheap- est in the world. The initial cost, it has been figured out, will be less than £140 per mile, and that the service will pay for itself within a very short time is certain. The invention having been tried with such satisfactory results, it is be- lieved that after two or three minor difficulties have been overcome the sys- tem will be adopted throughout Italy, and subsequently in every country where progress and reform are advo- cated.

#### ADOPTING AN HEIR IN JAPAN.

The custom of adoption is universal in Japan, where it is practiced to keep a family name from becoming extinct. In- deed, there is scarcely a family in which it has not at some time or other been observed. A person who has no male issue adopts a son, and, if he has a daughter, often gives her to him in marriage. A youth, or even a child, who may be the head of a family occasionally adopts, on the point of dying, a son older than himself to succeed him.

"Does it not throw a shade of bitter- ness into your heart," said the poetic youth, "to see the trees all leafless, and to hear the wind sighing in mournful monotony? Does it not make you feel that there is too much that is bleak in the world?" "No," answered the prac- tical youth. "it does not." "Why?" "Because my father is in the coal busi-

She sends most of her convicts to Gon- on the coast of India, or to her East African possession. But her system re- sembles that of New Caledonia, but is less strict. In fact, Portuguese convicts do very little hard labor. They are al- lowed almost complete liberty so long as they do not leave the limits of the settlement to which they are assigned. At Mozambique you may see Govern- ment officials playing billiards with convicts of good birth.

When a Turkish political prisoner is sentenced to be deported to Tripoli or to the Euphrates, his friends bid him farewell. They know that they will never see him again alive, and in all probability will never hear of him again unless enormous sums are forth- coming to bribe scores of different of- ficials. In fact the only difference be- tween a death sentence in Turkey and one of transportation is that the former is more rapid and more merciful. The Government prefers the latter because it is less public. Now and then, how- ever, news leaks through; of poor Mid- had Pacha, for instance, it is known that near Bagdad his brutal guards beat out his brains with the butt end of their rifles.—Answers.

#### DAWSON'S CONQUEST.

Things had gone his way in town, and Dawson was in quite an amiable and even melting mood when he came home in the evening and settled himself for a quiet hour with his cigar and book. Presently he said to his wife:—

"Now, here's something that's got good sound sense to it. You listen to it!—Real glory springs from the silent conquest of ourselves." That's the talk. Give me the man who is master of him- self. I have a perfect contempt for those unbalanced fellows who go all to pieces over nothing and— Why, what's the matter with this lamp? It gives a miser- able light."

"I think it needs trimming," replied Mrs. D.

"Why didn't you have it trimmed be- fore night?"

"I didn't know that it needed trim- ming."

"I should think it was your place to know in what condition the lamps are in."

"Humph! It's your place to know lots of things you don't know. If you'd known, as a man ought to know, the condition of the drainage pipes on his own ground, we wouldn't have had that illness last spring, and—"

"Oh, there you go and bring up those old drainage pipes!" howled the con- vert to the self-control theory, as he flung his book clear across the room and kicked the hassock at his feet against a frail table and sent it over with a crash.

"It beats me that a man can't have a minute's peace in his own home. I'll just be eternally ding-quizzed if I don't join a club or board away from home if I can't have any peace under my own roof! What with smoky old lamps and your tongue going like a trip-hammer all the time, and the young ones howling and the servants quarrelling, and dirt and disorder everywhere, and—"

"A beautiful specimen of self-con- quest you are, Mr. Dawson!"

"Don't you say 'self-enquest' to me, or I'll—I'll—well, I'll not be responsible for what happens! The idiot who wrote that didn't have to put up with smoky lamps and— Well, leave the room if you want to, madam! I'm going to leave the house, madam, do you under- stand?—do you understand?"

#### DOGS CARRY THE BIG DRUM.

A curious custom connected with the Servian army is the manner in which most of the regiments carry the big drum. It is not, as in most countries, slung in front of the man who plays it, but is placed upon a small two-wheeled cart drawn by a large dog, which has been so trained that it keeps its place even through the longest and most tedious of marches. The drummer takes up a position behind the cart, and per- forms on the instrument as it moves

were secured, after deducting every charge of every kind that would rank ahead of the interest on the new bonds, was \$136,700. The total interest charge of the new bonds, including amount re- quired to complete the interurban, was \$54,000. The existing net earnings were therefore already more than two and a half times the interest charge upon the new bonds. This was without any addition from natural increase, or from the new line. The replacement value of the property was moreover estimated at \$1,500,000 in excess of all bonds. Was there any risk in making such a pur- chase? Although no increase in earn- ings was needed to make the bonds abundantly safe, the new interurban line has in reality proved highly pro- fitable, and the earnings of the city properties have also steadily increased, so that the surplus, which was two and a half times the interest charge when the bonds were purchased, is now about \$370,000, or seven times the interest charge. The bonds were shortly after- wards sold at an advance in price, with- out any stock bonus, to an American banking firm, who in turn related them at a still higher price to the public, among the purchasers being two of the largest and best American Insurance Companies, which each took a block of \$100,000. The security for these bonds is absolute. Better cannot be obtained. Did the fact that the Sun Company made a bargain by which it obtained some bonus stock, which would ordinarily have gone to other parties, in any way lessen that security?

#### DECATUR RAILWAY & LIGHT COM- ANY.

The second purchase of Illinois Traction securities consisted of the bonds of the Decatur Railway & Light Com- pany, which carried a mortgage upon the street railway, electric light and gas properties of the city of Decatur. The audited available net earnings of these properties, without any addition for normal increase or earnings on new property, were even \$62,000, to cover an interest charge of \$30,000 on the new bonds, or more than \$2 for each \$1 re- quired. In addition, there was the guarantee of the Illinois Traction Co., whose surplus earnings from other properties already amounted to \$130,000, or a further guarantee equal to the en- tire interest charge, making, with the Decatur earnings, six times the entire interest charge on the new bonds. Where can safer or better bonds be obtained? Was there anything speculative about them? These, too, have since all been sold at an advance in price, the Sun Company retaining the stock bonus.

#### ILLINOIS CENTRAL TRACTION COM- PANY.

This was the third purchase. These bonds were secured by first mortgage upon a new interurban line between Decatur and Springfield, the capital of the state. Connecting two such cities, the success of the line was assured from the start. The bonds were, however, also guaranteed by the Illinois Traction Co., which then had a surplus of \$162,000, available from its other properties for the payment of this interest. As the entire interest charge upon the new road when finished would be only \$65,000, the interest was already assured two and a half times over, even if the new line earned nothing. It did, however, earn its own entire interest charges in the first eight months of its first year of complete operation, so that instead of having to call upon the guarantee of the parent company, it earned a surplus of fifty per cent. These bonds, too, were all purchased shortly afterwards by a firm of bankers at an advance in price, without any stock bonus.

Further illustrations could be given, but these cases, which were specially investigated, are enough to show the very high quality of the bonds in which the Sun Life has invested.

The value of the guarantee of the Illinois Traction Co. to any bond may be judged from the fact that its an- nual gross revenue now exceeds \$3,000,000, and that it has a surplus of \$700,000 above the total interest charges up- on all the bonds of the system. After paying six per cent. dividends upon its preferred stock it is earning about

curities not quite so good. It was de- cided to substitute these new securities in part for some others, that while not bad, were not entirely satisfactory. Had this not been done, the nominal surplus of the Company would have been in- creased by about \$300,000. In the opin- ion of the management this course was conservative and proper.

Incidentally, most of the securities then written down have since so im- proved that comparatively little loss is now expected. The actual losses in- curred by the Company have in fact been very trifling when compared with the profits, thus affording a further tes- timony to the high quality of the se- curities.

#### DIRECTORS HAVE NOT PROFITED.

No director has ever obtained any financial profit or advantage of any kind out of the Company, by means of sales, loans, or any such arrangement of any kind whatever, directly or indirectly. The charter prohibits directors and of- ficers from borrowing from the Com- pany, and this has been literally lived up to. Directors have been permitted to purchase securities for themselves in precisely the same terms as they were purchasing them for the Company, but that did not injure the policyholders, and it is even desirable that directors should show their faith in the invest- ments into which they put the Com- pany's money by taking some of the same for themselves. When this has been done, however, they have paid for such investments absolutely with their own money, and the Company has not assisted them in financing in any way.

#### ESTIMATES AND RESULTS.

Over 700 preferred profit policies have matured, and in thirty-four per cent. of the cases the amount originally es- timated as likely to be received at the end of the term, has been realized or exceeded. On all the cases combined the average amount has been about ninety-seven per cent. of the estimate. The management may be pardoned for being proud of this record. The esti- mates now in use are lower than the former ones, and premiums are higher, so that present estimates should certain- ly be realized. Statements were filed showing that \$108 is on hand for every \$100 required to pay the amounts called for by the present estimates for every deferred profit policy on the books.

#### STOCKHOLDERS.

The director, have reduced the pro- portion of profits accruing to share- holders, from 20 per cent., which was the original ratio, and is still usual with British Companies, to only 5 per cent. When the capital was increased in 1897, the new stock was issued at 300 per cent. of the paid-up value, and the dividends of 15 per cent., which have since been paid, therefore yield the stockholders only 5 per cent. upon the amount paid into the Company. As the money earned more than 5 per cent. this new capital has cost the policy- holders nothing.

#### COMMISSIONER KENT'S APPRECIATION.

The management gratefully acknow- ledges Mr. Kent's appreciative remarks at the closing session, in which he stated in connection with the sugges- tion that voting power might be given to policyholders that "it seems to me that in the conduct of the Sun Life business there is nothing to be desired as far as the present generation is con- cerned. If you were immortal I would not say anything further about it. If, by sound judgment, hard work and just discrimination you have put the Sun Life on the pinnacle of a successful Company, another management with other attributes might just as easily squander it. . . . The directors have done their duty nobly; there is no com- plaint to be made against them, or any one of them. Who can say whether the future management will continue the present high standard of your com- pany?"

While the directors and management deeply regret that they do not see the question of voting by policyholders in the same light as Mr. Kent, neverthe- less such remarks, coming from one of the Commissioners, are intensely ap- preciated.

## The J. J. Haines Shoe House

wishes each and every one of its many customers

**"A Happy and Prosperous New Year."**

THE **J. J. HAINES** SHOE HOUSES, Napanee, Belleville, and Trenton.

## THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

**CHOICE CORN MEAL and BUCK-WHEAT FLOUR** always on hand.

**FEED GRINDING** a specialty, with the best feed mills known to the trade.

A full stock of the best **ANTHRACITE COAL**. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,  
16th January, 1906.

## COAL!

OUR CELEBRATED

MADOLE & WILSON.

### Must be Sold This Month.

The grocery stock of the late Robt. Denison, will be on sale for the rest of this month at prices that will surprise patrons. Centre Street North. 2c

### Skips Appointed.

At the Curlers' Meeting on Wednesday evening the following were elected skips for this season:

W. A. Bellhouse, W. C. Smith,  
J. S. Ham, J. L. Boyes,  
Dr. R. A. Leonard, J. W. Robinson,  
C. I. Maybee, Wm. Templeton,  
R. A. Crookery, D. L. Hill.

### Mt. Ararat Encampment.

The officers of above Encampment for the ensuing term were elected on Wednesday evening:

Chief Patriarch—H. E. Smith  
Senior Warden—W. B. Grieve  
Junior Warden—R. S. Ham  
High Priest—Robt. Solmes  
Secretary—C. Frizzell  
Treas.—E. J. Pollard.

### High Grade.

The high grade training given at the Frontenac Business College, Kingston, has placed many young men and women on the road to success. Every graduate is placed in a good position, and not a graduate of our school is out of a situation. The increasing demand for our expert stenographers and accountants is far in excess of the supply. Winter term opens Jan. 2nd, 1907. Beautiful Calendar and catalogue mailed free. T. N. Stockdale Principal.

Novelties in Kitchen Ware, odd shapes in Jelly moulds, Individual Jellies, Fancy Vegetable Cutters, Cake Cutters, and brass goods, at

BOYLE & SON.

### Napanee Boys Remembered.

On Christmas Eve thirty-nine of our citizens sent the following telegram to the boys who have left our Town to make their home in Mexico City:—

"May all the Napanee boys have a very Merry Christmas. We think of you very often and wish you a very prosperous New Year."

Following the message were given the thirty-nine names.

On Christmas afternoon the following reply was received:—

"Mexico City, Dec. 25th 1906.

"Wishing you one and all a Merry Christmas and Happy New Year."

(Signed) "THE NAPANEE HOTEL"

If you want good flour try Hungarian Patent at KELLY'S.

### Caladonia.

A full house packed to the doors, greeted Barnett Bros in their production of that splendid farce comedy, "Uncle Dudley from Missouri" in the new Opera House on Friday evening last. This is one of the best troupes which has ever shown in Caladonia. It is probable that upon their return trip in a few months The Barnett Bros will again stop at Caladonia with an entirely new program. We can't promise them a more appreciative or a much bigger house for the hall would not contain it, but it is safe betting that there will be a very meagre choice of seats on the day of their next entertainment.

Pocket knives, table cutters, carving sets.

### The Time to Use Perfume

is all the time, if it is the right kind. So delightful and deli-

### Soap as a Medicine.

"When I was a boy," said the old man, "they often made me take a little soap as a medicine. It did me good."

"Soap was prescribed in the village for cramps, for sick headache, for a half dozen complaints. The people admitted that it was a nauseous dose, but on the other hand they pointed to its efficacy."

"When I was taken down my mother would cut from the cake of yellow soap in the kitchen a chunk about as big as a chestnut."

"Now, sonny," she would say, "swallow this," and she'd hold the yellow morsel in thumb and forefinger close to my lips.

"I'd begin to whimper. The smell of it and the idea of the lather that would form in my mouth—the lather I'd have to swallow—would fill me with despair. But my mother was inexorable. With stiff lips I'd take the soap into my mouth, I'd chew the soft and slippery stuff a little and then, with a groan and a dreadful gulp, I'd swallow it. Horrors!"

"Horrors!" said the old man, smiling. "I can still taste those doses of soap that were so common in the village in my boyhood."

### Jewish Thrift.

The Allgemeine Rundschau, Vienna, in an article on the Jewish question and anti-Semitism, has this to say as to Jewish thrift: "If we could only induce our own lower class to acquire the Jew's thrift, his industry, his sense of order, his scrupulous exactitude, his religious loyalty and love for his family the Jew on his darker side would appear far less dangerous to them than is at present the case. If one Sunday, by way of interesting experiment, one were to conduct an inquiry into the station, wealth and religion of visitors to the various public houses, the following result would transpire: A large number of the guests would be Christians, who would do far better to save than spend their money in alcoholic refreshments, gaming and tobacco. There might be a few Jews, but at the most they would content themselves with a cup of coffee."

### An Ancient Hebrew Bible.

The highest amount ever offered for a single volume was tendered by a number of wealthy Jewish merchants of Venice to Pope Julius II. for a very ancient Hebrew Bible. It was then believed to be an original copy of the Septuagint version made from the Hebrew into Greek in 277 B. C., careful copies of the Hebrew text having been prepared at that date for the use of the seventy translators. The offer to Julius was \$20,000, which, considering the difference between the value of money then and now, would in our day represent the princely sum of \$600,000. Julius was at that time greatly pressed for money to maintain the holy league which the pope had organized against France, but in spite of his lack of funds he declined the offer.

### Weight of a Lion.

"What does a lion weigh?" Ask that question of any acquaintance and see what he will say. Those who best know the look of the king of beasts and how small his lithe body really is will probably come furthest from the truth. About 300 to 350 pounds is a usual estimate. But this is below the mark. A full grown lion will tip the scales at no less than 500 pounds. Five hundred and forty pounds is the record for an African lion. His bone is solid and heavy as ivory. The tiger runs the lion very close. A Bengal tiger killed by an English officer scaled 520 pounds. A tiger of this size has, however, considerably greater muscu-

The Kind You Have Always Bought

scales at no less than 500 pounds. Five hundred and forty pounds is the record for an African lion. His bone is solid and heavy as ivory. The tiger runs the lion very close. A Bengal tiger killed by an English officer scaled 520 pounds. A tiger of this size has, however, considerably greater muscular strength than the biggest lion.

### Millers' Best Customers.

The forty odd million sacks of flour consumed yearly in the United Kingdom are mainly eaten in the form of bread. In the houses of the rich and in the best hotels bread is sparingly eaten, but among the middle classes and in workmen's homes it forms a considerable portion of the diet. As the latter class predominate and as their families are the most numerous, it is not improbable that the children under sixteen consume about three-fifths of the total flour sold in the United Kingdom. In a commercial sense, therefore, the children are the millers' best friends.—London Milling.

### Age and Years.

The man of forty must not think himself old. He is only beginning really to live. A man's usefulness is gone only when he ceases to grow. Age is not a matter of increasing years so much as of waning enthusiasm.

## ALREADY FOR THE CHRISTMAS TRADE.

Having on hand a very large and choice assortment of dinner sets, fruit sets, salad bowls, water sets, marmalade jars and covered cheese dishes in all shapes and sizes, plain open steak dishes and fancy covered steak dishes, jardiniers in endless variety, also fancy cross dishes, cabarets and fruit plates from 6 to 10 inches, bread and butter plates from 90c to \$3.00 a dozen, cups and saucers from 15c to \$1.50 each, also a very fine variety of souvenir plates and cups and saucers, other pieces of China too numerous to mention. All of the above named articles are of the finest quality of English, French and Austrian China, imported from each factory, also, a large and fresh assortment of groceries and fruit in fact, everything suitable for the Christmas trade of the finest quality. It's not always the cheapest article that's the best value, but more apt the reverse.

## Smoking Contests.

"Smoking contests are as old as the hills," said an antiquary. "Go to Brittany, take in a Breton 'pardon,' and you'll see a smoking contest sandwiched in between the dancing matches and the wrestling bouts."

The old man took out his notebook. "The first smoking contest of which we have any authentic record," he said, "came off at Oxford, the English seat of learning, in 1723. The conditions were that you should smoke three ounces of tobacco without drinking or leaving the stage, the person first finished to get a prize of 12 shillings."

"Hearne says—I copied it down here: 'Many tried, and 'twas thought that a journeyman taylor of St. Peter's-in-the-East would have been the victor, he smoking faster than and being many pipes before the rest, but at last he was so sick that 'twas thought he would have dyed, and an old man that had been a brawler and smoked gently came off the conqueror, smoking the three ounces quite out, and he told me that after it he smoked four or five pipes the same evening.'"

## A German Duel.

A young officer quarreled with a friend who was a solicitor. Hot words were exchanged, and the officer struck his friend. Here the matter might have ended—there was something to forgive and regret on both sides. But the officer's regiment heard of the affair, and a court of honor decided that he must challenge the civilian. So a duel by command took place, and the young lawyer fell mortally wounded by his friend. When the officer returned home he was arrested on the information of the president of the court of honor which had forced him to fight. He was tried by an ordinary tribunal and sentenced to three months' imprisonment. The president of the court of honor knew he was urging the officer to an illegal deed when he insisted on the duel, but honor, as he understood it, must be satisfied at all cost.

## The Cigar Mouthpiece.

or, as he undertakes it, must be satisfied at all cost.

#### The Cigar Mouthpiece.

A rich Russian banker had been discovered murdered in his house in St. Petersburg, says a writer in the Green Bag. There was no clew, but in the room there was found a cigar mouthpiece containing part of a cigar of such an expensive kind that it was supposed the banker himself had been smoking it just before the crime had been committed. On close examination the mouthpiece was found to be worn away by the teeth of its owner, but the dead man's teeth did not fit the indentation. The servants were one by one examined, and it was then found that the hollows of the mouthpiece compared exactly to the formation of the front teeth of the cook, to whom no suspicion had been attached. He afterward confessed to the murder.

## "10 DAYS" PRE-INVENTORY SALE.

Dec. 29, 31.-Jan. 1, 2, 3, 4, 5, 7, 8, 9.

Commencing Sat. 29th Dec., Ending Wed. 9th Jan.

Tis our plan at this season of the year to put in force a vigorous and decisive low range of prices in order to accomplish quickly an absolute clearance of all Winter Merchandise, or broken, left over lines from Xmas. We make it an invariable rule never to carry merchandise over from one season to another, but dispose of it before the season is ended—that is, if price inducements will move it. The fact that there are two or three full months of wearing time ahead yet—and lastly prices are such as you have never bought equal qualities at before. These are the circumstances which tend to make this sale by far the most important trade event that has ever taken place in Napanee. This "PROFIT SHARING SALE" is a means of thanking our many customers for a generous years business.

## Ladies' Ready-to-Wear Dept.

- |                                                                                                                                                                                                                             |         |

### What Fishing Develops.

To those who are satisfied with a superficial view of the subject it may seem impossible that the diligence and attention necessary to a fisherman's success can leave him any opportunity while fishing to thoughtfully contemplate any matter not related to his pursuit. Such a conception of the situation cannot be indorsed for a moment by those of us who are conversant with the mysterious and unaccountable mental phenomena which fishing develops. We know that the true fisherman finds no better time for profitable contemplation and mental exercise than when actually engaged with his angling outfit. It will probably never be possible for us to gather statistics showing the moving sermons, the enchanting poems, the learned arguments and eloquent orations that have been composed or constructed between the bites, strikes or rises of fish. But there can be no doubt that of the many intellectual triumphs won in every walk of life a larger proportion has been actually hooked and landed with a rod and reel by those of the fishing fraternity than have been secured in any one given condition of the nonfishing world.—"Fishing and Shooting Sketches," by Grover Cleveland.

### Calling the Chickens.

In England the calls chuck, chuck, or coop, coop, prevail; in Virginia, coo-che, coo-che; in Pennsylvania, pee, pee. This latter call is widely employed, being reported from Germany, Spain (as pi, pi), Bulgaria, Hungary, Bavaria and the Tyrol. In the Austrian province the term is used in combination—thus: Pulla, pi, pi. The call pullele, pul, pul, also occurs there. In some parts of Germany the poultry are called with tick, tick; in Prussia, put, put, and young chickens with tuk, tuk (Grimm), and schip, schip, the latter being an imitation of their own cry. In eastern Prussia hens are called with kluckseken, kluck, kluck; also tippechen, tipp, tipp. Grimm records also pi, pi, and tiet, tiet. Weinhold reports from Bavaria bibi, bibel, bidli; pi, pi, and pul, pul. In Denmark the call is pootle; in Holland, kip, kip; in Bohemia, tyoo; in Bulgaria, tiri, tiri.

### An Old Medicine.

"Ground oyster shells," said the physician, "were used as a medicine by the mediæval doctors—a medicine for the rickets and scrofula."

"How absurd!"

"Absurd? Not at all. Oyster shells contain lime, nitrogen, iron, sulphur, magnesia, bromide, phosphoric acid and iodine. Those are all excellent tonics. You know how hens eat ground oyster shells and thus produce eggs with good, thick, strong shells? Well, as the oyster shell powder acts on eggshells so I have no doubt it acted in the middle ages on the bending, crumbling bones of the rickety, putting strength and firmness into them. Ground oyster shells, I am convinced, would be good for our frail children today. They would strengthen the frame, increase the appetite and have a splendid effect on the teeth."

- 10 ONLY—Ladies' Koronias and Wrappers in good colors and full sizes. Regular \$1.75 to \$2.50 Pre-inventory Sale ..... \$ 1.39

of the rickety, putting strength and  
firmness into them. Ground oyster  
shells, I am convinced, would be good  
for frail children today. They  
would strengthen the frame, increase  
the appetite and have a splendid effect  
on the teeth."

### A Curious and Rare Book.

The most curious as well as one of  
the rarest books known to collectors is  
the edition of the Vulgate issued by  
Pope Sixtus V. some time between  
1585 and 1590. The book, as Disraeli  
described it, "fairly swarmed with er-  
rata." So numerous were they that a  
number of printed paper slips contain-  
ing the proper words were pasted over  
the errors, and, this device proving in-  
efficient on account of the immense  
number of mistakes, as many of the  
copies as could be found were called in  
and destroyed. Only a few remain, and  
the book with its paper patches com-  
mands an extremely high price.

### Scott's Narrow Escape.

The world had a narrow escape of  
never having known a Sir Walter  
Scott. When a tiny babe he was left  
in charge of a maid, but the girl's heart  
was in Edinburgh, whither she wanted  
to go to rejoin her lover. She was,  
however, compelled to stay and look  
after the infant at Sandy Knowe. The  
girl regarded her charge as an obstacle  
to be removed and afterward confessed  
that she carried young Scott up to  
the Craigs (under a strong temptation  
of the devil, as she expressed it), fully  
intending to cut his throat with her  
scissors and bury him under the moss.

### Historic Grapevines.

The celebrated "king's vines" at Fon-  
tainebleau, planted under the reign of  
Henry IV., grow against a wall in the  
park not far from the castle, and the  
grapes are highly esteemed by gour-  
mets. Since the republic was estab-  
lished the grapes have always been  
sold by auction, the proceeds going  
into the coffers of the minister of  
finance.

### Her Intense Sorrow.

He—I called to see you last evening  
and the servant told me you were not  
in. She—Yes: I was sorry to have  
missed you. He—I thought you must  
be; I heard you laughing upstairs in  
such grief stricken tones that I al-  
most wept myself out of sympathy.

### The Obstinate Cook.

Father—Cooking schools are of some  
use after all. This cake is delicious.  
Daughter—Is it? I thought it would  
be a terrible failure. Father—Why?  
Daughter—I told the cook exactly how  
to make it, and she went and made it  
some other way.

### The Freshman.

"Is Reggy improving by his life in  
college?"

"Oh, yes; he's already learned to toe  
in with one foot!"

After the joy which springs from  
right doing the purest and sweetest is  
that which is born of companionship  
with spirits akin to our own.

## To the Electors of the Town of Napanee.

LADIES AND GENTLEMEN,—

At the solicitation of my friends I am again a candidate for the Council of 1907. During the past few years I have endeavoured to faithfully discharge the duties intrusted to me, and would be grateful for a renewal of your confidence.

Yours very truly,  
A. S. KIMMERLY.

## Electors of Napanee.

LADIES AND GENTLEMEN,—

I have been requested by a large number of ratepayers, to offer myself as a candidate for the office of Mayor for the year 1907. During the past four years I have endeavoured to serve the town to the best of my ability and with a desire to economize wherever it was expedient. Should I fail to see you I wish you to accept this as a personal canvass. Wishing you all the compliments of the season, I am

Your obedient servant,  
HERMAN MENG.

## NOMINATION.

Notice is hereby given that a meeting of the Electors of the Township of Richmond will be held in the Town Hall, in the village of Selby, on Monday, the thirty-first day of December, 1906, commencing at the hour of 12 o'clock noon, and lasting one hour, for the purpose of nominating Candidates for the offices of Reeve and Councilors, to represent the said Township of Richmond for the year 1907. IN THE MATTER OF THE Estate of Sarah Scantlin, late of the Township of Chatham in the County of Lennox and Addington, Married woman. Deceased.

NOTICE IS HEREBY GIVEN pursuant to the Revised Statutes of Ontario (87 Chap. "120" Sec. "28" and Amending Acts, that all persons having any claims against the Estate of the said Sarah Scantlin, deceased, who died on or about the 15th day of November, A. D. 1905, are required on or before the Seventh day of January, A. D. 1907, to send by post prepaid or to deliver to the undersigned Solicitors for James Scantlin, Administrator of the Estate of the said Sarah Scantlin, deceased, their names, addresses and descriptions and full particulars of their claim or claims and the nature of the security of any hold by them duly verified. AND NOTICE IS HEREBY FURTHER GIVEN that after the said Seventh day of January, A. D. 1907, the said Administrator will proceed to distribute the assets of the said estate among the persons entitled thereto, having regard only to those claims of which he shall have had notice, and the Administrator will not be liable for the assets or any part thereof to any person or persons of whose claims he shall not then have had notice.

DATED at Napanee this 3rd day of December, A. D. 1906.

DEROGUE & DE JONGE

Solicitors for the Administrator, James Scantlin.

A bear wandered into the Langevin block at Ottawa and several civil servants a fright.

Coughs, colds, hoarseness, and other throat ailments are quickly relieved by Cresoline tablets, ten cents per box. All druggists.

Disorders have broken out in Servia threatening the overthrow of the present dynasty.

James Harris, his wife and two children were asphyxiated at Niagara Falls by fumes of natural gas escaping from an open stove.

Carvers, we have a special line of Carving Sets in Cases and in pairs from \$1.00 to \$12.00, nice goods and prices right. BOYLE & SON.

M. Pichon, Foreign Minister of France, has announced that the policy of his Government is to be "peace and dignity."

The annual report of the Nipissing mine showed that altogether \$2,500,000 worth of ore had been taken out, at an expenditure of \$255,000.

ITCH, Mange, Prairie Scratches and every form of contagious Itch on human or animals cured in 30 minutes by Wolford's Sanitary Lotion. It never fails. Sold by F. L. HOOPER.

Montreal had a tremendous snow-storm on Christmas day, with wind blowing forty miles an hour. To clear it up will require one thousand men at a cost of \$15,000.

## TRY THIS FOR YOUR COUGH

To relieve a cough or break up a cold in twenty-four hours, the following simple formula, the ingredients of which can be obtained of any good prescription druggist at small cost, is all that will be required: Virgin Oil of Pine (Pure), one-half ounce; Glycerine, two ounces; good Whisky, a half pint. Shake well and take in teaspoonful doses every four hours. The desired results can not be obtained unless the ingredients are pure. It is therefore better to purchase the ingredients separately and prepare the mixture yourself. Virgin Oil of Pine (Pure) should be purchased in the original half-ounce vials, which druggists buy for dispensing. Each vial is securely sealed in a round wooden case which protects the Oil from exposure to light. Around the wooden case is an engraved wrapper with the name—"Virgin Oil of Pine (Pure)"—plainly printed thereon. There are many imitations and cheap productions of Pine, but these only create nausea, and never effect the desired results. 1-13.

### PLUCKY SCHOOLMISTRESS.

Courageous Little School Marm Tackles a Bear Single-handed.

The heroine of the little village of Selway, Minnesota, says the Minneapolis Journal, is pretty Miss Mary Mulvaney, a schoolmistress, who, single-handed, tackled a bear which had invaded the classroom.

Miss Mulvaney was standing at the blackboard when a cry of terror from one of her young charges caused her to turn towards the door. There, in open doorway, stood a huge black bear, with head cocked curiously sideways, and nose greedily sniffing towards the closet where the teacher and children kept their lunch baskets. There was instant panic among the pupils, none of whom was more than 10, but the animal paid no attention to the children and headed straight for the lunch closet. One of the boys, bolder than the others, threw a chalk eraser at the bear, which turned around with an angry growl and started towards the terrified children with claws spread out menacingly. Miss Mulvaney thereupon seized a stick, sprang forward, and smote Bruin on his tenderest spot—across the bridge of the nose. This luckily seemed to disconcert the animal, for it turned tail and scampered out of the room. The danger over, Miss Mulvaney fainted, but a liberal application of cold water by some of the elder children soon brought her around again.

# DARE HE?

OR, A SAD LIFE STORY

## CHAPTER XII.

"A merry going out bringeth often a mournful return home; and a joyful evening makes many times a sad morning."

The return drive, as it is quicker, being all down hill, so is it a more silent one than that to the villa had been. Byng indeed is as gaily willing to be fondled by Cecilia as he was on his way up; but there is a mixture of maidenly reserve and sub-tender reproach in her manner which makes their relations somewhat strained. The afternoon's pleasuring has had a jading effect upon Amelia's spirits, as, after having been sucked dry on the subject of Sybilla's maladies, and afterwards at once shaken off by her female acquaintance, she has not been fortunate enough to meet with any one else to exchange talk with, and has sat in disconsolate yet patient loneliness on a stone bench, afraid to stir from the spot where he had left her, lest she might miss her lover, of whom, however, she has unaccountably seen nothing, until when the Angelus is ringing, and the shadows spreading, he has come to give her curt notice, with half-averted face, that the fâcère is at the door. In point of fact he has been too conscious of the disorder of his features to dare to expose them sooner than he can help to her fond scrutiny. He would give anything to be able to sit beside, instead of opposite to her during their drive home, as a profile is a much less tell-tale and more governable thing than a full face, and he is painfully conscious that as often as she imagines she can do it without being detected by him, she is stealing looks of inquiring anxiety at him. He tries to put her off the scent by spasmodic comments upon the entertainment that they have just quitted; and she does her best to keep up the ball of conversation, since she sees that it is his wish. But in vain. Each forced remark falls still-born, leading to nothing. It is Cecilia who at last succeeds in giving a filip to the languid talk.

"I did not know that Mrs. Roche was a cousin of your beauty, Miss Le Marchant," she says, suddenly, growing tired of her pensive attitude, and addressing herself to Jim.

He starts guiltily. "Did not you?" He must look odd; for even Cecilia's large and preoccupied cow eyes rest upon him with an expression of surprise.

"I wonder why she was not there today."

It is not exactly a question, yet her great shallow orbs do not seem to be going to leave his face until he makes some response. He forces himself to do so.

"I understood Miss Le Marchant to say that they are not going out just now."

"And why are not they, pray?" inquires Cecilia, in an injured voice, as if the retirement from the world of the two ladies in question were a personal injury to herself; "they are not in mourning, all their gowns are colored ones, and they do not look as if they had had health—perhaps, however" (after a moment's thoughtful attempt to find a solution)—"perhaps, however, they may have something—one never knows—people have such unexpected diseases nowadays—hysteria perhaps or fits."

At this ingenious suggestion Jim is

go on staring for ever at the billets of wood of the unit fire. He has to turn round and face his companions. The only one of them whose pleasure or displeasure in his announcement he at all needs—Amelia—is stooping over Sybilla, rearranging in a high, picturesque tier behind the invalid's long back, three cushions, and her face is almost entirely hidden from him by her attitude.

"Of course if it is in the least inconvenient, if you have made any other plans for me—if, in fact, you want me," he continues in a tone that is at once apologetic and dogged.

"But I do not," cries she at last, and with a distinct laugh in her voice, a laugh into whose quality he is not anxious too curiously to inquire. "You must not be so conceited as to think that I always want you! In point of fact you could not have hit upon a day that suited me better. I am really rather 'throng' to-day, as they say in Yorkshire. I have quite a hundred things to do, and father wants me to help him to correct the proofs of his sermon, the sermon he preached at Mr. Moffat's church on the Holy Innocents' Day. He has been asked to publish it—is not that flattering? Poor father, I believe he will end by being a popular preacher—in fact" (laughing again), "the whole family is going up in the world!"

There is such a forced mirth in her tone that Jim feels much more guiltily uncomfortable than if she had treated him to hysterics or sulks. Nor does his satisfaction with himself increase when, upon his rising to depart, she runs out of the room after him, to say to him, while her homely face twitches against her will, how much she hopes that he will enjoy himself; how perfectly happy she shall be without him; and how eagerly she shall look forward to hearing all about it from him to-morrow. "It will be almost better than going to Certosa herself," she ends.

But against the unnatural attitude of this last flight of abnegation nature revolts, and becoming conscious of a break in her voice, she hastily retreats and gets back into the salon, in time to see Cecilia shaking her elaborate head and to hear her remarking with slow emphasis, "Mark my words! There is something odd about those people, and it is not hysteria!"

With spirits sensibly worsened by his interview, Burgoyne returns to the Milneria, and, mounting to Byng's bedroom, finds that young gentleman stretched upon his bed, gloom in his usually jocund eye, and an open letter lying on the floor beside him. But Jim is far too preoccupied to notice anybody's gloom but his own.

"I came to ask at what hour we are to set off this afternoon?" he says with a sort of flat microseness in his tone.

"We, indeed?" rejoins the other with a groan, and rolling over with a sort of petulance on the bed, disheveling the neatly-smoothed pillow by burrowing his ruffled head in it—"we!"

There is such a heart-rent woe in the accent with which the last monosyllable is pronounced that for a moment Burgoyne has no other idea but that his young friend too has become aware of the "screw loose," has heard, perhaps, in detail, that story from before whose ominous opening he himself had fled. The thought sends his head into his

knows it was hard enough to persuade them to accept in the first instance. If you go we shall at all events keep our communications open; and you—you will say something to her for me?"

"What kind of something?" inquires the older man, curiously. "Am I to tell her only what a fine fellow you are in general, or anything more circumstantial?"

"Tell her," begins Byng, in a rapid voice; but apparently the sight of his companion, who has somewhat ostentatiously pulled out a note-book and pen, and assumed the patient air of one about to write to dictation, dries the stream of his young eloquence; "tell her—nothing."

"Nothing speaks our grief like to speak nothing!"

replies Jim, leaving the room with this quotation on his lips, rather hastily, for fear lest the other should change his mind.

## CHAPTER XIII.

It is five o'clock, the hour fixed for the expedition to Certosa, and in the entrance of 12 Bis, Piazza d'Azeglio, Mrs. and Miss Le Marchant are sitting—hatted, gloved, and en-tout-cas-ed—in expectation of the arrival of their double escort. Elizabeth's afternoon has, so far, not been a lazy one, as her little cousin Bertie and his dog have again been good enough to pay her a lengthy visit, and the former has insisted upon a repetition of their usual performance of the other day, though with truncated rites. Without the powerful aid of Byng, Elizabeth has found it a task considerably beyond her strength to hold a large bottle poised on his hind legs, on a music-stool. He has jumped down repeatedly, and now lies on his back—an attitude in which experience has taught him he is less attackable than in any other—sawing the air with his fore-paws, and lifting his lip in a deprecating grin.

"Where is Mr. Byng?" cries Bertie fretfully, baulked in his efforts to make his wily victim resume the perpendicular. "I want Mr. Byng! Why does not Mr. Byng come?"

"Perhaps if you went to the window," suggests Mrs. Le Marchant, in that patiently coaxing voice in which we are wont to address a tiresome child on a visit. Instead of the buffet which we should bestow upon it were it a resident—perhaps if you went to the window and looked out, you would see him coming round the corner of the Piazza."

The suggestion is at once accepted, and the child, balancing his fidgety body on a chair, and craning his neck over the window-ledge, is shouting shrill pieces of information as to the passers-by to his friends within the room. Presently he shrieks out in triumph:

"I see him! He is just coming into sight! He is walking so fast! No!"—a moment later, with a changed and disgusted note, as a nearer view corrects the first impression—"it is not he at all! It is only the other one!"

"Only the other one!" It is quite impossible that the sound of the child's voice can reach down to the open portal of No. 12 Bis, at which Jim has now arrived, and it is also certain that neither of the ladies whom he has come to visit are likely to word their surprise at his having arrived alone with the frank brutality which is confined to the utterances of infancy; and yet, Jim, as he presents himself, announced by Annunziata, the hard-featured possessor of a lovely name, is quite as conscious, as if he had overheard the boy's slighting remark, of being "only the other one!" Before he can begin his apologies, the eager little boy has run up to him.

"Where is Mr. Byng? I want Mr. Byng! Why has not he come? Elizabeth wants Mr. Byng!"

At this last clause Burgoyne is conscious of a dark, hot flush rising to his face, and partly to hide it, partly to avoid seeing what the effect of his communication may be upon her for whom it is meant, he stoops over the child, addressing his answer to him:

"Mr. Byng is very sorry, very sorry indeed, but he cannot come."

down the handle. The agony I suffered you may well imagine. I tried several different kinds of salves but the burns were too severe for these preparations to heat.

"I obtained a supply of Zam-Buk and the very first application gave me ease. This pleased me, you may guess, but as I applied the balm each day I was more and more pleased with the effect. The pain was relieved completely. In a very short time Zam-Buk healed my burns completely, and my hands actually felt better—the muscles more firm and the skin in better condition than before I was burned."

Not only for burns, but for cuts, bruises, sprains, etc., Zam-Buk is the best and surest cure. It also cures eczema, ulcers, abscesses, ringworm, boils, eruptions, poisoned wounds, chapped or cracked hands, cold sores, chilblains, bad leg, piles, etc. All druggists sell at 50c. a box, or post free from the Zam-Buk Co., Toronto, on receipt of price. 6 boxes for \$2.50.

Hicks—"My hair comes out in handfuls. If it keeps on I'll soon be bald."  
Wicks—"Non-sense. If it keeps on you can never be bald."

ITCH, Minge, Prairie Scratches and every form of contagious Itch on human or animals cured in 20 minutes by Wolford's Sanitary Lotion. It never fails.

The bee is an artistic upholsterer. It hives its nest with the leaves of flowers, always choosing such as have bright colors. They are invariably red in circles, so exact that no compass would make them more true.

A Pacific Vegetable Lili-Parmanides Vegetable Lili is concentrated from 100% lili root. It contains all known value in the treatment of liver and kidney complaints, and in giving tone to the system. It is a powerful cathartic, and is a most valuable remedy for all cases of indigestion, constipation, and all other ailments of the digestive system. It is a most valuable remedy for all cases of indigestion, constipation, and all other ailments of the digestive system.

Doctors. Doctor "Doe" Anderson, his practice is at the corner of 1st and 2nd Aves. N.Y. Doctor "Ade" Toke and Doctor "L. Simpson" of course, Chicago—a well-known artist, and cannot resist high prices.

The Rockeche Stage may be set that a certain form of kidney disease which is characterized by a slow but stubborn and distressing disorder that will take long tedious treatment to cure. Don't neglect the "rockeche stage" of the most common of diseases. South American Kidney Cure stops the ache in six hours and cures it.

#### DO NOT FORGET.

Mother—Tommy, what did I say to do to you if you touched that jam again?

Tommy—Why it's funny, ma, that you should forget, too. I'm blamed if I can remember!

had had health—perhaps, however (after a moment's thoughtful attempt to find a solution)—perhaps, however, they may have something—one never knows—people have such unexpected diseases nowadays—hysteria perhaps or fits."

At this ingenious suggestion Jim is conscious of a writhing motion passing over the stately form of Byng beside him. In his own train, if there is room for anything but the desire to evade Amelia's eyes, is a dim sense of relief at a suggestion so grotesquely wide of the mark as that made by the younger Miss Wilson. In perfect innocence of the effect produced upon her companions by her bright hypothesis, Cecilia goes on to remind her sister of the parallel case of a very handsome girl whom they had once reckoned among their acquaintance, and who was periodically being found by her family with her head under the fender. But Amelia rises but faintly to the reminiscence, and the remainder of the drive is accomplished in a general silence.

The next day is the one which had been fixed upon for the expedition to Certosa. It was only with a very large admixture of wormwood in its prospective pleasure that Jim had ever looked forward to this party, but now he anticipates it with absolute dread. How can he face Elizabeth and her mother with that ominous phrase of the "screw loose" still ringing in his ears? He feels a traitor towards them, in that he has, however unwillingly, overheard it. To add to his mental uneasiness is the fact of his having as yet not broken to Amelia his intentions with regard to the disposal of his afternoon. Amelia's eyes have for years had the habit of covertly watching him to read his wishes almost before they rose, but in their gaze yesterday he had, unless misled by his guilty conscience, detected a new quality, a quality of alarm and engagement. He will get over the communication of his piece of news as early in the day as may be; so, having finished breakfast before Byng has put in his usual tardy appearance, he takes his hasty way to the Anglo-American. He finds the family there in a more placid frame of mind than that which they had presented on one or two of his recent visits. Sybilla is expecting her doctor, in which occasion she always likes to have a more fully covered than usual thrown over her languid feet; a greater effort—once at pink ribbons about her throat, and a disposition of pots of blues about her van head. Amelia, active and long-suffering as usual, is usual, is moving about in patient expectation of her vain and tiresome whinnies. Cecilia sits tranquilly in the window, knitting an elaborate pair of men's woollen gloves, not, indeed, to do her justice—for any one in particular, but with a wise forethought for the accidents and possibilities of life. Since, on this occasion, his sweetheart shows no inclination to draw him away into the drawing-room for a tête-à-tête, Jim has to take the bull by the horns, and rush into his subject in a more public manner than he had intended. But the one desire to get it over outbalances all minor considerations.

"Amelia," he begins suddenly, and even to himself his voice sounds discourteous and abrupt, "shall you want me this afternoon?"  
The moment that the words are out of his mouth it strikes him that the form into which he has thrown his question is more than necessarily unflattering. She stops in the putting of Sybilla's smart pillows, and perhaps there is something a little abrupt too in her monosyllabic "Why?"  
"Because"—standing before the fireplace, with his back to the three women, and throwing the words over his shoulder, "because if you do not, Byng and I were thinking of going to Certosa."  
There is a pause. He hears that Cecilia's needles have stopped clicking; her work has dropped into her lap. In another moment she will have proposed to come too. "With the Le Marchants," he goes on, shooting out the fateful words like bullets; "a partie carree."

Sill silence behind him. He cannot

accent with which the last monosyllable is pronounced that for a moment Burgoyne has no other idea but that his young friend too has become aware of the "screw loose," has heard, perhaps, in detail, that story from before whose ominous opening he himself had fled. The thought sends his heart into his throat, so as to render him incapable of asking an explanation of the other's affliction.

"We!" repeats Byng for the third time, and very indistinctly, as he is now lying entirely on his face.

"Why do you go on saying 'we' in that idiotic way?" asks Jim at last, recovering his voice—recovering it only to employ it in imitating the younger man's accents, in a manner which displays more exasperation than natural talent for mimicry. It is not a politely worded inquiry, but it has the desired result of acting as a tonic on him at whom it is aimed, making him not only roll over once again, but actually sit up.

"Why do I say we?" repeats he, his young eyes looking lamentably out from under the fall of his tumbled hair—"because it is not we! It is you! You lucky dog, you will have her all to yourself!"

Jim heaves an inaudible sigh of relief. Whatever may be the cause of his companion's enigmatical conduct, it is evidently not what he had feared. There is, however, no evidence of relief or any other mild quality in his next remark.

"If you would talk less like an ass, I should have a better chance of knowing what you are driving at!"

The query seems only to renew and deepen the other's tribulation. He falls back into his former attitude.

"You will hold the white wonder of dear Juliet's hand!" begs Amelia. "No, do not go!" (with a sudden and startling change of tone, springing off the bed, as he became aware that his friend is making for the door, unable to bear those rhapsodies, whose full distastefulness to their hearer the utterer little conjectures). "I'll tell you! I'll explain! Why are you in such a deuce of a hurry? I cannot go to Certosa because I have just heard from my mother that she is to arrive to-day. She will be here to another hour."

Jim's fingers are already on the door-handle, but this piece of news arrests him.

"Your mother? I did not know that she was coming abroad."

"No more did I!"

"It must have been a very sudden thought!"

"Very!"

"What a delightful surprise for you!" "Delightful!" There is so ludicrous a discrepancy between the adjective and the accent with which it is rendered that Jim bursts into a bitter laugh.

"She would be flattered if she could see your elation at the prospect of meeting her!"

Byng's blood rushes up under his clear school skin at his friend's jeer, but he answers, with some dignity:

"I do not think you have any right to imply that I am not always glad to see my mother; I do not deny that it had been equally convenient to her, I had rather she should have come twenty-four hours later."

Jim feels ashamed of himself, though, being an Anglo-Saxon, he has far too much false shame to confess it directly, and what he means for an amende, when it comes, is of an oblique nature.

"I think far the best plan will be to put off the excursion altogether; I am sure that I am not particularly keen about it."

The indignant red has rapidly died out of Byng's face; his placability being only to be surpassed by his slowness to take offence.

"Is it possible?" he asks, in a tone of stupefaction; then, with a sudden tardy recollection of the rosy fletters in which his friend is held by another lady, he adds—"But, of course, you are not—I was forgetting!"

Jim winces.

"As it is your party you had better send up a note at once to the Piazza d'Azeglio."

"No, do not let us both throw them over!" cries Byng, eagerly. "Heaven

below us of a dark, not much rising to his face, and partly to hide it, partly to avoid seeing what the effect of his communication may be upon her for whom it is meant, he stoops over the child, addressing his answer to him:

"Mr. Byng is very sorry, very sorry indeed, but he cannot come."

"Cannot come! Why cannot he come?"

"Because he has gone to meet his mammy," replies Jim, trying to speak in a light and playful voice; "she is to arrive unexpectedly in Florence to-day; no good boy would leave his mammy when she had come all the way from England to see him, would he?"

But to this fustian and copy-book generally the young gentleman addressed is too angry to reply.

"It is a great disappointment to Byng; he bid me tell you what a great disappointment it is to him!" says Jim, turning to the two ladies, and looking apologetically from one to the other.

Elizabeth's head is averted, but on her mother's features he sees, or fancies he sees, slight evidences of a feeling not unlike relief.

"It is not of the least consequence," she says, cheerfully, "we can go any other day just as well."

Burgoyne's heart sinks. In these last sentences he too surely traces signs of the evasion and would-be-retrograde nature which has all along characterized Mrs. Le Marchant's relation with him. It has seemed to him that he has been looking forward to the expedition with sensations of almost unmingled dread, and yet now that he seems to be going to be delivered from it, what he experiences certainly does not come under the head of evasion.

"You wish to give up the excursion then?" he asks, in a tone which he honestly tries to make as neutral and colorless as he can.

"Well, I thought so—we thought so, did not we, Elizabeth?"

The person thus addressed lifts her head, and all over her features he, eagerly scanning them, sees written a warm acquiescence in her motherly decision, an acquiescence which, as her eyes meet his—his, in which his disappointment is written a good deal more plainly than he is aware—changes slowly and sweetly into indecision.

"I do not know," she answers, her gentle look clouded a little and yet kindly interrogating his. "If Mr. Burgoyne is willing to burden himself with us; and Bertie must play at being a grown-up gentleman, and help to take care of us! Bertie, will you play at being a grown-up gentleman?"

To this proposition Bertie assents warmly, and begins theatrically to recount to inattentive ears the high and singular deeds with which he will celebrate his arrival at maturity. But, as

Mrs. Le Marchant puts a strenuous veto upon his adoption of escort, and as his nurse appears at the same juncture to fetch him, he and his dog are presently removed, and the other three set off without him.

(To be continued.)

P.H.A.R.A.O.H.

Man Who Buys Cigars by Price Won't Really Appreciate My Pharaoh.

What a cigar costs has less than you'd think to do with its smoking quality. The thing that counts is what it's made of, and how it's made.

My Pharaoh cigar is a revelation to men who were wont to think a cigar had to be imported to be really fine.

It is just as much a surprise to the man who didn't believe a cigar could be fine unless it cost fifteen cents, at least.

The Pharaoh costs ten cents, about everywhere good cigars are sold. I would like you to buy one and judge it in comparison with any fifteen-cent cigar you know.

I feel just about certain you will say the Pharaoh has the full-bodied, mellow flavor, the fragrant aroma, the super-quality richness—without rankness—that you thought only fine imported cigars could have.

With the real Manicureagua Havana filler and the mild Connecticut binder and Sumatra wrapper all put together under my eyes in this model factory of mine, the Pharaoh has a fair right to be classed with fifteen-cent cigars. I don't want you to believe it until you know it's so. You will when you've tried the Pharaoh.

Better buy a box for Xmas. Your dealer should have it—I he is up-to-date and keeps the best brands.

The "China and Japan" Fast Mail carries Pullman Standard and Tourist sleepers to all California Coast points. Illustrated California literature, folders and rates to be had on application to B. H. Bennett, General Agent, 2 King St., Toronto, Ont.

Lady (to new servant)—"You quite understand, Bridget, that I shall only be 'at home' every Wednesday from three to five?" Bridget—"Yes, mum." To herself—"Bridget, me swate soul, if I ever a woman had a hivenly situation, sure it's yerself has got it. Wid the mistress only at home fur two hours ivery wake, phwat a roarin' time Oi can have av it!"

To discern and deal immediately with causes and overcome them, rather than to battle with effects after the disease has secured a lodgement is the chief aim of the medical man, and Bickle's Anti-Consumptive Syrup is the result of patient study along this particular line. At the first appearance of a cold the Syrup will be found a most efficient remedy, arresting development, and speedily healing the affected parts, so that the ailment disappears.

Hix—"An acquaintance of mine patented an appliance to enable a girl to play two pianos at one time. Dix—"Did he make anything out of it?" Hix—"Well he made a move out of the town. His neighbors threatened to mob him."

## Dear Mother

Your little ones are a constant care in Fall and Winter weather. They will catch cold. Do you know about Shiloh's Consumption Cure, the Lung Tonic, and what it has done for so many? It is said to be the only reliable remedy for all diseases of the air passages in children. It is absolutely harmless and pleasant to take. It is guaranteed to cure or your money is returned. The price is 25c. per bottle, and all dealers in medicine tell

**COW'S DRUNKEN FROLIC.**  
**Milkers Sample Apple Pomace and Give Forth "Milk Punch."**

An extraordinary fate has befallen an entire herd of cows on the farm of Mr. George Schenck, near Phoenixville, Penn. The herd happened to come across a quantity of apple pomace, the residue from cider-making, and with animal curiosity immediately sampled it. The scene that followed was comic in the utmost degree. So drunk did the cows become that they rolled and frolicked on the ground, unable to "moo" for hiccupping. When they found their feet they staggered about the orchard, lurching after each other like drunken men. Their hilarious state continued for two days, during which time their milk was said by the neighborhood to have acquired a distinct flavor, and was humorously described by the owner as "milk punch." The peculiar flavor, however, disappeared as the cows recovered from their dissipation, much to the sorrow of the inhabitants of the district.

**They Never Know Failure.**—Careful observation of the effects of Parnell's Vegetable Pills has shown that they act immediately on the diseased organs of the system and stimulate them to healthy action. There may be cases in which the disease has been long seated and does not easily yield to medicine, but even in such cases these Pills have been known to bring relief when all other so-called remedies have failed. These assertions can be substantiated by many who have used the Pills, and medical men speak highly of their qualities.

**Jabbers.**—"I tell you, old man, it's a terrible thing when your wife quarrels with her mother and the old lady lives with you. Which side do you take?"  
**Havers.**—"Neither. I preserve an alumnated neutrality."

**Dr. Von Sian's Pineapple Tablets.**—Medical science by accident discovered the potency of the pineapple as a pancrea for stomach troubles. The immense percentage of vegetable pepsin contained in the fruit makes it an almost indispensable remedy in cases of dyspepsia and indigestion. One tablet after each meal will cure most chronic cases. 50 in a box, 35 cents.—22

**HONEST ADMIRATION.**

**REGIMENT ADOPTS BABY.**  
**Was Found Asleep in Sentry Box, With Note From Its Parent.**

The soldiers of the Sixty-third Foot Regiment, at Saint Michel, France, have adopted a baby which was found asleep in a sentry-box on a recent morning. It had a wooden horse clasped in its arms and pinned to his jacket was a note saying: "Please look after my little Jacques, whom I am unable to support."

Jacques was thereupon taken into barracks, and the men promptly decided that he should remain. He will wear a little suit of regimentals, and the soldiers will take it in turn to look after him.

**Allen's Lung Balm.**—In which there is no opium, cures sore throat and sore lungs as it always the inflammation and rids you of the mucus that stops up the air passages. 25c., 50c., \$1.00 bottles.

There is one remarkable peculiarity about camels. They are the only animals that cannot swim.

Only those who have had experience can tell the torture corns cause. Pain with your boots on, pain with them off—pain night and day; but relief is sure to those who use Holloway's Corn Cure.

**Butcher.**—"What can I do for you, mum?"  
**Young Wife** (trying to give herself the air of a veteran).—"One pound of beef sausage, but without bone, please."

**A Great Combination.**—"Ferrovin" the best tonic in the world should be taken by all invalids, by all who are run down or out of sorts. It builds up, gives new life.

**"Soldiers must be fearfully dishonest,"** says Mrs. Countryside, "as it seems to be a nightly occurrence for a sentry to be relieved of his watch."

**Deafness of 12 Year's Standing.**—Protracted Catarrh produces deafness in many cases. Capt. Ben. Connor, of Toronto, Canada, was deaf for 12 years from Catarrh. All treatments failed to relieve. Dr. Agnew's Catarrhal Powder gave him relief in one day, and in a very short while the deafness left him entirely. It will do as much for you. 50 cents.—33

**Tramp.**—"I looks like a tramp, ma'am, but I ain't. I'm a sailor, ma'am. I was wrecked and washed ashore." Unsympathetic Lady of the House.—"Well, you ain't been washed since, I'll wager."

**Pains Disappear Before It.**—No one need suffer pain when they have available Dr. Thomas' Electric Oil. If not in the house when required it can be procured at the nearest store, as all merchants keep it for sale. Rheumatism and all bodily pains disappear when it is applied, and should they at any time return, experience teaches the user of the Oil how to deal with them.

**IT IS TO SMILE.**

To live too fast is also to die too fast. Prospective heirs are usually glad to wear dead men's shoes. The worker with the most sand usually is the first to raise the dust. To lose one's head is often the immediate preface to losing one's feet. If some of your china has been in the family for years, you probably wash your own dishes. When the poor young man finds a rich "better half," he also is apt to find better quarters. The song of the nightingales may be so mournful because morning after morning they find their bills all over due. They say a woman's aim is poor. It is only natural, after all, that she should find herself at a man's feet when she has thrown herself at his head.—Success Magazine.

**Salt Rheum, Tetter, Eczema.**—These distressing skin diseases relieved by one application. Dr. Agnew's Ointment is a potent cure for all eruptions of the skin. Jas. Gaston, Wilkesbarre, says: "For nine years I was afflicted with Tetter on my hands. Dr. Agnew's Ointment cured it." 35 cents.—31

"Katie, I must warn you, I saw that policeman put his arm round you and kiss you. 'I couldn't help that, ma'am.' 'But you didn't seem to object.' 'Not me, an' be had up for resistin' the police.'"

**Many Thanks** are due from the proprietors of Weaver's Cerate to friends who have written to tell the Cerate's good word in curing scrofulous humors, scald head and other skin diseases.

**WHERE IS DIVINE JUSTICE?**

**The Cry of a Poor Russian Boy Done to Death.**

The London Daily Express has the following pathetic story from Riga, Russia:  
Seven youths, whose ages ranged from sixteen to nineteen years, have been executed for eight cases of robbery by threats. The amount of money they extorted was £250.  
In a letter they wrote to M. Rainer of Riga they demanded £20 for the unemployed, adding: "We give you two hours to consider the matter." They were identified by their victims.  
As they freely admitted their guilt, the court-martial ordered them to be hanged, but afterwards the sentence was altered to military execution.  
Beneath a glimmering kerosene lamp to the prison courtyard the youths received religious consolation. Three who were Christians took the sacrament, and the Jews made their customary profession of faith. One of them, with tears streaming down his cheeks, but with a loud, firm voice repeated the words of the Jewish confession:

"Hear, O Israel! God is our Lord! God is One! We have sinned; we have done evil in His sight."

Another sent greetings to his parents. When asked if he repented, he answered: "Where is Divine justice, when such conditions exist as drove me to these crimes?"

Sacks were thrown over the heads of the condemned, who were then led into a field. They were tied to stakes, and the Cossacks formed in line of fire. Dawn was breaking when the three volleys were given. The bodies were buried in the sand.

"Weren't you frightened when your revolver missed fire?" "No; my wife kept the burglar off with a hat pin while I reloaded."

Did you notice that old man limping along a day or so ago? Well, if he will put on his back "The D & L" Menthol Plaster, in a week he will walk as straight as any one.

She—"Women may gossip sometimes, but they have better control of their tongues than men have." He—"You are right. Men have no control whatever of women's tongues."

One of the greatest blessings to parents is Mother Graves' Worm Expeller. It effectually expels worms and gives health in a marvellous manner to the little one.

"What a lovely collection of odd cups!" exclaimed a guest, peering into the china cabinet. "Did it take you long to get so many?" "Oh, no," said the hostess, who suffers by the servant problem, "these are samples of the sets we've had in the last two years."

**ANOTHER WONDERFUL CASE**

Here is Something That Will be Welcome News to Many a Discouraged One.

**William H. Reed.**  
"For several years I have been troubled with gas around my heart, shortness of breath, my food did not digest properly. It turned sour in my stomach, causing me great distress; often, too, I had disagreeable attacks of belching gas and heartburn, and severe pains across the small of my back.  
"I tried Dr. Leonard's Anti-Pill and from the very first found relief. Anti-Pill has indeed cured me."  
This is the voluntary statement of Wm. H. Reed, of 165 Queen St., Kingston, Ont.  
All dealers or The Wilson-Fyle Co., Limited, Niagara Falls, Ont.

# FOUR BURNED IN THEIR HOMES

## Terrible Tragedy in Small Apartment House in Buffalo.

A despatch from Buffalo, N. Y., says: Four lives were snuffed out and one person was fatally burned in a small fire in the Zenobia apartment house on Prospect Avenue, at the corner of West Huron Street, on Wednesday night. Other occupants of the place had narrow escapes, half a dozen being rescued by the firemen.

The dead are:—F. M. Lambrecht, 40 Elmwood Avenue; Mrs. Lambrecht; Ruth Crumlish, three years old, daughter of Mrs. C. Crumlish, and Mrs. J. J. Fisher, of New York.

The building was flatiron-shaped, and had narrow, winding hallways, in which the victims, confused by the

flames and smoke, lost their way and were overcome.

Mr. and Mrs. Lambrecht were visiting Mrs. Crumlish, who occupied apartments on the third floor. They, with a nurse, Ida Schambacher, and Mrs. Crumlish's baby, were the only other occupants of the room when the fire started. Mrs. Crumlish had gone to a drug store to get medicine for the baby.

It is supposed that the Lambrechts, thinking that the fire would not be serious, delayed taking the sick baby out into the cold air until it was too late, and all of them were overcome by smoke. The nurse, who had been dismissed for the night, escaped by jumping from her bedroom window to the roof of an adjoining house.

## THE WORLD'S MARKETS

### REPORTS FROM THE LEADING TRADING CENTRES.

#### Prices of Cattle, Grain, Cheese and Other Dairy Produce at Home and Abroad.

Toronto, Dec. 24.—Flour—Ontario wheat, 90 per cent. patents, are quoted at \$2.70 in buyers' sacks outside for export. Manitoba first patents, \$4.30; second patents \$4, and strong bakers', \$5.90. Toronto.

Hogs—\$6.15 per cwt. for choice selects, and \$5.90 for lights and fats, fed and watered.

### THE LARGEST REVENUE YET.

Receipts of the Province This Year Reach High Point.

A despatch from Toronto says: Hon. A. R. Matheson, the Provincial Treasurer, is a happy man because he foresees that Ontario will weather the storms of the financial year of 1906 with ease. "We shall make both ends meet," he has said. "The revenue will be the largest in the history of the province," he added smilingly, as he spoke of the subject on Wednesday. At the same time the expenditure will be larger, yet the Treasurer appears to expect to have a comfortable balance. Last year the revenue reached \$6,016,000, while the expenditure was \$5,396,000. Asked whether the receipts for 1906 would be as much as \$7,000,000, Mr. Matheson would not be too sanguine, but the indications are

### RED OF COBALT LAKE SOLD.

For the sum of One Million and Eighty-Five Thousand Dollars.

A despatch from Toronto says: A Canadian syndicate's tender of \$1,085,000 for the purchase of the portion of the bed of Cobalt Lake still vested in the Crown, and comprising 46 acres, has been accepted by the Government. The tender was accompanied by a marked cheque for ten per cent. of the purchase price, viz., \$108,500, and the balance must be paid within fifteen days. The tender was signed on behalf of over 600 subscribers to shares in the syndicate, the vast majority of them Canadians, by Pellatt & Pellatt and Messrs. Britton Osler, Toronto; Thos. Birkett, Geo. F. Henderson and D. B. Rochester, Ottawa, and Raymond Manicha, Detroit.

The money required by the syndicate was oversubscribed by several hundred thousands of dollars. The parties who were late in getting their money in will, it is understood, receive consideration in the formation of the company which is to be formed. The company will be called Cobalt Lake Mining Company, and will have a capital of between \$4,000,000 and \$6,000,000.

The highest tender for Kerr Lake, \$51,500, made by Americans, was considered too low. New tenders may be called for offers for the purchase of the lake.

A tender offering a bonus of \$38,100 for mining leases of three parcels of land on the right of way of the Temiskaming & Northern Ontario Railway, in addition to a royalty of 25 per cent. on the gross value of ore mined, was accepted. This tender was made by Messrs. Millar, Ferguson & Hunter, barristers, Toronto, and Mr. T. A. Beament, Ottawa.

In the case of Cobalt Lake two tenders were received which did not comply with the terms of the tenders as clearly set forth in the advertisements. One was accompanied by an uncertified cheque. In another case the Government was offered a cash payment and a block of stock in the company to be formed if the offer was accepted. The Government held that it would not be justified in deviating from the advertised terms.

### TRIED FOR THE DIAMONDS.

Daring Plan to Accomplish a Big Jewelry Robbery in Toronto.

A despatch from Toronto says: A daring burglary occurred on Saturday night at Mr. David Ward's loan office at 104 Adelaide street east, where two men, after tying up the doors and exits, threw a stone scoria block through the plate glass window and attempted to make off with the thousands of dollars' worth of precious stones on exhibition for Christmas sale. Two large trays of diamonds worth \$5,000, besides watches, etc., were in the window, but the burglars only got a few articles of small value. John McMan, supposed to be one of the thieves, was chased for nearly two miles and captured while hiding in a building at the corner of Charles and Jarvis streets. He was armed and had part of the stolen property on him. Not in fifteen years has there been such a daring robbery or such a sensational chase after burglars, fully a score of police officers and citizens assisting to run the man down. The greatest credit is due the police department for the prompt action that brought about the arrest and the recovery of most of the stolen jewellery. The robbery was carefully planned, the appliances used for making the doors secure exactly fitting into their place.

### HEROES SAVED PASSENGERS.

Magnificent Exhibition of Devotion to Duty on Burning Steamer.

A despatch from Halifax says: The new steamer Strathcona, owned in Halifax and running on the eastern shore of Nova Scotia, took fire on Saturday night as she was entering Port Dufferin, and was totally destroyed, with the

## DOMINION PARLIAMENT

### NOTES OF PROCEEDINGS IN THE HOUSE OF COMMONS.

#### CANADIAN IMMIGRATION.

The Minister of the Interior stated that the total number of immigrants arriving in Canada of recent years was as follows:—In 1904, 130,000; in 1905, 146,000; in 1906, 139,000, to the end of June in each year.

#### DUTY ON HORSES.

Mr. Elson was informed that the minimum valuation for customs purposes on inferior horses imported into this country is \$50.

#### CATTLE EMBARGO.

Communications have been passing, said the Minister of Agriculture, between the Canadian and British Governments, on the subject of the removal of the embargo on Canadian cattle. "Has the government any reason to anticipate the removal of this embargo at an early date?" to which Mr. Fisher replied: "It is not expedient to express an opinion at present."

#### HALIFAX AND ESQUIMALT.

Sir Frederick Borden explained that the amounts expended by the Dominion in connection with the military and naval stations at Halifax and Esquimalt, from June 30, 1904, to December, 1906, was \$952,453, and \$161,209 respectively.

#### REPATRIATION OF CANADIANS.

Dr. Paquet learned that since 1900, 26,547 Canadians had been repatriated. The Canadian immigration agents are under special instructions to encourage the repatriation of our own people.

#### NATURALIZATION LAW.

Sir Wilfrid Laurier, in moving the second reading of the bill to amend the Naturalization Law, said it was designed to dispense with the three years' residence in the case of an alien, who had been naturalized in some other portion of the Empire, settling in the Dominion. At the present time the naturalization laws in different portions of the Empire did not give anything more than civil rights in the country in which the man took out his papers. All that would be necessary after the adoption of this Act would be for a man who had been naturalized in Australia or New Zealand and settling in Canada, to go before a judge, file his papers, and take the oath of allegiance.

#### HOGS AND TUBERCULOSIS.

Carcasses Exported to Britain From U.S. Not Examined to Standard.

A despatch from London says: The president of the Local Government Board, Mr. Burns, replying to a question in the House of Commons on Wednesday, said he was aware that the carcasses of pigs intended for export from the United States were not dealt with according to the standard recommended by the Royal Commission in Tuberculosis of 1898, but, pending the report of the Royal Commission, which was now sitting, he did not think that carcasses could be examined in accordance with these requirements.

## FREIGHT TRAFFIC

## Returns at Fort William Immense

A despatch from Fort William, Ont., says: During the season of navigation

at \$11.50 to \$12 on track here; No. 2 quoted at \$3.50.  
 Straw—\$6.50 to \$7 per ton.  
 Potatoes—Ontario, 65 to 70c per bag, on track; and New Brunswick 70 to 75c per bag.  
 Poultry—Turkeys, fresh killed, 11 to 12½c; chickens, dressed, 8 to 9c; alive, 6 to 7c per lb.; fowl, alive, 4 to 5c; ducks, dressed, 9 to 10c; do., alive, 6 to 8c per lb.; geese, 7 to 9c per lb.

#### THE DAIRY MARKETS.

Butter—Pound rolls are quoted at 22 to 23c; tubs, 19 to 21c; large rolls, 20 to 22c; creamery prints set at 25 to 26c; and solids at 23½ to 24c.

Eggs—Storage, 23 to 24c per dozen, and lined, 22c; new laid, nominal at 30c.

Cheese—Large cheese, 12½c, and twins at 11c.

#### HOG PRODUCTS.

Dressed hogs in car lots are unchanged. Bacon, long clear, 11½ to 11¾c per lb. in case lots; mess pork, 21 to \$21.50; short cut, 82c.

Hams—Light to medium, 15 to 15½c; do., heavy, 14 to 14½c; rolls, 12c; shoulders, 11 to 11½c; backs, 16 to 16½c; breakfast bacon, 15½ to 16c.

Lard—Hercules, 12c; tubs, 12½c; pails, 12½c.

#### BUSINESS AT MONTREAL.

Montreal, Dec. 24.—Grain—There is no change in the local market for oats; sales of car lots of No. 2 white were made at 42½c; No. 3 at 41½c, and No. 4 at 40½c per bushel ex store. There are no new developments in the local flour situation. Manitoba Spring and Winter wheat patents, \$4.10 to \$4.25; wheat, \$1.60; strong bakers', \$4.10; straight rollers, \$3.65 to \$3.75; do., in bags, \$1.65 to \$1.75; extra, \$1.50 to \$1.60. Feed—Manitoba bran, in bags, \$21; shorts, \$22 per ton; Ontario bran, in bags, \$21 to \$21.50; shorts, \$22.50 to \$23; milled middling, \$22 to \$23 per ton; and straight grain, \$23 to \$23.50. Provisions—Barrels short cut mess, \$22.50 to \$23; half bbls., \$11.25 to \$11.75; clear fat backs, \$23.50; long cut heavy mess, \$21.50; half bbls., do., \$10.75; dry salt long clear bacon, 10½ to 11½c; barrels plate beef, \$12 to \$13; half barrels do., \$6.50 to \$7; barrels heavy mess beef, \$11; half bbls., do., \$6; compound lard, 8½ to 9c; pure lard, 12 to 13c; lard rendered, 13½ to 14c; hams, 13 to 14½c; breakfast bacon, 15 to 16c; Windsor, 15 to 16c; fresh killed slaughter dressed hogs, \$9 to \$9.25; alive, \$8.50 to \$8.75. Eggs—Selects, 25 to 26c; No. 1 candled, 21 to 22c. Cheese—October made Ontario, 12½ to 12¾c; November made, 12 to 12½c. Butter—Choice creamery, 25½ to 25¾c; medium grade, 24 to 24½c.

penditure will be larger, yet the treasurer appears to expect to have a comfortable balance. Last year the revenue reached \$6,016,000, while the expenditure was \$5,396,000. Asked whether the receipts for 1906 would be as much as \$7,000,000, Mr. Matheson would not be too sanguine, but the indications are that they will not fall far short of that sum. The province has received an income of \$1,000,000 from succession duties alone. There will be receipts from the taxation of railways. The income of the Provincial Secretary's Department is larger than ever before owing to the increased commercial activity on the one hand, and to the augmentation of fees for licenses, such as to sell liquor, on the other. Finally the exchequer will be further filled by ten per cent. of the purchase price of Cobalt and Kerr Lakes, which must be paid at once by the purchasers of those valuable mining rights. To counterbalance these there has been considerable expenditure on the important projects inaugurated by the Government during the last session of the Legislature.

#### MUST CAST BALLOT OR LOSE RIGHT.

##### Compulsory Voting Part of the Election Reform Bill.

A despatch from Ottawa says: The bill amending the election law has not yet been finally passed upon by the Cabinet, but it is understood that compulsory voting will be one of the features of the legislation which will be submitted to Parliament shortly after it reassembles. Any qualified voter who neglects, without good excuse, to exercise the franchise at a Parliamentary election shall be disqualified from voting for six years thereafter.

Legislation in this direction has been recommended by two special committees of the House in recent years. The Government measure will impose several penalties for anyone under this disqualification who attempts to vote. No one will lose his rights, however, who has been prevented from voting through illness or any other good and sufficient reason, and in such cases an application to the local judge will save anyone from the penalty that his non-attendance at the polls would otherwise incur.

#### TOOK CARBOLIC ACID.

##### Death of Patrick Langane, Foreman in Lumber Camp.

A despatch from Magnaewau says: Patrick Langane, foreman in Burton Bros' Camp No. 3, north of here a few miles, took a dose of carbolie acid on Wednesday night about 6 o'clock, mistaking it for cough mixture, and died from the effects in less than ten minutes. The unfortunate man was a good foreman and his untimely death is very much regretted.

#### Duty on Burning Steamer.

A despatch from Halifax says: The new steamer Strathcona, owned in Halifax and running on the eastern shore of Nova Scotia, took fire on Saturday night as she was entering Port Dufferin, and was totally destroyed, with the cargo. The passengers, who numbered 30, and the crew, were saved. The Strathcona left Halifax at noon on Saturday for Gaysboro and intermediate ports. About 8.30 o'clock, inside of Beaver Light, fire was discovered. It appeared to be under the saloon. The flames spread rapidly through the ship. Forty boxes of dynamite were thrown overboard. Capt. Reid, who was in command, ordered full speed ahead, and had all the boats gotten ready. The engineers remained in the engine-room until the fire drove them out. The man at the wheel stood at his post until the wheel ropes were burned off and he was nearly enveloped in flames. Had it not been for this faithfulness to duty all might have perished. Capt. Reid succeeded in beaching the steamer at Smiley's Point, but there was not a moment to spare. Although the passengers were almost panic-stricken, rendering it the more difficult for the captain's orders to be obeyed, all hands were got ashore. The passengers and crew lost everything, many of them reaching shore only half clad. Among the passengers were five ladies. Capt. Reid himself was the last to leave the ship.

#### DEAD AT THE THROTTLE.

##### Canadian Pacific Railway Engineer Killed in His Cab.

A despatch from Toronto says: John Paul, of 97 Mulock Avenue, Toronto Junction, engineer on C.P.R. engine No. 220, was killed in his cab on Saturday afternoon by striking his head against a semaphore arm just west of the Union Station. The train was composed of three coaches bound for Hamilton, and it is supposed that when struck he was looking to the rear to see if the steam was escaping from the exhaust pipe. The unfortunate man's skull was crushed in over the left ear. The accident was unmodified by the fireman, and the train ran through the city yards at a high rate of speed. When, however, sunnyside crossings were passed without warning, the fireman entered the cab and found the engineer dead, with his hand on the throttle. The train was stopped at Mimico, where telegraph messages had already been received from persons along the line who had noticed Paul's condition. The autopsy held on Saturday showed that death must have been instantaneous.

#### NINE KILLED IN WRECK.

##### Collision on the Soo Railway at Enderlin, North Dakota.

A despatch from Enderlin, North Dakota, says: Nine dead and thirty-seven injured is the result of a wreck on the St. Paul, Minneapolis & Sault Ste. Marie Railway here early on Sunday morning, caused by a head-on collision. Most of the passengers were in the smoking car, and only two escaped injury. The whistle had just rounded as the train approached Enderlin, and the passengers were nearly all standing in the aisles when the baggage car crashed into the smoker. Seven were killed outright and two have since died. Hospitals, hotels and private houses were soon filled with the injured, who were attended by four physicians. A special train from Valley City brought physicians and nurses. The dead: Charles Backus, Berger, N.D.; I. J. Volking, Anamoose, N.D.; John Statterberg, Anamoose, N.D.; Tony Gleen, Velva, N.D.; D. J. Beresford, Medicine Hat, Canada; H. Rosenbaum, Velva, N.D.; W. J. Danielson, Sheldon, N.D.; A. O. Anderson, Starbuck, Minn.; one unidentified man.

The Italian Foreign Minister has stated that a war at the present time would reduce Europe to bankruptcy.

## Immense

A despatch from Fort William, Ont., says: During the season of navigation just closed 836 vessels arrived and 834 departed at the port of Fort William. A trifle more than 2,000,000 tons of freight of all kinds was received during the season, and about 2,135,000 tons forwarded. Six hundred and seventy-two vessels arrived last year. For the last time, 1,200 truck handlers and checkers, employed since last Fall at the Canadian Pacific freight sheds, drew their cheques, thus marking the close of the season. There are still engaged at the freight docks 300 men, most of whom will be retained during the winter. The volume of freight handled in Fort William during the season exceeds by far that of any previous year in the history of this port, and although the officials' statement has not been given out, it is comparatively estimated.

#### FISSET SUCCEEDS PINAULT.

##### A South African Veteran to be Deputy Minister.

A despatch from Ottawa says: Col. E. Fisset, D.S.O., has been appointed Deputy Minister of Militia and Defence to succeed Col. Pinault. The order-in-Council appointing Col. Fisset to his position was passed on Wednesday afternoon. Without doubt the militia of Canada will receive the news that an officer who has shown his sterling worth upon the battlefields of South Africa on more than one occasion is to become Deputy Minister with satisfaction. Especially in Ottawa is the appointment popular. Col. Fisset is a son of Senator Pinault. He went to South Africa in 1899, on the first contingent, being connected with the Army Medical Service. He served in the operations in the Orange Free State, and at the engagement of Paardeberg helped to bear off the field on a stretcher Capt. Arnold, who was wounded. For his distinguished bravery on this occasion he was mentioned by Lord Roberts in despatches.

#### MUTINOUS SAILORS SENTENCED.

##### The Leader of Potemkin Rebels Gets Four Years.

A despatch from Sebastopol says: Fifteen sailors who participated in the mutiny of June, 1905, on board the Russian battle-ship Kniiaz Potemkin (now the Panteleimon) were sentenced on Wednesday. The leader was condemned to four years penal servitude, and the others to serve terms in the disciplinary corps, ranging from six months to two years. The prisoners were those of the crew who sought refuge in Roumania when the Kniiaz Potemkin put into Kustenji, where she was eventually surrendered, and who subsequently gave themselves up to the Russian authorities.

#### NO FAITH IN BANKS.

##### Woman Trusted Pocket Alone, But the \$6,000 Vanished.

A despatch from Philadelphia, Pa., says: Mrs. Ella V. Kober was robbed of \$6,000 by a pickpocket in a holiday crowd in the shopping district here on Monday. The money was paid Mrs. Kober by the Pennsylvania Railroad in settlement of a claim on the death of her husband, who was killed in the recent electric railroad wreck near Atlantic City. Mrs. Kober had no faith in banks, and had refused to accept a check from the railroad in payment of the claim, and demanded cash. She received thirty \$100 and six \$500 notes, which she sewed in a secret pocket in an undershirt. While shopping with a friend she discovered that the pocket had been cut from her skirt and the money taken.

# GENERAL LAD HEAD ON RAILS

## A British Officer Commits Suicide While Insane.

A despatch from London says: At the request of the decapitated body of Major-Gen. Guise Tucker, formerly commandant of the Royal Marine Artillery at Eastney Barracks, Portsmouth, which was found on the London and South-Western Railway at Cosham, a verdict of "suicide while temporarily insane" was returned.

The evidence showed that the General had recently been depressed by ill-health, though he had not been medically attended. On Tuesday evening he left his home at Purbrook Common, saying he was going to post some letters. He was not seen alive again, and his body was found by a plate-layer's

ganger under one of the bridges crossing the railway near Cosham Station, two miles from his residence.

The medical opinion was that the General had deliberately placed his head on the line before an approaching train.

Gen. Tucker, who was on the retired list, saw service in the Egyptian campaign in 1882, and fought in the engagements at Kassassin and Tel-el-Kebir, and was mentioned in despatches. He also served in the Eastern Sudan campaign in 1884, and was mentioned in despatches for seizing one of the enemy's Krupp guns and turning it upon them. He gained the nickname of "Krupp Tucker" by this exploit.

## PROFIT IN LAKE BOATS.

Never So Much Money Was Paid Out For Freight.

A despatch from Chicago says: Never before was so much money paid for carrying freight in lake vessels as during the season just closed. A rough estimate places it at \$61,000,000 for coal, iron ore, grain and lumber. The profits to the vessels were perhaps the largest in the history of the lakes. Careful computations, based on the earnings of typical steamers, show a net profit on steel ships of 13 per cent. On wooden ships of between 3,000 and 3,500 tons capacity the profits have ranged as high as 30 per cent., with an average of more than 25 per cent. on their insurance valuation. The cause of this great prosperity was the demand of the country for iron and steel. The total movement of iron ore for the season was 27,513,589 tons, an increase of 4,036,683 tons over 1905. Grain from Duluth moved in a larger volume than ever before. There were shipped from the head of Lake Superior 81,608,000 bushels, as compared with 59,678,000 bushels in 1905.

## SWINDLER CAUGHT.

A Bogus Cheque Operator is in the Toils at Galt.

A despatch from Galt says: A Galt woman's timely pointer to the police on Thursday led to the arrest of a man who has confessed to being a passer of bogus cheques, and is believed to be the swindler wanted in a number of Canadian towns and cities. Thursday morning a strange man entered Joseph Hall's store, New Ainslie Street, and asked Mrs. Hall whether she had any blank cheques she could spare, as he wanted to fill some out. Mrs. Hall suspected the man, and on his departure notified the chief of police, who placed the man under arrest. At headquarters the man was taxed with being the party who had worked the bogus cheque game in Guelph. At first he vigorously denied the charge, threatening reprisals, but finally weakened and admitted the whole thing. He said he was the son of a farmer named Horace Brown, living near Calnsville, a short distance from Brantford. He would make no further statement as to how long he had been operating.

## GLANDERS IN WINNIPEG.

First Outbreak in Two Years—Twenty Horses Shot.

A despatch from Winnipeg says: The first outbreak of glanders to occur in Winnipeg in two years was detected two days ago, and on Thursday 20 horses afflicted were shot at the city nuisance ground. Local veterinary surgeons detected the disease, and the horses were slaughtered under their direction. James Lightfoot's board and sale stables, on Bannatyne Avenue, lost nine, while Slater's stables, on North Main Street, lost ten. The odd horse belonged to a local express company. It is supposed that the disease was first contracted in the bush and brought to the city by animals brought in from the camps.

The French Government has ordered prosecutions for holding religious services discontinued for the present.

## CONDENSED NEWS ITEMS

HAPPENINGS FROM ALL OVER THE GLOBE.

Telegraphic Briefs From Our Own and Other Countries of Recent CANADA.

The Alberta Legislature will meet on Jan. 24.

The Toronto Exhibition surplus was over \$36,000.

Cobalt has applied to the Government for incorporation as a town.

Twenty-five soldiers have been sent to Victoria, B.C., from the Quebec garrison.

Kingston electors will vote on Jan. 7 on the question of license reduction.

Cobalt has been incorporated as a town.

Hon. V. W. Larue, member of the Quebec Legislative Council, is dead.

The Province has spent \$226,550 on roads in northern Ontario this year.

Fifty-one Manitoba municipalities voted for the Government's telephone scheme and seventy-one against it.

Chappel Bros.' grocery and Chamandy Bros.' dry goods store at North Bay were burned. The loss is \$25,000.

Windsor Model School made a record in the recent examination, every one of the forty-seven students obtaining a certificate.

The Canadian Northern Railway has filed plans at Ottawa for several new lines in western Ontario, including one from Toronto to Windsor.

The Grand Trunk ferry will make two trips daily between Cobourg and Charlotte.

Mrs. Alice Carey was acquitted of the charge of child murder at the Assizes at Brampton, on Friday.

Deer carried by the Canadian Express Co. during the present hunting season numbered 3,100.

William A. McDonald, a wealthy farmer, of Calgary district, formerly of Chatham, was found drowned at Vancouver.

Mr. G. M. Murray has been appointed General Secretary of the Canadian Manufacturers' Association, succeeding Mr. F. M. Stewart.

The Minister of Railways is about to invite tenders for motor cars for the Intercolonial Railway.

The Government is to extend the Temiskaming Railway to connect with the Grand Trunk Pacific.

Commission Coombs of the Salvation Army says eight steamers have been chartered to bring 25,000 people to Canada.

Custom House employees in Toronto have formed an organization with the object of securing a higher scale of pay.

Hon. G. W. Stephens, Messrs. C. C. Ballantyne and L. E. Geoffroy have been appointed Harbor Commissioners of Montreal.

The John Leslie Block on Main Street, Winnipeg, has been purchased by Joseph Bernhardt for \$125,000 for hotel purposes.

The transcontinental Railway Commission are negotiating for the purchase of a tract of land about two miles long at Winnipeg for shops and yards.

Shortage in weight of Canadian cheese exported to Britain is complained of by Mr. P. B. Macnamara, Canadian agent in Manchester.

Chicago capitalists have purchased the Canada Permanent Block in Winnipeg, corner Portage Avenue and Main Street for a quarter of a million dollars.

Canada's exports to Great Britain for the five months ending August 31 totalled \$55,653,099, as against \$41,153,071 the previous year and \$43,493,420 in 1904.

Minister of Agriculture Talton of British Columbia has arranged for some thousands of Salvation Army immigrants to increase the labor supply next year.

Canada's imports from Great Britain for the five months ending August 31 amounted to \$32,754,296, as against \$27,847,699 for the year previous and \$25,934,295 for 1904.

# 15,000,000 CHINESE SUFFERING

## Great Famine Follows Total Failure of Crops.

A despatch from Washington says: Official advices received here regarding the famine in North Kiangsu, China, confirm the stories of suffering and want in that section. The crops are reported as being almost a total failure to Tao Yuen. In Antong and Fung Township the crops practically are a total failure. The country everywhere is under water and the people are compelled to wade often waist deep and in some cases, up to their necks.

Immediately west of Tsingho what

formerly was a fertile plain is a vast lake extending 20 miles at the narrowest point and stretching for over 40 miles toward the south-west. "Here and there," the prefect says, "are the groups of cottages which rise above this sheet of water and can only be reached by boats. The people are in a state of absolute destitution, not only their crops but also the reeds which constitute their fuel being destroyed by the floods."

An urgent appeal is made for aid for the stricken people, who number 15,000,000.

States should be allowed a delegate to the coming Colonial Conference.

Japan is becoming impatient at Russia's delay in fulfilling the terms of the Portsmouth treaty.

Count Ignatieff, ex-Governor of Kieff, was shot and killed at Tver on Saturday by a revolutionist.

The universal suffrage bill passed in the Austrian upper House on Friday night.

## BRYCE FOR WASHINGTON.

British Government Enquires if He Will be Acceptable.

A despatch from Washington says: The British Government has enquired of the State Department if James Bryce, Chief Secretary for Ireland in the Government at London, would be acceptable to the United States as the King's Ambassador to succeed Sir Mortimer Durand, who is to retire from active service soon. The appointment of Mr. Bryce, it is learned, would be perfectly satisfactory to this Government, although the State Department has made no formal reply to the Foreign Office in London. It is expected he will come to America to take up his new mission late in February or early in March. Sir Mortimer Durand will leave Washington shortly after Christmas.

## STAMP DISTRIBUTING CENTRES.

Have Been Established at Winnipeg, Calgary and Vancouver.

A despatch from Ottawa says: A new departure has been made by the Post-office Department which will be welcomed by postmasters in the west. Heretofore these postmasters were compelled to send to Ottawa when they desired to replenish their stocks of stamps, but owing to the rapid growth in the demand for stamps it has been decided to establish distributing centres in the west. These will be at Winnipeg, Calgary and Vancouver. The new system will go into effect on the new year.

## BIG TIMBER DEAL IN QUEBEC.

American Syndicate Purchases Bradley Limits at La Tuque.

A despatch from Quebec says: Thursday afternoon one of the largest deals in industrial pursuits was completed. A syndicate of gentlemen from Portland, Maine, identified with the Berlin N. H. Paper Company, have purchased the Breakey syndicate of timber limits at La Tuque for a quarter of a million dollars, and La Tuque water-power and other properties, involving one million dollars, and will erect the largest pulp and paper mills in Canada at La Tuque. The company is capitalized at three million dollars, and will be known as the Quebec Industrial Company, with Mr. Howard J. Brown, of Portland, Me., presi-

## Fashion Hints.

### COATS.

The problem of an evening coat for the girl who must dress on next to nothing a year is a comparatively easy one this season.

The loose, flowing, almost the old dolman-shaped lines of the newest wraps require so little fitting that they can easily be fashioned at home with the aid of a good pattern, either with the assistance of a dressmaker or by the girl who makes her own clothes. Taste and clever fingers can work wonders in the way of inexpensive, yet really charming coats.

Few people, for instance, would think of cotton flannel in this connection, yet one young woman, who depends largely on her wits for her good appearance has just made a striking three-quarter length cape out of a rich shade of recantion flannel, lined with an old white china silk skirt, and finished with a rolling collar of black lynx from a worn out fur-lined circular.

One of these circulars, by the way is a godsend, when a new evening wrap is to be evolved. Use the squirrel as a lining for some pretty outer covering—say, one of the bengalines now so popular, or an inexpensive pompadour silk—and finish with the fur collar.

A very inexpensive cape or coat may be made of the soft furniture felt to be found in upholstery shops. It comes in lovely shades of blue, tan, red, gray and pink. This material is so warm and thick no lining is necessary, though, a cheap white silk is used, it is, naturally, much handsomer.

An old Paisley shawl, with a colored border, can be turned into a very stylish cloak, on the order of the dolman shaped wrap shown to-day. Use the border to edge the fronts and the flowing sleeves; or, if there is enough, turn it into a pointed cape collar. Or it can be finished with the chenille fringe seen so much this season. Fasten with passementerie ornaments.

Lucky is the girl who owns one of the big lace shawls, black or white, such as are handed down in many a family that has seen better, or, at least, richer days. A fascinating wrap was made recently of a black lace shawl lined with white taffeta. One of the points was caught in a jaunty little hood, and the entire cape was edged with a double ruffle of white and black chiffon, the black on the outside.

Then the girl who can afford to pay a little more for her materials—which she can easily manage, if she is her own

## AFFIC DOUBLED

William Show an e Increase.

that the tonnage received was 60 per cent. greater than that of 1905.

During the last 65 days 280,000 tons of

## Increase.

that the tonnage received was 60 per cent. greater than that of 1905.

During the last 65 days 280,000 tons of freight and flour were unloaded in Fort William, as compared with 191,000 tons for the corresponding period a year ago. The increase was confined to no particular commodity, all lines of merchandise having shared in the advance. Of barbed wire that arrived since the opening of navigation fully 15,000 tons, or enough to build a two-strand fence around the entire world, is stored here. Enough soap was unloaded at the docks during November to keep an average city of 15,000 inhabitants clean for a year. Four trainloads of farm implements were received.

From Oct. 31st to Dec. 1st 165 cargoes, five and one-half cargoes per day, were transferred from vessels to cars. This was exclusive of coal and grain and was by far the greatest number of steamers that ever arrived at the freight sheds in a single month.

### LEAVES FORTUNE TO POPE.

Wealthy Prelate's Will Gives \$1,000,000 to Pontiff.

A despatch from Rome says: The death was announced on Tuesday of Mgr. Adami, one of the most wealthy Roman prelates. Mgr. Adami made valuable presents to Pope Leo XIII. and Pius X., his gift to the latter being a gold pectoral cross set with brilliants. By his will he left \$1,000,000 to the Pope.

### WANT A BRITISH PRINCE.

Would Place Prince Arthur of Connaught on Serbian Throne.

A despatch from London says: In connection with the recent rumors of a plot to place Prince Arthur of Connaught on the Serbian throne, M. Mijatovich, ex-Serbian Minister in London, in a published interview, admits that twice within a year delegates from Belgrade have vainly endeavored to interest him in the proposal, asserting that King Peter would be induced to abdicate peacefully in favor of a British Prince. M. Mijatovich said he declined to have anything to do with such a fantastic suggestion, but declares there is a definite political party in Serbia favoring a change in the dynasty.

### SAVED FROM SCAFFOLD.

Woolly Bear's Sentence Commuted—Cannot Live Long.

A despatch from Ottawa says: His Excellency has commuted the sentence of death in the case of Woolly Bear, an Indian who was tried at Brandon and found guilty of killing a fellow tribesman. He was to have been executed on Friday. It was reported that remorse and confinement had so affected him that he could only live a short time. The Government therefore decided that nature and not the law should be allowed to take its course.

### JAPAN'S MERCHANT FLEET.

New Shipping Company With a Capital of \$10,000,000.

The London Times' correspondent at Tokio sends the following cable despatch:—A new shipping company has been formed in Japan. It already possesses a fleet of 150,000 tons. Its capital is £2,000,000, of which half represents the value of the existing fleet, the remainder to be devoted to the building of new ships. The company intends to establish services to Formosa, Hokkaido, Java, Vladivostok, North China, Hong Kong, Manila, Hawaii, America, the South Seas and India.

It is said that the new election bill now preparing at Ottawa will have a compulsory voting provision.

thousands of Salvation Army immigrants to increase the labor supply next year.

Canada's imports from Great Britain for the five months ending August 31 amounted to \$32,754,296, as against \$27,847,699 for the year previous and \$25,934,295 for 1904.

Our imports from the United States for the five months ending August 31 totalled \$83,420,899, an increase of \$13,323,606 over the previous year. Our exports to the States for the same period totalled \$47,036,371.

The imports into Canada from the West Indies for the five months ending August 31 amounted to \$3,106,646, a gain of \$336,322 as compared with 1905 and of \$675,143 in 1904. Exports to the West Indies totalled \$1,076,968, showing gains of \$187,274 and \$178,814 when contrasted with the same period of two years immediately preceding.

### GREAT BRITAIN.

The British Admiralty have decided to fit all new battleships with turbine engines.

Negotiations are in progress to have Sir Algernon West succeed Hon. James Bryce as Chief Secretary for Ireland.

The British Parliament has been prorogued until February 2nd.

The marksmanship of British gunners has shown a phenomenal improvement during the present year.

It is rumored at Dublin that Mr. Bryce's retirement from the British Cabinet is due to differences with Sir Anthony Macdonnell.

A clause has been added to the extradition treaty between Great Britain and the United States including bribery among extraditable offences.

Colonel Gerald Kitson, Commandant at Sandhurst, has been specially selected by Lord Kitchener to command a brigade in India.

Dr. Macnamara, a Canadian in the British House of Commons, is mentioned as a possible successor to the Earl of Elgin in the Colonial Secretaryship.

### UNITED STATES.

Lindsay B. Hicks was rescued on Saturday after having been entombed in a mine at Bakersfield, Cal., for over two weeks.

Cashier J. B. F. Rinehart, of the closed Farmers' and Drivers' National Bank of Waynesburg, Pa., surrendered himself on Tuesday, and was admitted to bail in the sum of \$10,000. Discrepancies in his accounts, aggregating \$950,000, are alleged.

At the Inter-State Commerce Commission's inquiry into the car shortage, Minnesota farmers testified wheat prices were abnormally depressed, with elevators full and no market. The coal famine forced farmers to burn fences and outbuildings to keep from freezing.

Viscount Aoki, the Japanese ambassador to the United States, said at the dinner of the American Asiatic Association, in New York, that eastern Asia was large enough for the commerce of all nations, and that the dream of the pessimist, who saw the phantom of a struggle between the United States and Japan for the supremacy of the Pacific was ridiculous.

The Pennsylvania Railroad Company has notified its employees that after January 1 the company, which owns many mines, will not sell coal to them at the rate which regular shippers pay. As a consequence all employees will be compelled to patronize retail dealers. About 60,000 of the 190,000 employees are housekeepers. It is estimated that the annual saving to those who bought their coal from the company was \$675,000.

### GENERAL.

Captain Magniez was degraded at Lille, France, for refusing to aid in taking a church inventory.

Japan is said to be planning to raise sufficient wheat in Manchuria to satisfy the Asiatic demand.

The Czar has decorated Premier Stolypin for his zeal in the cause of the empire.

It is feared the agitation of opium dealers in South China will cause a serious outbreak.

Australia claims that each of her

Tuque for a quarter of a million dollars, and La Tuque water-power and other properties, involving one million dollars, and will erect the largest pulp and paper mills in Canada at La Tuque. The company is capitalized at three million dollars, and will be known as the Quebec Industrial Company, with Mr. Herbert J. Brown, of Portland, Me., president.

### CHAMBERLAIN'S MEMORY.

The Past Has Become a Complete Blank to Him.

A despatch from London says: The long retirement of Joseph Chamberlain, owing to gout and other ailments, has led to constant assertions and contradictions concerning the gravity of his condition. The Chronicle states that he greatly overtaxed his strength at the celebrations in honor of his seventieth birthday at Birmingham, with the result that he lost his memory completely. The past became a blank to him, and he could not remember what had taken place even a few hours before, and although his other faculties were and are unimpaired, his memory is gone.

### ASSASSINS SHOT BADLY.

Desperate Attempt to Kill Chief of Police at Lodz.

A despatch from Lodz, Russia, says: An attempt to assassinate Chief of Police Chleshanowski was made here on Wednesday, but the official escaped with a slight injury to his right foot. The would-be assassins hurled a bomb beneath his carriage and opened fire on him with revolvers, but did not accomplish their object. The terrorists escaped. The carriage was wrecked and the coachman and three dragoons were probably fatally wounded by bomb splinters.

### BIG ORDER FOR RUSSIAN NAVY.

Krupps Will Supply Over Five Million Dollars' Worth.

A despatch from Berlin says: The Krupps, of Essen, have received an order for warship materials worth 22,000,000 marks (\$5,500,000), for the Russian Government. This will be used for building new warships. Under the conditions of the contract the Russian Pullloff works will participate to a certain extent, and the Krupp company will advance the Pullloff company 6,000,000 marks (\$1,500,000) to extend its works.

The Australian anti-gambling bill has passed both Houses of Parliament. Old bachelors are men who have given marriage a serious thought.

recently of a black lace lined with white taffeta. One of the points was caught in a jaunty little hood, and the entire rase was edged with a double ruffle of white and black chiffon, the black on the outside.

Then the girl who can afford to pay a little more for her materials—which she can easily manage, if she is her own dressmaker—can copy some of the most costly evening coats seen in the stores.

Chiffon velvet and bengaline silk are both more popular for evening coats this winter than broadcloth, and very little more expensive.

A charming combination, modeled on the dainty coat of the central figure, is of red bengaline, lined with white and finished with a facing of black lynx over a deep-pointed collar of the bengaline, with black silk tassels and buckles.

It is wiser for the girl who must use cheap materials to confine herself to capes, as the quality of the material is less noticeable than in a coat. The latter, moreover, requires skillful cutting and pressing to look well. Fortunately for her, the vogue for capes is steadily on the increase.

The cheap Pompadour silks are especially lovely for such a wrap, while many inexpensive Japanese silks can be picked up for the new kimono-shaped cloaks which are frequently seen this winter.

It must be confessed this latter style has more of novelty than becomingness or real attractiveness to recommend it.

In choosing an evening coat this winter be sure to select one of the pale pastel shades—orchid, mauve and a faint tone of violet and pink are especially good. These light shades are more in favor than the all-white coat.

An oyster-white broadcloth, brightened with touches of saffron velvet is, however, really lovely.

### EXPRESS MATTER BURNED.

Third Car Consumed Bound From Toronto to Winnipeg.

A despatch from Winnipeg says: Word was received on Wednesday to the effect that a carload of express packages, which left Toronto for the west on Monday, was destroyed by fire between that city and North Bay. The car contained a considerable quantity of goods for Winnipeg and other points in Manitoba and the west. This is the third carload of express goods destined for the west that has been destroyed by fire during the past month. The origin of the fires is not known.

A Melbourne despatch says several big gold nuggets were discovered recently near Tarnagulla, and two were found weighing respectively 967 and 373 ounces, the largest seen in Australia in forty years.

## GAVE CHIMPANZEE THE FEVER

### Former Montreal Doctor Achieves a Triumph in Science.

A despatch from Montreal says: One of the greatest achievements in modern medical science has just been accomplished by an old Montrealeur and graduate of McGill, at present attached to the Liverpool School of Tropical Medicine, Dr. H. Wolferstan Thomas, son of the late Wolferstan Thomas, a native of Montreal, and a member of the class of medicine '97 of McGill. Dr. Thomas has just succeeded for the first time in inoculating a chimpanzee with yellow fever from the bite of a mosquito, which had previously bitten a human being infected with the disease. This is the first experience that has ever been suc-

cessfully concluded through the medium of an animal, and means a great deal to medical science.

The chimpanzee had all the symptoms of yellow fever after it had been bitten, and now, if it can be successfully established that the disease may be given from the chimpanzee to the human being, doctors can then proceed to the discovery of a cure through the chimpanzee. The disease is of such a serious nature, and those living in countries where it is prevalent are so anxious to find a cure for it, that the Brazilian Government has offered a prize of \$50,000 for the discovery of a remedy.

# Why Refer to Doctors

Because we make medicines for them. We tell them all about Ayer's Cherry Pectoral, and they prescribe it for coughs, colds, bronchitis, consumption. They trust it. Then you can afford to trust it. Ask your own doctor.

The best kind of a testimonial—"Sold for over sixty years."

PILLS.  
HAIR VIGOR.  
We have no secrets! We publish the formulas of all our medicines.

Ayer's Pills greatly aid the Cherry Pectoral in breaking up a cold.

and artificial incubation and rearing feeding, care and management; the production of eggs in winter; demonstrations and practice in fattening, killing, dressing, and preparing chickens for home and foreign markets.

The demand for trained men in Dairy- ing too, far exceeds the supply and young men thoroughly equipped in the science and practice of Butter and Cheese-making, are in constant demand. The Dairy school is well prepared to give a good course in dairying. (The term is three months.) A herd of about 40 cows, heifers, and calves representing three different breeds of dairy cattle, gives an excellent object lesson in the handling, feeding, and caring for a dairy herd, besides supplying specimens for class-room work. A record is kept of each cow's milk, that students may see the simplicity and importance of a cow record.

These courses are offered as was stated before for those farmers and farmer's sons, who have not the time nor the money to take the regular College Course and it is to be hoped that a large number will avail themselves of the opportunity to attend during the coming January.

## RICHMOND MINUTES.

The Council met at Selby. The members present were Messrs Z. A. Grooms, Reeve, and Councillors Fred Sexsmith, Charles Anderson, E. R. Sills, and Alf McCutcheon, The R. ex. presiding.

The minutes of the last meeting were read and confirmed.

Moved by Chas. Anderson and seconded by Fred Sexsmith, that the collector be granted a voucher for the following sums:—Wm. Brandon \$9.00; Statute labor by order of the Pathmaster, Thomas Fralick \$4.00; Statute labor by order of the Pathmaster Wm. F. Ferguson \$1.00; Statute labor the same being an error. Carried.

The Treasurer's Financial report was laid before the Council which was read and ordered to be printed according to statute.

Moved by Fred Sexsmith seconded by Alf McCutcheon, that Sidney Pringle be paid \$3.00 for repairing three culverts in road section No 23, by order of the Pathmaster. Carried.

Moved and seconded that the collectors' time be extended until the next meeting of the Council. Carried.

Moved by Alf McCutcheon seconded by E. R. Sills that the following accounts be paid: Carleton Woods \$1.75 for furnishing wood to Magdalen Fralick; Allen Oliver for 87 loads of gravel furnished road sections Nos. 4 and 5 by order of the Pathmaster; \$6.00; Z. A. Grooms 35 loads of gravel for road sections Nos 73 and 81 by order of the Postmasters \$24.50; Daus Denison for wood furnished Thomas Sovereign \$10.00; Dan McCauley for work on road in section No 24 \$3.00; Alex. Denison for timber for repairing bridge on road east of Selby \$16.00; Rathbun Co. shingles for Town Hall shed \$29.50; M. S. Madole, account for lumber \$35.71; G. F. Rattan \$30.00 salary as Township Solicitor for 1906, also \$10.00 for postage and stationery; John Gollinger work on road in road section No 59 \$1.50. Carried.

The Council adjourned.  
ABRAHAM WINTERS  
Tp. Clerk.

## Ages in the Animal Kingdom.

A great variance as to length of life appears among different animals. Some insects live for only a few hours, while fish, elephants and turtles are frequently centenarians. The average life of the mosquito is three days. Toads usually live to the age of about fifteen years, while carp have been

## FREE COURSES

For over thirty years the Ontario Agricultural College has provided courses of study and practical field work for farmers' sons, and thousands of young men have taken advantage of it. At first the course was two years. This was found to be too short, and in 1888 a third year was added. Still later it was found impossible to do justice to the work in three sessions, and the regular College Course, leading to the degree of B. S. A., now covers a period of four years.  
But there are many farmers and far-

## Verdict for Dr. Pierce

AGAINST THE  
Ladies' Home Journal.

Sending truth after a lie. It is an old maxim that "a lie will travel seven leagues while truth is getting its boots on," and no doubt hundreds of thousands of good people read the unwarranted and malicious attack upon Dr. R. V. Pierce and his "Favorite Prescription" published in the May (1904) number of the Ladies' Home Journal, with its great black display headings, who never saw the humble, grovelling retraction, with its inconspicuous heading, published two months later. It was boldly charged in this slanderous and libelous article that Dr. Pierce's Favorite Prescription, for the cure of women's weaknesses and ailments, contained alcohol and other harmful ingredients. Dr. Pierce promptly brought suit against the publishers of the Ladies' Home Journal, for \$300,000.00 damages.

Dr. Pierce alleged that Mr. Bok, the editor, maliciously published the article containing such false and defamatory matter with the intent of injuring his business; furthermore, that no alcohol, or other poisonous, or habit-forming, drugs are, or ever were, contained in his "Favorite Prescription"; that said medicine is made from native medicinal roots and contains no harmful ingredients whatever; and that Mr. Bok's malicious statements were wholly and absolutely false.

In the retraction printed by said Journal they were forced to acknowledge that they had obtained analyses of "Favorite Prescription" from eminent chemists, all of whom certified that it did not contain alcohol or any of the alleged harmful drugs.

These facts were also proven in the trial of the action in the Supreme Court. But the business of Dr. Pierce was greatly injured by the publication of the libelous article with

## Breaking a Compact

By BELLE MANIATES

Tom Dalton paced the blue gravel road in front of the palatial hotel waiting for Dorothy. Waiting for Dorothy had been his normal condition this summer.

He was a man whose well made shoulders alone marked him as man of action. This new role of his was not consistent with his principles and habits.

He consulted his watch frequently and said things under his breath, but the instant he caught sight of the fair young form in the doorway he forgot his impatience.

When Dorothy's ingenuous, dazzling eyes looked into his he drew a quick breath and told himself she was well worth the waiting, however prolonged.

Time was made for slaves, not for Dorothy. It did not even occur to her to ask him if she were late or if he

1888 a third year was added. Still later it was found impossible to do justice to the work in three sessions, and the regular College Course, leading to the degree of B. S. A., now covers a period of four years.

But there are many farmers and farmer's sons who can not spare the time to take the long College Course, and others who might find the time, but have not the means or education sufficient for matriculation. For the sake of such men we have supplemented our regular work by adding **SHORT COURSES** to meet their special requirements.

A Judging Pavilion, with a fifty foot ring, and with seats all around capable of seating comfortably 550 persons, has been built especially for the convenience of those taking the Short Course in Live Stock. Into this ring all classes of horses, beef cattle, sheep and swine are brought for criticism. The animals are judged by the members of the class themselves, and finally judged by some recognized authority, so that students may have a good opportunity to compare their judgment with that of others. No money will be spared in bringing in some of the best representatives of all these classes from the stables of our leading Ontario breeders. The work will be conducted by G. E. Day, Prof. of animal husbandry; H. S. Arkell, lecturer in animal husbandry; and Dr. J. H. Reed, Prof. of Veterinary Science, with the assistance of other competent stockmen who are regarded as authorities on the most valuable breeds of farm animals.

One hour each day will be spent in lectures on seed selection and the best methods of cleaning seed, and in the judging of oats, barley, wheat, peas, and corn; and the seeds of grasses, clovers, and various fodder crops, and in the identification of weed seeds most commonly found in grass and clover seed. This course will be conducted by C. A. Zivitz, Prof. of Field Husbandry; J. Buchanan, lecturer in Field Husbandry; and J. E. Howitt, lecturer in Botany.

In the Poultry Course which lasts for one month, instruction will be given in the following branches of the poultry business: Preparation of plans, specifications and plans of poultry houses for various purposes; location, construction, ventilation and furnishings; breeds and varieties of fowls; origin and characteristics; principles of breeding and mating; judging; natural

insects live for only a few hours, while fish, elephants and turtles are frequently centenarians. The average life of the mosquito is three days. Toads usually live to the age of about fifteen years, while carp have been known to reach 150. Chickens live from twelve to fifteen years, dogs to the age of ten and occasionally fifteen and parrots to extreme age. These birds have been known to pass the age of 200 years. Turtles are also frequently centenarians, as are storks, and elephants are said to reach the age of 300 years. Whales have been known to live for 400 years.

#### Postage Stamps.

The largest postage stamp ever issued was a five cent stamp of the United States intended for newspaper postage. It was 4 by 2 inches in size. The smallest postage stamp, on the other hand, was a twenty-five pfennig stamp of Mecklenburg-Schwerin, issued in 1856. It was one-fourth the size of an ordinary postage stamp. Incidentally it has been calculated that about 13,000 different kinds of postage stamps have been issued by the various countries of the earth.

#### Fate.

A strange comedy and tragedy was woven into the lives of Ibsen and Bjornson. As young men they were great friends; then politics flung them apart; they quarreled and never met for years and years. Strange fate brought the children of these two great writers together, and Bjornson's daughter married Ibsen's only child. The fathers met after a quarter of a century of separation at the wedding of their children.

#### Deafness Cannot be Cured

by local applications, as they cannot reach the diseased portion of the ear. There is only one way to cure deafness, and that is by constitutional remedies. Deafness is caused by an inflamed condition of the mucous lining of the Eustachian tube. When this tube is inflamed, you have a rumbling sound or imperfect hearing, and when it is entirely closed, deafness is the result, and unless the inflammation can be taken out and this tube restored to its normal condition, hearing will be destroyed forever; nine cases out of ten are caused by Catarrh, which is nothing but an inflamed condition of the mucous lining.

We will give One Hundred Dollars for any case of Deafness caused by Catarrh that cannot be cured by Hall's Catarrh Cure. Send for circulars free.

J. J. CHENEY, & CO. Toledo, O. Sold by Druggists. Take Hall's Family Pills for constipation.

A first-class line of sleigh bells and horse blankets.

MADOLE & WILSON

A Boston schoolboy was tall, weak and sickly.

His arms were soft and flabby. He didn't have a strong muscle in his entire body.

The physician who had attended the family for thirty years prescribed **Scott's Emulsion**.

NOW:

To feel that boy's arm you would think he was apprenticed to a blacksmith.

ALL DRUGGISTS; 50c. AND \$1.00.

had obtained analyses of "Favorite Prescription," from eminent chemists, all of whom certified that it did not contain a color or any of the alleged harmful drugs. These facts were also proven in the trial of the action in the Supreme Court. But the business of Dr. Pierce was greatly injured by the publication of the libelous article with its great display headings, while hundreds of thousands who read the wickedly defamatory article never saw the humble, groveling retraction, set in small type and made as inconspicuous as possible. The matter was, however, brought before a jury in the Supreme Court of New York State which promptly rendered a verdict in the Doctor's favor. Thus his traducers came to grief and their base slanders were refuted.

#### England's "Fiery Dragons."

In the year 1532 various parts of Great Britain were visited by a remarkable meteorological phenomenon, which the old authors refer to as "the visitation of the fire drakes or dragons." The author of "Contemplation of Mysteries" says: "In ye letter parte of ye yere (1532) ye fieri dragons appeared flying by flocks or companies in ye ayre, having swines' snowtes, and sometimes were they seene foure hundred flying together." In speaking of the fire dragons in another portion of his work he says, "Common people thinke fire drakes to be spirits which watch over hidden treasure, but the philosophers affirm them to be ye result of poisonous vapors which are spontaneously lighted in ye ayre."

#### Ireland's Coast Cliffs.

The finest cliff scenery in the United Kingdom is on the coast of the county of Donegal, at the northwest of Ireland, facing the Atlantic, where the variety and grandeur of the cliffs are most thrilling and impressive. Slieve League, south of Glen Columbkille, is a superb introduction to Donegal's coast splendors. In less than half a mile from the sea the mountain rears its height of nearly 2,000 feet. In the Island of Achill, off the west coast of Ireland, the cliffs of Croghan, at Achill Head, rise sheer from the water's edge to the dizzy height of 3,000 feet.—London Standard.

#### Smoked Glass.

Murphy—Well, this hates the mischief. Dooley told me that if I smoked a piece of glass I'd be able to see the spooks on the sun. Sure, ain't I fairly kilt wid thyring to make me pipe draw? 'Tis the way, I'm thinking, that either I haven't the right kind of glass or else Dooley's been fooling me.—London Tri-Bits.

#### Took Wind Out of Their Sails.

Addressing one of his southern audiences, Sam Jones once requested all the husbands present who had not spoken a harsh word to their wives for a month to stand up. He shook hands with those who arose and then introduced them to the rest of the audience as the "seven biggest liars in Tennessee."

#### Honesty and Ability.

Uncle—You see honesty is absolutely necessary, but ability is equally indispensable. Nephew—That may be, but what end does honesty serve? Uncle—To maintain your obligations. Nephew—And ability? Uncle—To avoid having them.—All Men's Forerunner.

#### In Men a Barber's Proposition?

Mrs. Richmond—That barber tempted me first, Graham—Yes, I suppose he wanted to begin on something easy.

#### Necessary Qualifications.

Physician—I would assist a diet. Patient—Well, it will have to be some thing that agrees with the cook.—New York Sun.

#### CASTORIA.

Bears the Signature of The Kind You Have Always Bought *Chas. H. Fletcher*

"I HAVE PROMISED TOM TO GET UP TO BREAKFAST."

had been waiting long. She was the only daughter and had been subjected to no rules or regulations.

Her father, William Lloyd, had been perceptibly troubled when approached by Tom on the subject of his love and desire for Dorothy.

"I don't know of a fellow anywhere I think as much of as I do of you, Tom, and there is no one else whom I would like to have for a son-in-law, but you haven't said anything to her yet."

"No. Still, of course, she must know I love her."

Lloyd smiled.

"Very likely. But I don't want you to say anything to her until you have known her longer—until you are entirely sure you care enough."

Tom stared.

"Do you think any one could know her at all and not love her?"

"I must admit," replied Lloyd, "that we have done all we could to spoil Dorothy, and yet she is not spoiled—to us. She has always had her own way, but it has been such a witeling, sweet way we were glad to give it to her. It is our dearest wish and hope that she may always continue in her princess role."

"She has many little characteristics that we can laugh at, but to a conventional, practical, systematic nature like yours I fear will prove distracting. Her oblivion to the flight of time, her irresponsibility and utter disregard of anything approaching a system will be wearisome to you. I fear, after the glamour of courtship and honeymoon is over, you must take her as she is, with no thought of alteration."

Tom protested that he loved Dorothy as she was and that in naught would he have her changed, but Lloyd had seen his looks of impatience and their sudden vanishing this morning.

"There'll come a time when his impatience will linger after Dorothy's arrival on the scene," he reflected, with a sigh.

Meanwhile Tom was mildly remarking to Dorothy that he feared they would be late for the starting of the regatta. Dorothy gayly rejoined that she had never seen the starting of anything.

"I am dreadfully unpunctual," she added, with a little sigh. "It's inconvenient for my friends, but I can't help it. I get up late in the morning and everything has begun. I've never seen the first act of a matinee yet."

"Don't you breakfast with your father and mother?" he asked gravely.

"Breakfast," she echoed, with a little shrill. "I've never seen a breakfast table. I was brought up that way. I was a delicate child, and they never awoke me, and now, oh, there's something dead in the early morning sunshine! It seems so lonesome at the starting of day. Do you think it such a crime as your face indicates?"

"I really think you ought to breakfast with your parents, Dorothy," was the seriously spoken rejoinder.

"Do you, Tom?" she asked dejectedly.

"He doesn't know—he can't imagine—what a difficult thing it would be for me," she thought. "It would be as strange to me as it would to him."

An inspiration came to her.

"Tom," she asked, "if I turn over a new leaf and get up to breakfast, will you do something for me?"

His face glowed with enthusiasm and something else.

"There's nothing in the world I wouldn't do for you, Dorothy."

"Well, I'll get up to breakfast and make an effort to be on time if you will part your hair in the middle."

"What?"

"Yes; it's the only flaw I've discovered in you, Tom. I can't bear hair parted on the side. It's so old-fashioned."

"But I'd look perfectly idiotic with my hair parted in the middle," he protested, appalled at the prospect.

"Now you can see," she cried in triumph, with dancing eyes, "how strange it would seem to me to get up in the morning!"

Tom saw that this was his hour, and he met it unflinchingly.

"It's a compact, Dorothy. I'll part my hair in the middle or anywhere if you will get up in the morning and occasionally consult a timepiece."

That same evening Dorothy received the first piece of advice ever bestowed upon her by her adoring father.

"You are quite grown up, Dorothy," he suggested gently, "and don't you think you should be a little more systematic or punctual in your mode of life?"

"Et tu, Brute!" she thought, saying aloud: "Say no more, papa. I have promised Tom to get up to breakfast every morning and that I would try and be on time generally."

"You have?" he exclaimed in surprise and with the thought that she surely must love Tom.

"Yes, for a consideration. He is to part his hair in the middle."

"Tom Dalton part his hair in the middle? I'd as soon think of Abraham Lincoln dressed as Little Lord Fauntleroy."

This comparison amused Dorothy, and she began to wonder how Tom would look.

"I've invited him to breakfast with us tomorrow, so we will have an opportunity to see how his hair becomes him."

Dorothy did not face the next morning in a spirit of buoyancy. She came into the dining room listlessly and with a feeling that life was a desolate waste.

Her father and mother were already at the table, and Tom soon entered, looking sheepish and conscious. An unwilling smile of amusement was forced back by Dorothy as she looked at his hair and expression. It was incongruous, but she was not going to admit it.

Her words were few, her voice sad, her manner martyred throughout the meal. When later Tom came to take her for a drive he was patiently and dejectedly waiting for him. In the evening she was again on schedule time.

Three days of methodical life dragged on, and then Tom felt that he could no longer endure the new life and the

## BY-LAW NO.

OF THE CORPORATION OF THE TOWN OF NAPANEE.

A By-Law to authorize the issue of debentures of the Town of Napanee to the amount of \$2250.00, for the purpose of raising \$2250.00, to provide for cost of extending the Dundas street sewer along West street from Dundas street to Thomas street and connecting with the Canning Factory sewer.

WHEREAS the Corporation of the Town of Napanee has constructed a sewer from the banks of the Napanee River along West street to Dundas street and along Dundas street westerly to the creek crossing the same.

AND WHEREAS it is desirable to continue said sewer along West street to Thomas street to connect with the Canning Factory sewer at a cost of \$2250.00.

AND WHEREAS it is desirable that the amount necessary to defray the cost of this said extension of said sewer should be raised on the credit of the said Town.

AND WHEREAS in order thereto it will be necessary to issue debentures of the Town of Napanee for the sum of \$2250.00 as hereinafter provided, (which is the amount of the debt intended to be created by this By-Law) the proceeds of said debentures to be applied to said purpose and no other.

AND WHEREAS it is desirable to issue the said debentures at one time and to make the principal of said debt repayable by yearly sums during the period of twenty years being the currency of the said debentures, said yearly sums being of such respective amounts that the aggregate amount payable in each year for principal and interest at the rate of four per centum per annum in respect of the said debt shall be as nearly as possible equal to the amount so payable in each of the other nineteen years of the said period.

AND WHEREAS the total amount required to be raised annually by special rate for paying the said debt and interest as hereinafter provided is \$165.56.

AND WHEREAS, the amount of the whole rateable property of the Town of Napanee, according to the last revised Assessment Roll is \$1,104,883.

And whereas the amount of the existing debenture debt of the said municipality is \$88,739.86, exclusive of local improvement debts secured by special Acts rates or assessments whereof no part of principal or interest is in arrears.

THEREFORE the Municipal Council of the Corporation of the Town of Napanee enacts as follows:—

1.—That for the purpose of raising the sum of \$2250.00 as aforesaid debentures of the said Town of Napanee amounting to the sum of \$2250 as aforesaid, in the sum of \$165.56 each shall be issued on the First day of May, A. D. 1907, each of which debentures shall be dated on the date of the issue thereof and shall be payable one on the First day of May in each of the years from 1908 to 1927 inclusive, at the office of the Treasurer of the Town of Napanee, without interest, the interest on the said loan calculated at the rate of four per centum per annum being already included in the amount of the said debentures.

2.—It shall be lawful for the Mayor of the said Municipality and he is hereby authorized and instructed to sign and issue the said debentures hereby authorized to be issued and to cause the same to be signed by the Treasurer of the said Municipality and the Clerk of the said Municipality is hereby authorized and instructed to attach the seal of the said Municipality to the said debentures.

3.—THAT during the currency of the said debentures there shall be raised annually by special rate, on all the rateable property of the Town of Napanee the sum of \$165.56 for the purpose of paying the amount due in each of the said years for principal and interest in respect of the said debt.

4.—THIS By-Law shall take effect on the day of the date of the final passing thereof.

5.—THE votes of the electors of the said Town of Napanee, shall be taken on this By-Law on Monday the Seventh day of January 1907 commencing at the hour of nine o'clock in the forenoon, and continuing till five o'clock in the afternoon of the same day, by the following Deputy Returning Officers, and at the following places, that is to say:—

WEST WARD No. 1. St. Frank's Church.

## BLOOD POISON

On account of its terrible effects, blood disease is called the King of all diseases. It may be either hereditary or contracted; so while it may not be a crime to have the disease, it is a crime to permit it to remain in the system. It may manifest itself in the form of Scrofula, Eczema, rheumatic pains, ulcers or swollen joints, thickening of the skin, eruptions of blotches, sores in the mouth or on the tongue, sore throat, falling out of hair, "hardened stomach," and a general depression of the system. If you have any of these symptoms don't neglect yourself. You have no time to lose. Beware of "old fog" treatment—beware of mineral poison—beware of Quacks and Fakirs. O.K. KNEW MEDICINE REMEDY FOR BLOOD POISON is guaranteed to cure this disease, never to return. Bank Bonds will protect you. Our treatment is not injurious in any way, but reaches the very root of the disease and eliminates all poison from the system. The symptoms of disease gradually disappear. The blood becomes pure and enriched, the whole system is cleansed and purified, and the patient feels prepared anew for the duties and pleasures of life. CURE GUARANTEED OR NO PAY. 25 Years in Detroit. 250,000 Cured.

Consultation Free. Question Blank for Name Treatment and Costs Free.

### IN THE WHEELHOUSE.

**It Is There That All the Forces of a Great Vessel Are Directed.**

On entering the wheelhouse of an ocean liner a landsman is likely to be awed by the group of instruments and masses of complicated machinery on every hand. Your eye will first be caught by the wheel or wheels, for often there are two or more of them, one directly in line with the other. The first of these is an insignificant looking affair perhaps a foot or so in diameter, which seems out of all proportion to the work it must accomplish. Directly in front of it stands the ship's compass, while back of it are massed many complicated wheels and levers which transform the slightest motion of the wheel into the great force which guides the ship.

All the great steamers are steered nowadays by the aid of steam or electricity. In the old days half a dozen men at times would struggle with the wheel in high seas, and sailors have been killed by the rapid revolving of the projecting spoke handles. The modern steering gear makes it possible to guide these great ships with the slightest pressure. The rubber, weighing many tons, is perhaps 500 feet square, yet with a touch of the polished wheel the great 700 foot ship will swing 1/2 mile to starboard with almost the delicacy of a needle. The man at the wheel operates the steering engine, which, in turn, is the great rubber.

The most astonishing thing about the bridge is to find the wheelhouse with all its curtains tightly drawn, as often happens, and the man at the helm steering the boat without seeing ahead at all. At night or even by day if the light of the binnacle is confusing the wheelhouse is often completely shut in. The man at the wheel, it is explained, does not need to look ahead. The lookout high up in the "crow's nest" and the officer on watch on the bridge will keep him informed if any object is sighted. The duty of the man at the wheel is to keep the ship on her course. Throughout his watch of four hours he must keep his eyes on the compass and nowhere else.

On one side of the wheelhouse are posted the sailing directions, which give the wheelman explicit orders.

## Heart, Throat, Liver and Skin

DR. AGNEW'S FOUR FAMOUS SPECIFICS CURE

The course to be followed for the day is placed in a neat little rack called the compass control. It suggests the rack in church at the side of the pulpit which announces the number of the hymns and psalms for the day's service. The compass control will announce, for instance, N, 7, 8, W, or some such formula. The wheelman glances at this as he takes his watch at the wheel and holds the great ship exactly on this course until he is relieved.—Francis Arnold Colli in St. Nicholas.

### IDEAS OF HEAVEN.

The Romans believed in the Elysian fields of the Greeks.

The Haitians locate heaven in one of the beautiful valleys of their island.

The Assyrians believe heaven is in the bowels of the earth or far away in the east.

Some natives of the south Pacific think heaven a place where they will be white.

The Greek belief, according to Socrates, was that the pious went to heaven, like prisoners set free, to dwell in unclouded peace.

According to the ancient astronomers, heaven was seven or eight solid spheres, with a planet for the center of each. Some even ran the number up to seventy.

The Egyptians thought heaven to be on many islands at the foot of the Milky way. These worthy spent the time harvesting beans and in feasting, singing and playing.

### Gentle Things.

"Yes," said the teacher, "the egg represents all that is gentlest in creation—the cooling doves, the tuneful song birds and the stately swan, Johnny, what other gentle things are hatched from eggs?"

"Snakes, ostriches, alligators, sparrow hawks and eagles," said Johnny.

### Endless Expense.

"How about these dukes?" inquired Mr. Struckle. "Are they purty expensive?"

"You bet they are," answered Mr. Nurich, who had bought one. "And you want to remember this, Hiram. The first cost is the smallest item."

dejectedly waiting for him. In the evening she was again on schedule time.

Three days of methodical life dragged on, and then Tom felt that he could no longer endure the new life and the surprised glances at his head.

"Dorothy," he said impetuously, "you seem unhappy. Will you tell me why? Is it coming to breakfast?"

"No, Tom," she replied, with a little laugh that was more like a sob. "I think it's your hair. I can't bear to look at you," and she burst into tearful laughter.

"Dorothy, darling," he said. "I am glad you can't. Let me, too, make a confession. I have learned that your most delightful trait was your blissful disregard of time. To come in from the city where man, woman and child were on a mad rush for trains and see your delicious oblivion to the twelve figures on a timepiece was most restful."

"Then shall we go back to our old life?" she cried joyfully.

"Yes—or will you begin a new life with me, Dorothy?"

"Without breakfast?" she asked entreatingly.

"Without breakfast!" he replied solemnly.

#### Horror of Close Shaves.

A New York barber has on a corner table a fine pocket microscope and a framed announcement that says:

"Do you know what a close shave means? Bring a friend here, if you don't, have him shaved close, and then look at his face through this microscope. The entire skin will resemble a piece of raw beef."

"To shave the face perfectly smooth requires not only the removal of the hair, but also of a portion of the cuticle; so that a close shave means the removal of a layer of skin all round. The blood vessels thus exposed are not visible to the eye, but under the microscope each little quivering mouth, holding a minute blood drop, protests against such treatment. Bring a friend and see!"

"The nerve tips are also uncovered by close shaves, and the pores are left unprotected, which makes the skin tender and unhealthy. This sudden exposure of the inner layer of the skin renders a person liable to colds, hoarseness and sore throat."—New York Press.

#### National Bank Notes.

The government guarantees the circulating notes issued by national banks, but not the deposits. Each national bank is required to deposit with the treasury in Washington government bonds to the amount of the notes issued by it, and if the bank fails the bonds are sold, and out of the proceeds the notes are redeemed as they are presented. In fact, the government redeems these notes at any time, charging the amount so paid to its bond account with the bank. But while the government does not guarantee the deposits in national banks it safeguards them by close inspection of the condition of all of them, so that there is seldom a bad failure of a national bank. —St. Louis Republic.

#### So Different.

"Women all have the same fault. They can't pass a shop that has bonnets in the window without looking in."

"So different from men! They can't pass a shop that has bottles in the window without going in."

Beware of worrying about little things. It is the malady of happy people.

It is more heroic to live on one's grief than to die of it.

pine-o'clock in the forenoon, and continuing till five o'clock in the afternoon of the same day, by the following Deputy Returning Officers, and at the following places, that is to say:—

WEST WARD NO. 1, at Frank Kinkley's residence, C. W. Bowen, D. R. O.

WEST WARD NO. 2, at Mrs. J. H. Clapp's residence, Geo. Vanastine, D. R. O.

CENTRE WARD NO. 1, at Town Hall, Geo. Walters, D. R. O.

CENTRE WARD NO. 2, at Charles Poliard's residence, Patrick Gleason, D. R. O.

EAST WARD, at Perry's Woolen Mill Office, George Perry, D. R. O.

6—ON Saturday the Fifth day of January 1907 the Mayor of the said Town of Napanee, shall attend at the Council Chamber at twelve o'clock, noon to appoint persons to attend at the various polling places aforesaid, and at the final summing up of the votes by the Clerk on behalf of the persons interested in and promoting or opposing the passing of this By-law respectively.

7—The clerk of the council of the said Town of Napanee, shall attend at his office at ten o'clock in the forenoon of Tuesday the Eight day of January A. D. 1907 to sum up the votes for and against the By-law.

Dated at the Town Hall, in the Town of Napanee, the 5th day of December A. D. 1906.

Mayor.

Clerk.

Take notice that the above is a true copy of a proposed By-law which has been taken into consideration, and which will be finally passed by the Council of the Municipality of the Town of Napanee, in the event of the assent of the electors, being obtained thereto after one month from the first publication in the Napanee "Express", the date of which said first publication was the 7th December A. D. 1906, and that the votes of the electors of the said municipality will be taken thereon on the day at the hours and places therein fixed.

W. A. GRANGE  
Clerk.

#### Measures.

Teacher—Now, you have all studied about liquid measure, and I think you know it. Johnny, you may now tell me what measure treats of inches, feet and yards. Johnny

#### The Lobsters.

"Well," said the first lobster in a bored tone, "what are you going to do now?"

"Get dressed for dinner," the second lobster answered, yawning.

A present joy is worth a thousand past sorrows or future tips.—State Journal.

**Vapo-Cresolene**

Established 1879

Whooping Cough, Croup, Bronchitis  
Cough, Grip, Asthma, Diphtheria

Cresolene is a boon to Asthmatics

Does it not seem more effective to breathe in a remedy to cure disease of the breathing organs than to take the remedy into the stomach?

It cures because the air rendered strongly antiseptic is carried over the diseased surface with every breath, giving prolonged and constant treatment. It is invaluable to mothers with small children.

Those of a consumptive tendency find immediate relief from coughs or inflamed conditions of the throat.

## Heart, I treat, Liver and Skin

**DR. AGNEW'S FOUR FAMOUS SPECIFICS CURE COMPLETELY THE WORST DISEASES OF THESE PARTS—DREADFUL HEART DISEASE RELIEVED IN THIRTY MINUTES.**

Heart disease will affect people differently, but in all cases it must be viewed with great alarm. Dr. Agnew's Cure for the Heart is the one remedy that can be safely depended upon in times of trouble. It will give relief in thirty minutes.

Mr. Thomas Petry, of Admer, Que., was troubled with severe heart complaint for five years, the pain, at times, being so severe that he could not attend to business. Every other remedy failed until he tried Dr. Agnew's Cure for the Heart, which gave immediate relief, and his words are these: "I have now taken four bottles of the remedy and am entirely free from every symptom of heart disease."

A cold in the head need not be trifled with, for it is catarrh in an incipient condition, and catarrh is not to be trifled with. Dr. Agnew's Catarrhal Powder, as scores of clergymen, members of parliament, and prominent citizens in the Dominion have borne testimony, drives away a cold in the head like magic, and where this has assumed the shape of aggravated catarrh, producing deafness and throat trouble, it effects a permanent cure.

It is not always safe to take pills for liver trouble. They not unfrequently create other troubles that are serious. Dr. Agnew's Liver Pills, whilst thoroughly certain of removing all liver trouble, give no difficulty either at the time or afterwards. They are pleasant to take and cost only 10 cents.

The faculty that Dr. Agnew has displayed in getting at the seat of trouble is manifest in his Ointment, as in the other three remedies. This contains the elements that give speedy and permanent relief in all skin diseases and is peculiarly effective in curing piles. 35 cents.

Sold by Fred L. Hooper.

## Removed the Growth.

DOUGLAS & CO., NAPANEE, ONT.

DEAR SIR,—During year 1890-91 I was troubled with a large lump growing on the right side of my neck near the ear. Had consulted several physicians and used everything I could hear of, all to no use. Was told to use

Douglas' Egyptian Liniment.

I did, and before I had used half a twenty-five cent bottle was permanently cured. Since then I have used it for everything where outward application is required; am yet to learn of anything in reason that I cannot cure with it. No man has any idea of its value until he has used it; would not be without it under any circumstance

Respectfully yours,

NATHANIEL W. REID.

Enterprise P. O.

#### An Abrupt Finale.

Joaquin Miller had just won recognition as the poet of the Sierras and was working on a paper in Oregon. He had been contributing verses and short stories and had just begun a tale about the soldiers on the frontier who suffered with scurvy. The editor wanted the scurvy story for the morning publication, but Joaquin Miller could not concentrate upon his work. His mind leaped to the anticipated joy of a great social function occurring that evening, for at this time he was a social lion. However, he had proceeded in his story up to the point of the conditional cure for the disease where all the soldiers suffering with scurvy had been buried, with only their heads exposed to view. The editor was yelling "Copy!" The poet's mind refused to work. He could not finish the tale, leaving his soldiers in such a plight. Suddenly an inspiration came to him. He grabbed his pencil and wrote rapidly the following words:

"And a she wolf came along and ate off all their heads." Then he made a free line for the door and was not seen again until the next day. His story was not published.

#### A Cause of Divorce.

"What is the most frequent cause of divorce," the lawyer was asked.  
 "It is nearly incredible," he said, "but a thing just causes divorce often-

er than you'd imagine is married people's quarrelling over their right to open one another's letters. The husband will claim that he is entitled to open the wife's mail. The wife will claim that she is entitled to open the husband's. In the letters of neither will there be anything of a private or compromising nature, but nevertheless they both want to get their mail inviolate—it enrages them to have it opened and read. Quarrels over this letter opening question vex, I suppose, 90 per cent of married couples. Of this 90 per cent a distressingly large proportion go on from bad to worse till they wind up in the divorce court. So, young man, when you come to marry, leave your wife's mail alone, no matter how she may pry into yours."

#### Care of the Dog.

Dogs vary greatly in their appetites, and occasionally we find a dainty feeder who will nose over a mixed dish of food, picking out a bit here and there and showing but little relish for what he does eat. This is an evident sign that something is wrong. Changing his teeth, if a puppy, thus disturbing his system, may be the cause, and in this case a little cooling medicine should be given.

## A BY-LAW.

To prohibit the sale of liquor in the Township of Richmond.

The Municipal Council of the Township of Richmond, hereby enacts as follows:

1.—That the sale by retail of spirituous, fermented, or other manufactured liquors is and shall be prohibited in every tavern, inn or other house or place of public entertainment in the said municipality, and the sale thereof except by wholesale, is and shall be prohibited in every shop or place other than a house of public entertainment in the said municipality.

2.—That the vote of the electors of the said Township of Richmond will be taken on the by-law by the deputy-returning officer hereinafter named on Monday the 7th day of January, One Thousand Nine Hundred and Seven, commencing at nine o'clock in the morning and continuing till five o'clock in the afternoon at the undermentioned places:

For Polling Sub-division No. 1, the poll shall be held at the residence of Wm. Scheerhorn, on Lot No. 18, in the 2nd Con. of Richmond and that Ira E. Grooms shall be Deputy-Returning Officer. For Polling Sub-division No. 2, the poll shall be held in the Town Hall, in the village of Selby, and that Geo. S. Saxsmith shall be Deputy-Returning Officer. For Polling Sub-division No. 3, the poll shall be held at the Grist Mill, Forest Mills, and that Wm. Provins shall be Deputy-Returning Officer. For Polling Sub-division No. 4, the poll shall be held at the Orange Hall, in the village of Roblin, and that Geo. S. Richardson shall be Deputy-Returning Officer.

3.—That on the 15th day of December, A. D. 1906, at the Town Hall, in the village of Selby, at the hour of 10 o'clock in the forenoon there shall appear in writing, signed by himself, two persons to attend at the final summing up of the votes by the clerk, and one person to attend at each polling place on behalf of the persons interested in and desirous of promoting the passing of this by-law, and a like number on behalf of the persons interested in and desirous of opposing the passing of this by-law.

4.—That the Clerk of the said Municipal Council of the Township of Richmond, shall attend at the Town Hall, Selby, at the hour of 12 o'clock on the 2nd day of January, A. D. 1907 to sum up the number of votes given for and against this By-Law.

5.—This By-law shall come into operation, and be of full force and effect on and after the first day of May next after the final passing thereof. Council Chamber, December 3rd 1906, Resve.

#### NOTICE.

Take notice that the above is a true copy of a proposed By-law which has been taken into consideration by the Municipal Council of the township of Richmond, and which will be finally passed by the said Council (on the vote of the assent of the electors being obtained thereto, as provided by the Liquor License Act) after one month from the first publication thereof in the "Naponee Express" the date of which first publication was Friday, the 26th day of December 1906, and that at the hour, day and place thereinafter mentioned, the same will be

## CRIMINALS IN INDIA

WHOLE TRIBES WHOSE HEREDITARY PROFESSION IS THEFT.

Robbers Born and Bred So by Caste, They Are Politic and Modest Until the "Profession" Requires Them to Become Cruel and Frenzied.

India is usually spoken of as a land where life and property have become safe under British rule. True, the bands of thugs have been broken up, the Pindharry hordes have been suppressed, and the British police system is spread over the whole country, but the criminal tribes or castes, those whose hereditary "profession" is robbery and nothing else, remain, their instincts strong, wanting only opportunity to practice their traditional calling, which the Indian caste system forbids them to abandon.

These tribes are most numerous and most wayward in the united provinces, in which are Cawnpur and Lucknow, the cities associated forever with the Indian mutiny.

Half of the division is Oudh, the native province last annexed by Britain, many of whose old men vividly remember when every "talookdar," or feudal chief, lived in a fortified castle and retained a swarm of armed men, who received no pay, but lived on the country. They were official robbers, and their example gave free scope to the "professional" robbers, or, as they have always been known in India, the criminal tribes.

These tribes are the Samauriabs, the Barwars, the Santhals, the Doms, the Haburabs, the Aheriabs, the Banriabs, the Bhaturs. Each tribe has its own dialect, dress and customs.

A singular feature of Indian life is that persons who would be considered depraved characters in a European country and would bear the stamp of their nature on their faces are not degraded in their own estimation or in that of the people at large. A casual murderer is not ashamed of himself nor abhorred by his neighbors, who welcome him back among them if he escapes the gallows and is released after a term in jail. The universal belief that all things are decreed by fate accounts for this amazing state of feeling. Much more, then, are men regarded with indifference or even respect whose time honored, hereditary and natural profession is robbery with murder.

So the members of these tribes go in and out of the towns and villages without misgivings, and there is not a sign in their faces or manner to indicate that their business is robbery and murder.

When a gang encamps (outside of a town the inhabitants feel uncomfortable and take precautions, but cherish no ill will against the strangers. And when robberies and murders occur almost immediately within a radius of twenty miles they take more precautions, but regard the whole affair as a visitation of Providence, like a flood or a fire.

These habitual criminals are not degraded in any sense understood by the people. They simply have the misfortune to belong to a trade which is unpleasant for the neighborhood—like a dyer's or a tanner's.

They are well satisfied with themselves and are as careful as other people of their respectability. They have no unusual vices; they do not get drunk or riotous; they are civil, courteous and unassuming. Cruelty and ferocity are with them neither habits nor pleasures, but simply methods of business.

During the excitement of a sudden

# DENBIGH.

We are enjoying fine winter weather and splendid sleighing lately and our farmers are very busy in getting their teaming done. Quite a number have lately been, or are now in Reelfoot, marketing produce and getting their holiday supplies.

Business at our village has also improved some and especially the Roller Mills have lately run at their full capacity day and night. The proprietor Mr. E. Petzold has engaged Mr. H. Glaeser to assist him during the season.

Harvey Lockwood has only been able to make part of his new dwelling house habitable and has moved into it with his family, and Ardie Wright and family have moved into the premises created by him.

Mr. Albert Lockwood enjoyed a trip to Ottawa, being a witness in a lawsuit disposed of there.

It is reported that Mr. James Slater had the fore finger of his right hand amputated in Belleville Hospital where he went to get a serious wound in his hand treated.

Edgar Grainger who has suffered for years with Asthma and been unable to work, died of heart failure at the residence of his father-in-law Mr. Henry Crankshaw on the 17th inst at the age of 34 years. The funeral will take place this afternoon at the Methodist church and cemetery. He leaves his widow and one little son in rather straightened circumstances.

The nominations for next year Municipal Council for Denbigh Abinger and A. Lby passed off as usual, though at one time two members of this year's Council got a little warmed up in a dispute about some municipal and personal affairs. The following gentlemen were nominated for Reeve: Messrs John L. Lane, Wm. Sallan, and Herman Glaeser. For Councilors: Messrs S. Ball, Oscar Chatson, John Irish, Wm. John, Edman Marquardt, Walter Thompson, Melbourne Rose and Emil Warlich. Messrs Glaeser and Thompson tendered their resignation which still leaves nine to select next year's representative.

A great offer—The Napanee Express from now until January 1908 for \$1.00. Send your order early.

## DANGER IN HIGH SPEEDS.

The Force Developed by Swiftly Moving Automobiles.

Danger to drivers of automobiles grows rapidly greater with each new burst of speed. A correspondent of the Scientific American develops the theme as follows: "The danger in all cases increases as the square of the speed. Take three machines of the same make, one going five miles an hour, one twenty miles an hour and one forty miles an hour. The second has stored up in it, due to its rapidity of motion, sixteen times as much energy as the first, and if it leaves the road and runs into an obstacle, such as a tree, a stone wall or a ditch, it will strike with sixteen times as great force. In going around a curve or turning a corner it is sixteen times as likely to upset, skid into the ditch or strip a tire. When the power is shut off and the brakes applied it will go sixteen times as far before it can be brought to a stop. If it comes upon a pedestrian suddenly the latter will have to exert sixteen times as much energy to get out of the way in time and if struck will be struck with sixteen times the force. The third machine will be sixty-four times as likely to get into trouble in going around a curve as the first."

"An object going five miles an hour is moving with the same speed as it would have attained in falling ten inches. In moving ten miles an hour it is going as fast as though it had

# THE OLDEST MAN IN AMERICA

## Escaped the Terrors of Many Winters By Using Pe-ru-na.

"I Attribute my Extreme Old Age to the Use of Pe-ru-na."

Mr. Isaac Brock, 117 Years Old Last Birthday.

ISAAC BROCK, a citizen of McLennan county, Texas, has lived for 117 years. For many years he resided at Bosque Falls, eighteen miles west of Waco, but now lives with his son-in-law at Valley Mills, Texas.

Some time ago, by request, Uncle Isaac came to Waco and sat for his picture, holding in his hand a stick cut from the grave of General Andrew Jackson. Mr. Brock is a dignified old gentleman, showing few signs of decrepitude. His family Bible is still preserved, and it shows that the date of his birth was written 117 years ago.

Born before the United States were formed.

Saw 22 Presidents elected.

Pe-ru-na has protected him from all sudden changes.

Veteran of four wars.

Shod a horse when 99 years old.

Always conquered the grip with Pe-ru-na.

Witness in a land suit at the age of 110 years.

Believes Pe-ru-na the greatest remedy of the age for catarrhal troubles.

IN speaking of his good health and extreme old age, Mr. Brock says: "After a man has lived in the world as long as I have, he ought to have found out a great many things by experience. I think I have done so."

"One of the things I have found out to my entire satisfaction is the proper thing for ailments that are due directly to the effects of the climate. For 117 years I have withstood the changeable climate of the United States."

"I have always been a very healthy man, but, of course, subject to the affections which are due to sudden changes in the climate and temperature. During my long life I have known a great many remedies for coughs, colds and diarrhoea."

"As for Dr. Hartman's remedy, Peruna, I have found it to be the best, if not the only, reliable remedy for these affections. It has been my standby for many years, and I attribute my good health and extreme old age to this remedy."

"It exactly meets all my requirements. It protects me from the evil effects of sudden changes; it keeps me in good appetite; it gives me strength, it keeps my blood in good circulation. I have come to rely upon it almost entirely for the many little things for which I need medicine."

"When epidemics of la grippe first began to make their appearance in this country I was a sufferer from this disease."

"I had several long sieges with the grip. At first I did not know that Peruna was a remedy for this disease. When I heard that la grippe was epidemic catarrh, I tried Peruna for la grippe and found it to be just the thing."

In a later letter, Mr. Brock writes:

"I am well and feeling as well as I have for years. The only thing that bothers me is my sight. If I could see better I could walk all over the farm, and it would do me good. I would not be without Peruna."

Yours truly,

Isaac Brock.

When old age comes, it brings with it catarrhal diseases. Systemic catarrh is almost universal in old people. This explains why Peruna has become so indispensable to many old people.

Ask your druggist for Free Peruna Almanac for 1907

## A GIGANTIC GAMBLE.

Every Step of the Pearl Fishery Attended by Fickle Fortune.

The world's most gigantic gamble, pregnant with chance in all variations and shadings, is unquestionably the Ceylon pearl fishery. Compared with it any state lottery pales to insignificance. From the taking of the first oyster to the draining of the last vatful of "matter" every step is attended by fickle fortune, and never is

## FIGHTING BULLS.

They Are Easily Managed When They Are Massed Together.

In Spain accidents to bullfighters are of frequent occurrence, and it is interesting to see the hero of many fights swing into the chapel attached to the bull ring and kneel before the effigy of the Virgin Mary before entering the arena.

Bullfighting is the national pastime. Boys play at it in the gutters, and there are bullfights for amateurs all

and remain indifferent to the red cap extended to them, and then the list of casualties is generally high.

Sometimes a bull which has shown prodigious power and fight is pardoned by the populace. A cow, kept for the purpose, is then sent into the arena and at sight of her the bull forgets man and the fury of the battle and generally trots behind to the paddock as meek as any heifer.

Many are the curiosities about bulls which sometimes refuse to attack a particular horse and when a man is down, motionless, disdain even to paw

"An object going five miles an hour is moving with the same speed as it would have attained in falling ten inches. In moving ten miles an hour it is going as fast as though it had fallen three and a half feet. Twenty miles an hour is generally considered a very conservative speed. Now, twenty miles an hour is the same speed that would be obtained were the machine to fall thirteen feet through the air, thirty miles an hour is equivalent to a fall of thirty feet, forty miles an hour to a fall of fifty-two feet, sixty miles an hour to a fall of 120 feet and 120 miles an hour to a fall of 480 feet."

"A person struck by an automobile going twenty-five miles an hour receives the same jar as though he himself had fallen from a height of twenty-one feet, or, say, from a second story window; by one going forty miles an hour, as though he had fallen fifty-two feet, or, say, from the top of a lofty tree; by one going 120 miles an hour, as though he himself had fallen from the top of the Washington monument."

## BUYING VOTES.

**When British Electors Got Golden News From the Moon.**

Votes have been purchased shamelessly and on a huge scale in British elections. An arrangement was once made in the borough of Wendover by which two candidates were to be elected after a distribution of £6,000 (\$30,000) among the voters. The account reads: "This being settled, a gentleman was employed to go down, when he was met according to previous appointment by the electors about a mile from the town. The electors asked the stranger where he came from. He replied, 'From the moon.' They then asked, 'What news from the moon?' He answered that he had brought from thence £6,000 to be distributed among them. The electors, being thus satisfied with the golden news from the moon, chose the candidates and received their reward."

At Hindon a man dressed fantastically as the dancing Punch called at the houses of the voters and left behind him sums of 5 to 10 guineas (\$25 to \$50). Another device was to collect the citizens at the inns and hand them their reward through a hole in the door. For these offenses the house of commons passed a resolution that Hindon should be disfranchised, but so lux were the morals of the time—the close of the eighteenth century—that the resolution was never acted upon.

Again in 1859 the "man in the moon" turned up in Wakefield. He went about openly distributing money and did not appear to be in the least ashamed of his occupation. At Dublin in 1868 a hole in the wall served the purpose of a distributing center for five pound notes, while at Shaftesbury an alderman paid through a hole in the door of his office a sum of 20 guineas (\$100) to each elector.

## Harlem in New York.

In 1636 there was a settlement at the foot of a little hill on Manhattan Island which the settlers called Slang Berge, or Snake Hill, but which is now called Mount Morris. As the settlement grew each Dutchman who lived there wanted to name it after his native town. But as each one had come from a different place in Holland they could not agree. Governor Stuyvesant made careful inquiries, and, finding that no one had come from Harlem, he nipped all neighborly jealousies in the bud by naming it Nieuw Harlem.

pared with any state lottery paid to insignificance. From the taking of the first oyster to the draining of the last vatful of "matter" every step is attended by fickle fortune, and never is the interest of the people of Portugal or of Mexico keener over a drawing of a lottery, the tickets of which may have been sold at the very thresholds of the cathedrals, than is that of the natives of Ceylon and southern India over the daily results of a Manar fishery.

Each bivalve is a lottery ticket. It may contain a gem worthy of place in a monarch's crown or be a seed pearl with a mercantile value of only a few rupees. Perhaps one oyster in a hundred contains a pearl, and not more than one pearl in a hundred, be it known, has a value of importance. Nature furnishes the sea, pearling banks, oysters and all therein contained. The Ceylon administration conducts the undertaking and for its trouble and trifling outlay exacts a "rake-off" of two-thirds of all that may be won from the deep. And mere man, the brown or black diver, receives for his daring and enterprise one oyster in every three that he brings from the ocean's depths, and his earnings must be shared with boat owner, sailors, attendants and assistants almost without number.

For size of "rake-off" there is no gauge of hazard in the world offering a parallel. The Ceylon government used to exact three out of every four oysters brought in, the current tribute of two out of three having become operative only a few years since.—*Frederic C. Penfield in Century.*

## THE MANTO.

**A Garment That All Chilean Women Wear to Church.**

The Chilean women's most fetching garment, wrap, or what you will, is the manto. It is of some kind of fine black material and is worn thrown over the head. Sometimes a flap of it is drawn tightly across the forehead. After being thrown over the head the manto, by some means which I have as yet been unable to discern, is cinched in close about the neck.

This cinching in at the neck makes a kind of hood around the face, and this hood is very skillfully manipulated by some of the women to cover up moles and other defects and to conceal the fact that their hair has not been carefully combed.

From the shoulders the manto falls down in front to the toes and behind to the heels. It is held together in front partly by pins and partly by the hands of the wearer. It is usually, but not always, worn over the street costume.

The wearing of mantos by all women, no matter of what class, on attending church is obligatory. This providing for a uniform costume is quite reasonable and is designed to eliminate such things as our Easter bonnet competitions and allow the mind to forsake carthily and devote itself to things spiritual.

It also swells the attendance on many occasions, for some of the ladies, when they arise too late to have time to dress for early morning mass, merely throw on their mantos over their robes de nuit and, with the addition of such head and foot trimming as is necessary to give the impression of being fully dressed, trip demurely off to church, to all outward seeming as though they had spent hours instead of minutes before their glasses.

## CASITORIA.

Bears the Signature of *Charles H. Fletcher*

Mittens and gloves lined and unlined.  
MAYDOLE & WILSON

own ring and knee before the empy of the Virgin Mary before entering the arena.

Bullfighting is the national pastime. Boys play at it in the gutters, and there are bullfights for amateurs all over the country at which only two-year-old bulls are used and young and old descend into the arena. Astounding is the enthusiasm.

Interesting, too, is the psychology of bulls. When herded together they are docile enough, and it is a picturesque sight to see the bulls brought into the paddock prior to the fight through the streets of the city when all are sleeping. A cow trained to the business, with a bell around her neck, is all that is necessary, and the bulls follow quietly behind her.

In the plains where the bulls are reared men on horses manage them quite easily so long as they are massed together. Three bulls in the ring together would be useless for a fight, but each bull separately will fight to the death.

Bulls literally see red. Were it not that a bull will always dash at anything red the men in the ring would have no chance whatever. Of course, the bulls have what is called the red eye.

Axis and Nut says.  
MAYDOLE & WILSON

generally froth behind to the paddock, as meek as any heifer.

Many are the curiosities about bulls, which sometimes refuse to attack a particular horse and when a man is down, motionless, disdain even to paw him. Some bulls make instinctively for one man and will chase him all around the ring, leaping the barrier if he ventures over it, and if he falls will kneel upon his body and gore him to shreds. There is no mercy in bulls, and none is shown to them.—*Nineteenth Century.*

## Greek Burial Custom.

It is the custom in certain parts of Greece to carry bodies to the grave in coffins which allow the face to be visible. The fashion is said to have originated when the Turks dominated the land. At that time arms and ammunition were being constantly distributed to the Greek populace in a way which baffled the Turkish officials until a coffin which was being escorted by an apparently mourning procession was found to contain not a body, but weapons. An order was then promulgated that bodies were to be borne to the grave only on open litters or in coffins without lids.

# OVER-EATING

## OF XMAS FARE!

Pardonable at this Season, but the Results are Unpleasant

Eating more than is necessary is like choking a fire by putting on too much fuel. The food is not only undigested and useless, but a menace to health. Depression, drowsiness, headache, nausea, flatulence, and indigestion, are some of the consequences. A Bilean after dinner is the best help to the overburdened stomach. All sufferers from dyspepsia find Bileans indispensable. They enable you to eat what you like, when you like, and how you like. Unequaled as a family medicine.

## INTERESTING CURE BY BILEANS.

Lady who had Dyspepsia for a Year.

Mrs. Charles Merrett, 35 Cornwall Street, Toronto, Ont., says: "I was a sufferer from acute dyspepsia for 12 months before using Bileans. Pains in the chest and in the region of the heart, and a sensation of fullness in the stomach, usually after meals, were some of the symptoms. Such sudden and severe attacks of pain in the region of the heart made me think I had heart disease, but my doctor said there was nothing wrong with that organ, and the whole trouble lay in the food not digesting properly. I tried doctor's medicine and various remedies advised by friends and by druggists, but nothing seemed able to cure me of those terrible pains and the distress after food until I began using Bileans. A very few gave me such relief that I kept on using until I had no more trouble with my heart or stomach. I was recommended to try Bileans by parties who had used them as a family medicine for a long time, and now I would strongly recommend them to any sufferer from indigestion or allied symptoms. There is nothing to equal Bileans as an all-round medicine for young and old."

# BILEANS

Bileans are altogether different and superior to the ordinary stomach and liver medicines. They are purely vegetable in composition and are a certain cure for headache, nausea, and all the effects of indigestion. They also cure constipation, piles, female ailments and irregularities, anaemia, rheumatism, debility, blood impurities, and all ailments and disorders arising from defective bile flow and assimilation. Of all druggists at 50c. a box, or post free from the Bilean Co., Toronto, for price. 6 boxes for \$2.50.

# THE LIFE ABUNDANT

## The Master Teaches Men How to Make the Most of Their Lives.

Because I live ye shall live also.—  
John xiv. 19.

Life reaches out after more life. The evidence of vitality is its appetite for greater vitality. The higher the form of life the stronger this passion. The inanimate dust knows no desire, but the lowest form of life comes under this law that it must grow from more to more. Man most of all finds this within him, the root principle of his being, that he must either live a larger life or die.

Religion has often failed to find reception with reasonable men because it neglected this principle. It has too often said that the most religious man was the one who could make the least of himself, the ideal was an answer to the cry, "O, to be nothing!" The preacher cried, "Empty yourself"—probably meaning in pocket as well as in pride. The churches cried against education, ambition, and pleasure, against all that would enlarge the life.

It was not strange that such an attitude bred narrow characters, men of mean minds, cramped prejudices, capable of littlenesses that looked to their distorted vision like righteousness. Small wonder, too, that the religion that robbed life of its beauty and fought against primal instincts found only

### A SMALL PLACE IN LIFE.

It became the creed of the dead and not of the living; it fixed its eyes on graves and yew trees, or on another world.

This world went on its way, truly a wicked way, for it lacked the saving of the inspiration to larger, nobler living that the church should have given. Our fathers unable to separate sanctity from the odor of the sepulcher, cursed the world for its vitality and knew not that God was more likely to be in a world that was alive than in a church that was dead. Slowly have we come to know that the good news is a call to the fullest, most glorious heritage of free eternal life.

This is the gospel for to-day; the life more abundant is open to all. One who has shown us how to live, the Master of the art of living, opens the door into

the life that alone will satisfy the deep desires of our being. He who so enlarged his life that it broke the bounds of his time and the borders of a Syrian village until it covers all earth and all time teaches men how to make the most of their lives.

Remember how little he said of death, how much of life. Think how he called lives out of their shells, how he broke the limitations which formalism set on the lives of men, how he led into the freedom of the truth, how he led the little group of followers from their narrow selves into great service, how many have found greatness in this way since.

He called to the good that was in men, sleeping, but never dead; and

### IT ANSWERED HIS CALL.

He pointed out to the beauty of nature, the joy of daily living, the glory of commonplace, the great world of spiritual being as food and atmosphere for the development of life. He pointed to the life itself, the character and soul of man, as the ideal aim, as contrasted with the furniture and fixings of life.

A man is good, a man is worthy according to what he is and not according to what he is not. The life approaches the divine ideal not by its depletion but by its development. Religion is not the setting of a fence about the daily path; it is the obtaining of a new and nobler force in the life, with new strength striking out for more glorious ends.

Whatever leads a man into larger life, whatever widens the circle of his sympathies, his service, his knowledge, or enriches his mind and makes him worth more to the world, is truly religious. Whatever limits the life, narrows the soul, is from below. The lord of life did not set in man the law of growth into larger life with the intention of finding pleasure only in mocking and obstructing it. If man be in his likeness, who shall set the limits of his life? Into the glory from whence he came he must return.

HENRY F. COPE.

Golden Text: Isa. 9. 6.

### UNDERLYING CONCEPTIONS.

The lessons of the last Quarter are vital to the Christian faith both with respect to the representation which they give of the character of Jesus and also with respect to the ideals the realization of which has become the great expectation of Christian faith. The experiences of the Saviour which are set forth in the lessons help us to understand the perfection of his character, and are suggestive of what may be, and, indeed, what must be, the lot of each individual who follows in his steps. The topic becomes essentially the path of life or character perfected through suffering.

1. Principles of service. In the first three lessons there are laid down certain principles of service which pertain to perfection of character. The two

the earth as it was, and the spirit . . . unto God who gave it."

4. Life. The lesson of the risen Lord is the climax of the Christian story. It is the reason for character and the explanation of life. In the presence of the "glorious resurrection and ascension," "the cross and passion, the precious death and burial" seem to be shadows in the night yielding "to the dayspring from on high."

## LAND OF LONG DISTANCES

ACROSS THE GREAT PLATEAU OF SOUTH AFRICA.

### Civilization Looks Out of Place as the Train Crosses the Veldt.

It is fashionable to allude to a railway journey in South Africa in tones of thinly-veiled scorn and contempt, to condemn it as tiresome, complain of it as uninteresting, says a writer in the Pall Mall Gazette. There is space—almost undreamed of space. And that is all. Through the East the traveller lives in the past. He feels, if he has any imagination at all, that for the moment he has become part of an ancient civilization which still survives the train and the telegraph; he moves through cities with a story in every stone; each mile brings new pictures of the might and wealth which fill the most enchanting pages in the book of history.

In America you cross a land of the future. The cities are marvels of inventive genius; even away in the country there is an echo of the hum of restless enterprise, the murmur of a people confident they are hurrying on to realize a great destiny.

### ALWAYS IN PRESENT.

But across the great plateau of South Africa you seem to live always in the present. It becomes a dominating idea. You cannot picture a past save like the present, or imagine a future differing from to-day. The veldt is, and it looks as if it will always be as it is. The slender thread of steel which crosses its limitless space, the little towns set down at such great distances from one another, play no part in the scene. They are there, it is true; but they look fortuitous, out of place. Trains clang across the Karoo, and pant up the hill-sides from Natal; but the veldt ignores them; it does not adapt itself to them. The slow-moving ox-wagon alone fills in the picture; the mail-train, with its searchlight piercing the darkness and peace of the night, is, and always will be, a thing apart. It always seems to me that there is something curious, almost uncanny, about the great spaces of Southern Africa—something you do not find in other great lands. The haste of modern life clashes with the spirit of the veldt. There is a silent protest against the intruder. The country calls disease and drought to its aid to prevent its freedom being shackled by the bonds of civilization and the handcuffs of progress.

### FASCINATING SCENES.

The space destroys speed. As you hurry northward or eastward from London in a mile a minute express the close set villages fly past, increasing the impression of haste; but let the same engine pull the train northward from the Cape into the heart of Africa and its speed will seem to slacken. Steam cannot eat up the distances of such a continent, and there are no contrasts, no near landmarks, by which to measure the onward rush.

Yet such a journey, monotonous as it is, brings scenes which give it a fascination all its own. No one can paint in words or on canvas the beauty of a South African morning just after sunrise. Your carriage stands still at some way side station, with its solitary one-storey house and inevitable dwarfed tree. Away, as far as the eye can see, stretches the thin grassland. The landscape holds nothing to attract save its space; but the sunshine is something England never knows, the air is like a draught of champagne, the marvellous clearness and freshness—which no other land can equal—give new life. No breeze yet swirls the dust across the plain. All the world is still, as though lost in silent worship of the loveliness of the moment.

## HOME.

### SELECTED RECIPES.

Stewed dates should be prepared thus:—Select the cheaper fruit, place it in a jar, add a little water, a few strips of orange and lemon rind, but no sugar. Place the jar, closely covered, in a slow oven and cook for two hours.

Hasty Soup.—Dissolve a packet of concentrated soup in water, season it to taste, and add a few drops of vinegar. Just before serving add some finely chopped parsley, which makes a pretty garnish and improves the flavor.

Apple Dumplings.—One quart of flour, two tablespoonfuls of butter (or half lard and half butter), one and a half teaspoonfuls of baking powder, one-half teaspoonful of salt, two cups of milk. Make a dough, cover apples which have been pared and cored, and pinch together the dough ends. Boil hard for an hour.

Molasses Candy.—One cup of molasses, two cups of sugar, one tablespoon vinegar, a little butter and vanilla; boil ten minutes and allow it to cool enough for pulling.

Kisses.—One cup of sugar, one egg, one-half cup of butter, one-half cup of milk, one teaspoonful cream tartar, one-half teaspoonful of soda, flour enough to make a stiff dough, drop on tins and sprinkle with pulverized sugar. Bake in a quick oven.

Butter Scotch.—Melt together two tablespoonfuls of sugar, three of molasses, one of butter, one of water, pour into a buttered dish, and set away to cool.

Salted Almonds.—Shell the necessary quantity, pour boiling water over them, and remove the skins. For each cup of the almonds add one tablespoonful choice olive oil. Mix well and allow them to soak for an hour. Sprinkle with fine salt, a tablespoonful to each cup. Bake until brown in a slow oven, occasionally shaking the pans.

Macaroons.—Three-quarters cup butter, one pound white sugar, three eggs, two teaspoonfuls bitter almonds, two teaspoonfuls baking powder, two tablespoonfuls milk, two cups flour, make in balls.

Cookies.—Three-quarters pound sugar, one-half pound butter, one and one-quarter pounds flour, three eggs, little salt. Roll out thin and cut into small cakes.

Ginger Bread.—One cup syrup, one-half cup each butter and buttermilk, one egg, two teaspoonfuls baking soda, one teaspoonful ginger, and flour.

Barley Soup.—Boil in water for half an hour a pound of pearl barley. Place this barley in two quarts of chicken, beef, or mutton broth. Add some; carrot, turnip, and other vegetables, and boil gently for two hours. Season with salt and pepper, and when you serve add a few green peas or a little celery.

Beef Broth.—Take four pounds of meat not too fat, four whole medium-sized onions, five small carrots, and cover this with cold water. When all comes to a boil, boil slowly and skim. Set back on the stove to simmer all day, add salt and pepper, also strips of green pepper, set in a cool place over night. Next day skim all the grease off. Remove the beef and vegetables, save the carrot. Strain the soup, then simmer until well heated. Add to this boiled rice. It is improved by adding chopped parsley, and allowing it to remain until the flavor is extracted.

Coffee Buns.—One yeast cake dissolved in one-quarter cup of lukewarm water. Add to one cup of scalded milk. Add 1½ cups of flour. Beat well and let rise. When light add one-quarter cup of sugar, one teaspoonful salt, one egg, a little mace, one-quarter cup melted butter and enough more flour to knead. Knead well, let rise and roll in a long strip one-quarter inch thick. Spread with melted butter, sift cinnamon and sugar over it and roll up like a jelly-roll. Cut in one-inch pieces and place close together in pans. Bake one-half

who follows in his steps. The topic becomes essentially the path of life or character perfected through suffering.

1. Principles of service. In the first three lessons there are laid down certain principles of service which pertain to perfection of character. The two great commandments of love to God and love to man indicate the limits of the pathway along which human character must progress towards its ideal, but for the perfection of character it is also necessary that there should be watchfulness and faithfulness. These principles are illustrated in the Parable of the Ten Virgins and in the Parable of the Talents.

2. Personal experience. Three lessons follow which are peculiarly personal with respect to the life of Jesus: the anointing at Bethany, the Lord's Supper and Jesus in Gethsemane. These lessons are illustrative of the intimate personal experiences which each individual has in the realm of his own consciousness, and which pertain to the development of his own character. In the anointing there is offered to the Master the personal consolation of appreciative sympathy. 'This is one of the deepest needs of human nature. Even to be misunderstood and to be despised and rejected of men can be borne when strengthened by such consolation. The alabaster box of ointment stands opposite the cross and the tomb. The separation from friends is, too, a part of life's destiny. The lesson of the Lord's Supper is deeply symbolical of that love which gives its powers to service, permits its blood to be shed and body to be broken in the completeness of its ministration. This, after all, though a memorial, is the symbol of perfection of service. Only the one who is capable of yielding all vital powers to the service of his fellows walks truly in the path of life. The third lesson is peculiarly the deep experience of the individual who at some time must face alone and unaided the problem of existence. In it is represented all the suffering dependent upon the doubt, uncertainty and fear which gathers about the portals of the grave. The path of life and of the perfection of character leads for every person through the valley of submission. Its course is determined by the great vital principles which control existence and at some point it must reach its "Garden of Gethsemane."

3. Great questions. The three lessons with respect to the trial and execution of Jesus are deeply emblematic of the progress of life. Every one is on trial in this world with respect to who he is and what he has done, and the answer to these questions points to the path of destiny. These were the questions raised concerning Jesus. Before Caiaphas was asked the question, Who was he? and before Pilate, What has he done? These also are vital questions with respect to every man. The first is, What is his relation to the divine? Is he an immortal soul, an undying spirit, a son of God? The second question with respect to human action is practiced. Human character depends upon doing, and its perfection turns upon the question of right or wrong. It stands related to Jesus who is the supreme example of human conduct. Submission to his spirit is the final test of character, and obedience to his teaching and example is the credential of the soul. Over the way of life which leads to perfection of character he reigns as King.

The lesson of the crucifixion is the lesson of destiny. It is the great symbol of the final experience of humanity. Life ever is to be born, to have angels with heavenly promise hover over its cradle, to be waited upon by kings in infancy, to be subject to the conditions of childhood and youth, to hear the "voice crying in the wilderness," to yield obedience to life's mission, to fast in a wilderness, to fight temptation, to go forth and share the common lot, to endure the common burdens, to achieve transfiguration, and wait in Gethsemane, to find its Calvary and its cross; yet with all this it is to retain unflinching love to man and unshaken trust in God, and submissive to return the dust "to

Five Cents and it will buy a Newspaper.

Mail advices from Dawson City, giving an interesting account of life and the cost of living in that far northern city, say:—"From a summer Indian fishing camp Dawson City has grown into a thriving town with a population of more than eight thousand in hot weather, with warehouses, churches, banks, electric lights, wholesale and retail stores and two up-to-date newspapers, which sell for twenty-five cents a copy. The dwellings are either frame or of logs.

Many of the log cabins were built in 1877 and 1898, when carpenters were paid \$20 a day. The average size of a log cabin is 16x14, and, while they are comfortable, but little provision is made for light, the windows being exceptionally small.

"There were no shingles in those days, so the roofs were covered with earth, upon which the grass has grown, preventing the water from getting through. The roof poles project and form an overshoot above the door. The pantry, known as the cache, is built on the outside and is propped up by four poles. Cold storage can easily be obtained by digging a hole three or four feet deep and putting in a wooden box.

#### THE GROUND IS ALWAYS FROZEN.

"Twenty-five cents is the smallest piece of money in circulation, and there are children who never saw anything smaller. Only last year, when a man from the 'outside' lost at cards, he paid his debt in dimes. The winner was so disgusted that he threw them into the street, where they lay undisturbed.

"Canned goods are universally used. Evaporated apples are used until mid-summer, when the Yukon boats bring in a fresh supply, and even these sell at fifteen cents a pound.

"Crystallized eggs are used for cooking, and fresh ones are cheap in mid-summer at \$1 a dozen. Three eggs to order in a restaurant cost from 75 cents to \$1, and in winter probably \$1.50. Caribou steak is common and may be had for \$1.

"A light lunch, consisting of a piece of pie and a small glass of milk, costs the business man 50 cents. Cans of condensed milk, bearing the highly colored picture of a Jersey cow, are found on all restaurant tables. A small hole is punched in the top and from this milk is poured into the coffee or tea.

"Table d'hôte meals are served at \$1—easily within the reach of all. While almost everything eaten at this meal is of the canned variety, the food is very palatable. The dinner consists of soup, a roast, potatoes, another vegetable, pie or pudding and tea or coffee.

"Beer costs \$1 a bottle, and champagne is \$12 a quart. Clothing is likewise expensive. A tailor-made gown, which sells everywhere else for \$40, brings \$100 in Dawson. The expensive lingerie waist costs its wearer in Dawson from \$1 to \$15, and \$5 hats are eagerly bought for

#### FIVE TIMES THAT AMOUNT.

"Reading matter, is on a par with everything else in price. Ten cent magazines sell for twenty-five cents to fifty cents. The twenty-five cent variety cost the reader double in summer and four times their price in winter. Cost of transportation is the cause of high prices.

"Cooks receive as high as \$100 a month with board and room. A woman who comes in to prepare dinner and sets the house in order receives \$35 or \$40 a month, while the ordinary scrub woman commands \$3 a day.

"Keeping warm in winter is another expensive necessity. Wood is used for fuel, and last winter it cost \$67 to heat a small cottage for six months.

"There is no place in the world which has a wider range of temperature than Dawson. In winter the mercury drops perhaps to 70 degrees below zero. In midsummer the temperature often goes as high as 105, but the nights are always cool."

Even the turkeys are chicken-hearted about this time of year.

draught of champagne, the marvellous clearness and freshness—which no other land can equal—give new life. No breeze yet swirls the dust across the plain. All the world is still, as though lost in silent worship of the loveliness of the moment.

#### LAND IS EMPTY.

A few sleepy Kaffirs, wrapped close in blankets which display a rainbow of color, gaze with languid eyes at the panting monster. The white man and his ways are familiar to-day in the heart of the Dark Continent. Yet there are men living who remember the time when the coast tribes believed that white men were a production of the sea, which they traversed in large shells, their food being the tasks of elephants, which they would take from the beach if laid there for them, placing beads in their stead, which they obtained from the bottom of the sea. History has been made quickly in South Africa.

A shrill whistle, and on again into space. All day you clatter forward—a little uncertainly at times. There are mysterious wayside halts in the wilderness, when you seem to have run out of the world and been side-tracked far from the haunts of men; there are waitings at tiny sidings, from which not a habitation is visible, and where the only possible traffic appears to be a wild buck or an occasional stray bullock. The land is empty. The swarms of natives you expected to see are absent; the country looks deserted. Space—only space. Now and then there glides into the picture a town with a name known to history, the site of a siege, the field of a battle. The impression it leaves is simply one of insignificance. No ordinary town could look imposing upon such a plain.

#### BIVELIKE KRAAL.

All day the train toils onward, growing weary at times, as though disheartened at the miles which still stretch ahead. A few herds of goats or cattle; a shy figure in the distance, which makes you think of the harried Bushmen or the wild Veldt; now and then a bivellike kraal away under the shade of some trees. But no incident, no break—never was there such monotony. Yet you cannot conjure up a different picture. Even in imagination you cannot transform the veldt. It was thus when the first white men pushed forward from the shelter of the coast settlements into the unknown. It is thus to-day. It will be thus in a decade—perhaps in a century.

#### TO AVOID PREMATURE BURIAL.

##### Precautions at Weimar—English Society Takes Up Matter.

In England there is a society whose object is to awaken public opinion on the subject of premature burial and to work for the passage of laws which will make premature burial impossible.

Statistics have been prepared to show that in Europe out of every 500 supposed deaths one person is resuscitated. Although members of the medical profession refuse to take any interest in the matter it is probably true, says Suggestion, that many persons are buried while in a state of suspended animation.

It is stated that in the cemetery just outside the town of Weimar there is a special provision made against the danger of premature burial from suspended animation. No bodies are placed in the ground until they have spent a considerable time in a receiving vault.

In the fingers of the corpse are placed strings which communicate with an alarm. The least movement will ring a bell in an adjoining chamber, where a guardian is always on the watch.

In several instances by this timely alarm persons prematurely buried have been rescued. It is said that the provision arose from the tradition that one of the princes of Saxe-Weimar, this being their family burying place, was buried alive here.

a little mace, one-quarter cup melted butter and enough more flour to knead. Knead well, let rise and roll in a long strip one-quarter inch thick. Spread with melted butter, sift cinnamon and sugar over it and roll up like a jelly-roll. Cut in one-inch pieces and place close together in pans. Bake one-half hour. When cold pour over them a very thin syrup of confectioner's sugar and water which has been boiled two minutes.

Orange Marmalade Worth Trying.—To each pound of bitter or Seville oranges, sliced very fine, add 3 pints boiling water. Stir and let stand overnight, then take out every seed and ends of the oranges and boil well in the above water. Strain, wash the ends of the oranges and all the solid pulp and the seeds, to save the jelly that fails to pass through the strainer, and add to the mixture next day. Considerable jelly clings to all the solid parts, and the water that washes it off, added to the mixture, makes that much more marmalade. Add 1 pound sugar to each pint of the orange, cook moderately slow and stir frequently until the marmalade is thick and done. No flavoring is required. Orange marmalade should be a deep, reddish yellow when done. This is simply delicious.

#### HINTS FOR THE HOME.

If anything catches fire while cooking, throw salt upon it at once to prevent a disagreeable smell.

Fruit stains on linen can be taken out if powdered starch be applied at once.

Should be allowed to remain for several hours.

Corks that are Too Large for Bottles.—Soak them in boiling water, when they will become soft and easy to put into bottles.

When making coffee in a jug, place the ground coffee in a muslin bag, heat the jug, and pour perfectly boiling water on it.

When clearing away dinner, any soups or gravies left over should be put away in clean basins or pans, and in warm weather boil them up before putting away.

On Soup Making.—The object of this form of cookery is to extract by gentle stewing all the goodness of the viands from which it is made, be it meat, poultry, or vegetables.

Pour scalding water over apples and then the skins can easily be removed, and much labor saved. This hint is especially useful for fruit to be used in a tart.

Never consider the dinner prepared till all dishes, plates, and tureens are put on the rack to heat. Never place crockery in the oven to warm, for it is apt to smell nasty, besides being made brittle.

To boil vegetables well, place them in fast-boiling water, bring quickly to the boiling point again, not allowing them to steep in the hot water before boiling, which toughens them and destroys both flavor and color.

Kerosene will remove rust and fruit stains from almost every kind of goods without injuring the fabric. Wash the soiled parts in kerosene as you would in water. This must be done before the spots are wetted with water, to be effectual.

Tie your shoestrings in this way and you will not find that they come unfastened. Proceed exactly as if you were going to tie an ordinary bow; but before drawing it up pass the right-hand loop through the knot, then give a steady pull to both loops and the string will be fastened securely. This can be easily untied by pulling the right-hand string.

Slightly tainted meat and poultry should be washed in vinegar and boiled with a piece of charcoal tied in muslin in the water. This water should be poured off when the water is half cooked and fresh water substituted.

To keep fish fresh for some time—this recipe was sent to me from the West, where I am told it is used by the fishermen.—Well clean and scrape the fish, then salt, particularly the inside, and hang head downwards on a line, exposed to the air, to dry.

Do not put aside dirty bottles, but

wash each clean as it is emptied and turn the neck downwards, that it may be dry and free from dust when required. Small phials and wine bottles should all be treated thus, and the convenience will quickly be appreciated.

**Make blacking as follows:** Mix together two ounces of ivory black, three ounces of treacle, with one pint of vinegar. When these are satisfactorily amalgamated mix in a separate pot five drachms of sperm oil and six drachms of oil of vitriol. Work all together, and the liquid is fit for use.

## PERSONAL POINTERS.

### Notes About Some of the Prominent People on the World's Stage.

The Queen-Regent of Spain is one of the few Sovereigns who have ever made a balloon ascent. This exciting event occurred some years ago, when she happened to drive near a field where some experiments in aerial navigation were being made. She immediately stopped her carriage and asked to be permitted to make an ascent.

The Duke of Fife is the only man who ever changed his title while he reigned. On July 27th, 1889, he was married as earl simply, but at the subsequent breakfast the late Queen, in raising her glass to the young couple, conferred a dukedom on the bridegroom, who thus at a bound passed through the ranks of the peerage, surely the quickest promotion on record.

King George of Greece is having a new special railway carriage built for himself in France which promises to achieve a record in elaborate decorations. It will contain a drawing-room, a dining-room, two bedrooms, a dressing-room, and a study. The decoration is to be entirely of pale-green enamelled tiles. Over the walls and ceilings will run a pattern of water-lilies and convolvulus, enamelled on the earthenware.

The Hon. C. S. Rolls, of England, who is only twenty-nine, has had many and varied experiences as a motorist. As he once told the members of the Automobile Club, he has run into a tree at seventy miles an hour, has pushed a car three miles in dress clothes, has had to walk nine miles for petrol, has five times been run away with (twice forwards and thrice backwards), has been overturned twice, has had a horse and cart on top of him, has twice had his car burnt, and has been run over by his own car.

The Princess of Wales has never cared for any form of athletics, never gone in, to any extent, for riding, entirely disapproves of bicycling, and is indifferent to the fascinations of bridge. She keeps up her music, but is more genuinely interested in art (visiting picture galleries is really one of her hobbies), and she sews during every spare moment she can snatch from other duties. While on her long sea trips she sewed and knitted endless garments for poor children, and when she visits a country house she invariably provides herself with a piece of embroidery.

President Roosevelt was travelling in Iowa the year before he became Vice-President of the United States. One day, entering a store in a small village to make some trifling purchase, he saw a copy of his own book, "The Winning of the West." He picked it up and glanced at it for a few minutes. Then he turned to the storekeeper. "Who is this Roosevelt?" he said. "They say he's a rancher somewhere, stranger," was the reply; "and what I want to say is that in my opinion he'd better give up writing and stick to ranching if he can't do anything better than that."

Bishop Moule of Mid-China, brother of the Bishop of Durham, has been in charge of this diocese of 100,000,000 souls for over twenty-five years. No fewer than fourteen of this family are active workers in the mission field abroad. The first European missionary to settle in an interior Chinese city away from a treaty port, Bishop Moule made Hanchow his headquarters.

## TONS OF MISSING MONEY

**\$5,000 IN COPPER COINS MYSTICALLY DISAPPEAR.**

Tramway Company in Halifax, England, Deposits Copper in Town Hall.

A strange mystery of lost money is reported from Halifax, Eng., where tons of copper coins to the value of £1,200 are missing. It ought to be in a great safe at the Town Hall, but it is not there, and the corporation is bestirring itself with great energy to account for the disappearance.

The leakage—if that is what the trouble is—may have begun as long as seven years ago. At that time the local tramway system started its operation. From the beginning it has been the custom of the tramway officials to take copper in quantities of a ton or more to the central office with a statement of its value. No count was made to verify the various statements, and the money was deposited in the Town Hall strong room.

### SELLING MONEY.

The copper accumulated. It assumed such proportions that corporation officials were reminded of their accumulating wealth, and they began to fear that the coin would take complete possession of the municipal buildings.

It was decided that the money should be put in circulation again, and to this end the corporation advertised copper for sale in five-shilling parcels.

Cheques began to arrive by the first post after the advertisement appeared, but the corporation was not satisfied. It wanted cash for its accumulation of money.

One fine day it struck the authorities that these tons of copper ought to be counted, and a special staff was assigned to this task. Shilling after shilling was counted, day after day the work progressed, and yet many days passed before an appreciable difference was made in the bulk to be dealt with.

### THREE TONS MISSING.

But the task was finished at last, and then it was found that a matter of nearly three tons of the coins were missing.

The municipal premises were searched high and low, every nook and cranny was examined, but to no purpose. Not so much as one stray halfpenny was discovered. Of course the tramway officials were notified, but they could give no suggestion of a solution to the mystery.

Some persons are inclined to laugh at the matter, and there are plenty of purchasers for picture postcards representing worried councillors hunting for lost pennies.

The councillors, properly enough, take the situation seriously, and a special accountant has been appointed to investigate the mystery. Meantime the ratepayers are thinking, and waiting developments.

### WOMEN DOG THIEVES.

Pets Stolen on London Streets and Afterward Disposed Of.

Dog thieves have been very busy recently in the neighborhood of Oxford Street, Regent Street and Piccadilly, says the London Daily Mail.

The police believe that there is an expert and highly organized gang at work. The ordinary dog thief with his sack for small dogs and a stout piece of rope for the larger ones, is always at work; but recent losses point to a more daring method of appropriation. It is believed that many of the thefts of smaller dogs are committed by women. They hang about on the outskirts of crowds of ladies looking into the shop windows, and the small terrier is snatched up and either concealed under the cloak or the thief hails a passing hansom. As the female thieves are inviolate, the police are at a loss to know how to catch them.

## NEW CITY OF THE PACIFIC

PRINCE RUPERT, THE N. T. P. W. WESTERN TERMINUS.

Harbor Commodious and Safe and the Surrounding Territory Productive.

The new city which the Grand Trunk Pacific Railway Company proposes establishing at its western terminus on Kaien Island is already taking shape. The city has been named Prince Rupert, after the cousin of King Charles II. of England, who was first Governor of the Hudson's Bay Company.

A trip to Prince Rupert fills the visitor with the enthusiasm and optimism which the head officials of the road are displaying. Imagine a wide channel leading into a land-lock harbor a mile in width, whose waters extend far inland beyond the expansive basin which forms the harbor itself, and some idea can be formed of the great port which, it may be said without exaggeration, will be capable of accommodating all the fleets of the Pacific. The spacious harbor of Vancouver is frequently referred to as one of the finest on the Pacific coast. It might be lost in that of Prince Rupert.

Fringing the shores of this great bay, Kaien Island and the adjacent mainland present a panorama of almost unbroken forest, while Digby Island stretches itself across the entrance to the city to protect it from the swells of the Pacific. Mountains towering two thousand feet above the water perform a similar office in shielding the town from the winds blowing off land. The green mass of fir and cedar is scarred here and there by the location camps, of the survey parties, while a small wharf provides landing accommodation for the coasting steamers. Apart from these all is as yet virgin wilderness.

### THE SITE IS PICTURESQUE.

The land slopes back gently for distances ranging from half a mile to two or three miles. Here and there the ground rises abruptly, providing the necessary fall for drainage and sewerage, while a shore line five or six miles in extent sweeps around the front of the future city. The view from these elevated stations and from the beach is charming. On the opposite shore mountains slope down to the water.

To the northwest, through a channel studded with islands, is to be seen the famous Indian village of Metlakatla, known on the Coast as "The Holy City." This village was laid out by the missionary Duncan. Here he taught his copper-colored disciples to embrace the arts and trades of the white man and founded what was intended to be a model settlement. Later trouble arose between Duncan and his Bishop, and the Indians migrated to a settlement on the Alaskan coast. Opposite Prince Rupert rises Mount Hays, named after the President of the line. It is more than three thousand feet high.

The railway men are proceeding upon somewhat novel lines in founding the city. Before an acre of land is put on the market the best expert advice is to be obtained in planning the city on the most up-to-date lines. When the official party of the railroad were last on the Coast they saw in Seattle houses, hotels and business blocks being torn down in order to permit of lowering the street grades and correcting other defects in the laying out of that city. This is to be obviated in Prince Rupert, which is intended to be the city beautiful of the Coast. Five parties are now engaged in a careful topographical survey of the whole townsite. When this is complete their plans will go before a board of engineers and landscape gardeners, and they will decide upon the best lines to adopt in building the city proper.

### BORN TO THE PURPLE.

The city itself is in a trade sense born to the purple. Not only will it be the Pacific terminus of the shortest trans-

## ON THE FARM

### EXPERIENCES WITH LAMBS.

It has been said that all great men had good mothers, writes J. T. Drake. It can be said with almost equal certainty that all good lambs have good mothers. Whenever you see a good lamb you almost invariably find it following a good mother. To have good mothers you must have good blood, good feed, shelter and wear. It is just as reasonable to expect the cashier of your bank to honor your cheque when you have not a dollar on deposit and no means of placing any there as to expect a ewe to produce two good lambs, she being poor in the fall, with no shelter all winter but the windward side of the fence, fed on corn stalks and with no water except as she melted snow to get it.

I have a small farm of 80 acres, and after keeping horses enough to do our work and driving, cows enough for milk and butter for the family, hogs enough for our meat and a few to sell, six or seven dozen chickens, there is not a great deal left. That little I devote to sheep. I keep from 35 to 50, grade Shropshire breeding ewes. In the last six years, or since I had a good place to keep them, I have raised and marketed annually on an average 140 per cent. as many lambs as we had ewes. I usually arrange to have our lambs put in an appearance about March 1. The ewes must be in good condition. I would rather they were fat, for I do not think a ewe can be too fat if the flesh has been put on accompanied with daily exercise. The good shepherd should provide warm quarters for his sheep so that he can save young lambs when the mercury is below zero.

When expecting lambs, my sheep barn is divided into five apartments. I have always, at this season of the year, felt the need of small pens for my ewes and lambs so that I could give them personal attention. As necessity is the mother of invention, I devised the following plan: About four years ago I made 14 doors, 2½ feet high and 5 feet long. I purchased 3½ dozen hooks such as you buy to put on the inside of a barn door. I stapled a hook at the top and another at the bottom of the door, so that they would come near enough the ends to reach staples driven in the siding of the barn. I began at the corner of the barn and measured each way 5 feet and drove in my staples at the top and at the bottom and hooked on my doors. I then fastened the doors together in the same manner. This made pen No. 1. I fastened one door of pen No. 2 to the barn 5 feet from pen No. 1 and the other door of pen No. 2 to pen No. 1. In this way I made the seven pens all in a row and could place a sheep in any one of them without molesting the others.

As fast as my ewes became mothers I place them in these small pens so that I can give them personal attention until their lambs are known to be all right and doing well. They are then taken out and placed in an apartment for ewes and lambs. The question may arise in your minds, how I get a large Shropshire lamb in a small pen. I simply open the pen; then I go to her, take her lamb or lambs in my arms, hold them about as high as she carries her head, which is pretty high when I have her lambs, walk backward to the pen, place her lambs inside, step back. She goes in, I close the door and all is well.

When the oldest lambs are two weeks old, I place in the centre of the barn what we call a creep, a place where the lambs can get and the ewes cannot. In this creep I place a trough with some corn meal in it. You who have never tried it will be surprised at how young an age lambs will eat grain. They will eat shelled corn by the time they are one month old. I give my ewes about all the grain they will eat during March and April. About May I begin to de-

of the Bishop of Durnham, been in charge of this diocese of 100,000,000 souls for over twenty-five years. No fewer than fourteen of this family are active workers in the mission field abroad. The first European missionary to settle in an interior Chinese city away from a treaty port, Bishop Moule made Hang-Chow his headquarters. Thence year by year he made his wearisome circuit, sometimes on foot, sometimes in Sedan chairs, sometimes in the picturesque but not palatial Chinese boat—3,000 miles every twelve months. He speaks Chinese like a native.

King Edward can speak German and French as fluently as English, and has a fair knowledge of one or two other languages; but as a linguist he is quite eclipsed by the Emperor of Austria. It is told of him that at one of the great military reviews he addressed five different regiments—German, Italian, Hungarian, Bohemian, and Walachian—each in its own tongue; and Hungary will never forget how, fifty-seven years ago, the youthful Archduke Francis Joseph, when installing a certain Governor, electrified his audience by addressing it in purest Magyar, a tongue no other Archduke had ever taken the trouble to learn. They sprang from their seats, waved their swords in a frenzy of enthusiasm, and almost lifted the roof with thunderous shouts of "Eljen!"

The Earl of Ranfurly is now fifty. He was a very popular Governor of New Zealand, and was reluctant to go back to London. He has invested a large sum in Australian land, and has himself worked hard at fruit-growing on his farm out there. He is described as "one of those men who can plough a field one day and act as lord-in-waiting to his Sovereign the next." The Moories worshipped him and dowered him with many ennobling names, and the Colonials generally esteemed him so highly that they petitioned for a renewal of his term of office. His lordship, who is a descendant of William Penn, the founder of Pennsylvania, was nearly drowned by the capsizing of a boat, and a bullet from a rifle-range once whizzed close by his head.

Every day the young Duke of Westminster gets richer. He is the ground landlord of miles and miles of houses—the whole of South Belgravia—and for each he receives a shilling a year per-acre rent until the leases fall in. Each month fresh leases fall into his hands, and at the end of thirty years the whole of the property, which is now worth many millions, will be his entirely. The land, which was acquired by his ancestors nearly two centuries ago, was then a worthless marsh. Parts of it were drained and the land let on long leases at low rents. Suddenly, however, it became the fashionable quarter of London, and correspondingly the ducal family became one of the richest in the peerage. The Duke's income to-day is \$500,000 a year. In thirty years it will be increased five-fold.

The German Emperor insists upon good dancing at Court, and the arranging of an evening party is one of his favorite pastimes. He is most anxious that the Court balls shall be distinguished for their elegance, and exacts that the smallest details shall be carefully planned beforehand. Each year, therefore, he chooses either from his bodyguard or from the 1st regiment of Cavalry of the Guard, two brilliant cavaliers, who are excused from all military duties. These officers must dance to perfection, wear their uniforms with distinction, and lead a cotillon with method and dash. They open the ball with a princess of the blood royal, and they and their partners bring the function to a close with a deep obeisance before their Majesties. Upon their success in this exacting role their future career largely depends, and it is said, and may easily be imagined, that their exalted office is no sinecure.

#### YOU CAN'T BEAT 'EM.

"They said that we would never be happy," mourned the young bride.  
"But you are happy."  
"But now they say it won't last."

darning method of appropriation. It is believed that many of the thefts of smaller dogs are committed by women. They hang about on the outskirts of crowds of ladies looking into the shop windows, and the small terrier is snatched up and either concealed under the cloak or the thief hails a passing hansom. As the female thieves are invariably well dressed, the fact that they have a more or less protesting small dog under their arm occasions no comment.

Of the larger types, collies and poodles are the most sought after by the dog thieves because they seem to be more easily handled by strangers and because they always command a good market on the Continent, especially in France. The smaller dogs have various fates. They may be "faked" to some extent and sent down to "Club Row" in Shoreditch, where there is a regular dog market every Sunday morning, and where ten or fifteen shillings can easily be obtained for a good terrier, the purchaser, of course, having to run the risk that the dog is stolen and may be claimed. Another method of disposing of them is through the medium of various papers, and a third resort is to hold them to ransom. This last method is by far the most profitable way of realizing, but it requires to be carefully carried through.

To show the extent to which dog stealing is carried on, it may be mentioned that at Vine Street police office there were recently eight notices offering rewards for "lost" (the polite way of putting "stolen") dogs, and at Marlborough Street and all the other West End offices a correspondingly large number. The rewards offered range from a minimum of £1 up to £20.

#### A SCHEME THAT WORKED.

"Please, sir," piped the tiny customer, whose head scarcely reached the counter, "father wants some oak varnish."

"How much does your father want, my little man?" asked the shopman.

"Father says, will you fill this?" said the little fellow, handing him over a half-gallon can.

It was duly filled and handed over.

"Father will pay you on Saturday," said the recipient casually. And then the face of the shopman grew dark.

"We don't give credit here," he said. "Gimme back the can."

Meekly the little lad handed back the can, which was emptied, and handed back to him with a scowl.

"Thank you, sir," he said. "Father said you'd be sure to leave enough in the can, round the sides, for him to finish the job he wants to do, and I think you 'ave, sir."

#### AN APPROPRIATE EPITAPH.

The following is a copy of the epitaph of a watchmaker, written by himself, in which he is compared to a watch that had run down—

"Here lies, in horizontal position, the outside case of George Ritter, whose abiding-place in that line was an honor to his profession. Integrity was his mainspring, and prudence the regulator of all the actions of his life. Humane, generous, and liberal, his hand never stopped till he had relieved distress. He never went wrong, except when set a-going by people who did not know his key. Even then he was easily set right again. He had the art of dispensing his time so well that his hours glided by in one continual round of pleasure and delight, till an unlucky minute put an end to his existence. His case rests and moulders and decays beneath the turf, but his good works will never die."

#### MUCH TO BE THANKFUL FOR.

Mrs. Jones: "Whatever we got ter be thankful for, Silas?"

Mr. Jones: "Wa-all, th' mortgage hez bin foreclosed on th' farm, so we hain't got ter pay no more interest an' taxes; th' automobile's bin attached fer debt, so we hain't got ter worry about that no more; Johnny Smith hez thrown over our daughter Sal, so we won't have him ter support. Great Scott, Maria! we've got everything ter be thankful fer."

their plans will go before a board of engineers and landscape gardeners, and they will decide upon the best lines to adopt in building the city proper.

#### BORN TO THE PURPLE.

The city itself is in a trade sense born to the purple. Not only will it be the Pacific terminus of the shortest trans-continental system in America, with the lowest grades of any line traversing North America, but through its gates will pour the vast west-bound trade of that line to the opulent Orient. Immediately behind it lies a virgin territory of immense potentiality, quite equal in coal, gold, timber and agricultural land to the southern portion of the province. Already preparations are being made to open up the great coal deposits of the Teliqua, on the main line of the railway.

Immediately in front of the city a rich harvest lies waiting. The richest harbors in the world, those of the Queen Charlotte Islands, lie within five hours steaming of the docks of the new city. It is to those banks that the New England Fish Company of Boston sends its fleet of steamers and loads from their catch the halibut specials which carry the frozen fish to the tables of New York, Philadelphia and the New England States. Salmon, clams, herring and other food fish abound in the neighborhood. The railway company is fostering new organizations to exploit this wealth.

The climate is extremely mild, snow seldom falls and work is carried on in the open the year around. Within the past few weeks the work of surveying the actual line of the railway from Prince Rupert east has begun. Several preliminary surveys were made last summer, but the line is now being definitely located.

#### SLANDER ON LONDON REFUTED.

Not Always Foggy There—One Clear Day a Week on an Average.

It is the conviction of many tourists in London that there is fog in that metropolis 365 days in every year with the exception of leap years, when there is fog on 366 days.

This exaggerated notion of London fogs is quite refuted by an official publication of the English Government, which gives a compilation of the weather conditions taken twice a day and which shows, the following result for last year:

|                           | Days. |
|---------------------------|-------|
| Overcast (part fog) ..... | 145   |
| Fog (dense) .....         | 64    |
| Clear sky .....           | 60    |
| Snow .....                | 16    |
| Hail .....                | 5     |
| Thunderstorm .....        | 3     |
| Gale .....                | 2     |
| Variable .....            | 60    |

365  
London had last year 1,460 hours of sunshine out of 5,470 hours between the rising and the setting of the sun. In other words, about three-quarters of the time taken by observations was overcast and the balance was clear.

In London foggy days are the rule and clear days are the exception. It is of course not possible to figure many days as absolutely clear or wholly foggy, and as to these the expression is adopted of variable.

London owes its fogs to a triple combination of circumstances—westerly or southwesterly winds 325 out of the 365 days of the year, salt marshes through much of the territory over which the westerly or southwesterly winds blow and an almost universal use of soft coal. Last year there were more days of sunlight in London than there had been on an average for twenty years before.

Fred: "They tell me at your office that you are only one of the clerks, and you said you were a director." Charles: "So I am. I address the envelopes."

rams can get and the ewes cannot. In this creep I place a trough with some corn meal in it. You who have never tried it will be surprised at how young an age lambs will eat grain. They will eat shelled corn by the time they are one month old. I give my ewes about all the grain they will eat during March and April. About May 1 I begin to decrease the grain, lessening the quality gradually until about the middle of the month. I then turn them on good grass and the lambs grow rapidly.

#### GREEN BONE FOR FOWLS.

Animal food in one form or another is necessary for fowls. Practical experiments and observation both prove this to be true, writes Mr. J. B. Lisk. In summer bugs, worms, grasshoppers, etc., are devoured with relish, and it is during this time that the hen in her natural state lays the most of her eggs. Animal food is natural food for her, and if we insist upon her laying out of the natural breeding season, we must provide those elements that go to form eggs; not merely grain, but animal food as well. In other words, if we wish eggs in fall and winter, we must supply what is needed, and that in a palatable form. It is not enough to supply food merely to fill them up, they must get what is necessary to make eggs.

We almost save a great many scraps when we butcher in the fall, and for years this was the only animal food provided. The result from this was always the same: more eggs in January than in February, for, by the middle of January the animal food had given out.

Green cut bone is the best substitute for insects, and if fed properly is a fair rival. An ounce a day to laying fowls is a fair allowance when fed with a proper grain and vegetable ration. Green cut bone is the cheapest and best poultry food known if fresh from the butcher and full of meat and gristle. Boiled or bleached bones or those from old or diseased animals should not be used. The cost of a mill for grinding the bones is not great if one has use for it, and this is really the only expense, as in some localities green bones can be secured for little or nothing. Get mill large enough for all present and possible future needs, and one that runs by power, if the farm is so supplied. If not, a hand cutter does nicely. Manufacturers are now making bone cutters that run either by hand or power.

The saving in grain by the use of green cut bone soon pays for the machine. Thus there is a saving of grain and an increase in the number of eggs laid, which means a double profit from the hens instead of an expense during cold weather. Beef scrap, bone meal and all other ground and dried animal food for sale are of great value and easy to feed, but are expensive and may not always be pure goods. They may be compared with fresh cut bone as dried beef is to tender, juicy beefsteak. The owner of a flock of hens would not be long in deciding which he would choose for his winter's supply of meat.

There is no single thing of such an aid to secure a satisfactory egg yield in winter as green cut bone, and it is equally valuable in aiding hens through the moulting season and starting them laying again. It is also a great aid in bringing the pullets to maturity and making them good winter layers.

#### SAILORS IN KILTS.

Official recognition has been given to a couple of sailor pipers at Portsmouth Naval barracks. They are Scotsmen, and on enlisting brought their pipes with them. In the course of time pipe music grew so popular that the skirling tars were deputed to lead out the battalion in place of a file band. Now, having been officially recognized, they have been fitted out in kilts of the Royal Stuart tartan, tunics of the orthodox Scotch cut, and Glengarry caps with cockades, and may be seen at the head of the bluejackets when the latter are out on the march.

Old bachelors are men who have given marriage a serious thought.

## BANK FAILURE REGALLED

### WHAT HAPPENED THE GLASGOW BANK DIRECTORS.

#### Rash Speculations and Large Sums Advanced to Directors Led to False Returns.

The trial of the directors of the City of Glasgow Bank ranks is probably the most important which has ever taken place in Scotland, in modern times. It took place so long ago as January, 1879, but it may not be altogether uninteresting to relate some of its salient features, together with the causes that led up to the trial, at the present time.

#### FINANCIAL RECKLESSNESS.

The magnitude of the financial crisis brought about the collapse of the bank, the social standing of the directors to whose hands the management of it was entrusted, and who so shamefully abused the confidence reposed in them, the unparalleled disclosures of financial turpitude and recklessness revealed in the report of the professional gentlemen who conducted the investigation of its affairs immediately after the stoppage, and the startling nature of the evidence adduced by the prosecution, all combined to invest this trial with an interest rarely, if ever, surpassed in the annals of criminal jurisprudence.

#### UNSCRUPULOUS SPECULATORS.

The evidence showed how a once sound and prosperous banking concern was converted into a mere machine for the abstraction of the hard-won savings of the small and all-too-confiding investor, only to throw them into the lap of wealthy and unscrupulous speculators, who dissipated them in schemes of reckless folly and insensate gambling.

It also revealed the fact that the directors while posing as pillars of commercial integrity, were in reality the rotten props of a worthless and decaying concern.

#### HISTORY OF THE BANK.

The City of Glasgow Bank commenced business in the year 1839, having its head office in Glasgow, and numerous branches throughout the country, continuing business until the end of the year 1854, when it suspended payment.

The bank was, however, immediately reconstituted, and continued its operations until it finally ceased to do business, and closed its doors on 2nd October, 1878.

There were in all 1,249 partners connected with it, and the paid-up capital amounted to \$5,000,000.

At the beginning of 1878, the year of the smash, the reserve fund was stated at \$2,350,000, the dividends and surplus profits in hand at \$742,505, the deposits at \$41,913,560, and the "circulation, acceptances, etc.," at \$10,571,145.

Notwithstanding its apparent prosperity, the bank had, however, begun to experience some difficulty in carrying on its business, and for several weeks before the crash came sinister rumors had been floating around in bank circles.

#### GAVE RISKY CREDIT.

It was said that the directors had been lending countenance to unsound speculations, and had been giving risky credit, and that in consequence the influential position of the bank itself had been jeopardized.

Against this suspicion there was the fact that the bank stock was keeping its place well alongside its neighbors.

The stoppage of the bank, therefore, came as a surprise to the general public, but although it was thought that the complications of the bank would prove fatal to the concern itself, no fear existed as to the depositors not being fully provided for.

#### HAD CONFIDENCE IN SYSTEM.

No better testimony of the public confidence in the Scottish banking system

whatever the details, the directors must have known they could not possibly be accurate, then they were guilty of allowing a false representation of affairs to pass.

#### VERDICT OF GUILTY.

At the conclusion of the masterly summing up by the Lord Justice the jury retired, and, after an absence of two hours, returned into court with a verdict of "Guilty" against the manager of the bank, Robert Stronach, and one of the directors, Lewis Potter, of falsifying and fabricating the balance sheets; also the same verdict against the other directors, Robert Salmohd, John I. Wright, William Taylor, Chas. Leesche, John Stewart and Henry Inglis, of publishing them, knowing them to be false.

#### "DID IT FOR BANK." NO EXCUSE.

The judge in passing sentence said that although these acts did not necessarily involve, and probably were not actuated by any design, or desire, of personal advantage, but were committed as they thought for the benefit of the bank, they were not removed from the category of crime by any means.

However, the fact that they had not been actuated by motives of personal gain would weigh with him in the sentence he was about to inflict.

#### 18 MONTHS JAIL.

Potter, and Stronach would be imprisoned for 18 calendar months; and in the case of the remaining directors, between whom and the other prisoners a great distinction might be drawn, in consideration of the fact that they had been in jail for nearly four months, awaiting trial, he would order that they be further imprisoned for eight calendar months.

This brought to a close one of the most sensational bank trials ever recorded.

## MAN'S GREATEST ENEMY

### QUESTION WHETHER IT IS FLOOD, FIRE OR STORM.

#### How Famine Has Reaped Its Human Harvest — Interesting Facts and Figures.

That there are any human beings upon the earth is quite a marvel, when we think of all the ways in which nature has always tried to destroy them. Famine, floods, frosts, storms have no terrors now for us in these safe islands. But there was a time when they and many other natural foes worked havoc among our ancestors; and still they work it in less fortunate lands. The number of people killed by nature's destructive forces and the quantity of crops ruined is enormous. Which is the greatest enemy—flood, drought, fire, storm, frost, hail—it is difficult to say.

#### FAMINE TERRORS.

In the early ages famine prevailed in some part of the world every year. Probably, most of the people were always near starvation. As early as 310 A. D., we have record of a famine which killed 4,000 out of the small population of England. The whole world was in a state of starvation in the year 897, and millions must have perished. Half the population of Germany was carried off by famine in 1125. In those times it was the custom, when scarcity of food occurred, to drive all needy people out of the city gates and let them perish.

#### CHINA THE WORST SUFFERER.

The last serious famine in England occurred in 1321, so that this land, which has now to import over half its food was the first to escape from the grip of starvation. In Ireland, however, two famines in the nineteenth century carried off 1,746,000 people between them. Populous India and China, of course, are the great lands of hunger. Here are a few of their famine afflictions:

1780 India. 3,000,000 perished.

## AN HOTEL FOR BABIES

### A POPULAR INSTITUTION IN LONDON, ENGLAND.

#### What is Being Done to Help Mothers Who Want a Temporary Home.

Situated in one of the healthiest parts of London, England, at 7 Pembridge Square, is a hotel exclusively for babies. It is known as the Norland Nurseries, and besides affording excellent accommodation for its tiny visitors, serves as a final test of ability for the nurses of the Norland Institute before taking up private work.

#### WHO ARE ITS PATRONS.

The hotel is intended for little children from one month old up to seven or eight years of age, and is especially patronized by Indian officers and others on foreign services, widowers, widows, members of the theatrical profession, and other parents desiring a temporary, safe and happy home during their enforced absence. One little visitor lately arrived all the way from America.

#### THE SUITES OF ROOMS.

The nurseries are beautifully arranged in six suites, each having a day and night nursery. The rooms are large, airy and cheerfully decorated, and each has a pretty name, such as Forget-me-not Daisy, Speedwell, Peace and Joy. Each little resident has the individual attention of an efficient nurse, while a fully-trained nurse of long experience superintends the health of all infants and children. In all the rooms the furniture is of diminutive proportions—tables, chairs, washstands, jugs, etc., all exactly

#### FIT THE SMALL VISITORS.

for whose use and convenience they are designed. During the season the hotel presents a most engaging and no. el sight. Tiny tots preparing to take a morning ride in their mail car or perambulator, others enjoying a nap, while in the play-rooms others are occupied with their toys. The coach-house is excellently arranged for the reception of visitors' mail cars and carriages, which can be at the door in readiness to convey "his Majesty" to Kensington Gardens, or elsewhere at a minute's notice.

Parents of infants under three months old pay two guineas a week. Older children pay from thirty shillings to two guineas a week, or from £50 to £80 a year. These charges are inclusive, but do not, of course, embrace a doctor's and dentist's fees, which are extra. The very small infants are kept quite apart from the older children. Each wee mite has its own special nurse who studies its nascent needs and desires, finds out all the essential characteristics of its dietary, and, indeed, lives only to bring happiness and joy into its little life. Each suite is arranged for a model family of three children, and is made as nearly as possible like a nursery in a private home. Besides the suites already mentioned, the hotel contains four special rooms set apart for infants under four, five and six months of age; also for a child of exceptional delicacy, or for any small operations which may be necessary.

#### AN UNIQUE FEATURE.

An unique and charming feature of this babies' hotel is that its inmates are privileged as soon as the hot weather sets in to repair to the seaside, exchanging the more modified pleasures of the London squares and parks for the bliss of donkey-rides and goat chaises, and wielding spade and pail for the Norland Nursery has a beautifully situated cottage at Bognor in Sussex, where, for the single extra charge of travelling expenses its little visitors may repair. Consequently, during the summer months the babies' hotel is almost depleted of its small patrons, who revel in

## MILLIONS ARE STARVING

### TARTARS SUFFERING EQUALLY WITH RUSSIANS.

#### Agents Confirm Stories That Girls Are Sold Into Slavery for Food Money.

The newspapers of St. Petersburg are publishing terrible accounts of the famine in the Volga governments, in seven of which millions of people are said to be dying of starvation. The Tartars are said to be suffering equally with the Russians.

Princes G. E. Lvoff and Orbellani, who have just returned to St. Petersburg from the famine-stricken districts, have furnished the following picture of the conditions in the famine provinces:

The crops in seven provinces were practically total failures. In twenty-one provinces the harvests were very poor. About twenty million people will need assistance for from four to ten months to stay off starvation until the new crops are available. In some regions the inhabitants have been suffering from starvation for ten years, passable crops having been gathered in

#### ONLY TWO OF THE TEN YEARS.

Prince Lvoff believes the Government estimate of \$50,000,000 for famine relief is inadequate. The Moscow Zemstvo relief organization calculates that \$75,000,000 and possibly more will be necessary.

Though the conditions in the famine regions are now most distressing, the real horrors will begin in January. The Zemstvo organization funds, \$300,000, will then be exhausted, and the relief committees will be compelled to cease their efforts to save the lives of the starving peasants.

On the strength of his personal knowledge, Prince Lvoff reaffirmed the truth of the report, lately officially denied, that girls in Kazan Province had been sold into slavery and taken to Mohammedan harems in the Caucasus.

At the headquarters of the Free Economical Society, which is also conducting famine relief, official statistics show that the yields of rye, wheat and barley in Samara Province were only 25 per cent.; in Simbursk, 20; in Kazan, 32; in Saratov, 35, and in Penza 40 per cent. of the normal yield.

#### ON THE PEASANT ALLOTMENTS

the crops were much smaller, but the average yield was maintained on a few of the large estates employing improved methods of cultivation. No rye at all has been collected in half of the counties of Samara Province.

Both Prince Lvoff and the Free Economical Society question the reliability of the official figures, on the ground that, according to private information, the local officials are alleged to be endeavoring to conceal the real situation, and are prohibiting the collection of independent statistics. The Prince also questioned the official figures showing that over 25,000,000 bushels of grain had been supplied to famine districts. He said it was possible the grain may have arrived at the provincial railroad centres, but it has not yet been distributed in the famine-stricken localities.

#### MAN IN THE MOON.

### Versions of the Myth as Held by People of Different Lands.

Of all the myths which have sprung up around the moon, before Galileo's telescope revealed another world with lofty mountains, deep valleys and vast plains, the oldest, and probably the most familiar to us all, is that of its human inhabitant. Every nursery has heard the story of the man who was found by Moses gathering sticks on the Sabbath, and condemned to dwell in

came as a surprise to the general public, but although it was thought that the complications of the bank would prove fatal to the concern itself, no fear existed as to the depositors not being fully provided for.

#### HAD CONFIDENCE IN SYSTEM.

No better testimony of the public confidence in the Scottish Lanking system could have been given than the calmness with which the announcement of the stoppage was received.

No run on the bank took place, indeed there was a pretty general feeling of relief. A rotten branch had been cut away, and the good tree of Scottish banking it was felt, would be the better for its absence.

#### DEFICIENCY WAS \$25,000,000.

On the day following the stoppage the directors placed the books of the bank in the hands of expert accountants for investigation, who reported that the deficiency amounted to nearly \$25,000,000.

The bank had lost, on a moderate estimate, \$11,000,000, that is the whole of the paid-up capital, and reserve fund, together with fully \$5,500,000 besides.

The surprise forth in the report was one of the most disgraceful in the history of banking.

Accounts had been deliberately falsified, securities entered at fictitious values, bad debts taken as good assets, and the very gold which ought to have been held in trust for the note issue by the banking act, had been deliberately converted to the extent of over \$10,500,000.

#### MADE FALSE RETURNS.

The Government had been deceived by false returns, the shareholders by "crooked balance sheets," and everything done but a positive integrity could think of to conceal the disastrous condition of the bank.

Recklessness led to callousness, and difficulties to fraud in order that the true state of affairs might be kept from the shareholders and the public.

It was proved that the directors had had large advances from the bank, amounting to millions of dollars, while the total stock held by them only amounted to \$247,345.

The whole of the directors, together with the manager and secretary, were promptly arrested, but being refused, although application was made in the High Court for their removal.

#### DIRECTORS RECEIVED ADVANCES.

At the trial, which took place before Lord Justice Moncreiff, Moore and Craigell, and lasted a fortnight, the foremost advocates of the day were engaged for the defence.

The evidence showed that for five or six years preceding the crash the managing directors and secretary had been receiving advances from the bank in rapidly increasing amounts, until in 1878, the year in which the bank stopped payment, out of \$28,096,300 shown in the books as lent to customers, the directors had received \$16,884,181, or three-fifths of the whole.

#### DID THE DIRECTORS KNOW?

In charging the jury the Lord Justice Clerk said the points to be decided were whether the balance sheets were false, whether the directors and managers, each or any of them, knew them to be false, and whether the published reports were intended to deceive the shareholders.

A director was entitled to trust the fidelity of the bank as long as he had no reason to suspect their integrity, but nothing could for a moment justify, or excuse, or palliate the deliberate statement of what is known to be false.

#### A VERY GREAT CRIME.

"This is a crime of very great magnitude. The larger the interests committed to their charge, the more they were bound to absolutely honest administration," said his Lordship.

The defence of the directors was that they did not know how the accounts were dealt with in the books, and that they were entitled to assume that the officials were not playing them false, but the judge pointed out that if the position of the accounts was such that,

occurred in 1321, so that this land, which has now to import over half its food, was the first to escape from the grip of starvation. In Ireland, however, two famines in the nineteenth century carried off 1,746,000 people between them.

Populous India and China, of course, are the great lands of hunger. Here are a few of their famine afflictions: 1769, India, 3,000,000 perished; 1806, 1808 and 1878, India, 11,300,000 perished; 1870, Persia, 1,500,000 perished; 1877, 1878, 1879, China, 18,000,000 perished.

Floods do more damage to property than to life; but the number of people drowned is in itself terrible. These originate in many ways—in excessive rains, breaking down of river banks, bursting of reservoirs, sudden melting of ice and snow, and most terrible of all, eruptions of the sea. Every count of ice and snow, and most terrible of all, eruptions of the sea. Every count of ice and snow, and most terrible of all, eruptions of the sea. Every count of ice and snow, and most terrible of all, eruptions of the sea.

#### FLOOD AND EARTHQUAKE.

Again and again Holland has been inundated. One flood destroyed seventy-two villages, and the death roll of this and three of its successors amounted to 330,000 persons. During the first quarter of the nineteenth century the North Sea broke over Denmark, submerging one-third of the land and forming the island of Jutland.

From floods in the south of France just half a century ago, the loss was six million pounds, and the Toulouse flood, some years later, caused a loss of fifteen millions sterling.

In quite recent times we have had the Japan flood of 1896, which killed 27,000 people; the Oregon cloudburst of 1903, which drowned 300, as well as more recent disasters.

#### TO KEEP CUT FLOWERS.

Substances Added to the Water Which Have Proved Useful.

All flower lovers will be interested to learn that as a result of experiments conducted in France it has been conclusively shown that most varieties of flowers keep as well when cut as when left on the plant, provided they have proper attention. That is, if water is supplied to the stems and putrid fermentation is prevented. In carrying these experiments a step further it was shown that a large number of mineral and inorganic substances when added to the water in which cut flowers are kept add very materially to the length of time flowers may be kept fresh.

Among the substances which have proved useful are chloral, sugar, lime water, potash, ether, nitrate of potash, suboxide of potash, phosphate of ammonia, calcium chloride, glycerine and alcohol. The mineral substances are added in very minute quantities, concentrations of one part to 10,000 being sufficient. It is understood, of course, that only one substance is used at a time.

Another fact that is worth knowing is that other conditions being equal the preservation of flowers is longest when the distance between the surface of the liquid and the base of the flower is smallest.

Here is the latest parrot story: A certain retired general of the Indian Army possessed a parrot, and also a very irascible temperament. The parrot was a valuable bird, but was rather a nuisance by reason of its extreme talkativeness. One day, while the general was writing his business letters, the parrot kept up a continual chatter, very disturbing to the writer. At last the general could stand it no longer, and, jumping up, he seized the cage of the unhappy bird, which he whirled vigorously round and round, at the same time shouting furiously. Then he set the cage down again, and silence for some time ensued. At length, however, a feeble voice came from the interior of the cage. "General," it inquired, in quivering accents, "where were you when that cyclone struck us?"

donkey-rides and goat chaises, and wielding spade and pail, for the Norland Nursery has a beautifully situated cottage at Bognor, in Sussex, where, for the single extra charge of travelling expenses its little visitors may repair. Consequently, during the summer months the bachelors' hotel is almost depleted of its small patrons, who revel in all the delights of delving in long stretches of silver sand and bathing and paddling in a quiet sea that creeps up the beach so gently and softly as though fully conscious of its duties in safeguarding the tender lives entrusted to its mercies.

#### DANCE OF AFRICAN NATIVES.

Gathering of the Dancers—Weird Music and Strange Figures.

The high cliffs of the valley showed clearly in the bright moonlight, when the strains of a native band were heard coming from an adjacent village. Through the long guinea cornstalks men and women came out like so many shadows from the various clusters of huts, writes Hans Vischer, describing a dance he saw in Northern Nigeria, in the Geographic Journal. The sound of the fiddles and the rattling of a calabash filled with pebbles came ever nearer, till the band with many followers emerged from the dark fields to the open space, where a broad, sandy river bed formed a natural playground.

The merry crowd had now gathered chattering and laughing and thoroughly enjoying itself after the way of the African. The musicians, three stout men and a woman, played in that typical way common to all primitive people, one fiddle leading with a slightly varying wailing tune, when the second fiddle took up the air, repeating it in lower notes, and the woman accompanied with a rhythmic swinging of her calabash. It is a weird, melancholy noise, naturally in a minor key, but full of ever-growing excitement.

All the young people had now formed into two rings, the men inside, and around them an equal number of girls. They started walking around slowly in opposite directions. Then, as the music became faster, they quickened into a kind of two-step, the men dancing in and out around the girls, who kept moving the other way. Each time the boy faced the girl he turned around, gave a little jump, and snatching her outstretched hand, moved off to the next beauty, where the performance began again.

All was done in time to the music, and the movements of the laughing youngsters could not have been better measured. Without reserve all abandoned themselves to the most thorough enjoyment, dancing and yelling as if they had been acquainted for years. A little way off sat the matrons and the old men, watching and talking over what they had done in their younger days.

Behind was the black bush, with here and there a higher palm tree coming out and showing in clear silhouette against the white rocks, while the stars moved slowly over the sky, and the great silver moon made it all look wonderful and unearthly. Quite unconsciously I recalled old familiar scenes, other music, other costumes, and a smaller room; and these naked savages were, after all, not so very different from the wise Westerners.

#### FASHIONABLE DOG DOCTORS.

New York now possesses its fashionable dog doctors, who get \$10 a visit and sleep with a telephone at their bedside for night calls. A lady recently summoned a specialist from New York to Newport, and kept him there for a week at \$100 a day, because her poodle was ailing. Mistresses buy their canine pets collars, set with precious stones, at several hundred dollars each, and one lady has had a house built for her dog, the exact model of a Queen Anne cottage. Every morning, before being taken out for a walk, he is bathed, curled, and perfumed.

up around the moon, before Galileo's telescope revealed another world with lofty mountains, deep valleys and vast plains, the oldest, and probably the most familiar to us all, is that of its human inhabitant. Every nursery has heard the story of the man who was found by Moses gathering sticks on the Sabbath, and condemned to dwell in the moon till the end of time, says the London Globe.

Originating, doubtless, in the superficial resemblance of some of the moon spots to a man with a bundle of sticks on his back, it would be handed down by zealous Sabbatarians as an edifying warning. It has even been referred to Biblical authority. German nurses commonly vary the tale by saying that the offender was given the choice of burning in the sun or freezing in the moon, and that he preferred a lunar frost to a solar furnace. But in the Middle Ages, before Lutherans and Puritans had superimposed the conception of the Jewish Sabbath upon the Christian Sunday, the crime thus punished was theft. It is possible, however, that the "Man in the Moon" myth may claim an even remoter antiquity. Primitive man had a tendency to personify those natural forces whose laws he could not comprehend, his imagination endowed them with human force and human feelings, and with superhuman knowledge and power. Hence the moon acquired a sex and a gender, in Sanscrit and all derivations, except Greek and Latin, and such modern languages as have come under the classical influence, it is masculine. And doubtless, this is the reason why the legendary "Woman in the Moon" is not nearly so prevalent as the legendary "Man."

Be this as it may, it is certain that in Teutonic fable we find the moon inhabited by both sexes. For according to Mr. Baring-Gould, our familiar nursery rhyme about Jack and Jill is derived from the Scandinavian myth of the two children, Hukilund and Bil, who were taken up into the moon with their pole and bucket as they were drawing water. They symbolize the waxing and waning of the moon, while the water they are carrying refers to the influence of the moon's phases upon the rainfall.

There is an ancient belief found in some of the writings of the old Egyptians that the moon is an abode of departed spirits. And some of the South American Indians still regard it as their "happy hunting ground," the paradise of dead chiefs and braves. But in the Middle Ages the moon was generally looked upon as the seat of hell, and it is probably this circumstance that led to the familiar association of the moon with witchcraft.

#### LUCRETIA BORGAS.

Wholesale Poisoning Carried on Now in Town of Hungary.

Five men and two women were recently arrested at Kucz, in the Temesvar district of Hungary, for having poisoned their wives and husbands.

Martha Petromany, a woman who is known as the "Poison Mixer," was also placed in custody for having sold them arsenic to commit the murders.

A judge, who has been investigating the cases, now reports that there has been wholesale poisoning in the district, and further arrests have been made. Catherine Biber is accused of poisoning her son-in-law, because he was a drunkard, and also her parents, in order to obtain the family estate.

Vassa Ardalean is charged with poisoning a wealthy widow aunt, whose sole legatee he was; Lenka Bogoyok with poisoning her husband, who had willed his property to her; Nicholas Glass with poisoning Anton Braun, to marry his widow, and Julia Wulstich with poisoning her elderly husband to marry a young lover.

The poison in all cases is stated to have been provided by Martha Petromany, who is alleged to have charged \$4.50 in each case. The attention of the police was directed to the murder epidemic by an anonymous letter.

## ABOUT THE AERIAL MAIL

SENDING LETTERS AT A SPEED OF  
250 MILES AN HOUR.

Professor Andersen Has Succeeded in  
Building a Train Which Will  
Make This Speed.

Professor Andersen, a Danish scientist, by a system of magnets, has succeeded in building a train capable of reaching a speed of 250 miles an hour. Dr. Andersen some time ago explained to the present writer the means he employs to gain this tremendous momentum, and a brief explanation of his methods may not be without interest. By employing a series of the most powerful magnets a train can be so lightened that it will slip along the rails quite easily.

If a train weighs 100 tons the magnets employed in Professor Andersen's system might be so constructed as to have a lifting capacity of, say, ninety-eight tons. By this means the weight of motor and cars would be reduced to two tons—a mere nothing when attached to a powerful engine. Or, again, the lifting capacity of the magnets might be made but a few pounds less than the weight of the train, and then cars and motor would fly along with their wheels hardly touching the rails.

Dr. Andersen first intended that his "magnetic train" should be for passenger service, but when he realized that, however safe it might be to travel 250 miles an hour, few people would be willing to undertake the experiment, he decided to perfect his system in the interest of the mail service. He is still busy on his invention, and, as he has had a grant of track made him by a certain railroad company, it is not unlikely that before the year is out he will be able to make public the fact that he has

### PERFECTED HIS SCHEME.

But of all methods invented for the purpose of increasing the speed of our mail service, not one has created so much sensation as that by Signor Piscicelli, a scientist of Rome, which is at present undergoing severe tests by the Italian Government. By means of Signor Piscicelli's invention letters and parcels may be transmitted at a speed of 250 miles an hour with a minimum amount of risk. Moreover the cost of transmission is considerably less, and its adoption would be the means of an annual saving of many hundreds of millions of dollars to the Government.

By Signor Piscicelli's invention—which he calls "An Aerial System for Carrying the Mails"—wires are strung from pole to pole at a height of at least 45 ft., and more if desired. The boxes for holding both letters and parcels are furnished with wheels which run along the wires at any speed desired. These boxes are built of aluminum and are extremely light, though as strong as if built of steel. Each is made to carry a weight of 60 lbs., and before being dispatched it is sealed with the Government's seal, the same as in the case of ordinary mail-bags. The posts supporting the wires are placed at a distance of 300 ft., and each post carries two sets of wires, so that the boxes may proceed in either direction.

### WITHOUT FEAR OF COLLIDING.

It has been suggested by the ultra-pessimistic that the sending of mail-boxes through the open country (even though it is an aerial railway) will not be without danger, seeing that we have the covetous always with us. But Signor Piscicelli has amply provided for the burglariously inclined, and promises all those who endeavor to stay his mail-boxes in their postal flight such an energetic shock that the possibility is that they will never again take any interest whatever in his invention.

It is indeed very unlikely that any

## EARTH'S WORST PRISONS

AND THE BEST MANAGED CONVICT  
ISLAND IN THE WORLD.

At the French Penal Settlements the  
Convicts Stroll About  
Unshackled.

Down in the southwestern corner of the Australian continent, near the pretty town of Fremantle, stands grim and solitary an enormous granite prison. Once it held no fewer than 28,000 prisoners, but now it is, we believe, quite empty. It is the last of the great Australian convict establishments, and although transportation was abolished by act of parliament forty years ago, yet the life convicts of Fremantle remain on until they died or were set free. So lately as 1885 there were still some four hundred veterans in the place, France, Spain, Portugal, Russia and Turkey are to-day the only European countries which transport their criminals, and there are signs that this form of punishment will not be continued very much longer by civilized nations. Russia has already diminished the number of offences for which Siberia is the penalty.

### LEAD PIPE CINCH.

France has two penal settlements, one the island of New Caledonia, which lies northeast of Australia, the other in French Guiana, Caledonia, or Ile Nou, has often been described as a sort of Inferno. As a matter of fact, it is the best managed convict island in the world. The climate is not bad, and the convicts can gain, by good conduct, pleasures and privileges unheard of in British prisons.

Convicts form the working classes of the islands. They stroll about unshackled and unguarded. They can smoke cigarettes and buy a little wine. The better class act as barbers, waiters, engineers and stokers, and can earn about five pence a day.

The birch and the cat-o-nine-tails are unknown in the island, the punishment being the "cachot" or black cell. A few hours or days in this living tomb is usually enough for any of them, however refractory. They come out like lambs. Bad as is the lash, it is nothing compared with a sentence of five years in the cachot, with only one hour of light in each thirty days!

### TERRORS OF CAYENNE.

Cayenne is very different. The climate is about as bad as can be. The work is principally masonry and clearing land. In case of mutiny hoses are ready charged with scalding water. The least infringement of the rigid discipline is visited with cruel punishments. One of the commonest is to reduce a man to one meal a day, and that nothing but bread and water. Death follows any attack on a warder whether injury is inflicted or not. The food, all except the bread, is wretched.

The most horrible of the penal colonies in existence at present are undoubtedly those of Spain at Ceuta and at Fernando Po. The latter place is an island in the Bight of Biafra. The average temperature all the year round is nearly 80 degrees and the heat is a damp kind, most trying to Europeans. The horrors which Cuban patriots underwent in Fernando Po are not to be matched in Siberia itself. Three out of five died before they had been there two years.

Oddly enough Portugal manages these matters much better than does Spain. She sends most of her convicts to Goa, on the coast of India, or to her East African possession. But her system resembles that of New Caledonia, but is less strict. A few Portuguese convicts do very little hard labor. They are allowed almost complete liberty so long as they do not leave the limits of the settlement to which they are assigned. At Mozambique you may see Govern-

## SUN LIFE ASSURANCE CO., OF CANADA

(Official Statement.)

### RESULTS OF THE INVESTIGATION

The Severe Probing but Revealed Greater Strength—  
\$3,000,000 Better Off Than it Claimed to Be—  
Investments Absolutely Secure and Highly  
Profitable—Mr. Kent's Remarks.

Now that the chaff of trifling details has blown away, the management of the Sun Life Assurance Co., of Canada desire to draw attention to the really important facts which the investigation by the Royal Commission has brought out.

### LARGE PROFITS ON INVESTMENTS.

The most striking feature of the evidence was unquestionably the immensely profitable character of the investments. During the past few years the Company has realized a net profit after deducting all losses, not only of principal, but of interest, and after liberally writing down any securities at all doubtful, of over \$1,000,000 in hard cash. In addition, the present market value of the securities still owned, is about \$1,050,000 in excess of their ledger value. Still further, the Company has a contingent fund, consisting chiefly of stocks obtained in years gone by as bonuses in connection with bond purchases, which, though held in the Company's books at a nominal value of \$1 for each block, have an approximate value of \$3,050,000, and that value is increasing steadily. The Company's policy is to hold these securities as a contingent fund, and to only include them in the published list as each block becomes interest bearing, or is sold. In the meantime policyholders have the advantage of the immense additional security thus provided, and may also reasonably expect to have their profits much increased from this source in years to come.

### SAFETY THE FIRST CONSIDERATION.

Although the Company has thus made enormous profits, these profits have not been made from speculative securities. The Company carefully avoids such. The profits are the result of a policy of not waiting for investments to come to the Company, but of deliberately looking around and selecting those that are safest and best, and then making use of the company's ability to purchase large blocks (its assets are now \$24,000,000) to obtain inside terms, thus cutting out the middle men. Absolute safety is always the first consideration, and profit is essentially secondary. Actual illustrations are, however, more convincing than general statements, and as some attention was given to our investments in the Illinois Traction Company, these may be taken as examples.

### ILLINOIS TRACTION COMPANY.

The first investment of the Company in Illinois Traction securities was the purchase of two-thirds of the bonds of the Danville, Urbana & Champaign Railway. These were secured by first mortgage on a new interurban line connecting Danville with the twin cities of Urbana and Champaign, and by a further lien on the public utilities of the three cities, comprising the street railways, electric light and gas plants of each. Were these bonds absolutely safe? The audited net earnings for the previous year of the properties by which they were secured, after deducting every charge of every kind that would rank ahead of the interest on the new bonds, was \$136,700. The total interest charge of the new bonds, including amount required to complete the interurban, was \$54,000. The existing net earnings were therefore already more than two and a half times the interest charge upon the new bonds. This was without any ad-

justment for depreciation, and that nine per cent., however, not being paid in cash, but being used for extensions and other capital expenditure, which increase the value of the property. There are over seven hundred shareholders, and the market value of the preferred and common stocks is about \$7,000,000. While the first issue of this preferred stock had some water in it, large amounts have since been issued at 87½ and 95 for cash, so that about \$2,000,000 of actual hard cash has been paid in upon the preferred stock, and about \$1,200,000 more of value has been put into it in the form of surplus earnings used for extensions. The stock, therefore, has a very solid cash basis. The franchises are long and favorable, and are perpetual for more than two-thirds of the mileage.

The question was asked how long it would take to dispose of the Illinois Traction securities. The company's entire holding could easily be disposed of at a handsome profit within two days. Any person, however, who observes the phenomenal growth of the earnings must realize that the common stock at least will not attain its full value for years, and to sell now would merely be to divert into the pockets of brokers immense amounts which would otherwise go to the policyholders.

### BENEFIT TO POLICYHOLDERS.

The large profits have enabled the Company to forestall the requirements of the law and at once place the reserves, upon all its policies upon a 3½ per cent. basis, a step calling for at \$1,200,000. Even by this severe standard it had at 31st December last a surplus over all liabilities and capital stock of \$1,735,608.50. This sum has since been largely increased. This does not include the contingent fund of over \$2,000,000. The Company has also been enabled to increase the rate of profit paid to policyholders year after year, and it expects to still further increase it.

### WRITING DOWN SECURITIES.

The Company has been criticized for writing down its securities before losses actually happened, simply because it feared that loss might perhaps arise. The management claim, however, that this is the only proper course, and that any other would be highly objectionable. If the manager of a bank or loan company were to refrain from writing down securities, merely because losses had not yet actually materialized, he would be condemned as issuing misleading statements. The management consider that they deserve credit instead of censure for the course they took. As regards the so-called writing up, the facts are merely that when some large blocks of Illinois Traction preferred and other securities were sufficiently close to be transferred from the contingent account to the active list, the management had to face the question whether the entire value of these stocks should be added to the surplus, or whether they should be used in part to write down other securities not quite so good. It was decided to substitute these new securities in part for some others, that while not bad, were not entirely satisfactory. Had this not been done, the nominal surplus of the Company would have been increased by about \$300,000. In the opinion of the management this course was conservative and proper.

Incidentally, most of the securities

without danger, seeing that we have no covetous always with us. But Sig- or Piscicelli has amply provided for the ungraciously inclined, and promises all those who endeavor to stay his mal- oves in their postal flight such an en- ergic shock that the possibility is that they will never again take any interest whatever in his invention.

It is, indeed, very unlikely that any thief, however intrepid, would risk his life by trying to stop a 60lb. box in its dash through space at a speed of 250 miles an hour, no matter whether it was lured by electricity or not. There is, therefore, little to be feared from personal interference on the part of thieves. But it is further argued by those who only see the failures of new inventions that anyone with a sporting arm might bring down a "mail bird" with a well-directed shot, though this is a chance which the inventor is willing to run, for it is no greater than that which threatens a carrier-pigeon—about one in a thousand.

Each mail-box is furnished with an electric motor which provides the power necessary to propel it at any speed required, the rate being determined by setting a clever contrivance prior to the box being dispatched. The inventor takes that the speed may be so equalized that it will be possible to dispatch no fewer than

#### 4,000 BOXES EVERY HOUR.

the distance between each box being 60yds. As each box will carry an average of 60lb. weight of matter, this would mean that at one time a single wire may be called upon to support a weight of over 107 tons.

This, of course, seems a tremendous weight for one wire, however strong, but the inventor declares that it will be so distributed that there will be no fear of a breakdown. Moreover, as the distance between the posts will coincide with that between the boxes, it follows that in two posts will ever be called upon to support more than 60lb. In this way a carrier cannot possibly exceed in weight the strength of a wire.

In stating that it will be possible to dispatch boxes only 100yds. apart, Signor Piscicelli does so merely to prove the strength of his aerial system. But the Italian Government, during its tests of the invention, have declared that in their country at least there will be no necessity for dispatching more than one hundred boxes an hour, which will give a distance of something like two miles between each.

The cost of the system is not great. Indeed, it is believed that the Piscicelli aerial mail service will prove the cheapest in the world. The initial cost, it has been figured out, will be less than £140 per mile, and that the service will pay for itself within a very short time is certain. The invention having been tried with such satisfactory results, it is believed that after two or three minor difficulties have been overcome the system will be adopted throughout Italy, and subsequently in every country where progress and reform are advocated.

#### ADOPTING AN HEIR IN JAPAN.

The custom of adoption is universal in Japan, where it is practiced to keep a family name from becoming extinct. Indeed, there is scarcely a family in which it has not at some time or other been observed. A person who has no male issue adopts a son, and, if he has a daughter, often gives her to him in marriage. A youth, or even a child, who may be the head of a family occasionally adopts, on the point of dying, a son older than himself to succeed him.

"Does it not throw a shade of bitterness into your heart," said the poetic youth, "to see the trees all leafless, and to hear the wind sighing in mournful monotony? Does it not make you feel that there is too much that is bleak in the world?" "No," answered the practical youth, "it does not." "Why?" "Because my father is in the coal busi-

ness, and she sends most of her convicts to Goa, on the coast of India, or to her East African possession. But her system resembles that of New Caledonia, but is less strict. In fact, Portuguese convicts do very little hard labor. They are allowed almost complete liberty so long as they do not leave the limits of the settlement to which they are assigned. At Mozambique you may see Government officials playing billiards with convicts of good birth.

When a Turkish political prisoner is sentenced to be deported to Tripoli or to the Euphrates, his friends bid him farewell. They know that they will never see him again alive, and in all probability will never hear of him again unless enormous sums are forthcoming to bribe scores of different officials. In fact the only difference between a death sentence in Turkey and one of transportation is that the former is more rapid and more merciful. The Government prefers the latter because it is less public. Now and then, however, news leaks through; of poor Mid-hag Pacha, for instance, it is known that near Bagdad his brutal guards beat out his brains with the butt end of their rifles.—Answers.

#### DAWSON'S CONQUEST.

Things had gone his way in town, and Dawson was in quite an amiable and even melting mood when he came home in the evening and settled himself for a quiet hour with his cigar and book. Presently he said to his wife:—

"Now, here's something that's got good sound sense to it. You listen to it—'Real glory springs from the silent conquest of ourselves.' That's the talk. Give me the man who is master of himself. I have a perfect contempt for those unbalanced fellows who go all to pieces over nothing and—Why, what's the matter with this lamp? It gives a miserable light."

"I think it needs trimming," replied Mrs. D.

"Why didn't you have it trimmed before night?"

"I didn't know that it needed trimming."

"I should think it was your place to know in what condition the lamps are in."

"Humph! It's your place to know lots of things you don't know. If you'd known, as a man ought to know, the condition of the drainage pipes on his own ground, we wouldn't have had that illness last spring, and—"

"Oh, there you go and bring up those old drainage pipes!" howled the convert to the self-control theory, as he flung his book clear across the room and kicked the hassock at his feet against a fruit table and sent it over with a crash. "It beats me that a man can't have a minute's peace in his own home. I'll just be eternally ding-squizzled if I don't join a club or board away from home if I can't have any peace under my own roof! What with smoky old lamps and your tongue going like a trip-hammer all the time, and the young ones howling and the servants quarrelling, and dirt and disorder everywhere, and—"

"A beautiful specimen of self-conquest you are, Mr. Dawson!"

"Don't you say 'self-conquest' to me, or I'll—well, I'll not be responsible for what happens! The idiot who wrote that didn't happen to put up with smoky lamps and—Well, leave the room if you want to, madam! I'm going to leave the house, madam, do you understand?—do you understand?"

#### DOGS CARRY THE BIG DRUM.

A curious custom connected with the Serbian army is the manner in which most of the regiments carry the big drum. It is not, as in most countries, slung in front of the man who plays it, but is placed upon a small two-wheeled cart drawn by a large dog, which has been so trained that it keeps its place even through the longest and most tedious of marches. The drummer takes up a position behind the cart, and performs on the instrument as it moves

were secured, after deducting every charge of every kind that would rank ahead of the interest on the new bonds, was \$135,700. The total interest charge of the new bonds, including amount required to complete the interurban, was \$54,000. The existing net earnings were therefore already more than two and a half times the interest charge upon the new bonds. This was without any addition from natural increase, or from the new line. The replacement value of the property was moreover estimated at \$1,500,000 in excess of all bonds. Was there any risk in making such a purchase? Although no increase in earnings was needed to make the bonds abundantly safe, the new interurban line has in reality proved highly profitable, and the earnings of the city properties have also steadily increased, so that the surplus, which was two and a half times the interest charge when the bonds were purchased, is now about \$370,000, or seven times the interest charge. The bonds were shortly afterwards sold at an advance in price, without any stock bonus, to an American banking firm, who in turn related them at a still higher price to the public, among the purchasers being two of the largest and best American Insurance Companies, which each took a block of \$100,000. The security for these bonds is absolute. Better cannot be obtained. Did the fact that the Sun Company made a bargain by which it obtained some bonus stock, which would ordinarily have gone to other parties, in any way lessen that security?

#### DECATUR RAILWAY & LIGHT COMPANY.

The second purchase of Illinois Traction securities consisted of the bonds of the Decatur Railway & Light Company, which carried a mortgage upon the street railway, electric light and gas properties of the city of Decatur. The audited available net earnings of these properties, without any addition for normal increase or earnings on new property, were over \$62,000, to cover an interest charge of \$30,000 on the new bonds, or more than \$2 for each \$1 required. In addition, there was the guarantee of the Illinois Traction Co., whose surplus earnings from other properties already amounted to \$130,000, or a further guarantee equal to the entire interest charge, making, with the Decatur earnings, six times the entire interest charge on the new bonds. Where can safer or better bonds be obtained? Was there anything speculative about them? These, too, have since all been sold at an advance in price, the Sun Company retaining the stock bonus.

#### ILLINOIS CENTRAL TRACTION COMPANY.

This was the third purchase. These bonds were secured by first mortgage upon a new interurban line between Decatur and Springfield, the capital of the state. Connecting two such cities, the success of the line was assured from the start. The bonds were, however, also guaranteed by the Illinois Traction Co., which then had a surplus of \$162,000, available from its other properties for the payment of this interest. As the entire interest charge upon the new road when finished would be only \$65,000, the interest was already assured two and a half times over, even if the new line earned nothing. It did, however, earn its own entire interest charges in the first eight months of its first year of complete operation, so that instead of having to call upon the guarantee of the parent company, it earned a surplus of fifty per cent. These bonds, too, were all purchased shortly afterwards by a firm of bankers at an advance in price, without any stock bonus.

Further illustrations could be given, but these cases, which were specially investigated, are enough to show the very high quality of the bonds in which the Sun Life has invested.

The value of the guarantee of the Illinois Traction Co. to any bond may be judged from the fact that its annual gross revenue now exceeds \$3,000,000, and that it has a surplus of \$700,000 above the total interest charges upon all the bonds of the system. After paying six per cent. dividends upon its preferred stock it is earning about

curities not quite so good. It was decided to substitute these new securities in part for some others, that while not bad, were not entirely satisfactory. Had this not been done, the nominal surplus of the Company would have been increased by about \$300,000. In the opinion of the management this course was conservative and proper.

Incidentally, most of the securities then written down have since so improved that comparatively little loss is now expected. The actual losses incurred by the Company have in fact been very trifling when compared with the profits, thus affording a further testimony to the high quality of the securities.

#### DIRECTORS HAVE NOT PROFITED.

No director has ever obtained any financial profit or advantage of any kind out of the Company, by means of sales, loans, or any such arrangement of any kind whatever, directly or indirectly. The charter prohibits directors and officers from borrowing from the Company, and this has been literally lived up to. Directors have been permitted to purchase securities for themselves in precisely the same terms as they were purchasing them for the Company, but that did not injure the policyholders, and it is even desirable that directors should show their faith in the investments into which they put the Company's money by taking some of the same for themselves. When this has been done, however, they have made such investments absolutely with their own money, and the Company has not assisted them in financing in any way.

#### ESTIMATES AND RESULTS.

Over 700 preferred profit policies have matured, and in thirty-four per cent. of the cases the amount originally estimated as likely to be received at the end of the term, has been realized or exceeded. On all the cases combined the average amount has been about ninety-seven per cent. of the estimate. The management may be pardoned for being proud of this record. The estimates now in use are lower than the former ones, and premiums are higher, so that present estimates should certainly be realized. Statements were filed showing that \$108 is on hand for every \$100 required to pay the amounts called for by the present estimates for every deferred profit policy on the books.

#### STOCKHOLDERS.

The directors have reduced the proportion of profits accruing to shareholders from 20 per cent., which was the original ratio, and is still usual with British Companies, to only 5 per cent. When the capital was increased in 1897, the new stock was issued at 300 per cent. of the paid-up value, and the dividends of 15 per cent., which have since been paid, therefore yield the stockholders only 5 per cent. upon the amount paid into the Company. As the money earned more than 5 per cent. this new capital has cost the policyholders nothing.

#### COMMISSIONER KENT'S APPRECIATION.

The management gratefully acknowledges Mr. Kent's appreciative remarks at the closing session, in which he stated in connection with the suggestion that voting power might be given to policyholders that "it seems to me that in the conduct of the Sun Life business there is nothing to be desired as far as the present generation is concerned. If you were immortal I would not say anything further about it. If, by sound judgment, hard work and just discrimination you have put the Sun Life on the pinnacle of a successful Company, another management with other attributes might just as easily squander it. . . . The directors have done their duty nobly; there is no complaint to be made against them, or any one of them. Who can say whether the future management will continue the present high standard of your company?"

While the directors and management deeply regret that they do not see the question of voting by policyholders in the same light as Mr. Kent, nevertheless such remarks, coming from one of the Commissioners, are intensely appreciated.

## The J. J. Haines Shoe House

wishes each and every one of its many customers

"A Happy and Prosperous New Year."

THE J. J. HAINES SHOE HOUSES, Napanee, Belleville, and Trenton.

## THE BEST FLOUR. DAFOE'S NONESUCH DAFOE'S MANITOBA PATENT

By numerous tests by the best Bakers the above mentioned grades have been proven to be the best Flours in the market.

When buying Flour ask for Dafoe's, and patronize your home mill, thereby producing Bran and Shorts that you can purchase cheaper than the product of the Western mills, which has to be transported thousands of miles at great expense, and usually, when it reaches you, of inferior quality.

The grocer complains if the farmer or the mechanic sends to Toronto or to outside points for an article he can get at the home store just as good, but he does not hesitate to buy Flour from mills hundreds of miles away, and sell you an inferior Flour for more money than you can purchase the home product for, every bag of which is guaranteed.

CHOICE CORN MEAL and BUCK-WHEAT FLOUR always on hand.

FEED GRINDING a specialty, with the best feed mills known to the trade.

A full stock of the best ANTHRACITE COAL. Also in the market for the purchase of all kinds of Grain.

Ask for prices at the big Mill before purchasing your Flour, Feed or Coal.

NAPANEE,  
16th January, 1906.

### Skips Appointed.

At the Curlers' Meeting on Wednesday evening the following were elected skips for this season:

W. A. Bellhouse, W. C. Smith,  
J. S. Ham, J. L. Boyes,  
Dr. R. A. Leonard, J. W. Robinson,  
C. I. Maybee, Wm. Templeton,  
R. A. Crookery, D. L. Hill.

### Mt. Ararat Encampment.

The officers of above Encampment for the ensuing term were elected on Wednesday evening:

Chief Patriarch—H. E. Smith  
Senior Warden—W. B. Grieve  
Junior Warden—R. S. Ham  
High Priest—Robt. Solmes  
Secretary—C. Frizzell  
Treas.—E. J. Pollard.

### High Grade.

The high grade training given at the Frontenac Business College, Kingston, has placed many young men and women on the road to success. Every graduate is placed in a good position, and not a graduate of our school is out of a situation. The increasing demand for our expert stenographers and accountants is far in excess of the supply. Winter term opens Jan. 2nd, 1907. Beautiful Calendar and catalogue mailed free. T. N. Stockdale Principal.

Novelties in Kitchen Ware, odd shapes in Jelly moulds, Individual Jellies, Fancy Vegetable Cutters, Cake Cutters, and brass goods, at

BOYLE & SON.

### Napanee Boys Remembered.

On Christmas Eve thirty-nine of our citizens sent the following telegram to the boys who have left our town to make their home in Mexico City:

"May all the Napanee boys have a very Merry Christmas. We think of you very often and wish you a very prosperous New Year."

Following the message were given the thirty-nine names.

On Christmas afternoon the following reply was received:

"Mexico City, Dec. 25th 1906.  
"Wishing you one and all a Merry Christmas and Happy New Year."  
(Signed) "THE NAPANEE HOTEL"

If you want good flour try Hungarian Patent at KELLY'S.

### Caladonia.

A full house packed to the doors, greeted Barnett Bros in their production of that splendid farce comedy, "Uncle Dudley from Missouri" in the new Opera House on Friday evening last. This is one of the best troupes which has ever shown in Caladonia. It is probable that upon their return trip in a few months The Barnett Bros will again stop at Caladonia with an entirely new program. We can't promise them a more appreciative or a much bigger house for the hall would not contain it, but it is safe betting that there will be a very meagre choice of seats on the day of their next entertainment.

Pocket knives, table cutlery, carving sets.

### to Use Perfume

is all the time, if it is the right kind. So delightful and deli-

### Soap as a Medicine.

"When I was a boy," said the old man, "they often made me take a little soap as a medicine. It did me good."

"Soap was prescribed in the village for cramps, for sick headaches, for a half dozen complaints. The people admitted that it was a nauseous dose, but on the other hand they pointed to its efficacy."

"When I was taken down my mother would cut from the cake of yellow soap in the kitchen a chunk about as big as a chestnut."

"Now, sonny," she would say, "swallow this," and she'd hold the yellow morsel in thumb and forefinger close to my lips.

"I'd begin to whimper. The smell of it and the idea of the lather that would form in my mouth—the lather I'd have to swallow—would fill me with despair. But my mother was inexorable. With stiff lips I'd take the soap into my mouth, I'd chew the soft and slippery stuff a little and then, with a groan and a dreadful gulp, I'd swallow it. Horrors!"

"Horrors!" said the old man, smiling. "I can still taste those doses of soap that were so common in the village in my boyhood."

### Jewish Thrift.

The Allgemeine Rundschau, Vienna, in an article on the Jewish question and anti-Semitism, has this to say as to Jewish thrift: "If we could only induce our own lower class to acquire the Jew's thrift, his industry, his sense of order, his scrupulous exactitude, his religious loyalty and love for his family the Jew on his darker side would appear far less dangerous to them than is at present the case. If one Sunday, by way of interesting experiment, one were to conduct an inquiry into the station, wealth and religion of visitors to the various public houses, the following result would transpire: A large number of the guests would be Christians, who would do far better to save than spend their money in alcoholic refreshments, gaming and tobacco. There might be a few Jews, but at the most they would content themselves with a cup of coffee."

### An Ancient Hebrew Bible.

The highest amount ever offered for a single volume was tendered by a number of wealthy Jewish merchants of Venice to Pope Julius II. for a very ancient Hebrew Bible. It was then believed to be an original copy of the Septuagint version made from the Hebrew into Greek in 277 B. C. careful copies of the Hebrew text having been prepared at that date for the use of the seventy translators. The offer to Julius was \$20,000, which, considering the difference between the value of money then and now, would in our day represent the princely sum of \$600,000. Julius was at that time greatly pressed for money to maintain the holy league which the pope had organized against France, but in spite of his lack of funds he declined the offer.

### Weight of a Lion.

"What does a lion weigh?" Ask that question of any acquaintance and see what he will say. Those who best know the look of the king of beasts and how small his lithe body really is will probably come furthest from the truth. About 300 to 350 pounds is a usual estimate. But this is below the mark. A full grown lion will tip the scales at no less than 500 pounds. Five hundred and forty pounds is the record for an African lion. His bone is solid and heavy as ivory. The tiger runs the lion very close. A Bengal tiger killed by an English officer scaled 520 pounds. A tiger of this size has, however, considerably greater muscle.

## For Xmas!

- New Raisins
- New Currants
- New Peels
- New Shelled Nuts

scales at no less than 100 pounds. Five hundred and forty pounds is the record for an African lion. His bone is solid and heavy as ivory. The tiger runs the lion very close. A Bengal tiger killed by an English officer scaled 520 pounds. A tiger of this size has, however, considerably greater muscular strength than the biggest lion.

**Millers' Best Customers.**  
The forty odd million sacks of flour consumed yearly in the United Kingdom are mainly eaten in the form of bread. In the houses of the rich and in the best hotels bread is sparingly eaten, but among the middle classes and in workmen's homes it forms a considerable portion of the diet. As the latter class predominate and as their families are the most numerous, it is not improbable that the children under sixteen consume about three-fifths of the total flour sold in the United Kingdom. In a commercial sense, therefore, the children are the millers' best friends.—London Milling.

**Age and Years.**  
The man of forty must not think himself old. He is only beginning really to live. A man's usefulness is gone only when he ceases to grow. Age is not a matter of increasing years so much as of waning enthusiasm.

## ALREADY FOR THE CHRISTMAS TRADE.

Having on hand a very large and choice assortment of dinner sets, fruit sets, salad bowls, water sets, marmalade jars and covered cheese dishes in all shapes and sizes, plain open steak dishes and fancy covered steak dishes, jardiniere in endless variety, also fancy glass dishes, cabinets and fruit plates from 6 to 10 inches, bread and butter plates from 90c to \$3.00 a dozen, cups and saucers from 15c to \$1.50 each, also a very fine variety of souvenir plates and cups and saucers, other pieces of China too numerous to mention. All of the above named articles are of the finest quality of English, French and Austrian China, imported from each factory, also, a large and fresh assortment of groceries and fruit in fact, everything suitable for the Christmas trade of the finest quality. It's not always the cheapest article that's the best value, but more apt the reverse.

## Smoking Contests.

"Smoking contests are as old as the hills," said an antiquary. "Go to Brittany, take in a Breton 'pardon,' and you'll see a smoking contest sandwiched in between the dancing matches and the wrestling bouts."

The old man took out his notebook. "The first smoking contest of which we have any authentic record," he said, "came off at Oxford, the English seat of learning, in 1723. The conditions were that you should smoke three ounces of tobacco without drinking or leaving the stage; the person first finished to get a prize of 12 shillings."

"Heine says—I copied it down here: 'Many tried, and 'twas thought that a journeyman tailor of St. Peter's-in-the-East would have been the victor, he smoking faster than and being many pipes before the rest, but at last he was so sick that 'twas thought he would have died, and an old pun that had been a bolder and smoked gently came off the competitor, smoking the three ounces quite out, and he told me that after it he smoked four or five pipes the same evening.'"

## A German Duel.

A young officer quarreled with a friend who was a solicitor. Hot words were exchanged, and the officer struck his friend. Here the matter might have ended—there was something to forgive and regret on both sides. But the officer's regiment heard of the affair, and a court of honor decided that he must challenge the civilian. So a duel by command took place, and the young lawyer fell mortally wounded by his friend. When the officer returned home he was arrested on the information of the president of the court of honor which had forced him to fight. He was tried by an ordinary tribunal and sentenced to three months' imprisonment. The president of the court of honor knew he was urging the officer to an illegal deed when he fastened on the duel, but honor, as he called it, must be satisfied at all cost.

## The Cigar Mouthpiece.

A rich Russian banker had been discovered murdered in his house in St. Petersburg, says a writer in the Green

#### The Cigar Mouthpiece.

A rich Russian banker had been discovered murdered in his house in St. Petersburg, says a writer in the Green Rag. There was no clew, but in the room there was found a cigar mouthpiece containing part of a cigar of such an expensive kind that it was supposed the banker himself had been smoking it just before the crime had been committed. On close examination the mouthpiece was found to be worn away by the teeth of its owner, but the dead man's teeth did not fit the indentation. The servants were one by one examined, and it was then found that the hollows of the mouthpiece compared exactly to the formation of the front teeth of the cook, to whom no suspicion had been attached. He afterward confessed to the murder.
